DEAR SENATOR JACKSON: We appreciate the opportunity to comment upon the Shallit petition, which asks that your committee investigate the reasons why the Interior Department has not constructed a railroad beyond the present railhead in the Healy River Valley, Alaska. The railroad Mr. Shallit seeks would cut the heart out of the Usibelli mine to serve a claimed but disproven military demand. Our comments will center on these points. It will be necessary also

to comment on the scandalous and unwarranted innuendo throughout the petition directed at the Usibelli Coal Mine, Inc.

### I. THE AREA INVOLVED

Attached is a United States Geological Survey map of the area involved. We have located in the location of the various coal properties, including the Arctic Coal Co., Inc., on Lignite Creek.

The coal properties referred to in the petition are adjacent to one another on Healy Creek. This creek, or river as it is more commonly known, joins the Nenana River at the town of Healy, which is on the main line of the Alaska Railroad. Fairbanks lies about 100 miles northeast of Healy—Anchorage is some 250 miles to the southwest.

Of the 3 mines on Healy Creek, Suntrana Mining Co., Inc., is the closest to the town of Healy, being about  $3\frac{1}{2}$  miles distant. The Suntrana branch of the Alaska Railroad presently extends to this mine and has since about 1922. Mr. Shallit's mine (Cripple Creek Coal Co.) is about  $8\frac{1}{2}$  miles from Healy. (Next upstream from the Shallit lease is the Army coal reserve known as the Roth property.) In between the Suntrana and Shallit mines is the Usibelli Coal Mine, Inc. The lease being developed by the Usibelli mine lies on both banks of the Healy River. The petition does not mention the Arctic Coal Co., Inc. This mine, opened last year, is several miles up Lignite Creek, which parallels Healy River some 4 miles to the north and which also empties into the Nenana River.

The Healy River is in the foothills of the Alaska Range only about 40 air-miles from 20,000-foot Mount McKinley. The stream is narrow and winding. The rugged terrain it cut is laced with coal seams, all part of the public domain. Any passageway up the Healy River must stay close to the riverbank. And any passageway must traverse the full length of the Usibelli leasehold.

### II. THE USIBELLI COAL MINE, INC.

Mr. Emil Usibelli, president of this mine, formerly worked for the Healy River Coal Corp., the predecessor company of what is now Suntrana Mining Co., Inc. He has been a miner all his life.

In 1943 Mr. Usibelli began mining coal on his present lease under a use permit issued by the United States Army. In 1946 he applied for a lease on the so-called Roth property. It was rejected on the ground that this property was to remain in reserve. Accordingly, Usibelli was offered in lieu of the Roth property a lease on the property now being developed by the Usibelli Coal Mine, Inc.

Since that time progress and development have been steady and sure. The investment in plant and equipment is now about \$2 million. This mine is presently equipped to mine and ship a minimum of 500,000 tons of coal a year. This could be boosted to 700,000 tons within a few months and beyond that should the demand for coal warrant it. There is a new bunkhouse, built in 1953 in conformity to Territorial mining-camp regulations, which accommodates some 70 men. There are 15 modern individual family dwellings, a school building for the valley children, 2 washhouses, messhall, warehouse, machine shop, powerhouse, boilerhouse, commissary, and other buildings. The most recent developments are the installation of a coal washer, the opening of the underground mine, and the acquisition of storage and distribution facilities in Fairbanks in order to compete for the civilian market. There is an airstrip, built by the Usibelli mine, and maintained by it in excellent condition. A plane from Fairbanks lands regularly with mail, medicines, passengers, and other materials transportable in a four-place light plane, which may be needed quickly.

In 11 years this mine has become the best in the Territory. All earnings over the years have been plowed back into the business to achieve this. No dividends have ever been declared. Salaries to management are modest.

### III. RESPONSE TO THE SHALLIT PETITION

This petition overlooks at least two points of major significance. They are—

(1) The military demand, upon which heavy production is dependent, does not justify the present extension of the Suntrana branch of the railroad, or a public road.

(2) The route selected would destroy the economic development of the Usibelli mine.

We will treat these two points below. First, we want to make clear that we favor the eventual extension of the Suntrana branch of the Alaska Railroad, assuming that greatly increased coal needs are clearly evidenced. But we want to make it equally clear that we do not intend to sit by while a competitor maneuvers in every possible way—the most recent being this petition—to get a railroad or a road built at public expense on a route which will cut the heart out of our mine.

We were not consulted when the Alaska Railroad made its survey in the spring of 1953. We were not consulted when Mr. Shallit filed his Healy River Spur, Inc., proposal with the Government in 1954 asking for a loan of \$1,594,000—without a dime of equity money—using the identical map surveys of the Alaska Railroad. We protested the proposed location of the railroad in August 1953 to Edgar Hart, the engineer in charge of the survey, and to Messrs. Connor, Plein, and Newman, then in Alaska to survey the coal industry for the Secretary of the Interior, as well as to the Interior Department in Washington. We protested Mr. Shallit's Healy River spur proposal to RFC, ODM, and the Department of Defense in May 1954.

The letters we wrote in connection with the Healy River Spur, Inc., proposal are cited by date at page 69 of Mr. Shallit's petition. Copies are attached hereto (see exhibits 1, 2, and 3). He says copies were not furnished to him. We will remind him that he did not furnish us with a copy of his proposal, and only learned of it some time after it was submitted, although the proposal itself suggested that we utilize the spur for the transporting of our coal and that the coal operators in the Healy field be invited to serve on the board of directors.

The reasons for our opposition to Mr. Shallit's Healy River Spur, Inc., proposal were identical with those set forth above. Briefly, they relate to the demand for coal and the route of the proposed railroad. We think our objections are sound. Neither is met by the Shallit petition. With respect to "demand" he relies on generalizations which events of the past 2 years have proven false. "Route" he neglects entirely.

Before going on to these two points, we want to make a further observation, and that concerns the matter of the Shallit right-of-way over the Usibelli leasehold. Mr. Shallit filed a right-of-way map in June 1951. He was immediately given a construction permit although we protested the route and asked for a hearing under oath as to its location. The hearing was not granted and the road was constructed. The Bureau of Land Management, in September 1952, upheld the right-of-way. We appealed, still asking for a hearing. The Interior Department urged some agreement and ultimately a stipulation was achieved between the parties which was incorporated in a decision of the Interior Department dated November 4, 1954. This stipulation, signed by Mr. Shallit, was in effect an agreed statement of operating conditions under which both mines presumably could work together. It recognized the development of the Usibelli leasehold as the dominant use. We thus thought this matter was finally at rest because the right-of-way so formalized was approximately the same as that applied for by Mr. Shallit in 1951 and in use by him since that time. Then came the petition, making it abundantly clear that Mr. Shallit has never contemplated building a road which he could use all year around. He wants a railroad and he wants the Government to build it.

(1) The military demand, upon which heavy production is dependent, does not justify the present extension of the Suntrana branch of the railroad, or a public road.

The Alaska Range, capped by Mount McKinley, separates Fairbanks and Anchorage. It also separates the Nenana coalfield, in which the Suntrana, Usibelli, Shallit, and Arctic properties are situated, and the Matanuska coalfield, some 30 miles from Anchorage.

Two military bases lie north of the Alaska Range. They are Ladd Air Force Base, at Fairbanks, and Eielson Air Force Base, some 26 miles from that city. The mines in the Nenana field are looked to to supply the requirements of these bases. Two military bases are south of the range. They are Elmendorf Air Force Base, 4 miles from Anchorage, and Fort Richardson, some 7 miles from that city. The Matanuska field, with only one mine of any size, is looked to for the principal supply of these bases.

Thus, as far as the military is concerned, competition among the coal operators in the northern field is mainly for the tonnage required at Ladd and Eielson. What have been the recent requirements at those bases?

to comment on the scandalous and unwarranted innuendo throughout the petition directed at the Usibelli Coal Mine, Inc.

#### III. RESPONSE TO THE SHALLIT PETITION

This petition overlooks at least two points of major significance. They are—

(1) The military demand, upon which heavy production is dependent, does not justify the present extension of the Suntrana branch of the railroad, or a public road.

(2) The route selected would destroy the economic development of the Usibelli mine.

We will treat these two points below. First, we want to make clear that we favor the eventual extension of the Suntrana branch of the Alaska Railroad, assuming that greatly increased coal needs are clearly evidenced. But we want to make it equally clear that we do not intend to sit by while a competitor maneuvers in every possible way—the most recent being this petition—to get a railroad or a road built at public expense on a route which will cut the heart out of our mine.

We were not consulted when the Alaska Railroad made its survey in the spring of 1953. We were not consulted when Mr. Shallit filed his Healy River Spur, Inc., proposal with the Government in 1954 asking for a loan of \$1,594,000—without a dime of equity money—using the identical map surveys of the Alaska Railroad. We protested the proposed location of the railroad in August 1953 to Edgar Hart, the engineer in charge of the survey, and to Messrs. Connor, Plein, and Newman, then in Alaska to survey the coal industry for the Secretary of the Interior, as well as to the Interior Department in Washington. We protested Mr. Shallit's Healy River spur proposal to RFC, ODM, and the Department of Defense in May 1954.

The letters we wrote in connection with the Healy River Spur, Inc., proposal are cited by date at page 69 of Mr. Shallit's petition. Copies are attached hereto (see exhibits 1, 2, and 3). He says copies were not furnished to him. We will remind him that he did not furnish us with a copy of his proposal, and only learned of it some time after it was submitted, although the proposal itself suggested that we utilize the spur for the transporting of our coal and that the coal operators in the Healy field be invited to serve on the board of directors.

The reasons for our opposition to Mr. Shallit's Healy River Spur, Inc., proposal were identical with those set forth above. Briefly, they relate to the demand for coal and the route of the proposed railroad. We think our objections are sound. Neither is met by the Shallit petition. With respect to "demand" he relies on generalizations which events of the past 2 years have proven false. "Route" he neglects entirely.

Before going on to these two points, we want to make a further observation, and that concerns the matter of the Shallit right-of-way over the Usibelli leasehold. Mr. Shallit filed a right-of-way map in June 1951. He was immediately given a construction permit although we protested the route and asked for a hearing under oath as to its location. The hearing was not granted and the road was constructed. The Bureau of Land Management, in September 1952, upheld the right-of-way. We appealed, still asking for a hearing. The Interior Department urged some agreement and ultimately a stipulation was achieved between the parties which was incorporated in a decision of the Interior Department dated November 4, 1954. This stipulation, signed by Mr. Shallit, was in effect an agreed statement of operating conditions under which both mines presumably could work together. It recognized the development of the Usibelli leasehold as the dominant use. We thus thought this matter was finally at rest because the right-of-way so formalized was approximately the same as that applied for by Mr. Shallit in 1951 and in use by him since that time. Then came the petition, making it abundantly clear that Mr. Shallit has never contemplated building a road which he could use all year around. He wants a railroad and he wants the Government to build it.

(1) The military demand, upon which heavy production is dependent, does not justify the present extension of the Suntrana branch of the railroad, or a public road.

The Alaska Range, capped by Mount McKinley, separates Fairbanks and Anchorage. It also separates the Nenana coalfield, in which the Suntrana, Usibelli, Shallit, and Arctic properties are situated, and the Matanuska coalfield, some 30 miles from Anchorage.

Two military bases lie north of the Alaska Range. They are Ladd Air Force Base, at Fairbanks, and Eielson Air Force Base, some 26 miles from that city. The mines in the Nenana field are looked to to supply the requirements of these bases. Two military bases are south of the range. They are Elmendorf Air Force Base, 4 miles from Anchorage, and Fort Richardson, some 7 miles from that city. The Matanuska field, with only one mine of any size, is looked to for the principal supply of these bases.

Thus, as far as the military is concerned, competition among the coal operators in the northern field is mainly for the tonnage required at Ladd and Eielson. What have been the recent requirements at those bases?

In fiscal 1953, 335,000 tons were delivered. In fiscal 1954 the ultimate orders were for 377,500 tons. In fiscal 1955, 142,000 tons were initially ordered. This was later increased by 90,000 tons in order to keep all of the mines operating although this increment was not essential, by reason of heavy stockpiling. The total thus ordered for fiscal year 1955 was 232,000 tons. As of this moment the operators are awaiting word as to the requirements for fiscal year 1956. We do not know what they will be but all of the operators are on notice that the low pattern of the last year must be anticipated. This, we understand, is in furtherance of the effort to bring the stockpiles to a workable size.

In any event, we estimate that military needs north of the Alaska Range, even with all of the projected power units on the line, will not exceed 450,000-500,000 tons per year. At least this much coal can be provided with the existing facilities of our mine, let alone the four mines in the field. Yet the petition demands public expenditures for a railroad or public road as essential to the national defense.

Assume for the purposes of argument that a railroad were built, on whatever route, to the Usibelli mine tomorrow. The mine's tippie is located at the present railhead. In order to make use of a railroad to the camp, the Usibelli mine would have to move its tippie. Moving the tippie, which will in fact involve constructing a new one, is expected to cost in the vicinity of \$200,000.

Production and improvements at the mines are of course dependent upon demand. The Usibelli mine is now carrying a heavy load in the effort to pay off RFC loans, which funds were put into the most recent improvements. Unless there is an appreciable jump in demand, hardly indicated now, it will be several years at least before the Usibelli mine is able, financially, to rebuild its tippie. And until the tippie is moved (several years hence at present demand) this mine will continue to truck its production to its present tippie.

Both the Usibelli and Shalit strip operations would need trucks to get the coal from constantly moving pits to a railroad, even though extended. The petition concedes this (p. 72), yet claims that \$1 per ton could be saved on haulage costs if a railroad were extended to these two mines. Just a year ago, in his Healy River Spur, Inc., proposal, Mr. Shalit estimated the saving would be 70 cents a ton (exhibit C (b)). In that same proposal he said the cost of the railroad would be \$1,600,000, yet in his present petition alleges that at his estimated saving of \$1 per ton of haulage cost, the Government over the past 5 years would have saved \$1 per ton or \$1,200,000, "the entire cost of constructing the railroad spur" (p. 75). We are unable to reconcile these changing figures.

It should be noted that Mr. Shalit does not take into consideration the cost of maintenance of a railroad in figuring the "saving" to the Government although he is careful to include the cost of maintenance of a road in his estimates that 70 cents or \$1 would be saved. Nor does he include any figure for maintenance of railroad rolling stock, annual railroad roadbed and bridge repair or board loss, all of which he takes into consideration in connection with trucks and truck roads. We submit that if a figure were arrived at for these costs in connection with a railroad, that Mr. Shalit's "savings," whether he chooses to set it at 70 cents or \$1 per ton, would prove to be fictional. And in the very demonstration of these figures, whichever he chooses, he explodes the idea that a public road or a truck route would save anything.

Although we do not for a moment concede the "saving" Mr. Shalit presupposes, let us assume for argument it would be \$1. Let us also assume a military demand of 500,000 tons and an extension of the railroad as desired by Mr. Shalit, which would cost, on estimates he has used, some \$1,600,000. To start with, Mr. Shalit would be the only real user of the railroad, because Suntrana is already on it (and has been for over 30 years) and Usibelli could not use it. If Mr. Shalit got all the tonnage, the railroad would be paid for in something over 3 years, exclusive of maintenance costs, which Mr. Shalit ignores. Suntrana and Usibelli would be out of business. So would Arctic, which has significant transportation problems of its own. Such a result, which would eliminate the 2 most significant producers and 1 new mine, would hardly be in the interests of national defense, yet this is the basis upon which the railroad is urged.

The point is that there does not exist a military demand justifying this railroad and this conclusion cannot be avoided. Mr. Shalit relates an elaborate history, in none of which we participated, in support of his contentions. These conferences and correspondence took place before the actual military needs were known. The low military requirement of 142,000 tons north of the range, published in

March 1954, brought reality into the picture. It was only after months of still further conferences that the Suntrana and Shallit mines received an additional 90,000 tons, split between them, which was granted to keep them operating. This, together with military realization that the full capacity figures for the powerplants (cited p. 41 of the petition—estimated prior to the installation of the major plants) were simply not working out in actual operations, burst the bubble entirely. The figures quoted at page 41 for fiscal year 1955 total 525,000 tons for the 2 bases north of the range, Ladd and Eielson. What was actually ordered in fiscal year 1955? Only 235,00 tons (or a little more than two-fifths of the estimate made in April 1953), and that exceeded by 90,000 tons what the military authorities indicated would be actually required. Ninety thousand tons were ordered on a relief basis, one-half of it to help Mr. Shallit, not because it was currently needed.

We do not rejoice that military needs are proving to be less than heating engineers may have estimated. There are a number of reasons, not the least of which is an improved quality of coal giving more heat per ton than anticipated. But the realities have to be faced squarely. Recognition of them leads to only one conclusion: the extension of the Suntrana branch of the Alaska Railroad or a public road are not essential to the national defense.

(2) The route selected would destroy the economic development of the Usibelli mine.

As has been shown, 1 of the 4 mines in the Nenana coalfield, Suntrana Mining Co., Inc., is already on the Alaska Railroad. Another mine, Arctic Coal Co., Inc., is 4 miles over the hills and could not possibly be served by the railroad for which the petition asks. Thus the railroad desired will affect only two mines, Usibelli and Shallit. Of these two, the Usibelli mine would be affected adversely by reason of the route for which Mr. Shallit contends.

When operations were started at the Usibelli mine, the first development was to take the strippable coal from No. 1 seam. This seam lies along the north bank of the river, immediately below the promontory where the Usibelli camp has been built, and continues on a straight line across the promontory until again hitting the riverbank, at which point it bends across the river and reappears on the Usibelli lease on the south bank of the river. Tailings from the mining of this coal were used in the construction of the airstrip between the No. 1 cut and the river.

What was left was a broad, deep drainage ditch. Bridges were installed at both ends of the airstrip to permit drainage to the river. This was by design, as the long range mining plans call for overburden from the five seams lying parallel to and above the No. 1 seam to be sluiced, hydraulically, down the steep hillside and into the river via the No. 1 cut. These five seams constitute the major portion of the Usibelli reserves. Mining a considerable portion of them by hydraulic sluicing is the cheapest and most efficient way to produce coal. Working the lower part of these seams by underground mining has started. This underground development work is expensive.

When Mr. Edgar Hart, surveyor for the Alaska Railroad, made his survey in 1953 he plotted the line directly through the No. 1 cut. The location of a railroad or a road in this cut would destroy its use for drainage and render the planned economic development of the mine impossible. We protested emphatically, at the time that Mr. Hart and the Connor group were in Alaska in August 1953, and to the Interior Department in Washington. Mr. Hart and the Connor group told us that they would recommend that a feasible alternate route, skirting the camp to the right, be surveyed. The Interior Department advised us that the matter would be held in abeyance until Mr. Connor's report had been received and considered. (For this letter see exhibit 3.)

In 1954 Mr. Shallit filed his Healy River Spur, Inc., proposal. The survey maps he used were identical with those filed in 1953 by the Alaska Railroad. Exhibits 1, 2, and 3 tell our reaction to this and need not be repeated here. These exhibits show that by this time in 1954, however, the military requirements for fiscal 1955, amounting to 142,000 tons, had been published. Thus to our only objection in 1953, namely that if a railroad was to be built in the interests of national defense it should not be built so as to destroy the Usibelli mine, was added the belief that the railroad was simply not essential to that same national defense.

The petition ignores the question of route entirely. Yet if the railroad is to be constructed for \$1,200,000 as the petition suggests, it must obviously take the shortest and most direct route which could be devised, and still could not be

constructed for that sum if the figure of \$1,600,000 in Mr. Shallit's Healy River spur proposal is correct. In any event, such a route would be through our No. 1 cut. This cut, which we made, is essential to our mine. If it were used as a transportation artery we might as well close the mine.

After 2 years of objections to this route it should be abundantly clear to Mr. Shallit and to anyone else interested that we will fight it every time it is proposed. We cannot do otherwise.

#### IV. CONCLUSIONS

We have absolutely nothing to hide in this matter. We are volunteering herewith, as exhibits, letters hinted at darkly by the petition. Mr. Usibelli's letter to the Senate committee of April 14 offers every cooperation, including the opening of the company records should your committee desire to go further into this matter. That letter also mentions other developments in Alaska such as the possibility of opening the Gubik gas field, the intensified search for oil and the opening of coal beds on Lignite Creek—as possibly having some effect upon decisions among the Government departments against Mr. Shallit's proposals.

We would have been happy to have joined in some of the conferences which Mr. Shallit enjoyed, as shown by his petition. Contrary to the petition's inference that influence was somehow exerted by Usibelli, a reading of the petition and its exhibits makes the Usibelli mine quite conspicuous by its absence from the many meetings and conversations which Mr. Shallit discloses that he had with Department officials, all having considerable impact on the Usibelli operation.

Mr. Shallit says that "powerful pressures" were brought to bear to halt the railroad. If protests to the agencies of Government concerned, charged with the responsibility of protecting all citizens, based on a right-of-way filing that would have cut the development potential of the Usibelli mine to ribbons, can be characterized as "pressure," what defenses are left? We decry this whispering of scandal in the effort to get the Congress to build something the Government departments have rejected on the basis of cold fact.

We can only speculate what reasons have prompted the Government to reject the Shallit proposals. We have urged two reasons with vigor. Mr. Shallit's record shows equal vigor in the urging of his proposals. Our reasons are "demand"—which at its expected rate would make a railroad constructed to our camp tomorrow practically useless and which does not justify the proposals under the color of the national defense; and "route"—which as has been proposed would kill us.

We submit that the combination of these factors justifies the action taken by the Government. We feel the agencies involved are earnestly attempting to bring some stability into the coal procurement picture. We feel that should the demand picture change sharply in the next several years that they will again consider a railroad. We are hopeful, when and if that time comes, that our development will be considered in connection with its route.

We do not feel that any purpose would be served through the holding of a hearing by your committee. If such is to be held, however, we definitely want to be heard. We are also available to you to provide any further information which may be desired.

Respectfully submitted.

WILLIAM I. WAUGAMAN,  
General Manager, Usibelli Coal Mine, Inc.

#### EXHIBIT 1

WASHINGTON 5, D. C., May 17, 1954.

RECONSTRUCTION FINANCE CORPORATION,  
Washington 25, D. C.

GENTLEMEN: We understand that an application has been filed with your agency by Mr. Ben Shallit, of the Cripple Creek Coal Co., Suntrana, Alaska, involving a loan to be used for the extension of a spur line of the Alaska Railroad from the present railhead at Suntrana for some distance up the Healy River Valley, such loan to be amortized from the proceeds of coal tonnage moved on this railway. We have been advised that this matter has been referred to ODM for processing.

We represent the Usibelli Coal Mine, Inc., also of Suntrana, Alaska, which corporation mines the lease between the holding of the Suntrana Mining Co. (at which camp the railroad is now located) and that of the Cripple Creek Coal Co.

The Usibelli mine has not been consulted by the proponents of this proposed railroad, and there are at least two reasons why we should be:

1. The nature of the terrain is such that any roadway, rail or otherwise, must traverse the entire length of the Usibelli leasehold.

2. Presumably Usibelli tonnage will be expected to use this line and assist in amortizing the loan. It will be several years before Usibelli will be able to use this line.

We would like to elaborate on these points as follows:

#### *I. What is the route for this railroad?*

The Healy River is a winding stream which cuts through a narrow valley or gorge laced with coal seams. The river lies within the foothills of the Alaska Range, and empties into the Nenana River some 4 miles downstream from Suntrana and about 8 miles down the Nenana from Mount McKinley National Park.

The terrain is rugged. Any roadway up the Healy River Valley must stay close to the river bank.

Your attention is invited to the appended map. It will be seen that not only must any passageway traverse the Usibelli lease, but must also pass close by the Usibelli camp area.

The extension of the line beyond its present railroad has been under consideration by the Alaska Railroad for some time. A survey of a proposed extension was filed in the Fairbanks Land Office on behalf of the Alaska Railroad on May 11, 1953 (Fairbanks serial 010499). The route covered in this filing passes between the Usibelli camp and the mine, a route which would seriously impair the development of the large portion of Usibelli's coal reserves. This was thoroughly discussed with Edgar C. Hart, engineer in charge of the survey for the Alaska Railroad, together with officials of the Interior Department, at a meeting at the Usibelli mine on August 11, 1953. It was agreed at that meeting that a recommendation would be made to the Alaska Railroad to permit a survey of a route between the camp and the river believed by Mr. Hart to be entirely feasible. Such a survey has not been made. Our understanding of the reason for this is that the Interior Department elected not to ask Congress for funds for the construction of this spur at the present time thus making a final survey unnecessary. We further understand that the Interior Department has suspended the filing of the survey made by Mr. Hart so that no survey remains as a matter of official record at the present time.

A route between the mine and the river will restrict the use of the leasehold enough as it is. It will curtail expansion of the camp area. It may make the airstrip unsafe, if usable at all. It will pass within 40 feet of a newly constructed dormitory and generally rim the camp area which contains some 20 permanent structures, including individual family dwellings, workshops, powerhouse, etc. The dormitory alone, constructed last summer to replace an overcrowded bunkhouse, cost some \$142,000. The total plant and equipment for this mine represents an investment of well over \$1,500,000.

We do not know what route may be planned by the application submitted to you. A route is presumably definitely planned for otherwise a cost estimate would be unrealistic.

In view of the stake our people have in this valley, we believe they are entitled to have complete information and an opportunity to present views on a matter which will so obviously affect their operation.

#### *II. Who will pay for this railroad?*

An extension would bring the railroad to only two mines—Usibelli and Cripple Creek. Presumably the output of both would be looked upon to support operation and maintenance as well as amortization costs.

At the present time, Usibelli is mining seams on the south bank of the river. This is a strip operation. The coal is loaded into trucks for the trip to the Usibelli tipple, located at the railroad some  $3\frac{1}{2}$  miles from present operations. Trucking would be necessary to a strip operation, even if a railroad ran right through the camp.

This spring, Usibelli will construct a washing plant and start an underground operation. Over \$600,000 is committed for these developments. They are expected to make available a more desirable product and were prompted by an understanding that the military demand would steadily increase together with the fact that development of the underground operation to insure a stable, year-around source, has long been urged by the Interior Department. These expenditures will, however, make it necessary to delay, for several years, moving the tippie from its present site at the railroad to the camp area. Moving the tippie, which will in fact involve constructing a new one, will be a costly project.

Until the tippie is moved, Usibelli will of necessity continue to truck his coal to the present tippie. In brief, he could not make use of a railroad for hauling coal if it were constructed to his camp tomorrow. Obviously, Usibelli tonnage, which for fiscal year 1953 amounted to almost 300,000 tons, cannot be looked to support this proposal.

The time factor in moving the tippie will depend largely upon the demand for coal and the financing which an expanding production would make available. The complete uncertainty on this score is demonstrated by the fact that orders at Ladd and Eielson Air Force Bases which last fiscal year totaled 419,000 tons, have this year been reduced to less than 150,000 tons, with indications that this reduction will extend into fiscal year 1956 as well. It is understood that this cut is to permit stockpile reductions and that demand will return eventually to a higher figure. But we cannot make further large capital expenditures on this assumption. Since the military is by far the largest coal buyer in Alaska, their reductions this year will have a very heavy impact on the industry.

In the present circumstances the Usibelli mine does not believe it would be in a position to move its production over any railroad extension for the next several years. This should be clearly understood by any agency advancing funds for a railroad in the expectation that two mines will use it to haul coal and will pay for it from tonnage so hauled. As far as Usibelli is concerned, only one mine, the Cripple Creek Mine, will haul its coal on such a railroad for several years at least.

#### GENERAL COMMENT

The Usibelli Mine would gladly join in any program which would make the continued development of the mines a more definite matter. A railroad in the valley is considered desirable, but the primary consideration must be need. If the need is present and the venture worthwhile, why should not the Alaska Railroad finance and construct the line, as they have the rest of the trackage in the Territory?

We would appreciate an opportunity to review the proposal which has been made to you and to be heard in connection with it. We regret the necessity of this extended letter, but since we have heard only vague representations in connection with this matter and have no information on which we can make specific comment, we have no other alternative.

Respectfully,

NORTHCUTT ELY.

---

#### EXHIBIT 2

WASHINGTON, D. C., May 19, 1954.

The honorable the SECRETARY OF DEFENSE,  
Department of Defense,

The Pentagon, Washington, D. C.

(Attention of Mr. George A. Grimm, Chief, Utilities Division, ASD  
(Properties and Installations).)

DEAR MR. SECRETARY: We have enclosed a copy of a letter directed to RFC with a copy to ODM in connection with the application of Mr. Ben Shallit for a loan for the purpose of constructing an extension of the Suntrana branch of the Alaska Railroad.

We are advised by Mr. Pilson, of ODM, that this matter has been referred to the Department of Defense for a recommendation. As you will note from the enclosure, we have substantial interests which would be affected by this proposal, and several serious questions with regard to it. We desire to have the opportunity to present our views in connection with this matter before any action is taken by you.

Mr. Waugaman, general manager of the Usibelli Coal Mine, Inc., is in Washington at the present time, and is available, as we are, for a discussion of this proposition with you.

Respectfully,

NORTHCUTT ELY.

### EXHIBIT 3

USIBELLI COAL MINE, INC.,  
Suntrana, Alaska, May 26, 1954.

HON. THOMAS P. PIKE,  
Assistant Secretary of Defense,  
Department of Defense,  
Washington 25, D. C.

(Attention of Mr. Earl B. Smith, Director, Transportation and Communications.)

DEAR MR. SECRETARY: Reference is made to Mr. Ely's letter of May 19 to the Secretary of Defense, attention of Mr. George Grimm (ASD, P&I), and the enclosure, dated May 17, addressed to the Reconstruction Finance Corporation, relating to a proposal for a defense loan to construct an extension of the Suntrana branch of the Alaska Railroad.

At the time of the above letter we had not seen a copy of the proposal. This opportunity was afforded us by Mr. Grimm. On May 25 we met with representatives of your Department, together with Army, Navy, and Air Force officials concerned. The purpose of this letter is to summarize the material presented at that conference.

We want to state at the outset that we favor the eventual extension of the Suntrana branch. We cannot, however, subscribe to any part of the proposal now before you.

Our letter of May 17 raised two main questions: First, what is the route for this proposed spur? Second, who is to pay for it? Our inspection of the proposal indicates that these questions remain the basic ones. The following is a discussion of these issues in the context of the proposal itself, referencing exhibits A, B, and C, which constitute the essence of the proposition before you, in turn.

#### I. COMMENTS ON EXHIBIT A

It is acknowledged that the proposed railroad would make the Roth reserve more accessible. Mining of that reserve, however, should await a military need not now apparent. Accordingly, this present proposal, in actuality, affects only 2 mines and affects the Usibelli mine, as the larger of these 2, adversely.

It is stated that "transportation of coal over this spur would materially reduce the cost of production and place all of the coal operations on a competitive basis." The proposal recognizes that trucking would be necessary, in any event, to a strip operation. It estimates a saving of about 70 cents per ton. The Usibelli mine has a shorter haul. Accordingly the saving would probably be less. But, of primary importance, Usibelli would not be able to use such a railroad for several years, until coal demand makes the cost of moving the present tipple financially feasible and economically sound. Accordingly, such a railroad would represent no saving to this mine for several years at least.

With respect to placing all of the coal operations on a competitive basis, the Suntrana Mining Co. is now on the railroad and there is no problem in competing with them. In addition, the coal formations are such that costs of production by stripping are cheaper on the Cripple Creek property than on the Usibelli lease, and would probably be even less on the Roth reserve. Thus, in this factor alone there is an important leveling feature from the standpoint of competition.

The only mine which does not ship on a year-round basis is the Cripple Creek mine. If that mine constructed a proper truck road it, too, could ship 12 months of the year.

In our opinion, the 3 mines in this valley can produce far more than present or foreseeable military and civilian needs for the area north of the Alaska range. The Usibelli mine alone is presently capable of shipping 500,000 tons per year with existing facilities. This is three times more than is being ordered by the military for the bases north of the range this coming fiscal year, and is probably close to twice what the military will order for these same bases for fiscal year 1958.

This proposed spur, in our view, will not assure the availability of coal at points of need in the event of a military emergency. Of the some 350,000 tons being ordered by the military for fiscal 1955, over 200,000 tons are for the 2 bases in the Anchorage area south of the Alaska range. There is only 1 dependable coal mine in this area as opposed to 3 neighboring mines over 300 miles away, north of the range, accessible only by a single-track railroad.

Accessibility to a possible fourth neighboring mine on the Roth property military reserve will not assure coal for the Anchorage area. We can see a great military need for a second dependable mine near Anchorage. We cannot see such a need for accessibility (and that is all that this proposal would provide, at a tremendous expense) to a possible fourth mine on the Healy River.

## II. COMMENTS ON EXHIBIT B

Exhibits B (a) and B (b) detail estimated costs of construction, and the amount of the loan desired.

The total is \$1,754,000 if it includes interest for 2 years only, and \$1,594,000 if it does not.

We desire to highlight two points:

1. Whichever of these totals one may take, \$641,588 or more than one-third of the total, is for the sole purpose of building a bridge and spur to the Cripple Creek tippie improvements which can only be used by that mine.

2. This estimate is for the construction of a railroad on the route partially surveyed by the Alaska Railroad. This route goes through the heart of the Usibelli operation. It traverses a considerable length of Usibelli's all-weather road, goes up the center of the airstrip, and passes through our excavation in No. 1 bed, cutting off the development of our most significant stripping reserves immediately to the north of this excavation.

In this connection reference must be made to a letter dated March 3, 1954, from Mr. Kalbaugh of the Alaska Railroad (exhibit D (i) 4, 5, 6 of the proposal). Mr. Kalbaugh states that the survey made has been on file 8 months, and no objections, to his knowledge, have been made to the locations. Our letter of May 17, 1954, to RFC details the conference held at the Usibelli mine on August 11, 1953, at which objections were made at length to Mr. Charles Connor, Mr. Leo Plain and Mr. Andrew Newman (sent by Interior Secretary McKay to review and report on the coal situation in Alaska), and Mr. Hart, the engineer who supervised the survey for the Alaska Railroad.

Objections were also made to the Interior Department in Washington, and Assistant Secretary Orme Lewis advised, by letter dated August 10, 1953:

"I am informed by the Administrator for Land Management that on August 4 he teletyped the regional administrator at Anchorage to advise the railroad that permission to proceed with the construction of the line is suspended pending further notice from his office.

"The matter will be held in abeyance until Mr. Connor's report has been received and considered."

Mr. Kalbaugh's letter itself contradicts his statement that no objections have been made, for the same letter says that Mr. Usibelli has objected "quite violently" to the passage of the line through "G" bed. We estimate some 200,000 tons of coal immediately available in this bed for processing through the washer to be constructed this spring. But the major objection, which Mr. Kalbaugh overlooks entirely, is that a railroad on the route surveyed will make stripping on Nos. 2, 3, 4, 5, and 6 seams impossible.

Mr. Kalbaugh says that there is one alternate location past the Usibelli Mine, by skirting the camp to the right, which would apparently be agreeable to Usibelli because "he felt he would receive protection from stream erosion which affects his camp during runoff periods and cloudbursts." We want it unmistakably understood that a railroad through this property is going to have a restricting effect on operations—that it will be least restrictive if it skirts the camp to the right—and that we do not need a railroad, and have not for 10 years of operations, to protect the camp. The true reason for desiring that a railroad pass to the right, if there must be any railroad, is far too obvious to anyone who seriously considers a route least damaging to the development potential of the Usibelli mine to permit of the gratuitous comments made in Mr. Kalbaugh's letter.

It should be noted that although this route will cut through the Usibelli fuel dump (two 8,000-gallon tanks, one 12,000-gallon tank, with pipeline), traverse at least a mile of Usibelli's all-weather road and run through the center of the

entire length of the airstrip, not one dollar is included in the cost estimates for the relocation of these facilities.

### III. COMMENTS ON EXHIBIT C

This section deals with repayment of the loan.

Usibelli's tipple is so located that he cannot use this spur for several years, at least. Accordingly, no repayment funds for some time will come from Usibelli production.

The proposal notes that the Cripple Creek mine saving by the use of this spur would be 70 cents per ton and that this will be used, less the actual cost of maintenance, to amortize the loan.

As previously pointed out, \$641,588 of the proposed loan can only be used for the benefit of the Cripple Creek mine. At 70 cents a ton, and this allows no money for maintenance) Cripple Creek would have to ship 916,550 tons of coal in order to pay for the bridge and spur alone to be used solely by it.

Overall, in order to pay off a \$1,700,000 loan at 70 cents per ton (and again this ignores any charge for maintenance) some 2,428,500 tons of coal would have to be shipped over this spur. Assuming military demand north of the range were 500,000 tons per year (and it is less than 150,000 tons for fiscal 1955), it would take 5 years to pay out this loan. At that, this assumes all of the military demand being supplied by only the 2 miles which will eventually use the spur. It assumes that both users will pay 70 cents, even though Usibelli will use less than one-third of the trackage. It assumes all proceeds being devoted to repayment of capital costs, with no deduction for maintenance and no deduction for interest. Surely someone will have to pay interest on this loan at least equal to the cost of money to the Federal Government.

The proposal says each user should be able to reduce the price of his product after the spur is paid for. On the repayment schedule set up, it will be a good many years before the Government can look forward to this. Once again, at the most only 2 mines are involved, out of the 4 dependable mines now in the Territory.

Under the proposal freight rates will not be increased unless there is an actual increase in the operating costs to the Alaska Railroad, after the line is paid for and turned over to them, in which case this expense will be passed on to the shipper. Thus, if an abutment goes out on the proposed bridge across the Healy to serve the Cripple Creek mine, Usibelli, as well as Cripple Creek, will pay a freight increase. Coal is sold f. o. b. This gives the Alaska Railroad carte blanche to charge maintenance against Usibelli and Cripple Creek forever. This feature alone, in a river valley where maintenance costs will be significant annually, is enough to make this proposal a highly doubtful business proposition to either of the 2 mines that the spur would serve.

Note should be taken of the statement in Mr. Kalbaugh's letter that "this location (skirting the camp to the right) is not as desirable from our standpoint because of the curvature and the cost of construction." The curvature would be modest compared to that evident on the face of the survey for the trackage leading up to and through the Usibelli fuel dump near the present railhead. But more pertinent to the present discussion is the inference that the cost of construction would be higher. It is our opinion that an estimate of this higher cost of construction must be obtained and made available before the Government agencies involved can make a proper judgment on this proposal.

One final observation on this section: There is not one dime of equity money involved. The Government is to put up all of the money, to be repaid in indefinite amounts for an indefinite period on an indefinite demand for coal.

### IV. GENERAL OBSERVATIONS AND CONCLUSIONS

(a) If this proposal is worthwhile financially and the railroad is necessary now in the interests of national defense, why should not the Alaska Railroad build this spur, as it has, to our knowledge, the rest of the trackage in the Territory. We feel it illusory to say that this would provide a rail line to the Government without cost to it. This proposal in effect builds a floor under coal prices until the loan is paid off. If any resultant saving is to be obtained, it could become immediately available if the Alaska Railroad built the line. There would be no waiting for X years of pay-out period. If this matter can qualify for a defense loan, surely it could be justified and be allotted funds before the Appropriations Committees of Congress.

(b) If coal is what is desired, why should this line be planned so as to cut off the economic development and production potential of the major producer in

Alaska? The U'sibelli plant, conservatively, represents a \$1,500,000 investment. Its present facilities, without the hamstringing this route would impose, can turn out 500,000 tons per year.

(c) What military needs have been demonstrated to justify this proposition? We do not presume to tell the military what steps would most assure availability of coal at points of need in the event of an emergency in Alaska. We do respectfully point out, however, that of the 4 dependable mines, only 1 is in the Anchorage area. The other 3 are within 6 miles of each other, 300 miles distant. If eventual requirements indicate the need for a fifth mine, it would seem that the development of a second dependable producer near Anchorage should be fostered, rather than a new source just 2 miles from the 3 mines now in the northern field.

In summation, we consider the eventual extension of the Suntrana branch of the Alaska Railroad to be desirable. We want to take part in this improvement but say that if it is to be built by Government funds, there must be a demonstrated need, not now apparent; and that whenever and by whomever built, it must not be on a route which will choke off the production potential of our mine. We were not consulted in connection with the proposal now before you. The projected route is totally unacceptable, and even if it were not, we could not use the railroad nor participate in repayment for several years, based on the present demand outlook.

We want the Federal agencies which must pass on this proposal to have this material, and we stand ready to answer any further queries you may have. We greatly appreciate the courtesies extended by officials of your Department and of the Army, Navy, and Air Force in hearing us on this matter.

Respectfully,

WILLIAM I. WAUGAMAN.

#### APPENDIX C

##### STATUTES PERTINENT TO SHALLIT HEARING

I. Section 1 of the Alaska Railroad Act (1912) (38 Stat. 305; 48 U. S. C. A. 301) :

"The President of the United States is empowered, authorized, and directed \* \* \* to designate and cause to be located a route or routes for a line or lines of railroad in the Territory of Alaska \* \* \* to be so located as to connect one or more of the open Pacific Ocean harbors \* \* \* with a coal field or fields so as best to aid in the development of the \* \* \* resources of Alaska, and the settlement of the public lands therein, and so as to provide transportation of coal for the Army and Navy \* \* \*."

II. Section 2, act of May 14, 1898 (30 Stat. 409; 48 U. S. C. 411) grants railroads a right-of-way through lands of the United States in Alaska. Said right-of-way extends 100 feet on each side of the center line of said road. The second proviso states that all mining operations within the limits of such right-of-way shall be under the control of the Secretary of the Interior, and mining operations shall "be so conducted as not to injure or interfere with the property or operations of the road over its said lands or right-of-way."

III. Section 11 of the act of October 20, 1914 (38 Stat. 744; 48 U. S. C. 446) :

"Any lease, entry, location, occupation or use (under the Alaska coal lands laws) shall reserve to the government of the United States the right to grant or use such easements in, over, through, or upon the land \* \* \* as may be necessary or appropriate to the working of the same or other coal lands by or under the authority of the government \* \* \*."

#### APPENDIX D

Subsequent to the hearings the acting chairman of the subcommittee wrote the following letters to the Defense and Interior Departments:

JUNE 24, 1955.

HON. THOMAS P. PIKE,

*Assistant Secretary of Defense,*

*The Pentagon, Washington, D. C.*

DEAR SECRETARY PIKE: My somewhat belated thanks to you and the Department of Defense for the appearance before the Subcommittee on Territories of Col. Darrell G. Welch in our inquiry into the Alaska coal lands situation. Colonel Welch was most cooperative and his testimony is helpful to us.

During the hearing, it was brought out that bids had been submitted just the day before or so for supplies of coal to the military in Alaska. In view of the

interest of the committee in the development of Alaska's resources, and in keeping a competitive situation alive among the coal producers in the Fairbanks area, would you be good enough to inform the subcommittee of the contracts that the Defense Department has awarded, or proposes to award, as a result of the bidding? Also, will you give us your views as to whether such proposed awards will in fact permit the present competitive situation to continue?

Please convey my thanks to Colonel Welch.

Sincerely yours,

ALAN BIBLE,  
*Special Chairman, Territories Subcommittee.*

JUNE 29, 1955.

HON. CLARENCE A. DAVIS,  
*Acting Secretary of the Interior,  
Department of the Interior,  
Washington 25, D. C.*

DEAR SECRETARY DAVIS: Somewhat belatedly, I wish to express my thanks to you and to members of your Department for appearing and testifying before the Subcommittee on Territories on the petition of A. Ben Shallit, Cripple Creek Coal Co., Fairbanks, Alaska, regarding extension of the Alaska Railroad to serve the coal properties in the Healy River Valley. However, I have wanted opportunity to read over the rather extensive record of our hearing and supplementary material.

Your testimony, as well as the testimony of officials of your Department, makes it clear that Railroad access to the Cripple Creek Coal Co. property and to the Roth coal reserve would be deemed warranted were it not for the sharp reduction in anticipated military requirements. I am not convinced that the statute establishing the Alaska Railroad (48 U. S. C., 1955 ed., secs. 301 et. seq.) requires that construction of branch lines be predicated upon whether they will be self-sustaining or self-amortizing. There appears strong legal basis for the position that the primary consideration should be whether a branch line would result in development of the mineral resources of its area.

Be that as it may, it appears to me that the written correspondence from the Alaska Road Commission and the Alaska Railroad to Cripple Creek Coal Co. from 1951 to October 1954, when the railroad right-of-way was withdrawn, was such that Mr. Shallit was fully justified in believing that railroad or highway access would be provided. On the strength of that correspondence which led to the Alaska Railroad filing a right-of-way and making a survey of the proposed line, Cripple Creek Coal Co. proceeded with the development of its coal lease on its understanding that year-round access would be available.

At the hearing the thought was expressed several times that there was no reason why Cripple Creek Coal Co. should not be permitted to use the same all-weather road which is being used by Usibelli Coal Mines, Inc., to truck coal to the railroad siding at Suntrana. This road is a right-of-way across public lands of the United States and as I read section 446 of title 48 United States Code, and related sections, the United States reserves the right in every coal upon the land leased, entered, located, occupied, or used as may be necessary or appropriate to the working of the same or other coal lands by or under authority of the Government and for other purposes \* \* \*." It would appear, therefore, that the Department of the Interior has ample authority to permit Cripple Creek Coal Co. to utilize the existing roads across the Suntrana and Usibelli leases.

Would you be good enough to give me for submission to the committee your views as to what can be done to make all-weather, year-round access available, on a practical basis, to the Cripple Creek mine? In view of the facts stated at the hearing as to the need for Cripple Creek to be able to bid on an all-year basis if it is to share in the market this coming winter and thus maintain the competitive situation which your letter points out is highly desirable, as prompt a reply as possible will be appreciated. Prompt action also will of course be necessary.

Again thank you personally and the Department for your cooperation with the committee in this matter.

Sincerely yours,

ALAN BIBLE,  
*Special Chairman, Territories Committee.*

Alaska? The Usibelli plant, conservatively, represents a \$1,500,000 investment. Its present facilities, without the hamstringing this route would impose, can turn out 500,000 tons per year.

(c) What military needs have been demonstrated to justify this proposition? We do not presume to tell the military what steps would most assure availability of coal at points of need in the event of an emergency in Alaska. We do respectfully point out, however, that of the 4 dependable mines, only 1 is in the Anchorage area. The other 3 are within 6 miles of each other, 300 miles distant. If eventual requirements indicate the need for a fifth mine, it would seem that the development of a second dependable producer near Anchorage should be fostered, rather than a new source just 2 miles from the 3 mines now in the northern field.

In summation, we consider the eventual extension of the Suntrana branch of the Alaska Railroad to be desirable. We want to take part in this improvement but say that if it is to be built by Government funds, there must be a demonstrated need, not now apparent; and that whenever and by whomever built, it must not be on a route which will choke off the production potential of our mine. *Special Chairman, Territories Subcommittee.*

JUNE 29, 1955.

HON. CLARENCE A. DAVIS,

*Acting Secretary of the Interior,*

*Department of the Interior,*

*Washington 25, D. C.*

DEAR SECRETARY DAVIS: Somewhat belatedly, I wish to express my thanks to you and to members of your Department for appearing and testifying before the Subcommittee on Territories on the petition of A. Ben Shallit, Cripple Creek Coal Co., Fairbanks, Alaska, regarding extension of the Alaska Railroad to serve the coal properties in the Healy River Valley. However, I have wanted opportunity to read over the rather extensive record of our hearing and supplementary material.

Your testimony, as well as the testimony of officials of your Department, makes it clear that Railroad access to the Cripple Creek Coal Co. property and to the Roth coal reserve would be deemed warranted were it not for the sharp reduction in anticipated military requirements. I am not convinced that the statute establishing the Alaska Railroad (48 U. S. C., 1955 ed., secs. 301 et. seq.) requires that construction of branch lines be predicated upon whether they will be self-sustaining or self-amortizing. There appears strong legal basis for the position that the primary consideration should be whether a branch line would result in development of the mineral resources of its area.

Be that as it may, it appears to me that the written correspondence from the Alaska Road Commission and the Alaska Railroad to Cripple Creek Coal Co. from 1951 to October 1954, when the railroad right-of-way was withdrawn, was such that Mr. Shallit was fully justified in believing that railroad or highway access would be provided. On the strength of that correspondence which led to the Alaska Railroad filing a right-of-way and making a survey of the proposed line, Cripple Creek Coal Co. proceeded with the development of its coal lease on its understanding that year-round access would be available.

At the hearing the thought was expressed several times that there was no reason why Cripple Creek Coal Co. should not be permitted to use the same all-weather road which is being used by Usibelli Coal Mines, Inc., to truck coal to the railroad siding at Suntrana. This road is a right-of-way across public lands of the United States and as I read section 446 of title 48 United States Code, and related sections, the United States reserves the right in every coal upon the land leased, entered, located, occupied, or used as may be necessary or appropriate to the working of the same or other coal lands by or under authority of the Government and for other purposes \* \* \*." It would appear, therefore, that the Department of the Interior has ample authority to permit Cripple Creek Coal Co. to utilize the existing roads across the Suntrana and Usibelli leases.

Would you be good enough to give me for submission to the committee your views as to what can be done to make all-weather, year-round access available, on a practical basis, to the Cripple Creek mine? In view of the facts stated at the hearing as to the need for Cripple Creek to be able to bid on an all-year basis if it is to share in the market this coming winter and thus maintain the competitive situation which your letter points out is highly desirable, as prompt a reply as possible will be appreciated. Prompt action also will of course be necessary.

Again thank you personally and the Department for your cooperation with the committee in this matter.

Sincerely yours,

ALAN BIBLE,

*Special Chairman, Territories Committee.*

# RED WILLOW DAM, NEBRASKA

WEDNESDAY, JUNE 22, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON IRRIGATION AND RECLAMATION OF  
THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
Washington, D. C.

The subcommittee met at 10:10 a. m., pursuant to call, in room 224, Senate Office Building, Hon. Thomas H. Kuchel, presiding.

Present: Senators Kuchel, California; Millikin, Colorado; and Watkins, Utah; and Anderson, New Mexico.

Also present: Stewart French, chief counsel and staff director; Goodrich W. Lineweaver, Elmer K. Nelson, and Platt Wilson, committee assistants on reclamation; and N. D. McSherry, assistant chief clerk.

Senator KUCHEL. The meeting will come to order.

I have been delegated by Hon. Clinton Anderson, Senator from New Mexico and chairman of the Subcommittee on Irrigation and Reclamation, to act as chairman, by reason of his required attendance at another committee.

Senator ANDERSON. Maybe I just ought to say that you can never tell when the Atomic Energy Commission, these days, is going to have to have a full-scale hearing, and this day is one of them, again.

Senator KUCHEL. With Senator Anderson's permission, I will call the meeting to order.

The first item on the agenda this morning is S. 1195, to authorize construction of Red Willow Dam, Nebr., by the Bureau of Reclamation, instead of by the Corps of Engineers. The bill is offered by Senators Curtis and Hruska of Nebraska. S. 1194 will be inserted in the record at this point.

[S. 1194, 84th Cong., 1st sess.]

A BILL To provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebraska, as a unit of the Missouri River Basin project.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That Red Willow Dam and Reservoir, Nebraska, a unit of the Missouri River Basin project (Act of December 12, 1914, 58 Stat. 887, 891) shall be constructed, operated, and maintained by the Secretary of the Interior for the principal purposes of making available a regulated supply of water for irrigation and of assisting in the control of floods. The Secretary shall cause this unit of the Missouri River Basin project to be coordinated and integrated, physically and financially, with the other Federal works constructed or authorized to be constructed under the comprehensive plans approved by section 9 of the Act of December 12, 1944, aforesaid, as amended, and supplemented.

Senator KUCHEL. Senator Curtis is present. Senator?

**STATEMENT OF HON. CARL T. CURTIS, UNITED STATES SENATOR  
FROM THE STATE OF NEBRASKA**

Senator CURTIS. Mr. Chairman, my appearance here is in behalf of Senator Hruska as well as myself.

The bill that we have introduced does not call for a new authorization. This is not a new project.

The Missouri River development, which proceeded from the Flood Control Act of 1944, called for the development of that river basin by the Army engineers and the Bureau of Reclamation. One of the important tributaries of the Kansas River, which in turn is a tributary of the Missouri River, is the Republican River Basin. That river extends—in fact, the Missouri as well as the Kansas and the Republican—from an arid and semiarid territory down to an area of ample rainfall.

As a result, the many dams to be constructed throughout the entire basin were divided, some of them allocated to the Army and some to the Bureau of Reclamation.

In the Republican River Basin, the Army engineers constructed a project in Harlan County known as the Harlan County Reservoir. Generally speaking, west of that was the jurisdiction of the Bureau of Reclamation. They have already constructed, in that area, the Cambridge Dam, the Enders Dam, the Trenton Dam, and considerable irrigation works in addition to it.

As a matter of practicality, as a matter of convenience, as a matter of economical operation, the Red Willow Dam should be carried forth by the Bureau of Reclamation instead of the Army. It is located just a few miles, probably 15 or 16, from McCook, Nebr., where there is the district headquarters of the Bureau of Reclamation.

The Army agreed to that. We introduced a bill which would in effect transfer Red Willow Dam from the Army to the Bureau.

It is now developed that it will be an exchange of dams. Wilson Dam in the State of Kansas is now authorized to the Bureau, and it is to be transferred to the Army. It is my understanding that all of the interested departments, Interior, the Department of the Army, and the Bureau of the Budget, are agreeable to this bill.

So if the committee will report it favorably—and I urge them to do so—it is suggested that the bill as introduced be taken with the language after the enacting clause being stricken out and the amendments as suggested by the departments inserted; because that makes the complete trade of 1 dam from the Bureau to the Army and 1 from the Army to the Bureau.

I know of no opposition to this from any source.

Senator KUCHEL. Thank you very much, Senator.

Will the representatives of the Bureau of Reclamation discuss the costs involved?

Senator CURTIS. Yes.

Senator KUCHEL. Without objection, the record will remain open throughout tomorrow for receipt from the two Senators from Kansas of any statement which they may care to make in support of your legislation.

Senator CURTIS. Mr. Chairman, there are a lot of very busy people around here, and I have nothing further to state unless there are questions. The Bureau can supply the figures that you're interested in and that I think should be carried in the record.

Senator KUCHEL. Senator Millikin, do you have any questions?

Senator MILLIKIN. I have none.

Senator KUCHEL. The acting chairman is delighted to note the presence of the Commissioner of Reclamation, Mr. W. A. Dexheimer. However, I understand that on this proposed legislation Mr. N. B. Bennett of the Bureau will be the witness.

**STATEMENTS OF NEWCOMB B. BENNETT, CHIEF, PROJECT DEVELOPMENT DIVISION, BUREAU OF RECLAMATION; AND WILBUR A. DEXHEIMER, COMMISSIONER, BUREAU OF RECLAMATION**

Mr. DEXHEIMER. That is correct, Mr. Chairman.

Senator KUCHEL. Mr. Bennett, will you proceed?

Mr. BENNETT. Yes, Mr. Chairman. You have received the letter of June 21, 1955, from Assistant Secretary Aandahl, giving the views of the Department of the Interior on this bill and transmitting with that letter a proposed substitute for S. 1194.

Senator KUCHEL. Which is the proposal that the Senator has offered to the subcommittee.

Mr. BENNETT. Yes, sir; that draft of bill has been approved by the Secretary, and I understand also by the Defense Department, and it has been approved by the Bureau of the Budget.

Red Willow Dam was authorized to the Corps of Engineers in the 1944 Flood Control Act. The original plan called for the construction of a dam which would create about a 46,800 acre-foot reservoir, some 14 miles above the junction of the river.

Continuing investigations by both the Corps and the Bureau of Reclamation in connection with the Frenchman-Cambridge division of the Missouri River Basin project indicate that storage on Red Willow Creek would not only regulate floodwaters rising above the dam site, but could also provide a water supply for irrigation of about 10,000 acres in the Red Willow unit of the Frenchman-Cambridge division.

It is particularly important to note, Mr. Chairman, that the Red Willow Dam, as indicated on that map in gray, is practically in the middle of a system composed of the Medicine Creek Dam, Trenton Dam, and Enders Dam. The lands there in green and in cross-hatched blue are currently under irrigation as a part of the Frenchman-Cambridge division. The land in yellow just below Red Willow Dam cannot receive a water supply for irrigation without construction of Red Willow. The land in blue, under the Barkley Canal, is now receiving a water supply out of the combination of Enders and Trenton. But that is only temporary. As the yellow lands upstream come into development, the Barkley unit must rely upon Red Willow for its water supply. And it is essential that Red Willow be operated in conjunction with the other three reservoirs.

It is estimated that Red Willow will cost somewhere between 7 and 8 million dollars. Detailed investigations have not been completed, so we cannot give you an exact figure, but at the present time it looks like between 7 and 8 million dollars. The Corps of Engineers estimates that the annual flood-control benefits will be \$176,000. We have not yet been able to estimate the irrigation benefits, although there are some 6,000 acres remaining there not yet irrigated.

A good part of the lands to be irrigated are already included within the Frenchman-Cambridge Irrigation District, although they are not within the present repayment contract with that district.

Senator KUCHEL. Is it contemplated that they will be?

Mr. BENNETT. We will have to have a contract with the district before we can serve them with water.

Senator KUCHEL. Proceed.

Mr. BENNETT. Wilson Dam, which is not indicated on that particular map, but is on the small one which you have before you, was authorized for construction by the Bureau of Reclamation in the same Flood Control Act of 1944. It is in central Kansas on the Saline River.

At the present time, it looks like the dam would form a reservoir of about 559,000 acre-feet, the major part of which would be devoted to flood control. The Corps estimates there that the flood-control benefits would be approximately \$800,000 a year.

The cost of the structure would be approximately \$15 million.

We had originally contemplated irrigating about 18,000 acres near Salina, Kans., but our detailed investigations cut that to approximately 2,200. Therefore, the flood-control aspects became paramount in that reservoir.

There is some possibility of irrigating about 20,000 acres in the St. George unit downstream, but that is by no means firm at this time.

It is because of these two factors that it is believed advisable that the authorizations on these two reservoirs be switched.

I have no further direct testimony, Mr. Chairman. If you have any questions, we will be happy to try to answer them.

Mr. LINEWEAVER. Mr. Chairman, let me say that I have not yet been able to get in touch with Senator Schoeppel as to whether he has been advised of the proposal to switch the authorization of Wilson Dam in Kansas from the Bureau of Reclamation to the Corps of Engineers, but Senator Carlson's office indicated that there was no opposition. I will notify Senator Schoeppel.

Senator KUCHEL. We have here a question of jurisdiction which the bill contemplates correcting, and in which both the Department of the Interior and the Department of the Army join.

Mr. LINEWEAVER. I also want to say, Mr. Chairman, that I advised the Public Works Committee, which is the successor to the Senate committee that reported out the Flood Control Act of 1944, of this hearing this morning and of this bill, so that there would not be any question of committee jurisdiction.

Senator KUCHEL. I am glad you did that, Goodrich. There will not be, and should not be, any conflict under that state of the record.

The acting chairman will insert in the record the letter from the Department of Interior from Hon. Fred Aandahl and the letter from Hon. Robert T. Stevens, Secretary of the Army, both in support of the proposed language which Senator Curtis previously introduced, and the letter from the Bureau of the Budget. The proposed language will also appear in the record at this point.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington 25, D. C.

MY DEAR SENATOR MURRAY: A report from this Department has been requested on S. 1194, a bill to provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebr., as a unit of the Missouri River Basin project.

Construction of Red Willow Dam and Reservoir was proposed by the Corps of Engineers in House Document No. 475, 78th Congress, and was authorized by the Flood Control Act of 1944. The original plan called for the construction of a dam that would create a 46,800-acre-foot reservoir on Red Willow Creek about 14.5 miles above its junction with the Republican River in Nebraska. Continuing investigations by both the Corps of Engineers and the Bureau of Reclamation in connection with the Frenchman-Cambridge division of the Missouri River Basin project indicate that storage on Red Willow Creek would not only regulate floodwaters rising above the dam site but could also provide a water supply for irrigation of about 10,000 acres in the Red Willow unit of the Frenchman-Cambridge division. Although about 6,000 of these acres are now being served on a temporary basis through facilities of the Frenchman-Cambridge division, permanent service to these lands and to the remainder of the area requires storage on Red Willow Creek and the construction of the other facilities mentioned below. Minor changes in the proposed storage capacity of Red Willow Dam and changes in its estimated cost since the project was authorized result in a need for reappraisal before construction.

In order to make full use of the irrigation water supplies that would be made available by construction of Red Willow Dam, additional facilities, such as the diversion dams, canals, and distribution and drainage works contemplated for the Bureau of Reclamation's Red Willow unit, would be required. It is believed that the construction and operation of Red Willow Dam and Reservoir should be coordinated with that of these closely affiliated facilities and that this can best be accomplished by assigning responsibility therefor to the Department as proposed in S. 1194.

Construction responsibility for the Red Willow Dam was originally assigned to the Corps of Engineers on the theory that the primary purpose of the dam was flood control. The primary justification for its construction must still be based on flood control, but the need for regulation of streamflow for irrigation and the need for coordination of its operation with that of the other features of the Frenchman-Cambridge division make it necessary that normal operation of the dam be for irrigation.

A somewhat analogous situation has developed in connection with Wilson Dam, which was authorized for construction by the Bureau of Reclamation on Smoky Hill River in central Kansas. In this case detailed investigations have revealed that a smaller acreage of land than was originally anticipated is actually suited for irrigation development. At the same time, it has been found that a reservoir at the Wilson site would be valuable for flood-control purposes. Representatives of the Department of the Interior and the Department of the Army have discussed the possibility of exchanging construction responsibilities on Red Willow and Wilson Dams. A draft of a bill in the nature of a substitute for S. 1194 which both agencies feel will serve the desired purposes has been prepared. This draft is enclosed for your consideration, and we recommend its enactment.

The Bureau of Reclamation has not yet calculated the costs and benefits involved in construction of the Red Willow unit but, based upon recently revised figures furnished by the Corps of Engineers and statements concerning the economic feasibility of the unit made by representatives of the Chief of Engineers, we have reason to believe that the unit may be economically justified.

The Bureau of the Budget has advised that there would be no objection to the submission of this report to your committee.

Sincerely yours,

FRED G. AANDAHL,  
Assistant Secretary of the Interior.

DEPARTMENT OF THE ARMY,  
Washington 25, D. C.

HON. JAMES E. MURRAY,  
Chairman, Committee on Interior and Insular Affairs,  
United States Senate.

DEAR MR. CHAIRMAN: Reference is made to the request of the acting chairman of the committee for the views of the Department of the Army with respect to S. 1194, 84th Congress, a bill to provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebr., as a unit of the Missouri River Basin project.

The Department of the Army has considered the above-mentioned bill, the purpose of which is stated sufficiently in its title.

The Red Willow Reservoir, to be located on a tributary of the Republican River, was authorized by the Flood Control Act approved December 22, 1944, as a Corps of Engineers project in the comprehensive plan for the development of the Missouri River Basin. As presently planned, the reservoir would have a total capacity of approximately 51,500 acre-feet, of which 25,000 would be allocated to flood control with the remainder available for irrigation and sedimentation storage.

The Corps of Engineers has had under discussion with the Bureau of Reclamation the desirability of a change in authorization whereby the Bureau of Reclamation would undertake construction of Red Willow Reservoir. This transfer would appear appropriate in view of the current local desire in the area for irrigation and in view of the relatively small flood-control storage involved. These same discussions have pointed to the desirability of the corps having authority to construct Wilson Reservoir on the Saline River, now under the jurisdiction of the Bureau of Reclamation. This latter reservoir, as presently visualized by the Bureau of Reclamation, would have a total capacity of 559,000 acre-feet, of which 315,000 acre-feet would be allocated to flood control. The Saline River is a major flood contributor to the Kansas River and there is no other reservoir having a large-scale flood-control potential, existing or authorized, for this stream.

In view of the foregoing, the Department of the Army recommends that S. 1194 be modified to provide both for the transfer of authorization of Red Willow Reservoir and for the transfer of Wilson Reservoir. Substitute language to accomplish this purpose is attached. The Department of the Army recommends adoption of the modified bill.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

ROBERT T. STEVENS,  
Secretary of the Army.

A BILL To provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebraska, and construction by the Secretary of the Army of the Wilson Dam and Reservoir, Kansas, as units of the Missouri River Basin project

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Red Willow Dam and Reservoir, Nebraska, a unit of the Missouri River Basin project (Act of December 22, 1944, 58 Stat. 887, 891) shall be constructed, operated, and maintained by the Secretary of the Interior for the principal purposes of making available a regulated supply of water for irrigation and of assisting the control of floods.

SEC. 2. The Wilson Dam and Reservoir, Kansas, also a unit of the Missouri River Basin project (Act of December 22, 1944, aforesaid) shall be constructed, operated, and maintained by the Secretary of the Army for the principal purposes of flood control and assisting in making available a regulated supply of water for irrigation and low flow regulation.

SEC. 3. Both the Secretary of the Interior and the Secretary of the Army shall cause these units of the Missouri River Basin project to be coordinated and integrated physically and financially, with the other Federal works constructed or authorized to be constructed under the comprehensive plans approved by section 9 of the Act of December 22, 1944, aforesaid, as amended and supplemented.

SEC. 4. Notwithstanding any other provisions of this Act, the Secretary of the Army shall, in the case of the Red Willow Dam and Reservoir, be responsible for flood-control regulation as provided in section 7 of the Act of December 22, 1944, and the Secretary of the Interior shall, in the case of Wilson Dam and Reservoir, be responsible for the disposal of water for irrigation or space reserved for this purpose in accordance with the Federal reclamation laws.

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington 25, D. C., June 21, 1955.

Hon. JAMES E. MURRAY,  
Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington, D. C.

MY DEAR MR. CHAIRMAN: This will acknowledge your request of February 25, 1955, for the views of this office on S. 1194, a bill to provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebr., as a unit of the Missouri River Basin project.

This bill, if enacted, would have the effect of transferring from the Department of the Army to the Department of the Interior the former's existing authority to construct Red Willow Dam. It is our understanding that such a transfer would not change the purpose of the project as authorized by the Flood Control Act of 1944 (58 stat. 887-891).

The Department of the Army, in a report which it proposes to submit to your committee on this bill, recommends its modification to provide also for the transfer of authorization of Wilson Reservoir to the Corps of Engineers. The Department of the Interior likewise recommends this modification.

Accordingly, there would be no objection to enactment of S. 1194 with the modification recommended by the Department of the Army and concurred in by the Department of the Interior.

Sincerely yours,

DONALD R. BELCHER, Assistant Director.

Senator KUCHEL. Mr. Page, will you proceed?

**STATEMENT OF CARTER PAGE, CORPS OF ENGINEERS,  
DEPARTMENT OF THE ARMY**

MR. PAGE. Mr. Chairman, there is very little more that I can add.

My name is Carter Page. I am Chief of the Planning Division, Civil Works, Office of the Chief of Engineers.

There is very little I can add to what Mr. Bennett has said. We are in complete agreement with this. We feel, as he has pointed out, that the Wilson Reservoir would be a useful part of our flood-control plan for the Kansas. It is on the Saline River and is the only dam available to control that stream.

So we concur in the proposed trade.

Senator KUCHEL. Any questions, Senator Millikin?

Senator MILLIKIN. Does this involve any interstate questions?

Mr. BENNETT. No, sir.

Senator MILLIKIN. Is it necessary to consult with any other States?

Mr. DEXHEIMER. No, sir. If the Kansas congressional delegation is agreeable to the change—and I have no reason to believe that they would not be—there is no question of interstate waters, or interstate problems involved in this, as I understand it, at all. It is just a question of who builds these reservoirs.

Mr. Chairman, I think it would be appropriate at this point, if we could do so, to ask the Army representatives if they concur in the general estimated cost and flood-control benefits that we have used.

Mr. PAGE. Yes, I think we do, Mr. Dexheimer. You presented the flood-control benefits, and we estimated, ourselves, I believe, and the cost estimate presented by Mr. Bennett was also prepared by us.

Mr. DEXHEIMER. I wanted that particularly, Mr. Chairman, because we have not had a chance to study the costs or the flood-control or irrigation benefits up to this time.

Senator KUCHEL. On Red Willow?

Mr. DEXHEIMER. Yes. Because we did not have authority to do so.

Mr. LINEWEAVER. Mr. Chairman, at the suggestion of Senator Anderson, last Friday afternoon Senator Millikin presided at a hearing on the Ainsworth project, and at that time the question was brought up as to the participation of irrigation units like Ainsworth and Red Willow in Nebraska in the Missouri River Basin power revenues beyond the ability of water users to repay and outside of flood-control benefits. The Ainsworth report has this paragraph, which would be applicable to these two units also, especially the unit being transferred to the Bureau of Reclamation:

The Ainsworth unit is an integral component of the comprehensive Missouri River Basin project. A pay-out analysis of the Missouri River Basin project as a whole discloses that there are sufficient basinwide net revenues to pay all the reimbursable costs, including those of the Ainsworth unit, in a period of time well within the useful life of the works.

I make this statement, Mr. Chairman, for this reason. At the hearings of the House Public Works Appropriation Subcommittee, in their report, members raised questions about initiating any other new construction in the Missouri Basin until this pay-out analysis was available. The House, however, overruled the Appropriations Committee and reinstated the funds, and the language. However, it was the view that the Bureau or the Department should use their influence to get this report released. And in order to protect the agencies in appearing before the Appropriations Committee in the future, and also this committee, with respect to the feasibility of these projects from a financial standpoint, it was urged that the Department of the Interior use its influence to complete this analysis at as early a date as possible, so that there would not be these recurring questions with the appropriations and legislative committees. And members of this committee have indicated they want to know more about the financial analysis and the power revenue pay-out on the Missouri Basin.

You understand that a substantial amount of the irrigation cost will be repaid by power revenues from the entire Missouri River Basin power system. And therefore, although there is no power or very little in Nebraska, and none in Kansas, yet these irrigation projects down there share in overall net revenues from the power system.

Mr. DEXHEIMER. Mr. Chairman, I might clarify that a little bit. We have been making a concerted effort to analyze the Missouri River Basin project and possible additions to it that we can foresee in the reasonably near future. And that analysis, while it is not completed nor approved at this time, and we are not ready yet to make it an official document, does very definitely show that there will be sufficient power revenues from the Missouri River Basin project to carry the cost that is not repaid by water users in this development of irrigation projects, including the Ainsworth and the Red Willow, and any others that are now authorized and foreseeable in the next 20 or 25 years without the necessity for raising the cost of power sold from those projects. And we do feel that the question that has been raised is premature; that there are plenty of revenues available for supporting these additional projects. And this reanalysis of the Missouri River Basin project has been done in line with the agreement made between the various executive agencies of the Government concerned with water and power development, so that it will be consistent throughout the various agencies as to how we allocate costs and analyze the benefits, and so on.

Senator KUCHEL. Are you able to make any comment on the basis of the Department's knowledge and information on the rates in the area, Commissioner?

Mr. DEXHEIMER. Nothing further, Mr. Chairman, other than that the rates at which we now are marketing the power in the Missouri River Basin will be sufficient not only to pay back the power investment with interest, but to assist in the repayment of the irrigation investment for all of the projects we are recommending and for a good many more in the future.

Mr. LINEWEAVER. Does that mean the 5.5 mill rate will be maintained?

Mr. DEXHEIMER. Without any change.

Mr. LINEWEAVER. That was an interim rate, as you know.

Mr. DEXHEIMER. Yes. It won't be necessary, as we see it, to change that rate if our analysis is finally approved in the way we are presently working it out.

Senator KUCHEL. Senator Millikin, any questions?

Senator MILLIKIN. No questions, thank you.

Senator KUCHEL. Unless there is anything further on the bill offered by the two Senators from Nebraska, the hearing on it will be closed, subject to the Chair's earlier announcement that any statements which either or both of the Senators from Kansas desire to make will be received today or tomorrow.

(Mr. Lineweaver subsequently advised the committee that Senators Schoepfel and Carlson of Kansas, had been advised of the pending bills and reports. Neither had any objection to the construction of Wilson Dam by the Corps of Engineers.)

(Whereupon, at 10:44 a. m., the hearing was adjourned.)

# RED WILLOW DAM, NEBRASKA

WEDNESDAY, JUNE 22, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON IRRIGATION AND RECLAMATION OF  
THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The subcommittee met at 10:10 a. m., pursuant to call, in room 224, Senate Office Building. Hon. Thomas H. Kuchel, presiding.

Present: Senators Kuchel, California; Millikin, Colorado; and Watkins, Utah; and Anderson, New Mexico.

Also present: Stewart French, chief counsel and staff director; Goodrich W. Lineweaver, Elmer K. Nelson, and Platt Wilson, committee assistants on reclamation; and N. D. McSherry, assistant chief clerk.

Senator KUCHEL. The meeting will come to order.

I have been delegated by Hon. Clinton Anderson, Senator from New Mexico and chairman of the Subcommittee on Irrigation and Reclamation, to act as chairman, by reason of his required attendance at another committee.

Senator ANDERSON. Maybe I just ought to say that you can never tell when the Atomic Energy Commission, these days, is going to have to have a full-scale hearing, and this day is one of them, again.

Senator KUCHEL. With Senator Anderson's permission, I will call the meeting to order.

The first item on the agenda this morning is S. 1195, to authorize construction of Red Willow Dam, Nebr., by the Bureau of Reclamation, instead of by the Corps of Engineers. The bill is offered by Senators Curtis and Hruska of Nebraska. S. 1194 will be inserted in the record at this point.

[S. 1194, 84th Cong., 1st sess.]

A BILL To provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebraska, as a unit of the Missouri River Basin project.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Red Willow Dam and Reservoir, Nebraska, a unit of the Missouri River Basin project (Act of December 12, 1944, 58 Stat. 887, 891) shall be constructed, operated, and maintained by the Secretary of the Interior for the principal purposes of making available a regulated supply of water for irrigation and of assisting in the control of floods. The Secretary shall cause this unit of the Missouri River Basin project to be coordinated and integrated, physically and financially, with the other Federal works constructed or authorized to be constructed under the comprehensive plans approved by section 9 of the Act of December 12, 1944, aforesaid, as amended, and supplemented.*

Senator KUCHEL. Senator Curtis is present. Senator?

**STATEMENT OF HON. CARL T. CURTIS, UNITED STATES SENATOR  
FROM THE STATE OF NEBRASKA**

Senator CURTIS. Mr. Chairman, my appearance here is in behalf of Senator Hruska as well as myself.

The bill that we have introduced does not call for a new authorization. This is not a new project.

The Missouri River development, which proceeded from the Flood Control Act of 1944, called for the development of that river basin by the Army engineers and the Bureau of Reclamation. One of the important tributaries of the Kansas River, which in turn is a tributary of the Missouri River, is the Republican River Basin. That river extends—in fact, the Missouri as well as the Kansas and the Republican—from an arid and semiarid territory down to an area of ample rainfall.

As a result, the many dams to be constructed throughout the entire basin were divided, some of them allocated to the Army and some to the Bureau of Reclamation.

In the Republican River Basin, the Army engineers constructed a project in Harlan County known as the Harlan County Reservoir. Generally speaking, west of that was the jurisdiction of the Bureau of Reclamation. They have already constructed, in that area, the Cambridge Dam, the Enders Dam, the Trenton Dam, and considerable irrigation works in addition to it.

As a matter of practicality, as a matter of convenience, as a matter of economical operation, the Red Willow Dam should be carried forth by the Bureau of Reclamation instead of the Army. It is located just a few miles, probably 15 or 16, from McCook, Nebr., where there is the district headquarters of the Bureau of Reclamation.

The Army agreed to that. We introduced a bill which would in effect transfer Red Willow Dam from the Army to the Bureau.

It is now developed that it will be an exchange of dams. Wilson Dam in the State of Kansas is now authorized to the Bureau, and it is to be transferred to the Army. It is my understanding that all of the interested departments, Interior, the Department of the Army, and the Bureau of the Budget, are agreeable to this bill.

So if the committee will report it favorably—and I urge them to do so—it is suggested that the bill as introduced be taken with the language after the enacting clause being stricken out and the amendments as suggested by the departments inserted; because that makes the complete trade of 1 dam from the Bureau to the Army and 1 from the Army to the Bureau.

I know of no opposition to this from any source.

Senator KUCHEL. Thank you very much, Senator.

Will the representatives of the Bureau of Reclamation discuss the costs involved?

Senator CURTIS. Yes.

Senator KUCHEL. Without objection, the record will remain open throughout tomorrow for receipt from the two Senators from Kansas of any statement which they may care to make in support of your legislation.

Senator CURTIS. Mr. Chairman, there are a lot of very busy people around here, and I have nothing further to state unless there are questions. The Bureau can supply the figures that you're interested in and that I think should be carried in the record.

Senator KUCHEL. Senator Millikin, do you have any questions?

Senator MILLIKIN. I have none.

Senator KUCHEL. The acting chairman is delighted to note the presence of the Commissioner of Reclamation, Mr. W. A. Dexheimer. However, I understand that on this proposed legislation Mr. N. B. Bennett of the Bureau will be the witness.

**STATEMENTS OF NEWCOMB B. BENNETT, CHIEF, PROJECT DEVELOPMENT DIVISION, BUREAU OF RECLAMATION; AND WILBUR A. DEXHEIMER, COMMISSIONER, BUREAU OF RECLAMATION**

Mr. DEXHEIMER. That is correct, Mr. Chairman.

Senator KUCHEL. Mr. Bennett, will you proceed?

Mr. BENNETT. Yes, Mr. Chairman. You have received the letter of June 21, 1955, from Assistant Secretary Aandahl, giving the views of the Department of the Interior on this bill and transmitting with that letter a proposed substitute for S. 1194.

Senator KUCHEL. Which is the proposal that the Senator has offered to the subcommittee.

Mr. BENNETT. Yes, sir; that draft of bill has been approved by the Secretary, and I understand also by the Defense Department, and it has been approved by the Bureau of the Budget.

Red Willow Dam was authorized to the Corps of Engineers in the 1944 Flood Control Act. The original plan called for the construction of a dam which would create about a 46,800 acre-foot reservoir, some 14 miles above the junction of the river.

Continuing investigations by both the Corps and the Bureau of Reclamation in connection with the Frenchman-Cambridge division of the Missouri River Basin project indicate that storage on Red Willow Creek would not only regulate floodwaters rising above the dam site, but could also provide a water supply for irrigation of about 10,000 acres in the Red Willow unit of the Frenchman-Cambridge division.

It is particularly important to note, Mr. Chairman, that the Red Willow Dam, as indicated on that map in gray, is practically in the middle of a system composed of the Medicine Creek Dam, Trenton Dam, and Enders Dam. The lands there in green and in cross-hatched blue are currently under irrigation as a part of the Frenchman-Cambridge division. The land in yellow just below Red Willow Dam cannot receive a water supply for irrigation without construction of Red Willow. The land in blue, under the Barkley Canal, is now receiving a water supply out of the combination of Enders and Trenton. But that is only temporary. As the yellow lands upstream come into development, the Barkley unit must rely upon Red Willow for its water supply. And it is essential that Red Willow be operated in conjunction with the other three reservoirs.

It is estimated that Red Willow will cost somewhere between 7 and 8 million dollars. Detailed investigations have not been completed, so we cannot give you an exact figure, but at the present time it looks like between 7 and 8 million dollars. The Corps of Engineers estimates that the annual flood-control benefits will be \$176,000. We have not yet been able to estimate the irrigation benefits, although there are some 6,000 acres remaining there not yet irrigated.

A good part of the lands to be irrigated are already included within the Frenchman-Cambridge Irrigation District, although they are not within the present repayment contract with that district.

Senator KUCHEL. Is it contemplated that they will be?

Mr. BENNETT. We will have to have a contract with the district before we can serve them with water.

Senator KUCHEL. Proceed.

Mr. BENNETT. Wilson Dam, which is not indicated on that particular map, but is on the small one which you have before you, was authorized for construction by the Bureau of Reclamation in the same Flood Control Act of 1944. It is in central Kansas on the Saline River.

At the present time, it looks like the dam would form a reservoir of about 559,000 acre-feet, the major part of which would be devoted to flood control. The Corps estimates there that the flood-control benefits would be approximately \$800,000 a year.

The cost of the structure would be approximately \$15 million.

We had originally contemplated irrigating about 18,000 acres near Salina, Kans., but our detailed investigations cut that to approximately 2,200. Therefore, the flood-control aspects became paramount in that reservoir.

There is some possibility of irrigating about 20,000 acres in the St. George unit downstream, but that is by no means firm at this time.

It is because of these two factors that it is believed advisable that the authorizations on these two reservoirs be switched.

I have no further direct testimony, Mr. Chairman. If you have any questions, we will be happy to try to answer them.

Mr. LINEWEAVER. Mr. Chairman, let me say that I have not yet been able to get in touch with Senator Schoeppel as to whether he has been advised of the proposal to switch the authorization of Wilson Dam in Kansas from the Bureau of Reclamation to the Corps of Engineers, but Senator Carlson's office indicated that there was no opposition. I will notify Senator Schoeppel.

Senator KUCHEL. We have here a question of jurisdiction which the bill contemplates correcting, and in which both the Department of the Interior and the Department of the Army join.

Mr. LINEWEAVER. I also want to say, Mr. Chairman, that I advised the Public Works Committee, which is the successor to the Senate committee that reported out the Flood Control Act of 1944, of this hearing this morning and of this bill, so that there would not be any question of committee jurisdiction.

Senator KUCHEL. I am glad you did that, Goodrich. There will not be, and should not be, any conflict under that state of the record.

The acting chairman will insert in the record the letter from the Department of Interior from Hon. Fred Aandahl and the letter from Hon. Robert T. Stevens, Secretary of the Army, both in support of the proposed language which Senator Curtis previously introduced, and the letter from the Bureau of the Budget. The proposed language will also appear in the record at this point.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
*Washington 25, D. C.*

MY DEAR SENATOR MURRAY: A report from this Department has been requested on S. 1194, a bill to provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebr., as a unit of the Missouri River Basin project.

Construction of Red Willow Dam and Reservoir was proposed by the Corps of Engineers in House Document No. 475, 78th Congress, and was authorized by the Flood Control Act of 1944. The original plan called for the construction of a dam that would create a 46,800-acre-foot reservoir on Red Willow Creek about 14.5 miles above its junction with the Republican River in Nebraska. Continuing investigations by both the Corps of Engineers and the Bureau of Reclamation in connection with the Frenchman-Cambridge division of the Missouri River Basin project indicate that storage on Red Willow Creek would not only regulate floodwaters rising above the dam site but could also provide a water supply for irrigation of about 10,000 acres in the Red Willow unit of the Frenchman-Cambridge division. Although about 6,000 of these acres are now being served on a temporary basis through facilities of the Frenchman-Cambridge division, permanent service to these lands and to the remainder of the area requires storage on Red Willow Creek and the construction of the other facilities mentioned below. Minor changes in the proposed storage capacity of Red Willow Dam and changes in its estimated cost since the project was authorized result in a need for reappraisal before construction.

In order to make full use of the irrigation water supplies that would be made available by construction of Red Willow Dam, additional facilities, such as the diversion dams, canals, and distribution and drainage works contemplated for the Bureau of Reclamation's Red Willow unit, would be required. It is believed that the construction and operation of Red Willow Dam and Reservoir should be coordinated with that of these closely affiliated facilities and that this can best be accomplished by assigning responsibility therefor to the Department as proposed in S. 1194.

Construction responsibility for the Red Willow Dam was originally assigned to the Corps of Engineers on the theory that the primary purpose of the dam was flood control. The primary justification for its construction must still be based on flood control, but the need for regulation of streamflow for irrigation and the need for coordination of its operation with that of the other features of the Frenchman-Cambridge division make it necessary that normal operation of the dam be for irrigation.

A somewhat analogous situation has developed in connection with Wilson Dam, which was authorized for construction by the Bureau of Reclamation on Smoky Hill River in central Kansas. In this case detailed investigations have revealed that a smaller acreage of land than was originally anticipated is actually suited for irrigation development. At the same time, it has been found that a reservoir at the Wilson site would be valuable for flood-control purposes. Representatives of the Department of the Interior and the Department of the Army have discussed the possibility of exchanging construction responsibilities on Red Willow and Wilson Dams. A draft of a bill in the nature of a substitute for S. 1194 which both agencies feel will serve the desired purposes has been prepared. This draft is enclosed for your consideration, and we recommend its enactment.

The Bureau of Reclamation has not yet calculated the costs and benefits involved in construction of the Red Willow unit but, based upon recently revised figures furnished by the Corps of Engineers and statements concerning the economic feasibility of the unit made by representatives of the Chief of Engineers, we have reason to believe that the unit may be economically justified.

The Bureau of the Budget has advised that there would be no objection to the submission of this report to your committee.

Sincerely yours,

FRED G. AANDAHL,  
*Assistant Secretary of the Interior.*

DEPARTMENT OF THE ARMY,  
Washington 25, D. C.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate.*

DEAR MR. CHAIRMAN: Reference is made to the request of the acting chairman of the committee for the views of the Department of the Army with respect to S. 1194, 84th Congress, a bill to provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebr., as a unit of the Missouri River Basin project.

The Department of the Army has considered the above-mentioned bill, the purpose of which is stated sufficiently in its title.

The Red Willow Reservoir, to be located on a tributary of the Republican River, was authorized by the Flood Control Act approved December 22, 1944, as a Corps of Engineers project in the comprehensive plan for the development of the Missouri River Basin. As presently planned, the reservoir would have a total capacity of approximately 51,500 acre-feet, of which 25,000 would be allocated to flood control with the remainder available for irrigation and sedimentation storage.

The Corps of Engineers has had under discussion with the Bureau of Reclamation the desirability of a change in authorization whereby the Bureau of Reclamation would undertake construction of Red Willow Reservoir. This transfer would appear appropriate in view of the current local desire in the area for irrigation and in view of the relatively small flood-control storage involved. These same discussions have pointed to the desirability of the corps having authority to construct Wilson Reservoir on the Saline River, now under the jurisdiction of the Bureau of Reclamation. This latter reservoir, as presently visualized by the Bureau of Reclamation, would have a total capacity of 559,000 acre-feet, of which 315,000 acre-feet would be allocated to flood control. The Saline River is a major flood contributor to the Kansas River and there is no other reservoir having a large-scale flood-control potential, existing or authorized, for this stream.

In view of the foregoing, the Department of the Army recommends that S. 1194 be modified to provide both for the transfer of authorization of Red Willow Reservoir and for the transfer of Wilson Reservoir. Substitute language to accomplish this purpose is attached. The Department of the Army recommends adoption of the modified bill.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

ROBERT T. STEVENS,  
*Secretary of the Army.*

A BILL To provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebraska, and construction by the Secretary of the Army of the Wilson Dam and Reservoir, Kansas, as units of the Missouri River Basin project

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Red Willow Dam and Reservoir, Nebraska, a unit of the Missouri River Basin project (Act of December 22, 1944, 58 Stat. 887, 891) shall be constructed, operated, and maintained by the Secretary of the Interior for the principal purposes of making available a regulated supply of water for irrigation and of assisting the control of floods.*

SEC. 2. The Wilson Dam and Reservoir, Kansas, also a unit of the Missouri River Basin project (Act of December 22, 1944, aforesaid) shall be constructed, operated, and maintained by the Secretary of the Army for the principal purposes of flood control and assisting in making available a regulated supply of water for irrigation and low flow regulation.

SEC. 3. Both the Secretary of the Interior and the Secretary of the Army shall cause these units of the Missouri River Basin project to be coordinated and integrated physically and financially, with the other Federal works constructed or authorized to be constructed under the comprehensive plans approved by section 9 of the Act of December 22, 1944, aforesaid, as amended and supplemented.

SEC. 4. Notwithstanding any other provisions of this Act, the Secretary of the Army shall, in the case of the Red Willow Dam and Reservoir, be responsible for flood-control regulation as provided in section 7 of the Act of December 22, 1944, and the Secretary of the Interior shall, in the case of Wilson Dam and Reservoir, be responsible for the disposal of water for irrigation or space reserved for this purpose in accordance with the Federal reclamation laws.

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington 25, D. C., June 21, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington, D. C.*

MY DEAR MR. CHAIRMAN: This will acknowledge your request of February 25, 1955, for the views of this office on S. 1194, a bill to provide for construction by the Secretary of the Interior of Red Willow Dam and Reservoir, Nebr., as a unit of the Missouri River Basin project.

This bill, if enacted, would have the effect of transferring from the Department of the Army to the Department of the Interior the former's existing authority to construct Red Willow Dam. It is our understanding that such a transfer would not change the purpose of the project as authorized by the Flood Control Act of 1944 (58 stat. 887-891).

The Department of the Army, in a report which it proposes to submit to your committee on this bill, recommends its modification to provide also for the transfer of authorization of Wilson Reservoir to the Corps of Engineers. The Department of the Interior likewise recommends this modification.

Accordingly, there would be no objection to enactment of S. 1194 with the modification recommended by the Department of the Army and concurred in by the Department of the Interior.

Sincerely yours,

DONALD R. BELCHER, *Assistant Director.*

Senator KUCHEL. Mr. Page, will you proceed?

**STATEMENT OF CARTER PAGE, CORPS OF ENGINEERS,  
DEPARTMENT OF THE ARMY**

MR. PAGE. Mr. Chairman, there is very little more that I can add.

My name is Carter Page. I am Chief of the Planning Division, Civil Works, Office of the Chief of Engineers.

There is very little I can add to what Mr. Bennett has said. We are in complete agreement with this. We feel, as he has pointed out, that the Wilson Reservoir would be a useful part of our flood-control plan for the Kansas. It is on the Saline River and is the only dam available to control that stream.

So we concur in the proposed trade.

Senator KUCHEL. Any questions, Senator Millikin?

Senator MILLIKIN. Does this involve any interstate questions?

MR. BENNETT. No, sir.

Senator MILLIKIN. Is it necessary to consult with any other States?

MR. DEXHEIMER. No, sir. If the Kansas congressional delegation is agreeable to the change—and I have no reason to believe that they would not be—there is no question of interstate waters, or interstate problems involved in this, as I understand it, at all. It is just a question of who builds these reservoirs.

MR. CHAIRMAN, I think it would be appropriate at this point, if we could do so, to ask the Army representatives if they concur in the general estimated cost and flood-control benefits that we have used.

MR. PAGE. Yes, I think we do, Mr. Dexheimer. You presented the flood-control benefits, and we estimated, ourselves, I believe, and the cost estimate presented by Mr. Bennett was also prepared by us.

MR. DEXHEIMER. I wanted that particularly, Mr. Chairman, because we have not had a chance to study the costs or the flood-control or irrigation benefits up to this time.

Senator KUCHEL. On Red Willow?

MR. DEXHEIMER. Yes. Because we did not have authority to do so.

Mr. LINEWEAVER. Mr. Chairman, at the suggestion of Senator Anderson, last Friday afternoon Senator Millikin presided at a hearing on the Ainsworth project, and at that time the question was brought up as to the participation of irrigation units like Ainsworth and Red Willow in Nebraska in the Missouri River Basin power revenues beyond the ability of water users to repay and outside of flood-control benefits. The Ainsworth report has this paragraph, which would be applicable to these two units also, especially the unit being transferred to the Bureau of Reclamation:

The Ainsworth unit is an integral component of the comprehensive Missouri River Basin project. A pay-out analysis of the Missouri River Basin project as a whole discloses that there are sufficient basinwide net revenues to pay all the reimbursable costs, including those of the Ainsworth unit, in a period of time well within the useful life of the works.

I make this statement, Mr. Chairman, for this reason. At the hearings of the House Public Works Appropriation Subcommittee, in their report, members raised questions about initiating any other new construction in the Missouri Basin until this pay-out analysis was available. The House, however, overruled the Appropriations Committee and reinstated the funds, and the language. However, it was the view that the Bureau or the Department should use their influence to get this report released. And in order to protect the agencies in appearing before the Appropriations Committee in the future, and also this committee, with respect to the feasibility of these projects from a financial standpoint, it was urged that the Department of the Interior use its influence to complete this analysis at as early a date as possible, so that there would not be these recurring questions with the appropriations and legislative committees. And members of this committee have indicated they want to know more about the financial analysis and the power revenue pay-out on the Missouri Basin.

You understand that a substantial amount of the irrigation cost will be repaid by power revenues from the entire Missouri River Basin power system. And therefore, although there is no power or very little in Nebraska, and none in Kansas, yet these irrigation projects down there share in overall net revenues from the power system.

Mr. DEXHEIMER. Mr. Chairman, I might clarify that a little bit. We have been making a concerted effort to analyze the Missouri River Basin project and possible additions to it that we can foresee in the reasonably near future. And that analysis, while it is not completed nor approved at this time, and we are not ready yet to make it an official document, does very definitely show that there will be sufficient power revenues from the Missouri River Basin project to carry the cost that is not repaid by water users in this development of irrigation projects, including the Ainsworth and the Red Willow, and any others that are now authorized and foreseeable in the next 20 or 25 years without the necessity for raising the cost of power sold from those projects. And we do feel that the question that has been raised is premature; that there are plenty of revenues available for supporting these additional projects. And this reanalysis of the Missouri River Basin project has been done in line with the agreement made between the various executive agencies of the Government concerned with water and power development, so that it will be consistent throughout the various agencies as to how we allocate costs and analyze the benefits, and so on.

Senator KUCHEL. Are you able to make any comment on the basis of the Department's knowledge and information on the rates in the area, Commissioner?

Mr. DEXHEIMER. Nothing further, Mr. Chairman, other than that the rates at which we now are marketing the power in the Missouri River Basin will be sufficient not only to pay back the power investment with interest, but to assist in the repayment of the irrigation investment for all of the projects we are recommending and for a good many more in the future.

Mr. LINEWEAVER. Does that mean the 5.5 mill rate will be maintained?

Mr. DEXHEIMER. Without any change.

Mr. LINEWEAVER. That was an interim rate, as you know.

Mr. DEXHEIMER. Yes. It won't be necessary, as we see it, to change that rate if our analysis is finally approved in the way we are presently working it out.

Senator KUCHEL. Senator Millikin, any questions?

Senator MILLIKIN. No questions, thank you.

Senator KUCHEL. Unless there is anything further on the bill offered by the two Senators from Nebraska, the hearing on it will be closed, subject to the Chair's earlier announcement that any statements which either or both of the Senators from Kansas desire to make will be received today or tomorrow.

(Mr. Lineweaver subsequently advised the committee that Senators Schoepfel and Carlson of Kansas, had been advised of the pending bills and reports. Neither had any objection to the construction of Wilson Dam by the Corps of Engineers.)

(Whereupon, at 10:44 a. m., the hearing was adjourned.)

# VENTURA RIVER RECLAMATION PROJECT, CALIFORNIA

WEDNESDAY, JUNE 22, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON IRRIGATION AND RECLAMATION OF  
THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The subcommittee met at 10:45 a. m., pursuant to call, in room 224, Senate Office Building, Hon. Thomas H. Kuchel presiding.

Present: Senators Kuchel, California; Millikin, Colorado; and Watkins, Utah.

Also present: Stewart French, chief counsel and staff director; Goodrich W. Lineweaver, committee assistant on reclamation; Elmer K. Nelson and Platt Wilson, consultant engineers; and N. D. McSherry, assistant chief clerk.

Senator KUCHEL. The next item on the agenda is S. 926, which will be inserted in the record at this point, together with reports from the Bureau of the Budget and the Department of the Interior.

[S. 926, 84th Cong., 1st sess.]

A BILL To authorize the Secretary of the Interior to construct, operate, and maintain the Ventura River reclamation project, California

*Be it enacted by the Senate and House of Representative of the United States of America in Congress assembled,* That, for the purpose of supplying water for the irrigation of lands in Ventura County, California, and for municipal, domestic, and industrial use therein, and for other incidental beneficial purposes, the Secretary of the Interior is authorized to construct, operate, and maintain the Ventura River reclamation project comprising, as its principal works, Casitas Dam and Reservoir on Coyote Creek, Robles diversion dam on Ventura River, a canal to carry water from the Robles diversion dam to Casitas Reservoir, and other conduits and related facilities to deliver water to the lands and area to be served by the project.

SEC. 2. (a) In constructing, operating, and maintaining the Ventura River project, the Secretary shall be governed by the Federal reclamation laws (Act of June 17, 1902, 32 Stat. 388, and Acts amendatory thereof or supplementary thereto) except as is otherwise provided in this Act.

(b) In furnishing water for irrigation and for municipal, domestic, and industrial uses from the Ventura River project the Secretary shall charge rates with the object of returning to the United States during a fifty-year payment period all of the costs incurred by it in constructing, operating, and maintaining the project which the Secretary finds to be properly allocable to the purposes aforesaid and of interest, as hereinafter provided, on the portion of the construction cost which is allocated to municipal, domestic, and industrial water.

(c) Any contract entered into under section 9, subsection (d), of the Reclamation Project Act of 1939 (53 Stat. 1187, 1193; 43 U. S. C., sec. 485 (h)) for payment of those portions of the costs of constructing, operating, and maintaining the Ventura River project which are allocated to irrigation and assigned to be paid by the contracting organization may provide for the repayment of the portion of the construction cost of the project assigned to any project contract unit or, if the contract unit be divided into two or more irrigation blocks, to any

such block over a period of not more than fifty years or as near thereto as is consistent with the adoption and operation of a variable payment formula, which, being based on full repayment within the period stated under normal conditions, permits variance in the required annual payments in the light of economic factors pertinent to the ability of the organization to pay.

(d) Notwithstanding any other provision of law to the contrary, all net revenues derived by the Secretary from the furnishing of water for municipal, domestic, and industrial use shall be applied first to the amortization of that portion of the cost of constructing the Ventura River project which is allocated to that purpose with interest on the unamortized balance thereof at the average rate (which rate shall be certified by the Secretary of the Treasury) paid by the United States on its marketable long-term securities outstanding on the date of this Act and thereafter to the amortization of that portion of the cost of constructing the project which is allocated to irrigation but which is beyond the ability of the irrigation water users or their contracting organization to repay as provided above.

(e) The Secretary is authorized, subject to such rules and regulations as he may prescribe, to turn over to any contracting organization or to an organization which is designed by it for that purpose and which is satisfactory to the Secretary the care, operation, and maintenance of such portions of the Ventura River project as are used solely or principally for the benefit of that organization.

(f) Minimum basic facilities may be provided for the accommodation of the visiting public at Casitas Dam and, if responsible local interests agree to assume the operation and maintenance thereof, at the project reservoirs. The costs of such facilities shall be nonreimbursable.

SEC. 3. There is hereby authorized to be appropriated for construction of the Ventura River project the sum of \$27,600,000 plus such amounts, if any, as may be required by reason of changes in construction costs as may be indicated by engineering cost indices applicable to the types of construction involved herein and, in addition thereto, such sums as may be required to operate and maintain the project.

---

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington 25, D. C., February 18, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Senate Office Building,  
Washington 25, D. C.*

MY DEAR MR. CHAIRMAN: This will acknowledge your letter of February 7, 1955, requesting the views of the Bureau of the Budget on S. 926, to authorize the Secretary of the Interior to construct, operate, and maintain the Ventura River reclamation project, California.

The Department of the Interior has not yet submitted its final report on this proposed project to the Bureau of the Budget under procedures prescribed in Executive Order 9384. Until such a report is received, this Bureau has no basis for appraising the merits of the proposed Ventura River project.

Accordingly, it is recommended that the committee defer action on S. 926 until a project report has been submitted under established procedures.

Sincerely yours,

DONALD R. BELCHER,  
*Assistant Director.*

---

UNITED STATES DEPARTMENT OF THE INTERIOR,  
Washington 25, D. C., June 13, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington, D. C.*

MY DEAR SENATOR MURRAY: You have requested from us a report on S. 926, a bill to authorize the Secretary of the Interior to construct, operate, and maintain the Ventura River reclamation project, California.

This Department's proposed planning report on the Ventura River project (a copy of which is attached for your information) was sent on March 16 to the State of California and to the interested Federal agencies for review under the Flood Control Act of 1944, the act of August 14, 1946, and outstanding

interagency agreements. Until their comments have been received and reviewed, we will not be in a position to make any firm recommendation with respect to enactment of this bill. We likewise defer until that time any recommendations for its amendment. This interim report, therefore, is confined to a summary statement concerning the nature of the proposed project, its cost, its economic feasibility, and its repayment prospects.

The Ventura project area, which encompasses the city of Ventura and a relatively long, narrow strip of land west of the city, is on California's southern coast in Ventura County, about 60 miles northwest of metropolitan Los Angeles. There has been a rapid expansion of population in the project area. The project is multiple-purpose in character, involving primarily the storage of water from Ventura River and Coyote Creek in the proposed Casitas Reservoir for irrigation and municipal and industrial water. In addition, it would provide important fish and wildlife and recreational benefits and incidental flood-control benefits.

Rainfall is deficient in the project area during the growing season. Runoff of streams is erratic and the area is subjected to prolonged droughts. Many of the lands currently irrigated experience serious shortages of water. The city of Ventura has outgrown a reliable water supply and is now frequently forced to pump water from three wells located along the oceanfront which are subject to salt-water intrusion. There is, in short, need for stream regulation to provide additional water to stabilize the present economy, to irrigate new lands, to supply new industries, and in general to provide for a rapidly expanding economy.

The proposed project would aid the general situation by providing an addition to the area's water supply of 27,800 acre-feet annually, including 800 acre-feet to be obtained from the existing Matilija Reservoir. It is estimated this supply will be adequate to supply area needs during the 50 years following initial operation of the project.

During the first 50-year period of project operation it is estimated that 60 percent of the total water made available would be used for irrigation and 40 percent for municipal and industrial purposes. At the end of the first 20-year period of project operation it is estimated that maximum irrigation development will have been reached and 15,000 acre-feet will be needed at that time for that purpose. At the same time 5,000 acre-feet would be utilized for municipal and industrial purposes. Urban and industrial water use would continue to increase and use for irrigation would gradually decrease until at the end of a 50-year period 15,600 acre-feet would be used for municipal and industrial purposes and 12,400 acre-feet for irrigation. Lands to be served by the project consist of about 20,200 acres. Under full development it is estimated that 12,600 acres would be irrigated and 7,600 acres would be utilized for municipal and industrial development. Under present conditions about 4,000 acres are irrigated; approximately 5,900 acres are developed for urban and industrial uses; and over 10,300 acres are used for grazing, are dry-farmed or are idle.

The project facilities that would be constructed by the Federal Government are Casitas Dam and Reservoir on Coyote Creek, a tributary to the Ventura River; Robles diversion dam on the Ventura River; Robles-Casitas Canal; and the main conduit system consisting of 33 miles of pipelines, 7 pumping plants, and 6 balancing reservoirs. The Robles diversion dam would divert surplus flows through the Robles-Casitas Canal for storage and regulation in the Casitas Reservoir. Water would be released as required from the reservoir into the main conduit system for delivery to distribution systems. Some of the distribution facilities are existing; others needed would be constructed by the water users and would not be financed by Federal funds. Operation of the existing Matilija Reservoir located upstream on the Ventura River would be coordinated with operation of Casitas Reservoir.

Based on the contemplated development, full use of the water that would be made available by construction of the recommended project would not be realized for a number of years after completion of the project works. As a result, the possibility of initial construction of a smaller dam and reservoir with provision for future enlargement as water needs increased was investigated. After careful consideration of the technical and economic factors involved, it was concluded that initial construction of a reservoir of 250,000 acre-feet capacity is the most desirable plan. Other considerations such as the more rapid growth of the project area than contemplated, the probable extension of the service area boundaries, the probable future urban and suburban expansion into nonirrigable foothill areas which areas have not been considered in the studies for future water requirements, and possible heavier industrial demands than estimated

all tend to support the decision to construct initially to the 250,000 acre-foot capacity.

The cost of the Ventura River project based on January 1954 prices, which are approximately the same as current prices, is estimated to be \$27,669,000, including \$169,000 for minimum recreation facilities as estimated by the National Park Service. The \$169,000 figure includes \$67,500 for the acquisition of 675 acres of land required for minimum basic facilities in addition to land otherwise to be acquired for project purposes. Further detailed studies, in accordance with the act of August 14, 1946 (60 Stat. 1080), remain to be made of the fish and wildlife resources affected by the project and of measures required for their preservation and propagation. The cost of these measures is not included in the above estimate.

The \$27,669,000 project construction costs tentatively are allocated to municipal and industrial water, to irrigation and to recreation in the amounts of \$11,403,000, \$15,319,000 and \$169,000, respectively. The balance of \$778,000 has been or is now being contributed by the Ventura River Municipal Water District for preliminary and advanced planning for the project.

Studies indicate that project revenues from the sale of irrigation and municipal and industrial water together with receipts from an ad valorem tax levy in the project area would repay the municipal and industrial water allocation at 2.5 percent interest in 40 years and the irrigation allocation in 50 years including a 10-year development period.

The ratio of direct benefits to project cost is 1.76 to 1 and the ratio of total benefits to cost is 4.25 to 1. For these ratios, the benefits for an acre-foot of municipal and industrial water were assumed equal to the benefits for an equivalent amount of irrigation water. Even if municipal and industrial water benefits are said to be measured by the cost of the cheapest alternative method of providing an equivalent water supply the total project benefits would be well in excess of project costs with a benefit-cost ratio for municipal and industrial water of about 1.4 to 1.0 and a ratio of direct irrigation benefits to costs of 1.56 to 1.

The Bureau of the Budget has advised that there would be no objection to the submission of this report to your Committee.

Sincerely yours,

FRED G. AANDAHL,  
*Acting Secretary of the Interior.*

Senator KUCHEL. Because of the busy schedule of my friend and colleague, the senior Senator from California, Senator Knowland, I am going to interrupt the procedure of the committee in order to ask the Senator to speak on the project which he and I have introduced, the Ventura project in the State of California.

I would like to assuage any apprehension that my senior brother from California may have by telling him at the outset that the legislation before us now has nothing to do with the waters of the Colorado River.

#### STATEMENT OF HON. WILLIAM F. KNOWLAND, A UNITED STATES SENATOR FROM THE STATE OF CALIFORNIA

Senator KNOWLAND. Mr. Chairman, I will say that my statement will not take as much as 5 minutes, I believe. And I appreciate the courtesy, because I have some other meetings scheduled.

I want to first of all express my sincere appreciation to the chairman and members of this subcommittee for scheduling committee consideration of S. 926, legislation introduced by my colleague, Senator Kuchel and myself, to authorize the construction of the Ventura River reclamation project.

During the fall of 1954 I paid a special visit to Ventura and inspected the existing plans for the Ventura River municipal district's project. At that time, I was favorably impressed with the efforts put forward by the citizens of the communities involved, to activate the

fullest development of their water resources in that area. As a result of my studies and observations during that visit, I concluded that this project would have my complete support and this led to my joining with Senator Kuchel in the introduction of S. 926 on February 4 of this year.

I am pleased to find that the confidence I expressed in the project at that time has been substantiated by the Bureau of Reclamation's studies on the subject which evidence a cost-benefit ratio of 4.25 to 1. This ratio clearly indicates to me and, I hope, to the satisfaction of this committee, the economic justification and desirability of early construction of the Ventura River project.

The district involved covers an area in excess of 20,000 acres of irrigable, urban, and industrial lands, situated in Ventura County, 60 miles northwest of Los Angeles, off the southern coast of California. This area, seldom inflicted with freezing temperatures, offers a favorable climate for agricultural development. The increased activities of agriculture and industry, encouraged by a rapidly expanding population, have already brought about a distressing situation that has exhausted existing water supplies.

The district is currently experiencing a 10-year drought period which, if the history of the general rainfall pattern for the area continues, will be followed by a period of above-normal rainfall years. It is necessary that the water-storage facilities contemplated by the legislation pending here, be constructed early enough to permit storage of this surplus runoff, to be used in subsequent dry years.

It is contemplated that the population growth of Ventura County which has approximately doubled in the past 10 years, will be continued in the future, which only emphasizes the urgent necessity for prompt construction of the Ventura River projects. The legislation pending here carries out the recommendations of the Bureau of Reclamation, and the project calls for the construction of the Casitas Dam, the Robles diversion dam, the Robles-Casitas Canal and main conduit system. The project has the approval of the Bureau of Reclamation, the Department of the Interior, the State of California, and it is expected that the Bureau of the Budget's favorable report on the project will be before this committee within the next few days.

Construction of the Ventura project calls for complete reimbursement of Federal expenditures over a 50-year period, and contract negotiations between the Government and local Ventura officials are being conducted at the present time.

Companion legislation to S. 926 has been introduced in the House by Representative Charles Teague and it is expected that early action will be taken on this project by that body.

Mr. Chairman, among the many letters and other communications I have had on this project, no criticism of the water facilities contemplated by this legislation has been received by me. Complete cooperation on the project has been obtained from local governing officials, State authorities, the press, and representatives of industry, agriculture, and other interests involved.

I would like to request that representative communications from some of these be inserted at this point in my remarks.

Senator KUCHEL. Without objection, they will be inserted.

(The material referred to follows:)

VENTURA, CALIF., June 20, 1955.

HON. WILLIAM F. KNOWLAND,  
United States Senator,  
Senate Office Building, Washington, D. C.:

In the interests of our Ventura County populace and fully cognizant of the grave importance of speedy and definite approval and authorization of Senate bill 926 and House bills 3427 and 3488 for the purpose of a Federal reclamation undertaking of the Ventura River project and in view of the continued drought conditions and critical water shortage in the Ventura and Ojai areas we humbly request your honorable support in the forthcoming committee meeting. We further humbly beseech you to keep in session until this vital legislation has a favorable chance to clear the Congress. Ventura River project is our life's blood. Please don't let us down.

VENTURA COUNTY BOARD OF REALTORS.  
THOMAS C. LEFORS, *President*.

VENTURA, CALIF., May 24, 1955.

Senator WILLIAM F. KNOWLAND,  
Senate Office Building, Washington, D. C.:

Because of increasingly severe water shortage in district, authorization of Ventura River project in present session of Congress urgently required. We request your cooperation in bringing about hearings at early date.

VENTURA CHAMBER OF COMMERCE.  
GORDON K. LINDSAY, *President*.

OIL, CHEMICAL, AND ATOMIC WORKERS  
INTERNATIONAL UNION C. I. O.,  
VENTURA LOCAL 1-120,  
Ventura, Calif., May 31, 1955.

HON. C. F. ENGLE,  
House of Representatives,  
House Office Building, Washington, D. C.

DEAR SIR: We have written you in the past urging your favorable consideration and support of a water project of considerable importance to the people of the Ojai-Ventura area administered by the directors of Ventura River Municipal Water District. We wish to thank you for your efforts in promoting this project.

However, it has been brought to our attention that further progress on this very vital project is being delayed by failure of the Bureau of the Budget to approve this project for hearings by appropriate committees of the Congress.

We would like to point out that approval of this project has been given by all State and Federal agencies concerned, including a high commendation by Secretary of Interior McKay. So, again, we call on you, together with our Congressman from the 13th California District, to use your good offices in prevailing on the Bureau of the Budget to approve this project for hearing during the present sessions of Congress in order that there be a minimum of delay in getting an adequate water supply for our district.

Again thanking you for your past help, we remain,  
Yours truly,

WM. A. BERTLES,  
*Secretary-Treasurer*.

[From the Ventura County (Calif.) Star-Free Press, May 3, 1955]

#### STATE GRANTS APPROVAL OF CASITAS DAM PROJECT

#### REPORT URGES QUICK ACTION ON RESERVOIR

The State of California today gave its full approval for the construction of a 250,000-acre-foot reservoir at the Casitas site on the Ventura River "at the earliest possible date."

Director of Public Works Frank Durkee telephoned the Star-Free Press today to say that the State's comments on the proposed \$20 million Bureau of Reclamation project on the Ventura River were being airmailed to Secretary of the Interior Douglas McKay.

Construction of the Casitas Reservoir with a capacity of 250,000 acre-feet is not inconsistent with the objectives of the California water plan for the full development of the water resources of the State, Durkee informed Secretary McKay.

The recommendation on the capacity of any reservoir to be constructed, Durkee said, rests with the board of directors of the Ventura River Municipal Water District, the local agency acting for the taxpayers of the district. Secretary McKay, on last March 22, forwarded to Durkee the proposed report of the Secretary of the Interior on the Ventura project with a request that it be reviewed by the department of public works through its division of water resources.

"I concur," Durkee, said, "particularly in the recommendation that the Ventura River project be adopted and approved and an appropriation made for its construction at the earliest possible date, subject to execution of any necessary contracts between the United States and local interests. It is requested that the report be considered as expressing the views and recommendations of the State of California on your proposed report on the Ventura River project."

The estimated cost of the reservoir with a capacity of 250,000 acre-feet is \$20,304,000. Cost of the distribution system is estimated at about \$7 million.

---

[From Ventura County (Calif.) Star-Free Press, May 4, 1955]

#### STATE OF CALIFORNIA GIVES STRONG SUPPORT

We're one more step closer today to that Ventura River water project. The State of California has approved it officially, fully, and, we'd say, with a showing of genuine enthusiasm. And has done so in about one-third of the time legally allotted for such comments.

Frank Durkee, Governor Knight's director of public works, has sent Secretary of the Interior Douglas McKay his report, an act which pretty much clears the way for congressional hearings on the project preliminary to a vote on the authorization bill.

The proposed 250,000 acre-foot storage undertaking on the Ventura River is found to be consistent "with the objectives of the California water plan for the full practicable development of the water resources of the State," which, of course, any local water plan ought to be.

Mr. Durkee recognizes the time-urgency, the need for early construction which the district's acute present water shortage presents, for he adds:

"I concur, particularly in the recommendation that the Ventura River project be adopted and approved, and an appropriation made for its construction at the earliest possible date, subject to the execution of any necessary contracts between the United States and local interests. It is requested that this report be considered as expressing the views and recommendations of the State of California on your proposed report on the Ventura River project."

In light of the strong factual case presented, the State of California could hardly do other than approve this project. However, it might have responded in a perfunctory manner. Governor Knight and Public Works Director Durkee, by voluntarily urging its construction at the earliest possible date, which the situation certainly calls for, have contributed further strong support. The people of the Ventura River Municipal Water District should appreciate their interest and help.

---

#### BOARD RESOLUTION COMMENDS VRMWD

##### TEXT OF RESOLUTION

Whereas through investigations by the State division of water resources and by the United States Bureau of Reclamation it has been determined that the Ventura River Municipal Water District area (zone 1 of Ventura County flood-

control district) will eventually require some 30,000 acre-feet of supplemental water annually; and

Whereas such a supply can be made available through the construction of the Ventura River project with a 250,000 acre-foot reservoir on Coyote Creek as recommended by the Bureau of Reclamation; and

Whereas because of the erratic rainfall pattern of the south coast area which is characterized by periods of subnormal precipitation lasting several years followed by similar periods of above normal precipitation, it is essential that water-storage facilities be provided well in advance of the actual need for water; and

Whereas only one good reservoir site exists in the watershed area; and

Whereas there appears to be no other system of surface storage works which could be constructed on the Ventura River or on any other water course in Ventura County whereby such a supply of water could be developed at a comparable cost; and

Whereas investigations show that critical water supply deficiencies particularly for agricultural use also exist in other areas of Ventura County; and

Whereas it appears that substantial quantities of water developed through the construction of the Ventura River project may for a number of years be in excess of the supplemental requirements of the Ventura River area and can be made available to, and utilized on an interim basis by, other water deficient areas of Ventura County until additional facilities are constructed to more fully utilize local supplies available from Santa Clara River watershed or until the Feather River project as contemplated by the State of California or other system of works for the importation of water to this area is constructed; and

Whereas because of the above considerations it appears that the interests of Ventura County would best be served through the construction of water development facilities on Ventura River to the maximum practicable size: Now therefore, upon motion of Supervisor Ax and Supervisor Andrews and duly carried, be it

*Resolved by the Board of Supervisors of Ventura County.* That construction of the Ventura River project with a 250,000 acre-foot Casitas Reservoir as recommended by the Bureau of Reclamation be endorsed; and be it further

*Resolved,* That the Board of Directors of Ventura River Municipal Water District be commended for its actions to date to further plans for this construction and that said Board of Directors be urged to continue its efforts to effect construction of these greatly needed water development facilities at the earliest possible date.

---

#### KIWANIS CLUB OF SAN BUENAVENTURA, CALIF.

#### RESOLUTION URGING AUTHORIZATION OF VENTURA RIVER PROJECT AS A RECLAMATION PROJECT

Whereas the assured water supply in the Ventura area is insufficient to meet present needs or provide a basis for natural growth in the area; and

Whereas plans developed for construction of the Ventura project by the Bureau of Reclamation appear to present the best means of developing an adequate water supply for the protection and continued development of agriculture and industry; Be it

*Resolved by the board of directors of the Kiwanis Club of San Buena Ventura, Calif.,* That it urge the Congress of the United States to authorize the Ventura River project at its present session.

Passed and adopted June 6, 1955.

KIWANIS CLUB OF SAN BUENAVENTURA, CALIF.,

By WM. P. BRADFORD, *President*.

STATE OF CALIFORNIA,

*County of Ventura, ss:*

I, William Lowe, secretary of the Kiwanis Club of San Buena Ventura, Calif., hereby certify that the above is a true and correct copy of a resolution adopted by unanimous vote of the board of directors of the Kiwanis Club of San Buena Ventura in their regular meeting held on June 6, 1955.

WILLIAM LOWE.

Subscribed and sworn to before me this 7th day of June 1955.

[SEAL]

HELEN CRAIG,

*Notary Public in and for Said County and State.*

Senator KNOWLAND. Mr. Chairman and members of the committee, in view of the facts set forth and the other testimony this committee will receive, I earnestly urge prompt and favorable consideration of this water development project. I wish to thank the committee for its attention.

**STATEMENT OF HON. THOMAS H. KUCHEL, A UNITED STATES  
SENATOR FROM THE STATE OF CALIFORNIA**

Senator KUCHEL. The Chair will state for the record that the incessant growth of California makes it necessary for the people of my State to keep looking ahead, planning, and building in order to meet the ever-expanding needs of our increasing population. This is especially true with regard to the demand for water supplies.

The bill which you are considering today, S. 926, which I introduced in company with my colleague, Senator Knowland, is designed to relieve a situation which is becoming more acute each year and provide for the future development of an area that is mushrooming agriculturally, indusrially, and residentially.

This bill would authorize the Ventura project to remedy present inadequacy and maldistribution of present water supplies, counteract threatened salt-water intrusion of wells, now the source of much of the supply, and provide a firm yield of 28,000 acre-feet annually. The works to be constructed include Casitas Dam, a structure 275 feet high and 2,050 feet long, on Coyote Creek to store 250,000 acre-feet of water, Robles diversion dam on the Ventura River, and a 5¼-mile canal from Robles Dam to Casitas Reservoir. They are expected to meet the demands of the area to be served for the next half century.

This project has been thoroughly investigated and definite assurances of required local participation have been given.

The Ventura project is designed to meet the needs of the city of Ventura and a number of neighboring communities in the coastal area about 60 miles northwest of Los Angeles. This area now is supplied from the Ventura River and three supplemental deep wells near the beach. The present supplies are subject to great fluctuation so that even if this section had not been experiencing great growth of population, in common with the rest of southern California, there is urgent need for constructive action to improve the existing conditions.

The cost of this project is well within the capacity of water users to repay. The estimates of the Bureau of Reclamation are that it can be built for \$27,600,000 and the cost-benefit ratio is exceptionally high, being 4.25 to 1. The Ventura Municipal Water District already has paid 50 percent of the investigation cost and has entered a contract to advance the money for preconstruction work, including preparation of designs and specifications estimated to run above \$700,000.

The growth of this section of California has been substantial in the past two decades and every available index indicates it will continue. The area embraces important oil fields and has attracted chemical and related industries. There is a mounting need for food supplies. The soil and climate are peculiarly adapted to specialty

crops of generally high value. Among these are fruits and nuts, including oranges, lemons, avocados, walnuts, and grapes. It is expected that nearly one-fifth of the agricultural land will be devoted to truck crops.

This project is overwhelmingly justified by all tests of feasibility and local cooperation and is essential for the sound growth of a thriving section of my State.

So, on that basis, the acting chairman will recommend favorable consideration by the subcommittee, by the committee, and by the Senate.

Appearing here today, among others, is the able member of the House of Representatives from the area which includes the county of Ventura, the Honorable Charles Teague.

Mr. Teague is intimately acquainted with the problems of water in that community, and I will ask him for any statement which he cares to make at this time.

#### **STATEMENT OF HON. CHARLES M. TEAGUE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA**

Representative TEAGUE. Thank you, Mr. Chairman. I will be very brief.

Mr. Chairman and Senator Millikin, I should like to state first that I, of course, have introduced an identical bill in the House to that which you and Senator Knowland introduced in the Senate. Congressman Clair Engle, chairman of the House Committee on Interior and Insular Affairs, also introduced an identical bill. Hearings were held yesterday before the House subcommittee on those bills of Congressman Engle's and mine.

I do live in the area. I know by first-hand knowledge of the urgent and critical nature of the water shortage.

I should like to point out again the very remarkable fact, I think, of the splendid job which has been done by the local community in the matter of cooperating and getting this project moving toward, we hope, a successful conclusion. As Senator Kuchel has stated, over \$750,000 of local funds have been invested to date in the matter of securing reports, preliminary planning, preconstruction work, and so forth.

I should like to also point out that we have no problem here of power. There is no power feature in this project. I find that is sometimes a matter of some difference of opinion among people as to who should operate the power facilities, and we are not involved with that here. I would like to have the record so show.

Another matter which I would like to have made perfectly clear is that the agricultural areas which will be benefited by this project are not areas which produce crops which are in surplus or are a part of the Government-support program. So we are not involved with that problem.

I have received scores, hundreds, I think I may say, of letters, resolutions, telegrams, from all sorts of organizations, communities, chambers of commerce, city councils, labor organizations, local grange, farm bureau, and so forth, urging the support of this project. I have received only one communication—and that was several months ago—questioning in anyway the advisability of the program.

So I think it is very clear that we have a well-united local feeling in support of the project.

I should like, Mr. Chairman, if I may, to make this suggestion. We have several people here from Ventura who are available for questions, if the committee members desire to question them. It is suggested—and I believe it is in accordance with your plans—that two of our members, representatives from Ventura, give very brief statements; but I should like to introduce the others, if I may. They have come all the way from California. I should like you to know who they are and what particular place they have in this program. With your permission, may I do that?

Senator KUCHEL. The Chair will be delighted to have you introduce those representatives of the area who are here in support of the legislation.

Representative TEAGUE. Thank you.

First, Mr. George Purvis, who will testify later. Mr. Purvis is the president of the Ventura River Municipal Water District.

Next, Mr. Charles Pedit, who is the mayor of the city of Ventura, which is the principal city involved in this proposed project, and he is also a director of the water district.

Mr. Robert Willard, who is general counsel for the district.

Mr. Leland Bennett, who is engineering manager for the district.

Dr. Thomas Bailey, who is a director and also a leading geologist and engineer in the area.

Mr. Neil Ensich, who is an agriculturist who is here to testify briefly on agricultural problems involved.

Dr. J. S. Flynn, who is a member of the board of directors.

And Mr. Roy Pinkerton, who is now at the press table, who is the publisher of the Ventura County Star-Free Press, which is the largest newspaper in the area.

Thank you very much for your courtesy, Mr. Chairman.

Senator KUCHEL. Thank you.

The next witness that the Chair will call is the able Commissioner of Reclamation, the Honorable W. A. Dexheimer.

### STATEMENT OF W. A. DEXHEIMER, COMMISSIONER OF RECLAMATION

Mr. DEXHEIMER. Mr. Chairman, as Congressman Teague has told you, we had hearings on this project before the House subcommittee yesterday, and I think there was no opposition developed at all. I had the opportunity of also visiting this project and was very much impressed not only with the critical situation on the water, but with the very aggressive attitude on the part of the local people in pushing for the project and putting up the money to do it; and also the value of the property and farming crops that are produced in that area, and which are not in any way under price supports nor in surplus supply.

So this is, I am happy to report, one of the best, if not the best, project both from the angle of local support and prospects for payout, and it certainly is the best from the standpoint of benefit-cost ratio that we have had to propose to the Congress since I have been Commissioner.

It is a pleasure to appear before you again to present information on the potential Ventura River project, California.

As yet, we are not in a position to submit a planning report on the project with final recommendations but hope to do so in the near future. The report of the Department of the Interior is currently being considered by the Bureau of the Budget. Until we receive that agency's comments and the report is transmitted to the Congress, we will not be in a position to officially present the administration's views. We can, however, present information on the results of our studies to date and we have with us Mr. John S. Hamilton, chief, development division, Santa Barbara Area Projects Office, Goleta, Calif., to present technical details on the plan of development and to provide other information that members of the committee may desire.

The Ventura project is located on the southern coast of California in the general vicinity of the city of Ventura. The area concerned is composed of the valley of the Ventura River and its tributaries including the city of Ventura and a relatively long, narrow strip of land extending along the coast west of the city.

This is a multiple-purpose project primarily for irrigation and municipal and industrial water supply. Our investigations were initiated on a cooperative basis at the request of the inhabitants of the area. So anxious are these people to obtain this project at the earliest possible time, they have furnished in addition to matching funds for the feasibility investigations all of the funds so far used for advanced planning. By the time the advanced planning and preconstruction activities are completed, they will have furnished over three-quarters of a million dollars of their own funds for project investigations and plans. This is truly an outstanding record of local interest and participation.

The project facilities that are proposed for construction by the Federal Government are principally Casitas Dam and associated diversion and conveyance works. New distribution system facilities required would be constructed by the water users. The project facilities would provide 27,800 acre-feet of additional water supply annually on a firm basis to meet the area's needs.

The estimated cost of the proposed Federal works is \$27,669,000, including \$778,000 being contributed by the water users for planning and preconstruction purposes. All of the Federal investment would be reimbursable except \$169,000 for minimum basic recreation facilities which could be nonreimbursable. Ad valorem taxes collected by the local municipal water district would be used to supplement the revenues received from the water users in meeting the repayment schedules. The \$11,403,000 allocated to municipal and industrial water supply would be repaid to the Treasury at 2½ percent interest in 40 years after construction. The \$15,319,000 allocated to irrigation would be repaid without interest in 40 years following a 10-year development period. Revenues from sale of municipal and industrial water would assist in the return of costs allocated to irrigation after repayment of the costs allocated to municipal and industrial water.

Continuing studies, as contemplated in our planning report, will probably show that a repayment schedule with smaller initial payments and graduated increases, based primarily on the estimated water use over the repayment period, in lieu of the equal annual amounts shown in the report, with certain prescribed minimum annual payments, will be more acceptable to the contracting agency. I am

confident that a satisfactory contract can be negotiated. Benefits exceed costs in the ratio of 4.25 to 1.

The Venture project has all of the essentials of a successful reclamation undertaking. There is urgent need for this development to meet expanding requirements for municipal, industrial, and agricultural water in the rapidly growing project area. Estimated benefits exceed estimated costs by a wide margin, full repayment of reimbursable costs within a 40-year period is in prospect, and there is exceptionally strong local interest and support for the project and willingness to assume financial responsibility. The Ventura project will make a valuable contribution to the economic development of the West and the Nation as a whole.

Senator KUCHEL. I am sure, Mr. Dexheimer, that the people of the area are grateful to you for your description of the project and for your testimony here today.

Senator MILLIKIN, are there any questions?

Senator MILLIKIN. No. I would just like to ask: The Ventura River is a flashflood stream? They have big floods out there whenever the spring runoff comes, do they not?

Mr. DEXHEIMER. Yes, sir; it is typical of the Southwest streams. They are almost dry at some times, and they have flash floods in heavy rain seasons.

Senator MILLIKIN. I spent quite a little time in Ventura one time, and I thought I had a memory of the habits of the stream.

Senator KUCHEL. The next witness will be Mr. John Hamilton, the planning engineer of the Bureau of Reclamation. His headquarters are in Santa Barbara.

Mr. Hamilton?

Mr. DEXHEIMER. Mr. Chairman, if there are no further questions, might I be excused at this time?

Senator KUCHEL. Yes. Thank you very much, Mr. Dexheimer. I repeat my gratitude to you.

Mr. DEXHEIMER. Thank you.

Representative TEAGUE. Mr. Chairman, before Mr. Hamilton gets started, I would like to offer into the record a letter from Governor Knight, addressed to me. I will not read it.

Senator KUCHEL. Very well.

(The letter referred to follows:)

STATE OF CALIFORNIA,  
GOVERNOR'S OFFICE,  
Sacramento, June 14, 1955.

HON. CHARLES M. TEAGUE,  
Member of Congress,  
House Office Building, Washington, D. C.

DEAR CONGRESSMAN TEAGUE: I have learned that the subcommittee of the Senate Interior and Insular Affairs Committee plans a hearing June 22 on the Ventura River project calling primarily for storage of water from the Ventura River and Coyote Creek in the proposed Casitas Reservoir for irrigation and municipal and industrial use. I also have learned that a similar House committee hearing is pending.

In view of the urgent and immediate need for supplementary water in the Ventura River Basin, I hope that you will give your support to this project and that you will urge that appropriation be made for construction at the earliest practicable date.

I further urge that the capacity of the reservoir to be constructed meet with the desires of the board of directors of the Ventura Municipal Water District.

which is acting for the taxpayers of the district in seeking full, practicable development of its water resources.

I know that the proponents of the project are desirous of starting construction at the earliest possible date in view of the urgency of the situation in Ventura County, and I join them in expressing the hope that the present session of Congress will act favorably upon their request.

With the kindest personal regards,

Cordially,

GOODWIN KNIGHT, *Governor.*

Senator MILLIKIN. Mr. Chairman, may I interrupt? The Commissioner tells me that the Bureau of the Budget is expected to render an approving report within the near future.

Senator KUCHEL. Yes. I might say I do have to submit subsequently the Budget Bureau's memorandum to the committee and other documents, which I will insert, with the understanding that the subsequent letter from the Bureau of the Budget will be inserted.

Will you proceed, sir?

#### STATEMENT OF JOHN S. HAMILTON, PLANNING ENGINEER, RECLAMATION BUREAU, SACRAMENTO, CALIF.

Mr. HAMILTON. My name is John S. Hamilton. I am chief of the development division of the Santa Barbara area project office. The basic investigation for the Secretary's report, which is now being processed, was prepared in that office.

I would like to request permission, Mr. Chairman, to submit a prepared statement, and I will attempt to be very brief in my comments on that statement.

Senator KUCHEL. Without objection, the statement which you have prepared will be made a part of the record.

(The statement referred to follows:)

#### STATEMENT OF JOHN S. HAMILTON, UNITED STATES BUREAU OF RECLAMATION

My name is John S. Hamilton. I am Chief of the Development Division, Santa Barbara Area Projects Office, Bureau of Reclamation, at Goleta, Calif. The detailed studies and initial draft of the feasibility report on the Ventura River project now under consideration by your committee were prepared in that office.

The Ventura River project is a proposed multiple-purpose development that will create economic opportunities for the Ventura River area of southern California and provide optimum conservation and utilization of the water and related resources of the Ventura River Basin. This project, as shown on the frontispiece, involves essentially the same area as that of the Ventura River Municipal Water District and is situated in Ventura County on California's southern coast about 60 miles northwest of metropolitan Los Angeles. This development is needed to meet present water shortages and future requirements of an area considered in the report of the Secretary of the Interior on the Ventura River project that includes some 20,000 acres of irrigable, urban, and industrial lands within the boundaries of the Ventura River Municipal Water District. Subsequent to the completion of that report about 1,000 acres of additional irrigable land have been annexed to the district. Since this addition will increase the ultimate water requirements by only 5 percent, the following project information is based on the project area covered in the report as submitted to you by the Secretary of the Interior. No significant changes in project plan will be required in order to serve this area. The investigations of the area's water problems leading to this proposed project and looking toward early construction of the needed water supply facilities were made at the request of and in cooperation with the Ventura River Municipal Water District and represent an outstanding example of local participation in water resource development. The report of the Secretary of the Interior, prepared in accordance with Federal reclamation laws, recommends the construction of a storage

1954

reservoir, diversion works, and a conveyance system, all at an estimated cost of \$27,500,000, which, when integrated operationally with existing water supply facilities, will assure the area of a dependable supply to meet its needs.

Of this \$27,500,000 estimated cost, the district has already paid one-half the cost of the feasibility investigation and is currently paying all of the cost of the preconstruction work by the Bureau of Reclamation leading to and including the preparation of plans and specifications, at a total cost to the district of \$778,000. The estimated primary benefits to be obtained by the construction of these new works will exceed costs in the ratio of 1.76 to 1.00; on the basis of total benefits, the ratio would be 4.25 to 1. All of the costs of the project are reimbursable, with the exception of \$169,000 not included in the above total for minimum recreational development. Those portions of project costs allocated to municipal and industrial water service would be repaid with interest on the invested capital. This interest would be returned to the Federal Treasury and would not be credited to the repayment of the irrigation allocation.

#### THE SETTING

Essentially, the Ventura River Basin is composed of rugged mountains of the Coast Range, with elevations up to 6,000 feet above sea level, one main river valley, the Ventura River, and several side valleys which were formed by streams tributary to it. Included also in the project area are a relatively long, narrow strip extending along the coast west of Ventura, lying outside but contiguous with the drainage area of the Ventura River, as well as an area recently annexed to the district in the extreme westerly portion.

The Ventura River is the major stream in the area. It flows about 16.5 miles through the Ventura River Valley from its formation at the confluence of Matilija and North Fork Matilija Creeks to its mouth at the Pacific Ocean near the westerly edge of the city of Ventura. Its two principal tributaries, in addition to Matilija and North Fork Matilija Creeks, are San Antonio Creek, which flows in from the east draining Ojai, Upper Ojai, and San Antonio Creek Valleys, and Coyote Creek, which enters from the west after flowing through Santa Ana Valley.

As is typical of the coastal region of southern California, the project area has a mild climate with a long, dry, warm summer season and a shorter, wet winter period accompanied by cooler temperatures. The mean seasonal precipitation, 75 percent of which occurs during the months of December through March, varies from a minimum of about 15 inches at Ventura on the coast to 32 inches in the mountains. Temperatures average about 61° F. but range considerably above and below that figure, particularly in the more inland areas. The proximity of the project area to the ocean provides a moderating effect on the climate, with considerable fog along the coast and above-freezing temperatures all year long except in certain valley "pockets." This favorable climate creates a long growing season. Some of the crops are raised during the entire year. The absence of a snow pack and a wide variation in both monthly and annual rainfall result in streamflows of widely fluctuating magnitude.

Transportation and communication facilities for the area are excellent.

Today, the area's principal economic development is centered around agriculture and processing of agricultural crops, oil and gas production, and commercial, service, and recreational activities. The agricultural industry includes both irrigated and dry farming, together with processing of farm products. Oranges, lemons, walnuts, avocados, deciduous fruits, irrigated hay and pasture, and vegetables are the principal irrigated crops. Dry-farmed crops include grain hay, barley, beans, nuts, deciduous fruits, and grapes. Three major and several minor oil fields are in production with the largest, the Ventura Avenue oil field, ranking second in the State in the quantity of crude oil produced. Various important industries serve the oil and gas production industry directly and indirectly.

#### PRESENT DEVELOPMENT OF LAND AND WATER RESOURCES

Within the boundaries of the Ventura River project are about 21,170 acres of arable land, including 1,050 acres recently annexed to the project area in the extreme westerly portion of the district. Most of this land lies in the Ojai and Upper Ojai Valleys; the remainder borders the Ventura River, its tributaries, and the ocean shore. The city of Ventura, which is part of the district area, is expanding rapidly to the east of the district and looks to the Ventura River Municipal Water District for future water supplies to sustain this expansion.

The present use of the land within the district, exclusive of the Rincon annexation, is shown in the following tabulation:

<i>Present land use</i>		<i>Acres</i>
Grazing, dry-farmed, and idle.....		10, 290
Irrigated farms.....		3, 960
Urban and suburban.....		5, 600
Industrial.....		270
<b>Total arable.....</b>		<b>20, 120</b>

The water used for the presently irrigated lands, as shown in green on plate 1, is obtained primarily by pumping from ground-water basins, including stream gravels. A smaller quantity is diverted by gravity directly from streamflows. The largest quantity of ground-water pumping occurs in the Ojai Valley, with smaller quantities in the Ventura River Valley, and negligible amounts along the tributary streams. In 1953 an estimated 9,200 acre-feet of water were obtained for agricultural use.

Use of water for municipal and industrial purposes is concentrated largely in the city of Ventura and its environs. The other towns and scattered industrial developments require a smaller quantity of water. The city of Ventura obtains its water supply from Ventura River near Foster Park both by gravity and pumping from the river gravels; in addition it has three relatively deep wells along the ocean beach. During 1953 a total of 6,250 acre-feet was taken from these 2 sources, nearly 80 percent of which was supplied from the river. In excess of 2,000 acre-feet of the city's total supply was used by the industrial area in or near the Ventura Avenue oilfield. Over the last 10 years nearly 15 percent of the city's supply has been used for irrigation below Foster Park. This quantity is included in the irrigation use indicated in the preceding paragraph. Use of water by the other towns, including the suburban areas and industrial developments, outside of the city of Ventura's service area is estimated to approximate 1,500 acre-feet annually.

Water for irrigation and municipal and industrial uses now is obtained and distributed within the area by individuals, the city of Ventura, and several other types of organizations. Included in this latter group is the Ventura County Flood Control District which owns and operates the existing Matilija Dam, the only storage reservoir in the Ventura River Basin, and a pipeline to Ojai Valley. Water from that reservoir of 7,000 acre-feet capacity is released either for replenishment of the ground-water basin along Ventura River or conveyed through the pipeline for agricultural use or for ground-water replenishment in Ojai Valley.

#### NEED FOR ADDITIONAL WATER

Development of an additional firm water supply is urgently needed in the Ventura River project area for stabilization of present agricultural and other economic activities, for new irrigated lands, for new industries, a rapidly expanding population, and for new economic opportunities. Present water supplies are inadequate both for agricultural use and for municipal and industrial purposes. Many irrigated areas now experience serious shortages including the lands around the edge of Ojai Valley normally adequately supplied from ground water but where wells went dry during the recent drought. The city of Ventura already has outgrown its water supply. Normally pumping and gravity diversion from the Ventura River supply about 6,000 acre-feet of the city's water requirement but the amount available from this source has dropped as low as 1,500 acre-feet or about 25 percent of the need. This means that the city has to rely heavily on its three beach wells, as a standby source of supply. When these wells were drilled about 6 years ago, it was known that this temporary source would become unusable from salt water encroachment under continued pumpage. Thus because of the precarious supplemental supply that the beach wells provide, and the wide range in the quantity obtainable from the river, the city of Ventura has an immediate need for a firm supplemental water supply.

In addition to the needs of the present irrigated area and those of the city of Ventura, the area above Foster Park and the coastal strip need more water for additional irrigation, and municipal and industrial developments. Within the project area this would include all presently dry-farmed or idle land that could be irrigated if a water supply were available, and used for

expansion of existing communities, and commercial and industrial activities. This expansion is continuing now and will continue in the future. Ventura County is receiving more than its proportionate share of the State's growing population. People are attracted by its close geographical location to the metropolitan centers of southern California, its agricultural, industrial, and commercial opportunities, and its moderate climate and scenic attributes. This recent population growth is exemplified by the city of Ventura which constitutes about 60 percent of the population within the project area, and which has increased in size from about 16,000 to 25,000 in the last 10 years. Studies made during this investigation indicate that during the next 50 years the population of the city may increase to more than 80,000, accompanied by rapid growth throughout the remainder of the project area. The growth in population as well as the increase in irrigated agriculture and industry is dependent, however, on the availability of an adequate supply of water, which need the Ventura River project would provide. In the future, if an adequate water supply is developed it is anticipated that 12,580 acres, including small suburban farm plots would be in irrigated agriculture and approximately 7,600 acres would be in municipal and industrial development including suburban uses having similar water requirement characteristics. As the city of Ventura continues to expand to the east, it is estimated that within 50 years an additional 5,000 acres will be served through water made available by the project. Crops expected to be grown in the future on the irrigated lands include citrus, avocados, walnuts, grapes, deciduous fruits, irrigated pasture, alfalfa, and truck crops.

The total supplemental water requirement estimated at the end of the 50-year period of analysis for agriculture, municipal, and industrial purposes would be about 28,000 acre-feet per year. In about 20 years the supplemental water requirement will total at least 20,000 acre-feet annually. It is estimated that by then the projected irrigated acreage which would use about three-fourth of the 20,000 acre-foot requirement will be fully developed. By the end of 50 years it is expected that municipal and industrial requirements will begin to exceed the use for irrigation. Averaged over the 50-year analysis period, however, irrigated agriculture would require approximately 60 percent of the total supplemental water supply while the municipalities and industries would take about 40 percent.

Considering the history of comparable areas, the potential for growth inherent in the project area, and the very rapid growth in other southern California areas when a water supply became available, the increase in use of water in the Ventura River project area may be even more rapid than anticipated. The probable extension of the service area boundaries, future use of lands that are not now considered usable, and possible heavier industrial demands are additional considerations indicating that the need for more water may become more acute even sooner than present estimates contemplate. Plate 2 depicts the estimated water demand buildup. The acreage and water requirement figures given above are those on which the recommended project was based. As mentioned on page 1, since that time the addition of 1,000 acres in the Rincon addition at the extreme westerly end of the district has increased the anticipated water demand by 1,400 acre-feet.

As illustrated by plate 3 the runoff of streams in the Ventura River Basin varies widely from year to year and is characterized by a series of drought years. Since the lower streamflows of the basin are presently being used and because of the extreme vagaries in streamflow, storage of water in reservoirs is permitted only during the high-flow periods. The intermittent occurrence or cyclic characteristics of high streamflows necessitates that the required reservoir capacity be constructed and placed in operation as rapidly as possible in order to take full advantage of whatever favorable runoff years may occur during the time that the buildup of the demand for use of water is taking place in the project area. This approach to timing of construction and operation is of prime importance in providing the needed opportunity for the storage of water that may become available during wet years in order that the probable safe yield available from the reservoir may meet the supplemental water requirements of the area. This is particularly important prior to the time the reservoir is completely filled for the first time. In the Ventura River Basin only one good site for a large reservoir exists, namely the Casitas site on Coyote Creek, a tributary of the Ventura River. Proper development of this site to meet the area's annual water needs of about 28,000 acre-feet would require the construction of a reservoir with a capacity

of 250,000 acre-feet. A 250,000 acre-foot reservoir together with other project features would be mutually advantageous for providing both supplemental water for irrigation use and for additional municipal and industrial water supply. Dual purpose use of both the reservoir site and other necessary project facilities would make it possible to serve the area in the most economic and completely effective manner. Development of the only good storage site without full consideration of both irrigation and municipal and industrial water uses should not be undertaken as there are no alternative potential feasible developments within the area that could provide an alternative water supply in as economical a manner.

#### PLAN OF DEVELOPMENT

The recommended plan for providing a water supply for the Ventura River projects area includes a storage reservoir to conserve the erratic streamflows and hold water over a period of several dry years, diversion works to divert water into the reservoir, and a conduit system to convey the water to points of use. The project works necessary to accomplish these objectives include:

(a) Casitas Dam and Reservoir, impounding 250,000 acre-feet of water, located on Coyote Creek, a tributary of the Ventura River. The dam would be an earth-fill structure rising about 275 feet above streambed and would have a crest length of 2,050 feet. Two small earthfill saddle dams having a maximum height of about 25 feet and a total combined crest length of about 1,215 feet would also be required.

(b) Robles diversion dam on the Ventura River to divert storable flows into the Robles-Casitas Canal would be a rockfill structure about 7 feet high and 25 feet long.

(c) Robles-Casitas Canal would carry Ventura River water from Robles diversion dam to Casitas Reservoir and comprises a concrete-lined canal section, a pipe section, and a rectangular chute section, with a capacity of 500 cubic feet per second and a combined length of about 5 miles.

(d) The main conduit system would convey the conserved water from Casitas Reservoir to the points of use and would involve 33 miles of pipelines with capacities ranging from about 80 to 3 cubic feet per second. Also required in the main conduit system would be 7 pumping plants with total dynamic heads of 150 feet to 930 feet and capacities of 52 cubic feet per second to 3 cubic feet per second, and 6 balancing reservoirs with capacities of 20 to 80 acre-feet.

In addition to the foregoing works, an irrigation distribution system would be required to distribute the water from the major delivery points to actual places of use. A portion of this system is existing and as now planned, the necessary additions would be constructed over a period of several years by the Ventura River Municipal Water District as the need for water develops. Likewise any drainage facilities (expected to be of minor significance in this area due to the favorable natural drainage that exists) would be constructed by the district. No electric generating facilities are contemplated as a part of the Ventura River project; studies showed such facilities to be economically unjustified, principally because of the small and erratic streamflow and operational requirements to meet other water use demands.

As schematically illustrated on plate 4, under the proposed method of project operation water would be diverted from the Ventura River at Robles diversion dam and would flow through the Robles-Casitas Canal to Casitas Reservoir for storage and subsequent use. Inflow from Coyote and Santa Ana Creeks also would be stored in the reservoir. Due to the periods of low streamflow, Casitas Reservoir would require operation on a long-term carryover basis. Assuming a repetition of historical conditions of runoff, the period 1918-44 was found to be the most critical from a water supply standpoint. As shown by the heavy dashed lines in the lower right-hand corner of plate 3, during this critical period the project as proposed would meet an annual demand of 27,800 acre-feet, and after allowance for an average annual evaporation of 3,400 acre-feet, an average of some 6,300 acre-feet annually would spill to the ocean. In these computations an allowance has been made for an average annual prior use of water of 3,000 acre-feet.

Plate 5 illustrates the buildup and depletion of the long-term carryover storage in the reservoir, assuming a repetition of the historical runoff for the period 1918-52. It should be noted that the period prior to 1918 was a wet one, so that the reservoir would have been full in that year. Sufficient runoff available for

storage should occur following construction of the reservoir to permit the safe yield obtainable during the period of reservoir filling to meet the increase in demands for project water. This determination, made on the basis of a study of the past 87 years of precipitation or runoff records, would be correct in all cases with the single exception of the possible, but unlikely, occurrence of a drastic drought period similar to 1948-52 shortly after initiation of reservoir operation. Inasmuch as southern California is now experiencing a dry period, which has extended over an 11-year period, and since the average length of dry period appears to be approximately 14 years, it is probable that a series of wet years would be in the offing by the time the storage facilities were constructed, assuming an early start of construction. It is because of this necessity for long-term carryover storage of water from the flood years, combined with the critical need for additional water supply, that the Ventura River Municipal Water District has felt that the investment of \$720,000 in advance preparation of designs and specifications for the project was justified, in order to take the maximum advantage of the impending wet period.

From the reservoir, water would be conveyed through the main conduit system, including pressure pipelines, pumping plants, and balancing reservoirs, to various points of delivery throughout the project area. The main conduit system would interconnect with the existing pipeline from existing Matilija Reservoir in order to properly integrate the operation and effectiveness of the two systems.

Casitas Reservoir, operated in conjunction with the other recommended features and integrated with the existing Matilija Reservoir, would provide a safe annual yield of 28,000 acre-feet. The project yield of 28,000 acre-feet would meet the estimated requirements except for the Rincon addition for water during the 50 years after initiation of project operation. The chemical quality of the water from the proposed Casitas Reservoir would be superior to that now obtained for both irrigation and municipal use because of the diluting effect of the larger portion of the streamflows which would be stored. In the future, possibly 50 years or more, when the requirements approach the yield or sedimentation prevented effective operation of the existing Matilija Reservoir, a reservoir of about 10,000 acre-feet should be constructed on the Ventura River at the Nordhoff site, a short distance upstream from Robles diversion dam site. This would permit the safe yield at that time to be increased to about 30,000 acre-feet.

#### RECREATION, FISH AND WILDLIFE, AND OTHER CONSIDERATIONS

The Ventura River project would provide the opportunity for obtaining important incidental uses in addition to serving the area's water supply needs. The reservoir and its shorelands would offer opportunity for recreation and development of a sports fishery. In addition a small incidental flood-control benefit might result. Watershed conservation and protecting the quality of the water supply would be corollary to these incidental benefits.

A study made by the National Park Service of the Department of the Interior shows that Casitas Reservoir would be used extensively for recreation. Although most of the patronage, estimated at 376,000 annual visitor days on the basis of 1953 populations, would come from a 50-mile radius, a considerable visitation also would come from the Los Angeles area. Basic recreational facilities totaling approximately \$500,000 will be needed over a period of years according to the National Park Service. Of this amount, \$160,000 is for minimum basic recreational facilities and could be nonreimbursable. The Service recommended, however, that additional, more detailed studies be made and that a Ventura County Park Agency be established to develop and operate the recreational facilities. It is estimated that, as a minimum, annual benefits of \$47,000 attributable to project construction would result from use of Casitas Reservoir for recreation.

According to the findings of an investigation made by the Department of the Interior, Fish and Wildlife Service, a valuable fishery may be anticipated in Casitas Reservoir. A minimum annual angling use of 10,000 fisherman days may be expected according to the Service. Construction of recreational facilities and improving access to the reservoir would increase the use. On the basis of the minimum use alone an annual benefit value of \$100,000 is estimated. The Fish and Wildlife Service recommended that Federal lands and leases of Federal lands provide that the area be open to hunting and fishing whenever practicable considering public safety, efficient operation, and protection of public property. It also recommended that more detailed studies of fish and wildlife resources affected be conducted as necessary following project authorization.

The Department of the Army, Corps of Engineers, recognized, in its flood-control survey report prepared in 1940, that potential damages from floods existed along portions of Ventura River and Coyote Creek, in addition to those which the construction of recommended levees, now completed, would prevent. Flood-control works to avoid these potential damages were not considered economically justified. Although the proposed Ventura River project would be operated for conservation purposes, it should have some incidental flood-control benefits of a minor nature, but an evaluation of them has not been made in this analysis.

Nearly 85 percent of the total watershed area of the Ventura River project above the proposed Robles diversion dam and Casitas Reservoir is within the Los Padres National Forest. The type of terrain and the inflammable cover during the dryer months of each year make an effective watershed-management program essential. An investigation made by the Department of Agriculture in 1953 recommended an integrated watershed-conservation program, including increased fire protection, control of active sediment source areas, and stream-channel improvement. That program would benefit the proposed project primarily by reducing sedimentation damage which otherwise would occur both to Casitas and Matilija Reservoirs.

Public health and sanitation aspects of the proposed project have been investigated by the Public Health Service of the Department of Health, Education, and Welfare in collaboration with State and local health and pollution-control agencies. The Public Health Service made several recommendation that would insure that the project water supply will be of satisfactory quality for domestic use and suggested that construction be so conducted as to eliminate mosquito breeding areas. These recommendations and suggestions will be helpful in developing a safe, dependable water supply.

#### CAPITAL AND ANNUAL COSTS

The estimated capital cost of the Ventura River project, on the basis of January 1954 prices, is \$27,500,000, plus \$169,000 for minimum recreational facilities. Probable savings in construction costs already indicated in the preconstruction designs being financed by the Ventura River Municipal Water District will offset minor increase of estimated cost of the line to serve the coastal strip as a result of the Rincon area annexation. For this reason, the present estimated cost of the project remains at \$27,500,000, as covered in the report of the Secretary of the Interior. This estimate was made from preliminary designs of the proposed features and includes costs for construction, contingencies, investigations, engineering, general expense, land and rights, relocation of existing property, clearing, and construction facilities. Annual operation, maintenance, and replacement costs of project features, including costs for water treatment and electric energy for water conveyance, are estimated to average about \$262,400 over the 50-year period of analysis following construction. A summary of the estimated capital and average annual costs is shown in the following tabulation:

Project feature	Capital cost <sup>1</sup>	Average annual operation, maintenance, and replacement costs
Casitas Dam and Reservoir.....	\$17,624,000	\$36,900
Robles diversion dam.....	362,000	1,500
Robles-Casitas Canal.....	1,585,000	16,200
Main conduit system.....	7,804,000	<sup>2</sup> 207,800
General property.....	125,000	
<b>Total.....</b>	<b>27,500,000</b>	<b><sup>3</sup> 262,400</b>

<sup>1</sup> Estimated capital costs based on January 1954 prices.

<sup>2</sup> Includes estimated average annual costs for electric energy and water treatment expenses.

<sup>3</sup> Estimated costs based on current prices. Replacement costs included in this estimate are computed on an interest-free basis for repayment purposes; the sinking-fund method was employed to determine replacement costs for benefit-cost analysis.

#### ECONOMIC JUSTIFICATION

A comparison of annual equivalent benefits and costs is depicted graphically on plate 6. The economic justification of the Ventura River project has been

determined by benefit-cost analyses comparing annual equivalent benefits with annual equivalent costs. The benefits for water service from the project were measured at the point of delivery from the main conduit system. Therefore, only the costs of the proposed project features necessary to convey water to the delivery point were included in the benefit-cost analyses. Distribution system costs beyond the delivery point were deducted from the benefits before computing the benefit-cost ratios. The estimated recreation and fishery benefits associated with the project were included in the benefit-cost evaluation.

Annual equivalent Federal costs for the Ventura River project consist of the amount necessary to amortize the net project investment over a 50-year period at 2.5 percent interest plus the annual operation, maintenance, and replacement expenses. Proper adjustment was made in the annual costs for the estimated construction period and for the long-term price outlook over the 50-year period. The resulting annual equivalent costs are as follows:

Amortization of net project investment.....	\$850,000
Operation, maintenance, and replacement.....	<sup>1</sup> 178,000
<b>Total.....</b>	<b>1,028,000</b>

<sup>1</sup> Replacement costs included in this estimate were computed on a sinking-fund basis with interest at 2.5 percent.

Annual equivalent benefits were computed on the basis of water uses expected to develop during the 50-year period following initiation of operation of the project. The portion of the benefits creditable to prospective irrigation use was adjusted for the long term projection of agricultural prices. The estimated annual equivalent benefits, both primary and total, are summarized as follows:

	Annual equivalent benefits	
	Primary	Total
Irrigation.....	\$978,000	\$2,541,000
Municipal and industrial.....	684,000	1,776,000
Other secondary uses <sup>1</sup> .....	147,000	147,000
<b>Total.....</b>	<b><sup>2</sup> 1,809,000</b>	<b><sup>2</sup> 4,464,000</b>

<sup>1</sup> Includes recreation and fishery benefits; primary and total benefits are considered to be identical.

<sup>2</sup> Excludes any benefits due to yield of the existing Matilija Reservoir operated under nonproject conditions and at a non-Federal cost.

The total annual equivalent benefits of \$4,464,000 exceed the annual equivalent Federal costs of \$1,028,000 by a ratio of 4.25 to 1. A similar comparison using only the primary annual equivalent benefits of \$1,809,000 results in a favorable benefit-cost ratio of 1.76 to 1. These benefit-cost ratios indicate clearly the economic justification and desirability from the national standpoint of constructing the Ventura River project.

#### COST ALLOCATION AND REPAYMENT

The cost allocation and repayment are depicted graphically on plate 7. The financial feasibility, or probable repayment, of the Ventura River project has been determined by allocating the project costs between the two functional water uses and then analyzing the repayment potentials. No project costs were allocated to secondary functions, recreation, and fish and wildlife, although benefits from those sources are indicated. The capital-cost allocation employed the separable costs-remaining-benefits method.

In the report of the Secretary of the Interior on this project, a possible method of repayment was presented based essentially on 40 equal installments respectively for irrigation and for the municipal and industrial allocations. However, as stated in that report, further consideration of repayment arrangements was contemplated, pursuant to existing reclamation law. Although formal repayment negotiations have not yet been entered into, the Ventura River Municipal Water District and the Bureau of Reclamation have discussed the repayment aspects. A resolution was recently adopted by the board of directors of that

district indicating a preference for a graduated repayment schedule which would roughly parallel the estimated buildup of the demand for the project water over a 50-year payment period. The amounts shown graphically on plate 7 are based on this type of repayment. It would increase the total interest payments on the municipal and industrial water supply allocation and at the same time alter slightly the schedule of payments on the irrigation costs. It would not change the period of payout.

In order to recover the capital cost with interest plus operation and maintenance costs, it is estimated that the total district cost for water for municipal and industrial purposes would be \$95 per acre-foot. Although this cost of water is high as compared with that in other communities more favorably located, it is within the repayment ability of the municipal and industrial water users. In a like manner, the estimated cost of irrigation water delivered at the farm without interest on the project investment would be \$48 per acre-foot. This rate is sufficiently within the estimated repayment capacity of \$60 per acre-foot for lands without a present supply to produce an incentive for development. However, in common with the usual practice, rates to the water users would be reduced through ad valorem taxes in order to encourage more rapid development.

#### PUBLIC APPROVAL

Local interest in a new dependable water-supply development in the Ventura River area has been evidenced for many years by repeated requests for investigations. On October 17, 1952, the Ventura River Municipal Water District was formed for the purpose of investigating and solving the water-supply problems existing within its boundaries. The investigation and plan of development was made on a cooperative basis under a contract with the district bearing one-half the cost. By resolution dated March 24, 1954, the board of directors of the district requested the Bureau of Reclamation to expedite this report for the purpose of obtaining the earliest possible authorization of the project by Congress, and also requested reclamation to submit a form of agreement for advanced planning and preconstruction work by reclamation at district expense. On July 29, 1954, a contract was executed providing the financial arrangements for this work which is now proceeding.

In addition to local interest and cooperation expressed through the Ventura River Municipal Water District, the Board of Supervisors of Ventura County, acting in its capacity as the board of directors of the Ventura County Flood Control District, has expedited the proposed project with a formal agreement on May 26, 1954, providing for the operation and maintenance of Matilija Reservoir and all appurtenant facilities by the Ventura River Municipal Water District upon completion of the proposed project. At the same time the flood-control district assigned to the Ventura River Municipal Water District its several applications for unappropriated water in the Ventura River Basin, for which permits have not been issued. The executed agreement relating to operation of Matilija Reservoir assures that integrated operation of the two reservoirs, as proposed, can be effected upon completion of Casitas Reservoir. The action in regard to assignment of the applications for appropriation of water likewise is important as it cleared the way for the Ventura River Municipal Water District to file its recent applications, with the State engineer of California, specifically covering the water needed for the proposed Ventura River project. A further expression of local interest was made by a resolution adopted on October 26, 1954, by the Board of Supervisors of Ventura County in which the supervisors endorsed the construction of the Ventura River project and commended the board of directors of the Ventura River Municipal Water District on its efforts to effect early construction of these greatly needed water-development facilities.

#### CONCLUSIONS

The investigations covered in the report of the Secretary of the Interior support the following conclusions:

(a) A critical need for an additional water supply within the project area exists now and this need will become increasingly acute;

(b) The requirement for irrigation water would reach nearly three-fourths of the total requirement by the 20th year of project operation; municipal and industrial water use would comprise the remainder, but this proportion would shift and by the end of the 50-year period following construction the municipal and industrial needs probably would exceed slightly those of irrigation;

(c) The water supply works proposed in this report are feasible from an engineering standpoint and constitute the most practicable and least costly means of meeting the needs of the area for possibly 50 years after construction of the project;

(d) Project operation would be beneficial to other uses, notably development of a sports fishery and recreational opportunities;

(e) The project is economically justified as measurable benefits exceed costs by a ratio of 4.25 to 1; considering primary benefits only, the ratio would be 1.76 to 1;

(f) All Federal costs are reimbursable except those for minimum recreational facilities and as allocated between irrigation, and municipal and industrial uses can be repaid in accordance with the provisions of Federal reclamation laws;

(g) The local interests, represented by the Ventura River Municipal Water District and the board of supervisors of Ventura County, have approved the proposed project and desire early construction as a Federal reclamation development; and

(h) The Ventura River Municipal Water District has completed an agreement with Ventura County relating to the operation of the existing Matilija Reservoir upon completion of the project; this important action assures operational integration of Matilija Reservoir with the proposed project.

PLATE 8  
ANNUAL PROJECT PAYMENTS

Mr. HAMILTON. This project, of course, has been pretty well outlined by the individuals who have spoken before to you, Senator, so I will try to eliminate duplications.

It is obviously a multiple-purpose project to furnish irrigation and municipal and industrial water. It is to provide a supply for present and future uses of that nature for an area of some 26,000 acres. All costs are reimbursable except for a possible \$169,000 for minimum recreational facilities.

Over the repayment period, 60 percent of the water is estimated to be for irrigation use and 40 percent of the water for municipal and industrial use. It is contemplated that there will be a 40-year repayment period for both municipal and industrial allocation and for the irrigation allocation.

Senator MILLIKIN. Mr. Chairman, may I ask a question, please?

Senator KUCHEL. Senator Millikin.

Senator MILLIKIN. What are the oil activities out there at the present time?

Mr. HAMILTON. At the present time, the oilfields are quite active. The assessed valuation in those fields amounts to about \$160 million. Those fields have passed their peak, and the reserves are now being depleted. It is estimated that within a 20-year period they will be down to rather small production.

Senator MILLIKIN. How near are they to the city of Ventura?

Mr. HAMILTON. They immediately adjoin the city of Ventura to the north and west.

Senator MILLIKIN. Thank you very much.

Mr. HAMILTON. The irrigation allocation would be repaid in 40 years with this 10-year development period. The municipal and industrial allocation would also be paid in 40 years, with interest on the Federal investment to be returned to the Treasury, and not credited to the irrigation allocation. Operation and maintenance of the project will be by the district and not by the United States, and at the district's cost. The district plans to build its own distribution systems, and supervise such construction.

The present land use in the area consists of 4,400 acres in irrigation and 5,300 acres in urban use. The balance of the area is in dry farming; with considerable grazing in the mountains.

It is estimated that under ultimate project conditions, 13,000 acres will be in irrigation and approximately an equal number of acres devoted to urban use. There is no excess land problem in this area. Estimates of probable excess land range between 300 and 1,000 acres, against a total acreage of 26,000, which would not affect the feasibility of the project.

There are, at the present time, serious requirements for water; although in wet years there is actually a surplus, in dry years the drought conditions not only affect the agricultural supply, but they also affect the municipal supplies. There is no way to iron out that surplus and deficiency, because the only storage in the entire area is the Matilija Reservoir of 7,000 acre-feet capacity, a drop in the bucket. We, therefore, estimate that the supplemental water requirement for this project area will be in the neighborhood of 28,000 acre-feet.

Because of the alternating drought and wet years, a large storage reservoir is required in order to develop this 28,000 acre-feet a year.

We have recommended a storage reservoir of a capacity of 250,000 acre-feet.

Senator, if you will permit me, I will step up to the map and explain briefly the method of operation.

I might outline the project works. The main reservoir is located in this area here in the foothills. Unfortunately, it is at a low elevation of about 300 feet—

Senator KUCHEL. Let me interrupt you for the purpose of orienting my colleagues. Ventura County is immediately north and west and is adjacent to the county of Los Angeles. And farther on up the Pacific Ocean is the county of Santa Barbara.

Senator MILLIKIN. How far is the reservoir from the town of Ventura?

Mr. HAMILTON. The reservoir will be approximately 7 miles from the city of Ventura.

Senator MILLIKIN. Thank you.

Mr. HAMILTON. This reservoir is recommended to have a capacity of 250,000 acre-feet. There is an existing reservoir of 7,000 acre-feet capacity here, and our plan of operation contemplates the integration of those two. There is a proposed diversion dam and canal of 500 second-foot capacity to lead over from the river into this reservoir. From the reservoir there would be a conveyance system consisting of 32 miles of pipeline, 7 pumping plants and 6 regulating reservoirs to carry the water from the reservoir for wholesale delivery into the various parts of the service area.

It is quite an interesting operation, in that the proposed method would be to keep this reservoir on the upper tributary dry during the wintertime, and whenever the floods came, hold them back temporarily, and then release them, so that they can be transported through the canal to the reservoir.

During the most critical dry period on record, had the reservoir been built it would have been almost empty. However, the following wet period would have filled it completely. That was the basis for our method of operation. Even in the most critical cycle of wet years and dry years, some 6,000 acre-feet annually on the average would have still flowed out to the ocean.

Senator KUCHEL. Senator Watkins?

Senator WATKINS. I would like to ask if there is any interest-free money on this project.

Mr. HAMILTON. Yes, there is, a matter of \$15 million.

Senator WATKINS. I am sorry I did not get to hear the first part of your testimony. You are not opposed to interest-free money, are you?

Mr. HAMILTON. I am a Reclamation employee.

Senator WATKINS. What is that?

Mr. HAMILTON. I am sorry, sir. I cannot express a policy opinion.

Senator MILLIKIN. I do not know anyone who is opposed to interest-free money on a reclamation project.

Senator WATKINS. I understand the same group who are asking for this project have spoken against the upper Colorado River project.

Senator MILLIKIN. Oh, they have temporary foolishness, yes. We cannot measure the interest in projects by strict consistency. Maybe they will learn better as time goes on.

Senator KUCHEL. I think that is an admirable statement for you to make, Senator.

Senator MILLIKIN. It is an admirable statement, and I wish the view were universally held.

Senator KUCHEL. I endeavored to allay any evanescent fears of our colleague from Colorado earlier, Senator Watkins, by indicating that this project has nothing to do with waters in the Colorado River.

Senator WATKINS. It might get different treatment if it had, I assume.

Senator KUCHEL. I merely wanted the record to indicate that here is an area in the State which is pretty much dependent, so far as its continued water supply is concerned, on what Congress might do in this area, and that no Colorado River water is involved in the thirst of the citizens there.

Representative TEAGUE. I was out when the Senator came in. I am Congressman Teague, Senator.

I just wanted to be sure there was no misunderstanding. If you mean by "this group" the Ventura Municipal Water District, they have not in any way gone on record against the Colorado River project.

Senator WATKINS. I was advised to the contrary. I am very glad of that.

Representative TEAGUE. The representatives are here, and they are going to testify later, and that is the fact.

Senator WATKINS. Well, it is their perfect right to go against it if they wish, but I would want them to explain how they could come in here and ask for the same kind of treatment they are opposing.

Representative TEAGUE. Well, they have not been in opposition at all, sir.

Senator MILLIKIN. Are you referring to the Ventura Municipal Water District?

Representative TEAGUE. The Ventura Municipal Water District, yes.

Senator MILLIKIN. You say they have not made any resolutions against the upper Colorado River project?

Representative TEAGUE. That is quite correct.

Senator MILLIKIN. My information is that they have. We will get at that. It is not important one way or the other.

Representative TEAGUE. Both the president and several of the directors are here and will testify later.

Senator MILLIKIN. The chairman has emphasized that this has nothing to do with the Colorado. So why that particular district should be sticking its nose into extraneous matters puzzled me a little bit. But beyond puzzling me, it has no importance.

Senator KUCHEL. Apparently, Senator, those canards are baseless, and may I offer my personal regret that they have come to your attention; and to yours, too, Senator Watkins.

Senator MILLIKIN. I would like to find out about it through curiosity, not because it makes the slightest difference.

Senator WATKINS. That is what prompted me—curiosity.

Mr. HAMILTON. The allocation of cost was 57 percent to irrigation and 43 percent to municipal and industrial, as to the estimated water use over the period, and the allocation was made by the separable costs remaining benefit method. The direct benefits exceed costs on irriga-

tion by a ratio of 1.56 to 1, and on municipal and industrial, at a ratio of 1.71 to 1. Total benefits to cost are on a ratio of 4.25 to 1 for the project, indicating economic feasibility and justification.

I won't touch on repayment, other than to stress the fact that these local people have indicated that they are agreeable to entering into a repayment contract on this project before the start of construction. They have also indicated, since the preparation of our report, that they would prefer that the municipal and industrial allocation be paid in installments which are made proportional to the estimated buildup of the municipal and industrial demand. Since they would still continue to pay interest on the unpaid balance of the municipal and industrial allocation, no added cost would be incurred by the Federal Government; during the early years of the repayment period the tax load on the district would be raised to an extreme point if it were necessary to pay off the municipal and industrial allocation in equal annual installments.

Those are all the remarks I have.

Senator KUCHEL. Any questions, Senator Millikin?

Senator MILLIKIN. No.

Senator KUCHEL. Senator Watkins?

Senator WATKINS. What proportion of the costs allocated to irrigation do the water users pay? Do they pay it all, in this case?

Mr. HAMILTON. Just behind you, Senator, is a chart that illustrates that. There would be municipal and industrial assistance to irrigation in the last 10 years of the payout period in the amount of \$6,330,000. That is the amount to be secured by water sales revenues.

Senator WATKINS. What is the answer to my question?

Mr. HAMILTON. There is assistance from municipal and industrial water sales. There will also be tax assistance.

Senator WATKINS. According to some people, that would be a subsidy. I do not necessarily agree, but I just call attention to the fact that that is the language that has been used around here, that that all becomes a subsidy.

The people who live in the city are also owners of the farms, too, are they not?

Mr. HAMILTON. To a very limited extent.

Senator WATKINS. The people live on the farms in this area?

Mr. HAMILTON. Yes, sir.

Senator WATKINS. And how do the industrial users come into the picture?

Mr. HAMILTON. Because they have some need for the water. However, they happen to be a part of the District and furnish a very substantial tax base, which will be of considerable assistance in making the irrigation development possible.

Senator WATKINS. You do not see any objection to having the municipalities and the industrial users pay a part of the cost of the water which will go on the farms, do you?

Mr. HAMILTON. As I am a technical man, I cannot comment on that personally. I am the engineer who is in charge of the preparation of the report at the field level.

Senator KUCHEL. I am going to ask Mr. Lineweaver to bring out certain things for the record.

Mr. LINEWEAVER. Mr. Hamilton, this information is in your statement, but to point it up for the record and for the information of all concerned and where the members of the committee can readily have it, I wish you would make a brief statement as to the cost of the water per acre-foot for irrigation and for municipal and industrial uses.

Mr. HAMILTON. The cost of water for municipal and industrial uses will average, over the repayment period, including operation and maintenance, repayment, interest cost and repayment, \$95 an acre-foot. Agricultural water will average, over the repayment period, not including assistance, \$61 an acre-foot. The effect of the assistance I referred to, Senator, from municipal and industrial water sales in the last 10 years of the project will reduce that average cost by \$13. There will be tax assistance, which it is estimated will further reduce the delivered cost of the water to \$36 an acre-foot, which will put it within the repayment capacity.

Mr. LINEWEAVER. You mean that is the irrigation cost?

Mr. HAMILTON. Yes, as finally sold to the farmer it is expected to be in the range of \$36 an acre-foot delivered out to the farm.

Senator WATKINS. That is per year?

Mr. HAMILTON. Per acre-foot, each acre-foot, Senator.

Senator WATKINS. I know, but is that the overall cost for the whole project, or so much per year? It could not be \$36 a year, could it?

Mr. HAMILTON. No, it is the average cost per year for the 500,000, roughly, acre-feet, which would be delivered over the 50-year period.

Senator WATKINS. And what is your operation and maintenance?

Mr. HAMILTON. The operation and maintenance is included in those figures. Those were overall costs including distribution.

Senator WATKINS. How much would the farmer have to pay per acre-foot per year?

Mr. HAMILTON. Per acre-foot per year, he would pay \$36, sir.

Senator WATKINS. That is what I started to bring out. What is the total cost per acre-foot in buying the right?

Mr. HAMILTON. The total cost in buying the right is \$32 per year. That is the repayment cost.

Senator WATKINS. You mean to say they pay \$36 per year?

Mr. LINEWEAVER. The Senator means over the repayment period.

Mr. HAMILTON. Oh. Approximately \$1,200.

Senator WATKINS. \$1,200 per acre-foot?

Mr. HAMILTON. Yes, sir.

Senator WATKINS. What crops do you grow there?

Mr. HAMILTON. Lemons, avacados, oranges, walnuts.

Senator WATKINS. What is the price per acre of land without trees on it, without the groves?

Mr. HAMILTON. At the present time, \$1,000 an acre on anticipation of the project. Prior to that time it was about \$200 an acre.

Mr. LINEWEAVER. How does that figure of \$32 an acre-foot annually compare with any other costs, first, say, on reclamation projects, or, second, otherwise, on general agricultural water, in California?

Mr. HAMILTON. First, as pertaining to reclamation projects, the adjoining Coahuma project has a rate for the farmers that is close to \$35 an acre-foot.

Senator WATKINS. Approximately the same.

Mr. HAMILTON. Approximately the same. Local water rates on many of the supplies within the Ventura River area are close to about the same amount, \$25 to \$35 per acre-foot delivered at the farm.

Senator WATKINS. Some of that is pumping?

Mr. HAMILTON. Some of that is pumping, pumped from considerable depths. There are some areas in which rates are more favorable. But they are able to pay \$35 an acre-foot and make a profit.

Senator MILLIKIN. I did not get that. What is the capital cost per acre of irrigated land allocated?

Mr. HAMILTON. I am having to be approximate, Senator. Probably somewhere between \$1,200 and \$1,400 an acre.

Senator MILLIKIN. The farmers are willing to pay that?

Mr. HAMILTON. We have the expressed willingness on the part of the board of directors, and we think the farmers have also expressed willingness to the extent it has been developed so far. Let's say there has been no opposition, although they know the water rate will be high.

Senator MILLIKIN. Do the farmers get a chance to vote on these things?

Mr. HAMILTON. Yes. The district will put this up for an election.

Senator MILLIKIN. You feel confident the farmers will approve the plan?

Mr. HAMILTON. In the absence of opposition, I am confident that they will.

Senator MILLIKIN. Well, I do not know about "in the absence of opposition." Will they approve it whether there is or is not opposition?

Mr. HAMILTON. The farmers, Senator, have not expressed themselves officially yet. All I can go on is the feel of the public pulse.

Senator MILLIKIN. They are the ones who in the end will pay for this, are they not?

Mr. HAMILTON. They will pay for it, but they are going to have assistance from the general taxpayers of the entire area.

Senator MILLIKIN. But whatever they have to pay, they have to pay it, and they will have a voice in the matter some place, will they not?

Mr. HAMILTON. Yes, sir.

Senator KUCHEL. We have a farmer or two who will testify for the farming group, Senator.

Any further questions?

Senator WATKINS. I have some more questions.

Now, the \$1,200 per acre-foot that you are talking about is for only 1 acre-foot?

Mr. HAMILTON. Yes, sir.

Senator WATKINS. How many acre-feet per acre do they need for irrigation?

Mr. HAMILTON. One and a half.

Senator WATKINS. Around \$1,800, then, per acre?

Mr. HAMILTON. Yes, sir.

Senator WATKINS. That is the sum that the farmers are going to pay?

Mr. HAMILTON. Ultimately; yes, sir.

Senator WATKINS. That is over and above the so-called help they get from the industrial municipal users?

Mr. HAMILTON. No; that was total on the entire project.

Senator WATKINS. Now, we are getting at it. How much of that will be paid by the industrial and the municipal users?

Mr. HAMILTON. Actually, the district has not taken a complete position on how much the distribution will be, but apparently, depending on just how one credits the tax, whether it is credited to operation, maintenance, or repayment, the effect of the municipal help in any event, the general tax help, appears to be contemplated in the amount of about \$12 an acre-foot, which would bring it down to \$20.

Senator WATKINS. You mean the municipalities and the industrial users will pay \$12 per acre-foot per year as a help to the farmers?

Mr. HAMILTON. Yes, sir.

Senator WATKINS. That will cut it from \$36 down, whatever that takes off.

Mr. HAMILTON. Yes.

Senator WATKINS. Now, is it true that you have around \$6,330,500 that will lie unpaid for 40 years of this interest-free money?

Mr. HAMILTON. I think that is correct; yes, sir.

Senator WATKINS. And it will not bear interest during that full period?

Mr. HAMILTON. No, sir.

Senator WATKINS. That is of the interest-free money?

Mr. HAMILTON. Yes, sir.

Senator MILLIKIN. And then it will be paid off at the end by power revenue?

Mr. HAMILTON. By water revenues, municipal and industrial sales.

Senator MILLIKIN. Mr. Chairman, is that not the very formula that you have had quite a little complaint about in the Senate?

Senator KUCHEL. My dear friend, I think you will find, if you review my comments, both in committee and on the floor of the Senate, that the position I took with regard to the legislation to which you refer was based upon the interpretation of the compact. I doubt very much that you will find any comments of mine which would be deemed by you as offensive.

Senator MILLIKIN. I did not deem any comment that you are making now or any comment that I could imagine you to be making as offensive. But I do have a rather distinct recollection that you had considerable criticism of that method of paying off. But I do not hold you to strict consistency. It might be all right in this project and not all right elsewhere.

Senator KUCHEL. No, to the contrary, Senator, I think you will find I was silent on some of those points which you are commenting on now.

Senator WATKINS. At least you did not attack it.

Senator KUCHEL. You will find there are a good many reasons why your junior colleague from California is growing old rapidly in the public service.

Senator WATKINS. I think we know what you mean.

Senator KUCHEL. Are there any further questions?

Senator WATKINS. I have not quite finished.

Senator KUCHEL. Senator Watkins.

Senator WATKINS. What formula do you use to get that sort of an arrangement whereby \$6,330,500 will lie idle for 40 years without in-

terest? What is the name of that formula? Has it been called the collbran formula?

Mr. HAMILTON. It has been called that by some people. However, we just refer to it as municipal and industrial assistance.

Senator WATKINS. I think that is all.

Senator KUCHEL. Are there any further questions of Mr. Hamilton?

The next witness is Mr. George Purvis, the president of the Ventura Municipal Water District.

As you are preparing to testify, Mr. Purvis, I want to offer into and to accept for the record the letter from the State government of California, or 2 letters from the State government of California, 1 from the Governor, Hon. Goodwin J. Knight, 1 from the Honorable Frank B. Durkee, director of public works; also a letter from the Ventura Chamber of Commerce; and also a resolution from the board of supervisors of the county of Ventura; also sundry letters of recommendation which the acting chairman has received. Letters from the Bureau of the Budget and an interim report from the Department of the Interior are already in the record.

(The material referred to follows:)

VENTURA, March 12, 1954.

VENTURA RIVER MUNICIPAL WATER DISTRICT.

GENTLEMEN: La Avenida Grange 655 thanks you for your action accepting the Bureau of Reclamation. We approve the Bureau handling the project.

Sincerely,

CORA BELL, *Secretary.*

---

OJAI VALLEY GRANGE 659,

Route 2, Box 300, Ojai, Calif., March 6, 1954.

DIRECTORS OF VRMWD,  
480 North Ventura Avenue, Ventura, Calif.

DEAR SIRS: The Ojai Valley Grange wishes to commend the directors of the VRMWD for their thorough investigation and prompt decision to ask the Bureau of Reclamation to finance and build the proposed Casitas project.

We regret that a countywide survey by the Bureau wasn't authorized.

Sincerely yours,

CAROLINE FROST, *Secretary.*

---

BOARD OF SUPERVISORS, COUNTY OF VENTURA,  
Ventura, Calif., March 15, 1954.

Mr. LELAND G. BENNETT,  
*Engineer-Manager, Ventura River Municipal Water District,*  
480 North Ventura Avenue, Ventura, Calif.

DEAR LEE: Although it was impossible for me to attend your board meeting on March 10, because of a previous engagement, I am anxious to inform your board that I am wholeheartedly in favor of the action taken at the meeting on March 3, 1954.

As you illustrated in the report to your board of directors, the Bureau of Reclamation seems by far to be our most logical answer to completion of the Casitas Dam.

I believe the taxpayers of this district should be grateful for your board's decisive actions and sound planning, and I feel that finally we are taking steps toward county water development that will set a precedent for the rest of the county to follow.

Very truly yours,

C. H. (BOB) ANDREWS,  
*Supervisor, Third District, County of Ventura.*

VENTURA CHAMBER OF COMMERCE,  
Ventura, Calif., September 17, 1954.

VENTURA RIVER MUNICIPAL WATER DISTRICT,  
Ventura, Calif.

GENTLEMEN: The board of directors of the Ventura Chamber of Commerce wish to extend their sincere thanks and appreciation to you for the untiring efforts you have put forth in this area.

Our efforts in securing industry for Ventura are continually confronted by the lack of water. The need for water is still more urgent and the continual activity of the VRMWD in seeing the Casitas Dam project through deserves the sincere support and cooperation of every community organization.

We stand ready and willing to assist you in any way possible.

Cordially,

LLOYD McCAMPRELL,  
President, Ventura Chamber of Commerce.

BOARD OF SUPERVISORS, COUNTY OF VENTURA, STATE OF CALIFORNIA

Tuesday, October 26, 1954, at 9 a. m.

Present: Supervisors Edwin L. Carty, chairman pro tempore, presiding; A. C. Ax, Robert W. Lefever and C. H. Andrews; L. E. Hallowell, clerk; by Shirley Weeks, deputy; absent: Supervisor L. A. Price.

RESOLUTION

Whereas through investigations by the State division of water resources and by the United States Bureau of Reclamation it has been determined that the Ventura River Municipal Water District area (zone 1 of Ventura County Flood Control District) will eventually require some 30,000 acre-feet of supplemental water annually, and

Whereas such a supply can be made available through the construction of the Ventura River project with a 250,000 acre-foot reservoir on Coyote Creek as recommended by the Bureau of Reclamation, and

Whereas because of the erratic rainfall pattern of the south coast area which is characterized by periods of subnormal precipitation lasting several years followed by similar periods of above normal precipitation, it is essential that water-storage facilities be provided well in advance of the actual need for water, and

Whereas only one good reservoir site exists in the watershed area, and

Whereas there appears to be no other system of surface storage works which could be constructed on Ventura River or on any other water course in Ventura County whereby such a supply of water could be developed at a comparable cost, and

Whereas investigations show that critical water supply deficiencies, particularly for agricultural use also exist in other areas of Ventura County, and

Whereas it appears that substantial quantities of water developed through the construction of the Ventura River project may for a number of years be in excess of the supplemental requirements of the Ventura River area and can be made available to, and utilized on an interim basis by, other water deficient areas of Ventura County until additional facilities are constructed to more fully utilize local supplies available from Santa Clara River watershed or until the Feather River project as contemplated by the State of California or other system of works for the importation of water to this area is constructed, and

Whereas because of the above considerations it appears that the interests of Ventura County would best be served through the construction of water-development facilities on Ventura River to the maximum practicable size.

Now, therefore, upon motion of Supervisor Ax, seconded by Supervisor Andrews, and duly carried, be it

*Resolved by the Board of Supervisors of Ventura County, That construction of the Ventura River project with a 250,000 acre-foot Casitas Reservoir as recommended by the Bureau of Reclamation be endorsed; and be it further*

*Resolved, That the board of directors of Ventura River Municipal Water District be commended for its actions to date to further plans for this construction and that said board of directors be urged to continue its efforts to effect construction of these greatly needed water development facilities at the earliest possible date.*

STATE OF CALIFORNIA,

*County of Ventura, ss:*

I, L. E. Hallowell, county clerk and ex officio clerk of the board of supervisors of the County of Ventura, State of California, hereby certify the above and foregoing to be a true and correct copy of an excerpt from the minutes of said board for the meeting of the date first above indicated. In witness whereof, I have hereunto set my hand and caused the seal of said board to be affixed this 26th day of October 1954.

[SEAL]

L. E. HALLOWELL, *Clerk,*  
By SHIRLEY WEEKS, *Deputy.*

LOCAL UNION No. 2042,  
UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA,  
*Ornard, Calif., August 23, 1954.*

VENTURA MUTUAL WATER CO.  
*Ventura, Calif.*

DEAR SIR: This Local Union No. 2042 United Brotherhood of Carpenters and Joiners of America have agreed by referendum vote, to endorse the Ventura Mutual Water Co. for a large full-size dam, as recommended by the Bureau of Reclamation.

Sincerely yours,

R. L. ROGERS,  
*Recording Secretary.*

VENTURA CENTRAL LABOR UNION,  
*Ventura, Calif., July 28, 1954.*

Mr. GEORGE PURVIS,  
*Chairman, Ventura River Mutual Water District,*  
*Ventura, Calif.*

DEAR MR. PURVIS: This letter is to inform you and the members of the district board that this council reaffirms its support to your efforts to bring about the creation of the Casitas Dam project.

It is sincerely hoped that in view of the necessary steps that must be taken, all in some relation time-consuming elements, every future act of your board will be that of expediency in arriving at its ultimate goal.

We are deeply appreciative of your hard, earnest, and sincere work for the people, not only of the district, but Ventura County as well.

Sincerely,

GEORGE F. BONNER,  
*Secretary-Treasurer.*

VENTURA COUNTY BUILDING AND CONSTRUCTION TRADES COUNCIL,  
*Ventura, Calif., July 28, 1954.*

Mr. GEORGE PURVIS,  
*Chairman, Board of Directors,*  
*Ventura River Municipal Water District,*  
*Ventura, Calif.*

DEAR SIR: The Ventura County Building and Construction Trades Council, wishes to go on record as opposing any further delay in the development of the Casitas Dam project, as planned by your honorable body.

We have supported the district since its inception, and feel you should not be stymied now by useless wrangling and delays. We feel confident that your representation of all the people of the district will not be influenced by minority pressure groups.

It is our belief the Bureau of Reclamation report should be accepted, and the preconstruction contract signed, so that necessary work in connection with this project can proceed immediately.

Thanking you in advance for your consideration, I am,

Yours very truly,

RONALD BENNER, *Recording Secretary.*

OIL WORKERS INTERNATIONAL UNION,  
VENTURA LOCAL, No. 120,  
Ventura, Calif., March 10, 1954.

VENTURA RIVER MUNICIPAL WATER DISTRICT,  
Ventura, Calif.

GENTLEMEN: The members of local No. 120, OWIU-CIO, have noted with interest the actions taken by directors of Ventura River Municipal Water District.

We were pleased to read in the Ventura County Star-Free Press of action of your board approving a resolution recommending the construction of Casitas Dam and conveyance works by Federal financing.

The membership voted unanimously to approve the action taken by your board as reported in the Ventura Star-Free Press recently.

Yours truly,

WM. A. BERTLES, *Secretary.*

Senator KUCHEL. Mr. Purvis?

### STATEMENT OF GEORGE M. PURVIS, PRESIDENT, VENTURA RIVER MUNICIPAL WATER DISTRICT

Mr. PURVIS. Mr. Chairman and gentlemen, my name is George Purvis, and I am president of the Ventura River Municipal Water District.

We have a prepared statement to submit, but if the chairman is willing, I should like to submit that and summarize my remarks more briefly.

Senator KUCHEL. Without objection, the record will include the complete text of Mr. Purvis' statement.

(The statement referred to follows:)

#### STATEMENT OF GEORGE M. PURVIS

Mr. Chairman, my name is George M. Purvis. I am president of Ventura River Municipal Water District.

#### VENTURA RIVER MUNICIPAL WATER DISTRICT

From our district's name the impression is given that we are a city or municipal utility. That is not correct.

Our district covers approximately 90,000 acres of land in the northwestern portion of Ventura County, of which approximately 21,000 acres are arable. Taking account of probable future developments with an adequate water supply, it is estimated that the urban area comprising the cities of Ventura and Ojai and several small unincorporated communities would occupy about one-third of the arable land. The remainder would be used for agricultural purposes. Therefore, while we are deeply concerned with providing an assured water supply for domestic and industrial use, we have an equal, if not greater concern with development of water for maintenance and expansion of agriculture through irrigation.

When our district was formed in 1952 we had a choice of several types of public water agencies under which to organize. In California there are water districts, waterworks districts, irrigation districts, conservation districts, utility districts, and others. After detailed study, the organization committee chose the Municipal Water District Act of 1911, as rewritten in 1951. This was the most up-to-date enabling act available, and it seemed to fill our needs. Since the act was rewritten in 1951 most of the new water development districts formed in California have been organized under its provisions.

This type of district has broad powers essential to obtaining a water supply for all beneficial purposes. These include the authority to levy taxes, issue bonds, and contract with the United States and other public agencies.

The word "municipal" in our district name is required by State law as identification of the act under which the district was formed, and is not a descriptive adjective indicating our purposes or authority.

My purpose in appearing before you today is twofold. First, I should like to stress the need for development of an assured water supply in the area of our

district. Second, I want you to know that our people favor this particular project for construction by the Bureau of Reclamation and are willing to pay for it.

#### NEED FOR WATER

In our area there is only a very limited amount of underground water storage. Except for the Ojai Basin, which cannot store enough water for its own needs, the drainage is steep and shallow. When rains come the water runs off to the ocean. There are no deep gravels to hold and store it in for future use. Such storage can be provided only by surface reservoirs. Our only surface reservoir is a 7,000 acre-foot reservoir created by Matilija Dam. We have dry periods of several years between the wet periods of heavy rainfall, which limits Matilija Reservoir to a present safe average annual yield of less than 2,000 acre-feet. That is woefully inadequate.

Therefore, under present conditions of irrigation and municipal and industrial development a shortage of water exists. Ground water and surface runoff are used extensively for both irrigation and municipal and industrial purposes. The present demands on these sources are exceeding the long range safe yield which can be obtained from them. A critical water supply situation for these uses exists under present water supply development conditions whenever a dry year occurs, and an extremely critical shortage exists under a series of dry years. Increase in irrigated acreage, therefore, will depend upon the development of an adequate additional water supply. Likewise, municipal and industrial expansion would require relatively large amounts of additional water.

In an effort to keep up with the demand for water the city of Ventura has drilled several wells near the ocean. These wells are about 1,500 feet deep and pump from below sea level. For the past several years, these wells have been the principal source of water for the city during the summer months. The water is not very good and there is always danger of salt-water intrusion. We are literally mining water stored many years ago. These wells do not afford a permanent water supply and it would appear desirable that they be maintained to serve the purpose for which they were originally drilled, the provision of an emergency supply only.

The proposed Ventura River project will provide holdover storage sufficient to meet increasing demands for agricultural and domestic purposes in dry periods as prolonged as the worst drought covered by our records.

#### BACKGROUND OF REQUEST FOR RECLAMATION PROJECT

As early as 1925 consultants were employed by local groups to consider our ever-increasing water problem and develop a solution. All investigators agreed that there was need for water-conservation facilities and each recommended the construction of some system of storage and conveyance works designed to conserve surplus water in wet cycles for use during the inevitable periods of drought. During those early years the need for water was not as great as it is now, and none of the plans was brought to fruition.

In 1944, the Ventura County Flood Control District was formed by a special act of the California State Legislature. Under that act the county was divided into several zones. Zone 1 is roughly coextensive with Ventura River Municipal Water District. The Flood Control District in 1948 constructed Matilija Dam, providing a 7,000 acre-foot reservoir. While Matilija water has contributed to the supply of water available to the Ventura River area, its safe annual yield of less than 2,000 acre-feet supplies only a small fraction of the need.

By 1951 a popular demand became evident for the formation of an independent water agency with adequate authority to provide for the needs of our area. A steering committee of interested people was organized, an election was held, and by a two-thirds majority vote the Ventura River Municipal Water District was established on October 17, 1952.

In March 1953 the district entered into a contract with the Bureau of Reclamation for a study of its water problems. Each of the parties paid half of the costs involved. The study and report which you have before you was completed in July 1954.

Submission of the report put before our district the problem of how to proceed. The two practical alternatives available for consideration were (a) design and construction by private contract, financed by a general obligation bond issue, or (b) authorization and construction as a Federal reclamation project, the costs to be repaid by the district in accordance with reclamation law.

Two principal reasons convinced us that we should seek a reclamation project. First, we and our constituents had confidence that the Bureau of Reclamation would design and execute complete plans for a water project that was physically safe, adequate to meet requirements, and economically sound.

They were acquainted with the businesslike way the Bureau of Reclamation was completing the Cachuma project in our neighboring county, Santa Barbara. Consequently, the Bureau of Reclamation was in a position to inspire the confidence of the people of our district.

Our second reason is related to our basic needs for water. The cost of water is not a major part of the budget of most industrial or municipal users, and they will procure what they need regardless of the cost. The same, of course, is not true with respect to irrigation users. The cost of water to them is a major item of expense and the amount they can afford to pay is definitely limited.

If this project is authorized and constructed under reclamation law the agricultural allocation, amounting to 57 percent of project costs, will be repaid without interest within a period of 50 years. If the project were financed by a local bond issue the agricultural allocation would have to be repaid with interest on a maximum period of 40 years from the date the money was advanced. Our studies indicate that the difference in cost between these alternatives is very substantial.

The general taxpayers, who are the indirect beneficiaries of the project, recognize the equity of and are agreeable to paying a portion of the agricultural water cost. With interest-free financing of the irrigation facilities, the difference between the cost of water and the amount the farmers can be expected to pay is not great. However, with bond financing this difference becomes unreasonable. Consequently, without reclamation financing the financial feasibility of the project becomes questionable.

After considering in detail this basic problem of how to proceed, the board proposed that the report of the Bureau of Reclamation be processed for authorization of the project as a reclamation project, and through the press and special public meetings sought the people's reaction. Endorsements of our action came pouring in from farm organizations, labor unions, civic groups and individuals. We feel that it is particularly significant that the overwhelming sentiment in our district favors this proposed reclamation project and that there is no substantial opposition.

#### REPAYMENT

If the Ventura River project is authorized for construction as a reclamation project, our district will contract to operate the facilities and return to the Government an amount equal to the costs of construction. Payments would be made over a period of years with interest on the portion of the costs allocated to municipal and industrial purposes.

It is estimated that the demand for project water will be small in the early years of project operation, but will increase steadily throughout the repayment period. In these circumstances the benefits from the project, both direct and indirect, will be greater in the later years of the repayment period. With this situation in mind our board of directors feels that repayment obligations should be geared to water use so that the principal burden of repayment will fall on those persons who are to derive the principal benefit. This is the basis of repayment we hope to secure when the contract between the district and the United States is negotiated. Attached hereto is a copy of a resolution which our board adopted some time ago relating to this subject.

#### CONTRACT

It is our understanding of procedure that when this project is authorized the district and the Bureau of Reclamation will be in a position to negotiate a contract for operation of the project and return to the Government of its investment (together with interest on the municipal and industrial allocation) pursuant to reclamation law. Before we execute such a contract we intend to submit the matter to the popular vote of the people in our district. We do not expect the Federal Government to commence construction of this project until our district, with the consent of its people, has bound itself to repay the costs involved.

However, we feel that it is urgent that construction be commenced at the earliest practicable date. To this end our district is currently financing pre-construction work, including the preparation of final design and specifications. In July of 1954 we entered into a contract with the Bureau of Reclamation under

which they commenced this work wholly financed with district funds at an estimated cost of \$720,000. While we understand this procedure is unusual it will lead to conclusion of this preconstruction work on the dam and reservoir by the end of this calendar year and permit actual construction as soon as the project is authorized and funds are available.

# CONCLUSION

The current drought period has now continued for some 10 years. It is reasonable to expect a period of normal rainfall to commence before very many more years pass. We need to have a reservoir ready to conserve that runoff.

Mr. Chairman, we sincerely request approval of the authorization bill and thereafter that all possible action be taken to assure the construction of the Ventura River project at the earliest possible date.

## VENTURA RIVER MUNICIPAL WATER DISTRICT, RESOLUTION No. 65

### RESOLUTION OF POLICY CONCERNING PAYMENT OF CAPITAL COSTS

Whereas it appears that the Congress of the United States of America during its present session may authorize the Ventura River project for construction by the Bureau of Reclamation as a Federal reclamation project; and

Whereas the Bureau of Reclamation has indicated that as soon as such authorization is obtained negotiation of a repayment contract between the United States and the Ventura River Municipal Water District will be appropriate; and

Whereas section 22 of the Municipal Water District Act of 1911, under which the Ventura River Municipal Water District was organized, provides that, "The board of directors, so far as practicable shall fix such rate or rates for water as will result in revenues which will pay the operating expenses of the district, provide for repairs and depreciation of works owned or operated by the district, and provide a reasonable surplus for improvements, extensions, and enlargements, pay the interest on any bonded debt of the district, and provide a sinking or other fund for the payment of the principal of such debt as it may become due"; and

Whereas it is the intention of the board in complying with this provision of the Municipal Water District Act of 1911 to attain as equitable a distribution of project costs as possible; and

Whereas it is the opinion of this board that a repayment schedule based upon and proportional to the estimated annual use of water to be developed by said project will attain such equitable distribution of project costs: Now, therefore, be it

*Resolved by the Board of Directors of Ventura River Municipal Water District, That, in the event the construction of said project is authorized by the Congress of the United States of America, the declared intention and purposes of the board shall be:*

1. To establish a schedule of resale rates which, being consistent with the ability of water users to pay, will result in the greatest practicable portion of project costs being borne by water users.

2. To negotiate with the Bureau of Reclamation for a repayment contract which shall provide either:

(a) That the United States of America furnish water to this district at such rates as will produce revenues during a 50-year period sufficient to cover the costs of construction of such dam and related facilities; or

(b) That, if a repayment obligation type contract be made, the annual payments by this district to the United States of America to repay the costs of construction shall be made over a period of 50 years and shall be proportional to the estimated annual use of water to be developed by such project.

Passed and adopted the 11th day of May 1955.

GEORGE M. PURVIS,  
*President of Ventura River Municipal Water District.*

Attest:

CHARLES W. PETIT,  
*Secretary of Ventura River Municipal Water District.*

Senator MILLIKIN. Mr. Chairman, we might lay one ghost that has appeared at this hearing. Has your organization made any official statements, or have any of its officers made any unofficial statements, condemning the upper Colorado?

Mr. PURVIS. Senator, they certainly have not.

Senator MILLIKIN. That is false, is it? You have no mental reservations on that?

Mr. PURVIS. I have no mental reservations. None of our group.

Senator MILLIKIN. We have heard otherwise. What did you call it, a canard?

Senator KUCHEL. A rather base canard, Senator.

Senator WATKINS. Have any of your communities passed any such resolutions?

Mr. PURVIS. If the Senator is willing, I think I could bring that point out a little later in my testimony and shall be glad to cover it as far as I know anything about it.

Senator WATKINS. Well, I am perfectly willing to develop it as you like.

Senator MILLIKIN. It does not make the slightest difference to me whether you did or did not. Let me make that clear. But I just wondered how foolish people could get to be when they are asking for something themselves, if they are narrow enough and foolish enough to condemn what somebody else is trying to do. Because there are some people who do not like that kind of business. I am a kind of a fool, and it does not make any difference to me.

Mr. PURVIS. Sometimes people are very shortsighted.

Senator MILLIKIN. That is very true.

Senator KUCHEL. Do you want to proceed on this? Do you want to develop this thought-control matter, Senator?

Senator MILLIKIN. I am tired of these canards.

Senator KUCHEL. All right. Proceed, Mr. Purvis.

Mr. PURVIS. One of the problems that our community has had to face—and it has been covered to some extent already—is the nature of the erratic rainfall. We either have a feast or a famine. We have these dry creekbeds labeled rivers, and most of the time, if you have driven through California, you will know they are dry. But at other times they have a great deal of water in them.

Our communities got along with this trick of nature up until about 1925. By that time, the demands from agriculture and the municipalities had become so great for water that they could not suffer in silence any longer, and they agreed they would have to do something about it. So they hired an engineer, a Mr. Lippincott, I believe, to try to find a solution for it.

He made a survey, and he found that they were getting from the ground all of the water that could be practically pumped. And the only way they could develop new water was to take care of the runoff that was wasting to the ocean. He assured them that there was sufficient water there, and that was the only way they could lick their problem.

They accepted the report. But I suppose the next year it rained. There are occasional good rains. At least nothing constructive followed the survey.

The years drifted along, and occasional reports again were made. A bond issue was brought up at one time, but the day of the election

a good rain came and the bond issue failed. By 1944, the people realized that they must do something definite. So they formed, throughout the county of Ventura, the Ventura County Flood Control District. I have a map which indicates this district.

They divided the county into zones. The district that I am representing here [points to map] at the present time is located within zone 1. Another was zone 2, and another one zone 3. These were the important ones. The lands that were thought to require no development were placed into zone 4. So the important ones were these three [indicating].

These three zones were operated by the county board of supervisors, acting as a flood-control district—a unique situation, in that each zone could function by itself, while the whole board directed the affairs of the district. Each zone could levy taxes, build dams, pipelines, and so forth independently of the others.

Eight years slipped by, and nothing of any significance had been accomplished. The people in this area, again (that I represent), said, "This must not be the answer. It appears that this vehicle is not going to take us where we want to go." Meetings were held through our area again, and finally they said, "We will have to set up a new water district, a district that is designed for water development alone, with directors who are interested in water development alone, whose interests do not go into other fields, as the board of supervisors necessarily have to do."

They had three reasons for coming to this conclusion. One reason is that zone 2 had already come to that conclusion 2 or 3 years before and practically had withdrawn from the overall district by setting up a water district of their own.

The second reason was that during this 8 years, the supervisors had built one little 7,000-acre-foot reservoir up here [indicating], with many attendant unfortunate details that left a bad taste in the people's mouths—a bad taste as far as any kind of water development was concerned.

So our people said, "We had better form a water district for the sole purpose of developing water." Labor, industry, the Grange, all the people, got together, and organized under a good act called the Municipal Water District Act of California.

As soon as we were organized, our directors got together. We had no money. We had no office. We had no staff. We had only one thing. We had a determination to do something as quickly as possible.

A canvass of the sentiment in the district as to ways that we might proceed resulted in the conclusion that our community would best be served through the efforts of the Reclamation Bureau.

Senator MILLIKIN. Mr. Chairman, may I ask:

How many people have you in Ventura at the present time?

Mr. PURVIS. In the city of Ventura, we have approximately 25,000 people. In the district, we have about 45,000, at the present time.

Senator MILLIKIN. How far out from Ventura is the district?

Mr. PURVIS. It is not a large district. This distance from Ventura, which is approximately in this location [indicating] would go up possibly 15 miles.

Senator MILLIKIN. How many people did you say are in the district?

Mr. PURVIS. About 45,000.

This was in the spring of 1953, when the Reclamation Bureau got started on the investigation.

Again, they had no money set aside for this, and neither did we, but we borrowed \$30,000 and got them started on the feasibility studies immediately.

By constant cooperation between our district and the Bureau of Reclamation, they were able to bring out results of their studies 1 year later, which is about 50 percent of the time they originally contemplated would be necessary for the study. They said, "You have plenty of water wasting away if you would save it. You have the ability to pay for it. We recommend a 250,000-acre-foot reservoir, at a cost of \$27½ million."

And then our question was: "What do we do now?"

Their answer was that the report had to be written up, that it had to be submitted to all the agencies, and that it would take several months before we could be ready to come to you gentlemen for authorization.

So, knowing the urgency of our situation, we said, "What is there that we can do to speed our project along? Is there not some way we can telescope these activities?" Then we came up with the idea of preconstruction work.

Now, we had no money for such work. Nor would the Bureau match funds on such work. But we borrowed the money, which we have been able to repay by taxes. And we have not paid all of this \$720,000. We had to stretch it over a 2-year period in order to be able to pay for it. But we are having that work done at the present time, and it has been going on for several months.

Senator MILLIKIN. What is the nature of that work?

Mr. PURVIS. The nature of the work is to go into the reservoir area and to make many test holes to test further the depth to which the footings, and so on, will have to be made; drifts back into the mountain to discover the nature of the soil and rock; and testing to find out what borrow materials can be used to build the dam. Then assembling of this information and a final design of the dam and the pipelines and regulating reservoirs would complete the work.

Senator MILLIKIN. It looks like you made a very intelligent effort to get that thing started.

Mr. PURVIS. We thought so; although not everybody agreed. Some thought we were going out on a limb, that we were going too fast, that maybe there would be a hitch in the project and that we would lose our money. We knew that, too. But because of the urgency of the situation, we thought we were justified in doing so.

That brings us up to the present time. We have all of our reports in to the Bureau of the Budget. You have heard the recommendations of Mr. Dexheimer, who has been good enough to visit our project, as has Senator Kuchel, Senator Knowland, and of course, Congressman Teague. They are beginning to share the same urgency that we feel about our project.

So we leave it now in your hands. We sincerely hope that authorization will come this session, and that by the next session with our preconstruction work done, you may have an appropriation that will enable us to get under way at once.

As has been pointed out, we have gone through a dry period. Another year or so may bring an extremely wet period. In 1941, 250,000 acre-feet wasted away from the Ventura River into the ocean; enough water, if it were impounded in this large reservoir, to fill it in 1 year.

I am not saying it is possible to fill in 1 year, even if such a rain came again, because of the nature of the conduit that goes across there [indicating]. Even in good years, it would take approximately 5 years to fill. During a dry period, the Bureau estimates the reservoir would fill in 20 years.

If I may, Mr. Chairman, I should just like to show some of the results of water shortages in our area; and, again, what we could do if we had sufficient water.

I was traveling in the Ojai Valley a short time ago, and I saw something that was even a surprise to me—a citrus orchard completely lost because of lack of water. I would not give you the idea that the Ojai Valley is a barren valley. It is a beautiful valley. It has many fine citrus orchards. But nevertheless, this drought condition has crept in, and we are beginning to lose our investments, as you can see. Cattle are grazing in 60 acres of oranges.

You ask about the price of our better citrus land? Well, recently 40 acres changed hands for \$167,000.

To the left of this picture is also some fine potential avocado land. It looks just like a dry field and a barren hillside. But it happens to be in a relatively frost-free area. That hillside could be planted to avocados, one of our coming valuable crops.

Here is a closeup that may give a little better idea of what these dead trees look like.

Note on the right-hand side the valve and the pump, which is unable to serve this area because of the drought—no water to pump. Let me show you the idea that that is all we have, let me show you some of our fine orchards from which we get high production. This is the thing we could have if we had water [indicating].

Senator KUCHEL. Thank you very much, Mr. Purvis.

Are there any questions?

Senator WATKINS. I would like to inquire of the witness why it is not possible for the people in that area to handle it as an ordinary development proposition, by organizing properly and issuing bonds and getting the money that way. Why, in other words, do you have to come to the Federal Government?

Mr. PURVIS. I do not blame you for asking that question, and I think if I were in your place I would be asking the same question. I think possibly if you were in my place, you would be saying the same thing that I am here.

Senator WATKINS. I could; only I would have to say peaches and apples, and that sort of thing, up in my area. We have had lots of orchards abandoned there because of lack of water, drought. Fields of alfalfa, pastures—I could go on for half an hour describing the effects in my State that droughts have had on farms that have been developed at great costs. I can understand full well what a drought means. I have been through them many times. You say I can say the same thing. I can if you will just change the names of the crops.

Mr. PURVIS. I think I might point out 2 or 3 reasons why I feel that Federal financing is justified.

No. 1 is the problems that we have involved in getting our people together to take some concerted action. We have had some difficulties under private development, as I started to point out, with the Ventura Flood Control District. Our people seem to have an apathy for this type of development.

Now, maybe they are to blame for that. Maybe that is inexcusable. But we know that that is just the situation—that to get our people to take some concerted action for a bond issue would be extremely difficult.

Senator WATKINS. May I ask you this question: I understand your difficulties in organizing. I had the same difficulties, because I was the general counsel for a project in my own State, and I took a long time to convert them to the point that they had to do something on their water supply.

You have a difficulty selling your own people, where you know they will benefit. But from the standpoint of financing, do you have enough values there that this could be financed by the people themselves, on an ordinary commercial transaction?

Mr. PURVIS. That is right. That was one of our problems.

Now, the second one is this: that we could finance it from a municipal and industrial angle—

Senator WATKINS. And pay for the entire project?

Mr. PURVIS. For municipal and industrial use. But according to what our engineers tell me, we cannot make a going proposition of providing water for agriculture, because of the high costs of the water for that alone. Our interest rate would cause the costs of agricultural water to practically double, and we just simply could not make a go of it from that point of view. And as a result, our agriculture would have to get along as they are now doing.

For the third reason, and I guess this just gets into a matter of philosophy, the reclamation law makes these things available to us. I suppose those Congressmen who put these laws on the books felt that it was a good thing for the country. And I agree. It is. It makes this project possible for us, where it would not otherwise be possible.

We can make this country really come to fruition if we have water. If we do not have water our lands and people will suffer.

Senator WATKINS. What you are trying to say, then, is this: that the cities and the industrial users, the municipalities and the industrial users, could bond that and take care of their own water supply. They could do that all right.

Mr. PURVIS. I believe they could.

Senator WATKINS. There is no particular difficulty in finding people to buy the bonds, and they would be able to pay back the entire cost for the water that they would need.

Mr. PURVIS. That is my understanding.

Senator WATKINS. But the farmer end of it, the agricultural end—you could not do that there. That is beyond your capacity to do and your ability to pay.

Mr. PURVIS. That is the way it is, yes.

Senator WATKINS. Is that the fact? Is that the fact, that it is beyond your ability to do?

Mr. PURVIS. As far as I know, it is, yes.

Senator WATKINS. There ought to be some basis to show that. Because ordinarily the reclamation program was adopted for the purpose of doing those necessary things for the people that they could not do for themselves. That is the reason I am asking these questions. And that ought to be one of the tests for a reclamation project.

Mr. PURVIS. Senator, if you would like to go into this a little further, our engineer, Mr. Bennett, is here, and I believe he knows these details better than I do, and he would be glad to testify.

Senator WATKINS. You are one of the board of directors, the president of it, are you not?

Mr. PURVIS. Yes.

Senator WATKINS. You know whether or not it would be possible for you to go out and bond that area, put in your canals and reservoirs for the use of the farmers. You know whether it would be possible to get the money privately or through the ordinary business channels.

Mr. PURVIS. Our district has pretty good credit.

Senator WATKINS. Well, they could have good credit for the smaller things, but how about the total cost of a project of this kind? Could you build a project just for the agriculturists alone?

Mr. PURVIS. Oh, no. We could not do that. That is out of the picture. You see, we have pumping costs—

Senator WATKINS. Why is it that you are not getting the help? Because you cannot pay it, or because they just do not want to help you out?

Mr. PURVIS. As Mr. Hamilton pointed out, even with the benefits of reclamation, we still have to ask the municipal and industrial areas to help out the agricultural end of it to some extent.

Senator WATKINS. That means that you are paying all you can, and if you paid all you could possibly pay you could not pay enough to pay the costs of that, even when they joined with you and took part of the water themselves.

Mr. PURVIS. That is right.

Senator WATKINS. That is what I am trying to find out, if that is the situation. I thought with that rich ground down there you farmers might have a type of project that would be financially feasible without the help of the Federal Government.

Mr. PURVIS. It just could not be.

Senator WATKINS. Well, now, that is the kind of projects we have. So you come in within our class, where we need the help, and we do not hesitate to come in and say we will pay it all back. We cannot finance it ourselves, so we come in and ask the Federal Government to take it under the reclamation law, which was designed for that very purpose.

Mr. PURVIS. I would like to explain just one thing further, that I sidestepped a few moments ago, and that was your question with regard to, let me say, some offensive resolution.

I have intimated that a number of our problems on our water development arose from some actions of the Flood Control Board. They are the ones that introduced this resolution.

Senator WATKINS. Which resolution?

Mr. PURVIS. At least I heard some reference to it, some problem here. We have had no part of that. We are sympathetic to the interests and the needs for water in areas in our State and out of our State, and we are certainly not taking any steps to oppose the project in other States.

I want to make that very clear for myself, for the men who are here, and for the community at large. Our editor, Mr. Pinkerton, has written editorials, particularly after Congressman Aspinall visited our area, and indicated our sympathy with his problems.

Senator MILLIKIN. Mr. Chairman, I would like to ask the witness: Tell us a little bit about your water district. Under the law of California, how do you organize a district of that kind?

Mr. PURVIS. Senator, when we want to organize a district of that sort, first of all, we have to have community interest. We hold meetings. In this case, we had labor that really initiated some of the early meetings. And a group of people got together and decided that some action should be taken.

We circulated petitions calling for an election. Then, at a stated time, an election was held, and the people in the community had the opportunity to vote as to whether they wanted to form this particular district. The district was approved by a 2 to 1 vote.

Senator MILLIKIN. What opportunity will the people have to vote on what you are proposing to do here?

Mr. PURVIS. As soon as this project is authorized, we expect to negotiate a repayment contract stating just how we expect to bind ourselves to the repayment of the debt. Then we will submit that to a vote of the people. We are very sure that our people will approve the contract that we negotiate.

But we will not enter into anything and will not sign anything until it has been submitted to the people.

Senator MILLIKIN. Who has the authority to levy the taxes?

Mr. PURVIS. The board of directors.

Senator MILLIKIN. And they will levy the taxes necessary to see that a repayment is made of the contract that is entered into; is that right?

Mr. PURVIS. They will.

Senator MILLIKIN. That is all I wanted to know. You have no doubt about the willingness of the people to approve that kind of a plan?

Mr. PURVIS. I have no doubt at all.

Senator MILLIKIN. That is all, Mr. Chairman.

Senator WATKINS. I have one further question, there.

It was indicated, I think, by the previous witness that you people were willing to sign a contract for repayment before construction begins.

Mr. PURVIS. That was our intention. We would not want to spend the money that would bind the people to anything until the people had had a chance to decide for themselves that that was what they wanted to do.

Senator WATKINS. I do not think the Bureau of Reclamation would accept a contract unless it had been submitted to your property owners within the district. As I understand it, the usual program of the Bureau is to obtain a repayment contract on all of these projects before construction begins. So that would just be following the regular

pattern, in doing this. However, in Central Valley, I think that was not the case.

Mr. PURVIS. I understood there had been exceptions.

Senator WATKINS. But when any project started, we had to have a repayment contract signed.

Mr. PURVIS. We have assured our people that we will not enter into a contract without submitting it to them for a vote.

Senator WATKINS. I notice you said something about flood control in that area. Was there an attempt to get a flood control project there?

Mr. PURVIS. No; there was not. It just happens to be a title to the act under which the district organized.

Senator WATKINS. If you could have got a flood control act, you would not have had to pay any of it back?

Mr. PURVIS. We are going to pay it all back.

Senator WATKINS. I do not have any further questions.

Senator KUCHEL. Congressman Teague?

Representative TEAGUE. I just think the record ought to be absolutely clear on one thing. The statement Mr. Purvis and I made was a thousand percent correct, that this Ventura Municipal Water District has entered into no resolution nor taken any action in opposition to the upper Colorado River project.

But apparently, I am now informed, the Board of Supervisors of Ventura County, saw fit to pass such a resolution. That is probably what the Senator had in mind.

Senator WATKINS. Do you know whether the board of supervisors are now in favor of the Ventura project?

Representative TEAGUE. Oh, yes.

Senator WATKINS. And do we have their resolution?

Senator KUCHEL. I just made it a part of the record.

Senator WATKINS. Well, we are glad to know they are in favor of one reclamation project.

Senator MILLIKIN. I want to say again: It does not make a bit of difference to me whether they did or did not pass such a resolution. I think people can be perfect fools in rendering disservice to their own interests, and you have to save them against that when they do it.

Mr. PURVIS. Thank you, Senator.

Senator KUCHEL. That is your usual broadminded and statesman-like approach to a problem of this kind, Senator.

Senator WATKINS. May I say that I have great sympathy for this community, because I know what they go through. We have gone through in our State identical situations. But I am probably not in the best mood this morning. I have just been talking to some Californians about seeing whether they would not support a project in my State and the upper basin States. They were not friendly. So I had the wrong mood when I came in here. However, you are getting me mellow now.

Senator KUCHEL. We have one more witness, Mr. Neil Ensich, a farmer of the area.

Mr. Ensich, we have a little time problem, so will you expedite your statement as much as possible?

**STATEMENT OF NEIL ENSCH, FARMER, OJAI, CALIF.**

Mr. ENSCH. I will keep it brief, Mr. Chairman.

Mr. Chairman and gentlemen, my name is Neil Ensich. I am the managing partner of a farming company at Ojai. We have 18,000 trees, ranging from 2 to 45 years of age, and our problem is water. I don't want to be repetitious, so I will give you a few comparisons and stop.

We acquired the ranch in 1937. We had 2 wells on the ranch then, both less than 300 feet deep. Now we have 6 wells. The deepest is 740 feet. We cannot drill more. There is no use to drill more. We do not put more water in the basin by drilling. And we have not found that we increased our water supply greatly by drilling the additional wells.

The water costs are high. We cannot go ahead and plan future development. The trees cannot be put in cold storage, when we have a drought cycle. During the present cycle we have been fortunate enough to have had a wet year once in awhile that pulled us out of a bad situation.

Our low point in production was 1951. That was a dry year, when several of our farmer neighbors were out of water entirely. We had some. Our production that year was 36,000 field boxes of oranges—which is red ink. The following year, the winter of 1951-52, was a wet winter, and the trees came back, and we had production of 59,000 field boxes, which was like it should be.

The year after that, the production was 76,000 boxes—which indicates that it is a good area, good for citrus. We have the soil and the climate. If we had the water, there would be no question but what we could go ahead and run our business as industry and other lines of economy do.

The difference, possibly, between some segments of agriculture is the annual crops or the row crops. If you lose a crop, you can plant another one. Or if you know the year is going to be dry, or if you are in a dry cycle, you do not do anything.

With ours, we are stuck with our life's work. And many of these neighbors of mine have worked hard and have done the work themselves, and now they are old, and they see a probability of losing their entire life's work just because of lack of water.

Now, there is plenty of surplus water, as the witnesses have said, during periods of rainfall. And if this could be stored to take us over the dry cycles, we would have a stable economy.

The crops, principally citrus, in the area, certainly are not in surplus supply nationally, and I know of no crops in the area that are.

There is an area to be developed, and I would like to submit a picture, quickly, which shows a lemon grove. The Senator from California will appreciate this. This grove a couple of years ago produced 13,000 boxes from 10 acres. That is 1,300 boxes an acre. The price of that fruit grossed well over \$2. It probably netted over \$2 a box.

Senator WATKINS. How many boxes per acre?

Mr. ENSCH. 1,300 boxes. He has water. There is this place across the street. I am at present clearing it. And as soon as I know there can be water, I will do the same with this [indicating].

People have asked me why? I don't know. It is in your blood. If you are a farmer, you are foolish. You can make a lot more money in other lines of endeavor, but farming is what you like to do.

And I am here today not only for myself, but my neighbors. Our grove is the largest in the area. There are a few of them that are 60 acres. The rest are 40, 30, 10, and some 5. And all of us ask you to take the politics out of it. We are asking for survival. Because an orange tree without water cannot exist. And if we are to continue to exist and further develop the area, it will be necessary to store these surplus waters.

Senator WATKINS. How long have you lived there in Ventura County, Mr. ENSCH?

Mr. ENSCH. We acquired the grove in 1937.

Senator WATKINS. In your judgment, can you state what the feeling among the farming population of the area is with respect to this proposal?

Mr. ENSCH. Very definitely.

Senator WATKINS. In favor of it?

Mr. ENSCH. Very definitely. What else is there? We are out on a limb a mile long. And it is a terrific investment; your life's work.

Senator WATKINS. Why did you plant those farms if the water supply was as scarce as you said it was? Was it overextended?

Mr. ENSCH. It was overextended.

Senator WATKINS. Just because of some change in the natural situation there as compared to what it was when the orchards were planted?

Mr. ENSCH. That is true. A dry cycle. And planting more acres before we knew.

Senator WATKINS. Why should they plant more acres when you are already short of water?

Mr. ENSCH. Well, that is the American way. As I say, we go ahead and do these things. This agriculture is the least exact science of any that I know. And it does not make sense, but you do it. You get a wet year and everybody feels wonderful, and they want to do something. And you go ahead and do it. It is silly, Senator. Sometimes I wonder why I ever got up there.

Senator WATKINS. I think I can understand your situation. I have a couple of fruit farms that my family has been arguing about for years. I think it does get in the blood.

Mr. ENSCH. I am sure you can understand.

Senator WATKINS. I think you described it better than it has been described, as a sort of foolishness.

Mr. ENSCH. Well, this is serious. With us it is tragic. It really is. We cannot go on much longer.

Senator KUCHEL. Senators, I think you will be interested. The large city is the city of, as it used to be called, San Buena Ventura. How old is that city?

Mr. ENSCH. It was founded by the Padres of 1780, I believe.

Representative TEAGUE. The mayor says 1782, Mr. Chairman.

Senator KUCHEL. So they have been up there, you know, quite a little while, gentlemen. This runs back to the days before the country was founded.

Any questions from the members of the committee?

Thank you very much.

Mr. LINEWEAVER. Mr. Fred W. Peel, an attorney in this city, asked permission, Mr. Chairman, to file a statement possibly next week on behalf of the Hoffman-Casitas Ranch.

Senator KUCHEL. In opposition to the bill?

Mr. LINEWEAVER. No, he does not say he is in opposition. He just wants permission to file a statement.

Senator KUCHEL. Well, now, I do not know when the subcommittee will meet. I assume it will meet shortly.

Is he here in the room? Is the gentleman present?

Mr. PEEL. Yes, sir.

Senator KUCHEL. How long would it take you to formulate the statement?

Mr. PEEL. Just a few days. Actually, I could tell you what they want to make a statement on, or what they presently plan to make a statement on, and that is a request that the 160-acre limitation be removed. I do not have sufficient data on it, and that is the reason I do not want to file a statement now. But I gather that that will affect them particularly, and they are the people whose ranch will be flooded by such a project.

Senator KUCHEL. You may file such a statement. I would like to have the record closed as soon as possible. Would it be reasonable for you to prepare it and present it to the staff of the committee by Friday of this week?

Mr. PEEL. I believe so.

(Mr. Peel subsequently advised the committee, his clients would not file a statement.)

Senator KUCHEL. Thank you, sir.

Senator MILLIKIN. Mr. Chairman, is the Senate bill exactly the same as the House bill?

Senator KUCHEL. Yes.

Mr. LINEWEAVER. Is Mr. Bennett here?

Have you any idea how soon the Budget Bureau is going to clear this with any suggested amendments?

Mr. BENNETT (Elmer Bennett, Legislative Counsel, Interior Department). There is some material before the Bureau of the Budget, and I am not able to advise when clearance will be secured. However, I will convey the committee's desire to the Department, with the view of expediting clearance.

(The following letter and enclosure were later received for the record:)

CONGRESS OF THE UNITED STATES,  
HOUSE OF REPRESENTATIVES,  
Washington, D. C., June 9, 1955.

Re Ventura River project.

SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
Suite 224, Senate Office Building,  
Washington 25, D. C.

GENTLEMEN: Enclosed herewith is a resolution from the Ojai Valley Business Association regarding the Ventura River project, with the request that it be made a part of the hearings to be held on this matter.

Sincerely yours,

CHARLES M. TEAGUE, M. C.

OJAI VALLEY BUSINESS ASSOCIATION

OJAI, CALIF.

RESOLUTION

Whereas the needs and demands for water in the Ojai Valley for agricultural and domestic purposes exceeds the water supply now available; and

Whereas this situation is imperilling our orange orchards and our other agricultural pursuits, preventing planting and stopping the development of new homes; and

Whereas construction of the Casitas Dam as outlined by the Bureau of Reclamation will provide the most economical and possible solution to this problem: Now, therefore, be it

*Resolved*, That we, the business, professional and agricultural people of the Ojai Valley hereby go on record as favoring the authorization of construction of the Casitas Dam by the Bureau of Reclamation at the earliest possible date.

BOARD OF DIRECTORS,  
OJAI VALLEY BUSINESS ASSOCIATION,  
GEORGE E. MEINIG, *Chairman*.  
HAROLD M. RIDER, *Secretary-Manager*.

Dated May 20, 1955.

(The reports of the Department of the Interior and Bureau of the Budget ordered printed are as follows:)

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington 25, D. C., July 12, 1955.

HON. SAM RAYBURN,  
*Speaker of the House of Representatives,*  
Washington 25, D. C.

MY DEAR MR. SPEAKER: My report on the Ventura project, California, is transmitted herewith pursuant to the provisions of section 9 (a) of the Reclamation Project Act of 1939 (53 Stat. 1187).

The report presents a plan for furnishing an average of 27,800 acre-feet of water annually for irrigation and for municipal and industrial purposes in Ventura County in the vicinity of the city of Ventura. The project works would consist primarily of Casitas Dam and Reservoir, Robles diversion dam, Robles-Casitas Canal, and a main conduit system for carrying the water to the various service areas. The project is urgently needed to permit expansion of irrigation and industry and to serve the municipal requirements of this rapidly growing, water-scarce area.

The estimated cost based on January 1954 prices, which are approximately the same as current prices, is \$27,869,000. A total of \$778,000 will have been contributed by the water users prior to construction of the project, if authorized, for investigations and for preconstruction activities. The remainder, except for \$169,000 which could be assigned to minimum basic recreational facilities is allocated to irrigation and to municipal and industrial water supply and will be repaid within a 50-year period including a 10-year development period. As is customary, repayment of costs allocated to municipal and industrial water purposes would include interest. Total benefits are estimated to exceed costs in the ratio of 4.25 to 1.0, with primary benefits exceeding costs by a margin of 1.76 to 1.0.

Copies of the proposed report of the Secretary of the Interior were transmitted to the State of California and to the Secretary of the Army for their views and recommendations in accordance with the provisions of section 1 of the Flood Control Act of December 22, 1944, and to the agencies represented on the Interagency Committee on Water Resources for their information and comments. Copies of all comments which have been received are enclosed with the report.

The report and copies of all comments received were transmitted to the President. Enclosed is a copy of the letter of comments of June 29, 1955, from Assistant Director, Bureau of the Budget, Donald R. Belcher.

Sincerely yours,

DOUGLAS MCKAY,  
*Secretary of the Interior.*

Identical letter to Hon. Richard M. Nixon, President of the Senate, United States Senate, Washington 25, D. C.

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington 25, D. C., June 29, 1955.

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: This will acknowledge receipt of Acting Secretary Davis' letter of June 14, 1955, requesting advice concerning the relationship to the program of the President of your proposed report on the Ventura River project, California.

The report recommends a multiple-purpose project involving the storage of water primarily for irrigation and municipal and industrial uses. The estimated total cost, based on January 1954 prices, is \$27,669,000, of which \$26,891,000 is Federal and \$778,000 is non-Federal. The report states that \$26,722,000 of the Federal cost, consisting of \$15,319,000 for irrigation and \$11,403,000 for municipal and industrial supply purposes, is reimbursable, and \$169,000 for recreational facilities is nonreimbursable. The non-Federal cost consists of a contribution of \$778,000 by the Ventura River Municipal Water District formed in October 1952.

The average annual total benefits are \$4,374,000, of which \$1,809,000 are primary and \$2,565,000 are secondary. The annual cost is estimated at \$1,028,000. The overall project benefit-cost ratios are 4.25 based on total benefits and 1.76 based on primary benefits. Corresponding benefit-cost ratios for irrigation are 3.90 and 1.56, respectively, and for municipal and industrial water are 4.44 and 1.71, respectively.

The report indicates that project revenues from the sale of irrigation and municipal and industrial water, together with receipts from an ad valorem tax levy on the district's assessed valuation, presently estimated to be \$185 million, will repay the municipal and industrial water allocation at 2.5 percent interest in 40 years and the irrigation allocation in 50 years, including a 10-year development period.

It is noted that definite contractual arrangements for repayment of reimbursable costs have not been completed but that the Ventura River Municipal Water District, representing the project water users, contemplates repayment of these costs by a combination of water tolls and tax assessments. The water users would repay \$3,227,000 for irrigation and \$11,243,500 for municipal and industrial water or a total of \$14,470,500. The balance, including interest on the municipal and industrial water investment, of \$19,403,113 would be repaid through a general tax levy which would involve a maximum annual rate of approximately \$0.30 per hundred dollars of assessed valuation.

The report recommends that a study be made of fish and wildlife resources after project authorization and that such modification in the authorized project facilities as may be found appropriate to preserve and propagate these resources be made by the Secretary of the Interior. The Department contemplates that any additional costs for this purpose would be nonreimbursable.

The Department of Agriculture questions whether farmers will make necessary investments to expand irrigation to the full project potential in view of annual water charges of \$25 per acre-foot or an average of more than \$50 per acre annually. The State of California is in agreement with the objectives of the project.

The Bureau of the Budget believes that—

(1) In view of the possibilities that irrigation may not expand to the extent anticipated in the report, and in order to protect the Federal investment, construction of the project, if authorized, should be contingent upon the Ventura River Municipal Water District assuming financial responsibility for the project and executing a repayment contract with the Federal Government for the repayment of all reimbursable costs within a period of 50 years.

(2) Where proposed recreational facilities are not of national significance, as in the case of the Ventura River project, they should not be included in the project report unless States and local governments agree to repay the costs. However, such minimum basic facilities and services, as may be needed for the general protection and operation of the project area and for the accommodation or protection of the visiting public, should be considered necessary adjuncts to construction and operation, and their costs should be allocated to the major purposes of the project.

(3) With respect to fish and wildlife, the costs for correcting any damages to fish and wildlife caused by the project should be treated as part of the construction costs and allocated to the various purposes in the same manner as

other damages, including relocations. To the extent that works to be constructed would be in the nature of an expansion of the fish and wildlife resources of the area they would fall into either of two classes. On those of a purely local nature the cost should be fully reimbursed by States, local governments, or local interests. If of national significance they should be authorized and financed as a part of the regular fish and wildlife program or authorizing language should be submitted to the Congress stating the maximum amount of such costs which would be borne by the Federal Government.

Your proposed report presents a very beneficial water resource project for the Ventura River Basin. The benefit-cost ratios based only on their direct benefits are favorable for both the irrigation and the municipal and industrial water features. Also, the analysis given in your report shows the project to be sound financially, with full repayment of the Federal reimbursable investments scheduled within a period of 50 years, including a 10-year development period for irrigation.

Accordingly, you are advised that (1) subject to your consideration of the above comments there would be no objection to the submission of your report to the Congress, and (2) we would recommend that any legislation authorizing the proposed project incorporate the conditions set forth above concerning the financial responsibility for repayment of all reimbursable costs within a period of 50 years, and the provision of recreational and fish and wildlife facilities. No commitment, however, can be made at this time as to when any estimate of appropriation would be submitted for construction of the project, if authorized by the Congress, since this would be governed by the President's budgetary objectives as determined by the then prevailing fiscal situation.

We would appreciate having a copy of this letter included with your report when it is submitted to the Congress.

Sincerely yours,

DONALD R. BELCHER,  
*Assistant Director.*

Senator KUCHEL. Thank you very much, gentlemen. The hearing is concluded and a further report of the Department with comments of the Bureau of the Budget thereon will be incorporated in the record when received.

(Whereupon, at 12:15 p. m., the hearing was adjourned till the call of the Chair.)

# TRINITY RIVER DIVISION, CENTRAL VALLEY PROJECT, CALIFORNIA

---

THURSDAY, JULY 14, 1955

UNITED STATES SENATE  
SUBCOMMITTEE ON IRRIGATION AND RECLAMATION  
OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The subcommittee met, pursuant to call, at 10 a. m., in the committee room, 224 Senate Office Building, Hon. Clinton P. Anderson (chairman of the subcommittee) presiding.

Present: Senators Clinton P. Anderson, New Mexico; Eugene D. Millikin, Colorado; and Arthur V. Watkins, Utah.

Also present: Senators James E. Murray, Montana, chairman, and Alan Bible, Nevada, and Thomas H. Kuchel, California, members, committee on Interior and Insular Affairs.

Also present: Stewart French, chief counsel and staff director; Goodrich W. Lineweaver, Elmer K. Nelson, and Platt Wilson, professional staff members; and N. D. McSherry, assistant chief clerk.

Senator ANDERSON. The meeting will be in order.

This is a hearing on the Trinity River division of the Central Valley project of California, covering S. 178 and H. R. 4663, Trinity division.

We do not intend at this session to take any testimony on the San Luis unit of the West San Joaquin division, as no report from the Department was available at the time this meeting was scheduled.

We are very happy to have Senator Kuchel here today, from California, and also Congressman Engle and the other members of the California delegation.

Mr. LINEWEAVER. Mr. Chairman, Senator Knowland phoned and said it was impossible for him to be here, and he sent a statement over that he would like to have inserted in the record. His administrative assistant, Mr. Gleason, is here.

Senator ANDERSON. Very well.

We will start by putting in a copy of the bill.

Are the sections of the Senate and House bills at all comparable?

Senator KUCHEL. The House bill, Mr. Chairman, does have a number of amendments in it to which I will allude, and I am sure my colleague, Congressman Engle, will also allude to them. I would ask the Chair to consider, in these hearings, the provisions of the House bill alone.

Senator ANDERSON. The House bill alone?

Senator KUCHEL. Yes, sir.

Senator ANDERSON. Thank you. We have to know which way we are going. So we will put in H. R. 4663 and the reports from the Department and the Bureau of the Budget at this point.

(The material referred to is as follows:)

[H. R. 4668, 84th Cong., 1st sess.]

**AN ACT** To authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division, Central Valley project, California, under Federal reclamation laws

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That, for the principal purpose of increasing the supply of water available for irrigation and other beneficial uses in the Central Valley of California, the Secretary of the Interior, acting pursuant to the Federal reclamation laws (Act of June 17, 1902, 32 Stat. 388, and Acts amendatory thereof or supplementary thereto), is authorized to construct, operate, and maintain, as an addition to and an integral part of the Central Valley project, California, the Trinity River division consisting of a major storage reservoir on the Trinity River with a capacity of two million five hundred thousand acre-feet, a conveyance system consisting of tunnels, dams, and appurtenant works to transport Trinity River water to the Sacramento River and provide, by means of storage as necessary, such control and conservation of Clear Creek flows as the Secretary determines proper to carry out the purposes of this Act, hydroelectric powerplants with a total generating capacity of approximately two hundred thirty-three thousand kilowatts, and such electric transmission facilities as may be required to deliver the output of said powerplants to other facilities of the Central Valley project and to furnish energy in Trinity County: *Provided*, That the Secretary is authorized and directed to continue to a conclusion the engineering studies and negotiations with any non-Federal agency with respect to proposals to purchase falling water and, not later than eighteen months from the date of enactment of this Act, report the results of such negotiations, including the terms of a proposed agreement, if any, that may be reached, together with his recommendations thereon, which agreement, if any, shall not become effective until approved by Congress. The works authorized to be constructed shall also include a conduit or canal extending from the most practicable point on the Sacramento River near Redding in an easterly direction to intersect with Cow Creek, with such pumping plants, regulatory reservoirs, and other appurtenant works as may be necessary to bring about maximum beneficial use of project water supplies in the area.

SEC. 2. Subject to the provisions of this Act, the operation of the Trinity River division shall be integrated and coordinated, from both a financial and an operational standpoint, with the operation of other features of the Central Valley project, as presently authorized and as may in the future be authorized by Act of Congress, in such manner as will effectuate the fullest, most beneficial, and most economic utilization of the water resources hereby made available: *Provided*, That the Secretary is authorized and directed to adopt appropriate measures to insure the preservation and propagation of fish and wildlife, including, but not limited to, the maintenance of the flow of the Trinity River below the diversion point at not less than one hundred and fifty cubic feet per second for the months July through November and the flow of Clear Creek below the diversion point at not less than fifteen cubic feet per second unless the Secretary and the California Fish and Game Commission determine and agree that lesser flows would be adequate for maintenance of fish life and propagation thereof; the Secretary shall also allocate to the preservation and propagation of fish and wildlife, as provided in the Act of August 14, 1946 (60 Stat. 1080), an appropriate share of the costs of constructing the Trinity River development and of operating and maintaining the same, such costs to be nonreimbursable: *Provided further*, That not less than 50,000 acre-feet shall be released annually from the Trinity Reservoir and made available to Humboldt County and downstream water users.

SEC. 3. The Secretary is authorized to investigate, plan, construct, operate, and maintain minimum basic facilities for access to, and for the maintenance of public health and safety and the protection of public property on, lands withdrawn or acquired for the development of the Trinity River division, to conserve the scenery and the natural, historic, and archeologic objects, and to provide for public use and enjoyment of the same and of the water areas created by these developments by such means as are consistent with their primary purposes. The Secretary is authorized to withdraw from entry or other disposition under the public land laws such public lands as are necessary for the construction, operation, and maintenance of said minimum basic facilities and for

the other purposes specified in this section and to dispose of such lands to Federal, State, and local governmental agencies by lease, transfer, exchange, or conveyance upon such terms and conditions as will best promote their development and operation in the public interest. The Secretary is further authorized to investigate the need for acquiring other lands for said purposes and to report thereon to the Committees on Interior and Insular Affairs of the Senate and House of Representatives, but no lands shall be acquired solely for any of these purposes other than access to project lands and the maintenance of public health and safety and the protection of public property thereon without further authorization by the Congress. All costs incurred pursuant to this section shall be nonreimbursable and nonreturnable.

SEC. 4. Contracts for the sale and delivery of the additional electric energy available from the Central Valley project power system as a result of the construction of the plants herein authorized and their integration with that system shall be made in accordance with preferences expressed in the Federal reclamation laws: *Provided*, That a first preference, to the extent of 25 per centum of such additional energy, shall be given, under reclamation law, to preference customers in Trinity County, California, for use in that county, who are ready, able and willing, within twelve months after notice of availability by the Secretary, to enter into contracts for the energy: *Provided further*, That Trinity County preference customers may exercise their option on the same date in each successive fifth year providing written notice of their intention to use the energy is given to the Secretary not less than eighteen months prior to said date.

SEC. 5. The Secretary is authorized to make payments, from construction appropriations, to Trinity County, California, of such additional costs of repairing, maintaining, and constructing county roads as are incurred by it during the period of actual construction of the Trinity River division and as are found by the Secretary to be properly attributable to and occasioned by said construction. The Secretary is further authorized and directed to pay to Trinity County annually an in-lieu tax payment out of the appropriations during construction and from the gross revenues of the project during operation an amount equal to the annual tax rate of the county applied to the value of the real property and improvements taken for project purposes in Trinity County, said value being determined as of the date such property and improvements are taken off the tax rolls. Payments to the public-school districts in the project area affected by construction activities shall be made pursuant to existing law.

SEC. 6. There are hereby authorized to be appropriated for construction of the Trinity River division \$225,000,000, plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction costs as indicated by engineering cost indexes applicable to the type of construction involved herein, and, in addition thereto, such sums as may be required to carry out the provisions of section 5 of this Act and to operate and maintain the said development.

Passed the House of Representatives June 21, 1955.

Attest:

RALPH R. ROBERTS, *Clerk*.

(The following is same as letter to Chairman Engle, dated April 12, 1955, on H. R. 105, considered as Department's report on H. R. 4663.)

UNITED STATES DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington, D. C., May 4, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington, D. C.*

MY DEAR SENATOR MURRAY: You have requested a report from this Department on S. 178, a bill to authorize the Secretary of the Interior to construct, operate, and maintain as additions to the Central Valley project, California, the Trinity River division and the San Luis unit of the West San Joaquin division.

As an interim response to this request, there are enclosed copies of our proposed report on the Trinity River division, Central Valley project, California, dated January 19, 1955, and of two attachments to that report entitled "Supplementary Report, Trinity River Division, Central Valley Project, California" and Addendum to Supplementary Report \* \* \* Trinity River Division, Central Valley

Project, California" dated March 1954 and January 1955, respectively. These documents are now before officials of the States of California and Oregon and of various Federal agencies for review. After their review has been completed and the comments received have been considered here, we will be in a position to advise you more fully than we now can with respect to the Trinity River division portion of S. 178. Our final report on the portion of the bill dealing with the San Luis unit of the West San Joaquin division of the project will necessarily be somewhat further delayed. A planning report on that development is now in preparation. Until it has been completed and reviewed by the State of California and by interested Federal agencies, we will not be in a position to do more than furnish a sketch of this proposed development to your committee.

The physical plan for development of the Trinity River division is set forth in the attached report thereon. It is unnecessary, therefore, to repeat it here. Suffice it to say that the works which would be authorized if S. 178 is enacted in its present form are, for the most part, those contemplated in our report. One exception is the Redding-Cow Creek works covered in S. 178, page 2, lines 16-22. Detailed investigations on the feasibility of these proposed works have not been made. We can only report at this time that such studies as have been made indicate that to provide water service to the area involved at a price the water users could afford to pay would require a considerable but as yet indeterminate amount of financial assistance. Another possible exception is the single-purpose hydroelectric works of the Trinity division. A firm conclusion has not yet been reached on the relative merits of Federal construction and of non-Federal construction of these works. If it should be concluded that it would be more desirable for these works to be undertaken by a non-Federal agency than by the Government, or to leave the question of the proper construction agency to be decided later, the text of S. 178 could be amended accordingly.

The need for the additional water supplies which construction of the Trinity division, either under its existing authorization (H. Doc. 53, 83d Cong.) or under the enlarged authorization contemplated in S. 178 and in our report of January 19 is emphasized by the congressional authorization of the Sacramento Valley canals as part of the Central Valley project (act of September 26, 1950, 64 Stat. 1036). It is anticipated that full development of the Sacramento canals unit, which is now under construction, will require diverted Trinity River division water. This was pointed out in the Department's report on the unit (H. Doc. No. 73, 83d Cong.) wherein it was stated that " \* \* \* the Trinity River division works are required as a physical means of providing the water supply needed over the long run for the Sacramento canals unit" (p. vii) and that " \* \* \* the Sacramento canals unit has engineering feasibility on the basis that the Trinity River division, upon which the canals unit is dependent for a firm water supply \* \* \* will be authorized and constructed" (p. xi). In addition the importance of imported water to the San Joaquin River Basin, where large areas are experiencing an alarming drop in the ground-water table as a result of pumping, cannot be overemphasized.

The following listing shows those facilities which in the presently proposed plan are different from the plan on which the existing authorization was based. All features not listed are essentially the same under the two plans.

Feature	New plan	Previous plan
Trinity Reservoir capacity.....acre-feet.....	2, 500, 000	1, 800, 000
Trinity powerplant, installed capacity.....kilowatts.....	90, 000	75, 000
Steam plant and subsidiary transmission facilities.....do.....	None	70, 000

The changes in the facilities from those previously recommended have resulted from additional information and from suggestions made by public agencies which commented on the earlier report. On an average annual basis, the somewhat expanded plan would divert 704,000 acre-feet of Trinity River water to the Sacramento River Basin. When coordinated with the Central Valley project system, it would provide 1,190,000 acre-feet for additional use in the Central Valley project. (Comparable figures for the previous plan are 660,000 acre-feet and 1,010,000 acre-feet, respectively.) Of these 1,190,000 acre-feet, 665,000 acre-feet would be used to meet the ultimate needs of 205,400 net acres in the authorized Sacramento canals unit of the Central Valley project and 525,000 acre-feet would be available for use on other lands in the Central Valley

such as those of the potential San Luis unit. The new total installed hydroelectric capacity contemplated by S. 178 and our report would be 233,000 kilowatts as compared to 218,000 kilowatts under the old plan. It is expected that this larger installed capacity of 233,000 kilowatts will increase the Central Valley project energy by 1,067 million kilowatt-hours annually.

The Trinity River division would be integrated physically and financially with the Central Valley project. All reimbursable costs would be repaid within 50 years after the last feature of the division is constructed. The estimated cost of the Trinity River division based on January 1954 prices is \$219,280,000, assuming that the Federal Government builds the power facilities. Under the alternative plan for non-Federal construction of these facilities, the Government's cost of constructing the Trinity River division is estimated at approximately \$154,400,000. Substantially these entire amounts would be reimbursable. Both of them include \$215,000 for minimum recreation facilities which we recommended be provided at Trinity and Lewiston Reservoirs but they do not include the amounts required for the acquisition of approximately 1,200 acres of land adjacent to the reservoir areas primarily for recreation purposes and principally in connection with the provision of the minimum facilities. They also include \$47,000 for fish-protection facilities. Both of these items should be treated as nonreimbursable. Further consideration will be given to the fish and wildlife allocation at the time of preparation of the definite plan report in light of the applicable policies and provisions of the act of August 14, 1946 (60 Stat. 1080).

Public hearings have disclosed the large majority of California interests recognize the value of adding the Trinity River division to the Central Valley project and are anxious that the division be constructed. The few opposed interests who reside downstream in the Klamath River Basin are concerned over their future water needs. Our studies, however, indicate that the proposed diversion would utilize only a small percentage of the water now wasting into the Pacific Ocean from the Klamath River watershed. These studies also disclose that the relatively small amount of water that would be diverted would not affect future development of either the Trinity River Basin or the Klamath River Basin downstream since water in those areas would be more than adequate to satisfy future needs. The Trinity division's ratio of primary benefits to total cost is 1.86 to 1. Total benefits resulting from the development would outweigh the cost in a ratio of 3.31 to 1.

The fishery resources of Trinity River are an asset to the Trinity River Basin as well as the whole northern coastal area. Accordingly, the Trinity River development has been and should be planned with a view to maintaining and improving fishery conditions. The schedule of water releases for Trinity River flow below Lewiston diversion dam and for Clear Creek flow below Tower House diversion dam used in House Document No. 53, 83d Congress, was recommended by the Fish and Wildlife Service and accepted by this Department. House Document No. 147, 83d Congress, indicates that the California Department of Fish and Game concurs, in substance, in that recommendation.

The flows set out in House Document No. 53, however, are not the same as those prescribed in section 2 of S. 178. The flow schedule proposed by the Fish and Wildlife Service is predicated on the seasonal needs of the fishery resources. Since flows should vary in accordance with estimated requirements, the Service-proposed flow schedule is preferable to the flat minimum flow requirement for the month of July through November below Lewiston diversion dam prescribed in S. 178, and it is desirable that the minimum flows adopted by the department for other periods of the year be incorporated in the legislation. Room should also be left in any legislation that is enacted for modification in the light of experience. Since the Secretary of the Interior will necessarily be charged with overall responsibility for the project, including particularly its financial aspects, it is our belief that it must also be his responsibility to determine, in accordance with statutory standards laid down by Congress and after consultation with appropriate State officials, what modification if any should be made. We suggest, therefore, that the language of the proviso beginning on page 3, line 23, of the bill be modified to read as follows:

*“Provided, That the Secretary is authorized and directed to adopt, with respect to the Trinity River division, measures which, in his judgment, are appropriate to insure the preservation and propagation of fish and wildlife including, but not limited to, the maintenance of the flow of the Trinity River below Lewiston diversion dam and the flow of Clear Creek below Tower House diversion dam in accordance with schedules set forth on pages 77 and 79 of House Document 53, 83d Congress, unless, after consultation with the Cali-*

fornia Fish and Game Commission, he determines that different flows would be adequate for maintenance of fish life and the propagation thereof. The Secretary shall allocate to the preservation and propagation of fish and wildlife an appropriate share of the cost of constructing the Trinity River development, as provided in the act of August 14, 1946 (60 Stat. 1080), and of operating and maintaining the same, such costs to be nonreimbursable and nonreturnable."

In view of the inclusion of basic recreational facilities in the Trinity River plan, it is suggested that a new section be added to S. 178 after its present section 3 to read as follows:

"SEC. —. The Secretary is authorized to investigate, plan, construct, operate, and maintain minimum basic facilities for access to, and for the maintenance of public health and safety and the protection of public property on, lands withdrawn or acquired for the development of the Trinity River division and the San Luis unit projects, to conserve the scenery and the natural, historic, and archeologic objects, and to provide for public use and enjoyment of the same and of the water areas created by these developments by such means as are consistent with their primary purposes. The Secretary is authorized to withdraw from entry or other disposition under the public land laws such public lands as are necessary for the construction, operation, and maintenance of said minimum basic facilities and for the other purposes specified in this section and to dispose of such lands to Federal, State, and local governmental agencies by lease, transfer, exchange, or conveyance upon such terms and conditions as will best promote their development and operation in the public interest. The Secretary is further authorized to investigate the need for acquiring other lands for said purposes and to report thereon to the Committees on Interior and Insular Affairs of the Senate and House of Representatives, but no lands shall be acquired solely for any of these purposes other than access to project lands and the maintenance of public health and safety and the protection of public property thereon without further authorization by the Congress. All costs incurred pursuant to this section shall be nonreimbursable and nonreturnable."

Section 3 of the bill deals with a preferred right on the part of customers in Trinity County to purchase a portion of the increased output of the Central Valley project made possible by the Trinity River development powerplants. If the San Luis unit is authorized, the energy available for commercial sale from the Central Valley project power system, even including a Government-built Trinity power development, will be decreased below its output without Trinity and San Luis. This decrease will result from the use of energy for San Luis pumping loads. In this circumstance, the preference expressed in section 3 of the bill will be meaningless. If, on the other hand, the San Luis unit is not constructed, there will be a significant increase in the amount of power available for commercial sale and the preference will be important. From an administrative viewpoint, the provision giving Trinity County preference customers a right to exercise an option to purchase project power in each successive fifth year upon 6 months' prior notice would impose restrictions on alternative sales to other markets at firm rates. The 6 months' notice provision should, we believe, be changed to not less than 30 months in order that interim purchasers of power could be provided adequate notice in which to arrange for power from alternative sources.

Section 4 of the bill would provide that appropriations for construction of the Trinity River development and gross revenues from the development shall be available and used for in-lieu-of-tax payments to Trinity County and for payments to the county for certain additional costs of government, including police, school, hospital, and welfare facilities and for the repair, maintenance, and replacement of roads and establishment of new roads. We question the wisdom of some of the items and the desirability of imposing on the Trinity development terms more onerous than or different from those generally applying to other reclamation projects.

More particularly, it appears to us that the matter of payments to Trinity County in lieu of taxes should await consideration by the Congress of general legislation establishing Federal policy with respect to payments to States and local governments on account of real property and improvements thereon. Such legislation is proposed in various bills now pending before the Congress. It will be possible at that time to weigh the general question of the benefits of Federal construction activities to local communities against their added costs. Similarly, we question the provisions of section 4 insofar as they would charge to the Trinity River development, and thus to California water and power users, the cost of new roads that are not required for project purposes or to replace

existing roads damaged or destroyed by the project. Such a requirement would extend the liability of the United States beyond the present requirements of law.

While, as has already been indicated, we are currently preparing a feasibility report on the San Luis unit and cannot recommend its authorization at this time, it may be helpful to your committee to have a sketch of our present information with respect to it.

Our studies to date indicate that, as an addition to the Central Valley project, the San Luis unit is feasible both from an engineering and financial viewpoint. Its water supply would be obtained in part from surplus winter flows of the Sacramento and San Joaquin Rivers that now waste into the ocean and in part from water made available as the result of the Trinity River diversion.

New Federal facilities as presently contemplated would consist of the San Luis Dam, Reservoir, and pumping plant, San Luis Canal, Pleasant Valley pumping plant, Pleasant Valley Canal, relief pumps, and necessary electric transmission system.

San Luis Reservoir, the principal storage facility for the San Luis unit, would be filled primarily by pumping water from the Delta-Mendota Canal during winter months. Water stored in San Luis Reservoir and pumped directly into San Luis Canal would be used to supply 440,000 acres of productive land on the west side of the San Joaquin Valley. Much of this area is now in urgent need of additional water supply because of the rapid lowering of existing ground water supplies. Urgently needed municipal water would also be made available by this development.

It is currently estimated that the required Federal expenditure for the San Luis unit would amount to approximately \$229 million, all of which would be reimbursable. Through financial integration with the Central Valley project, the enlarged project would show payout of all reimbursable features within 50 years after completion of construction of the San Luis features.

The views of the Bureau of the Budget with respect to present enactment of a Trinity River-San Luis bill are expressed in the attached letter dated April 28 on H. R. 105, a companion measure to S. 178.

Sincerely yours,

FRED G. AANDAHL,  
*Assistant Secretary of the Interior.*

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington 25, D. C., April 28, 1955.

The honorable the SECRETARY OF THE INTERIOR.  
(Attention: Mr. Elmer F. Bennett, 6041 Interior Building.)

MY DEAR MR SECRETARY: This will acknowledge Assistant Secretary Aandahl's letter of April 12, 1955, transmitting copies of a report which has been submitted to the House Interior and Insular Affairs Committee on H. R. 105, a bill to authorize the Secretary of the Interior to construct, operate, and maintain as additions to the Central Valley project, California, the Trinity River division, and the San Luis unit of the West San Joaquin division.

In the absence of final reports on the proposed Trinity River division and San Luis unit and in the absence of a report on the partnership possibilities for the Trinity River division, which it is understood the Department has been exploring, the Bureau of the Budget is not in a position to make a satisfactory evaluation of the proposed Federal developments. While there is no objection to the action of the Department in submitting to the chairman of the House Interior and Insular Affairs Committee a report which it considered appropriate, it is requested that you now advise the chairman that the Bureau of the Budget recommends, in view of the above, that action on this bill by the Congress be deferred until the final project reports have been submitted under established procedures and the partnership possibilities of the Trinity River division have been fully explored. Furthermore, there are certain provisions in the bill and certain recommendations in your report which involve policy issues on which the administration's position has not yet been determined. Deferral of action on the bill will permit further consideration of these matters.

Sincerely yours,

ROGER W. JONES,  
*Assistant Director for Legislative Reference.*

Senator ANDERSON. Now, if I may have Senator Knowland's statement, it will be submitted for the record at this point. We regret he was not able to be here, but he probably will be here shortly. As the session draws to a close, it is pretty rough on the majority and minority leaders, and they are kept very busy indeed.

(The statement of Senator Knowland is as follows:)

STATEMENT OF SENATOR WILLIAM F. KNOWLAND

Mr. Chairman, I appreciate the courtesy of the Senate Committee on Interior and Insular Affairs in providing time in their busy schedule for consideration of the Trinity division legislation. As the members of the committee know, Senator Kuchel and I have pending before the committee S. 178. However, due to the fact that the House of Representatives has already passed legislation sponsored by Congressman Engle of California to authorize the Trinity division, both Senator Kuchel and I believe that that legislation should be given priority approval by the Senate. The expected adjournment of Congress by the end of July precludes any possibility for completed reports on S. 178 being in the hands of the committee in sufficient time for its consideration.

In brief, the legislation will authorize the Secretary of the Interior to construct, operate, and maintain as an addition to the great Central Valley project of California, the Trinity River division. The primary purpose of constructing this addition to the Central Valley project is to meet the urgent requirements for irrigation water in the Sacramento and San Joaquin River Basins. Its secondary purpose is to provide electric energy to meet the expanding power needs in northern California.

The plan of development includes Trinity Dam, reservoir, and powerplant; Lewiston diversion dam, reservoir, and powerplant, and Matheson Tunnel and powerplant. The basic plan provides for the diversion of water from the Trinity River Basin into the Sacramento River Basin of the Central Valley, and the Trinity division would become an integral part of the Central Valley project coordinated with the other features of the Central Valley project. The plan would divert 704,000 acre-feet of Trinity Basin water annually to the Sacramento River Basin and the proposed hydroelectric power capacity would be 233,000 kilowatts.

The State of California has indicated its approval to the plan of diverting water from the Trinity River Basin to the Sacramento Basin and the Bureau of Reclamation and the State have concluded that there is a surplus of water available to the present and future water requirements of the Trinity and Klamath River Basins.

The fishery resources of the river are important to the entire area and the studies show that the water can be diverted from the Trinity River without detrimental effect to this vital industry.

Mr. Chairman, I do not believe it is necessary for me to emphasize to the members of this committee the great water problems of the State of California. Vast areas of land lack an adequate water supply, while at the same time the rivers of the State empty over 70 million acre-feet of water into the Pacific Ocean. The great Central Valley project seeks to do what nature has not done and to redistribute the water of the State. The Trinity division is an important segment of this master plan, and when completed it will provide ample water for areas in need of water by transporting over mountains the surplus waters of a river that would otherwise empty into the Pacific Ocean.

We have other vital water shortage problems in the San Joaquin Valley as well as in southern California and other areas of our State which we hope and expect the Congress will direct its attention toward solving at the next session.

I urge your approval of the legislation under consideration. The Trinity division of the Central Valley project will alleviate some major problems in a section of the State of California which is one of the most important agricultural areas of the United States. Immediate authorization and construction of the Trinity project are required to prevent any further economic losses, as are indicated in seasonal water supply surveys. The Senate of the State of California has authorized a resolution memorializing the Congress to authorize the construction of the project. I hope that the members of this committee will speedily act on this legislation which is of significance to the State and the Nation.

Senator ANDERSON. Senator Kuchel, we would be very glad to hear your statement on this bill.

**STATEMENT OF HON. THOMAS H. KUCHEL, A UNITED STATES  
SENATOR FROM THE STATE OF CALIFORNIA**

Senator KUCHEL. Thank you very much, Mr. Chairman.

I am very grateful to this subcommittee for this opportunity to urge favorable action on another piece of legislation designed to assist my State of California in solving its complex and critical water problems.

As this subcommittee has been advised on many occasions, California is constantly striving to correct the conditions of maldistribution of water and through conservation and redistribution meet the needs of its growing population for water for all purposes: Agricultural, industrial, power generation, and municipal.

The legislation being considered today would authorize construction of another segment of the vast Central Valley project initiated in California about 20 years ago. Specifically, it would make possible the Trinity River division, which involves works to store surplus waters of the Trinity River in the northwestern section of the State, divert them through mountains to the Sacramento River Valley, generate a large amount of additional electric power, and benefit approximately 250,000 acres of agricultural land.

I have been an earnest advocate of the Trinity River project for a long time. In the 83d Congress I introduced a bill authorizing the Trinity project and the San Luis project. As the committee knows, I introduced this year, in company with my colleague, Senator Knowland, S. 178, one of the bills now before you, for the same purpose. Congressmen Engle, Hagen, Moss, and Sisk, of California, introduced similar legislation in the House.

The subcommittee also has before it a bill already passed by the House by a substantial margin to authorize the Trinity River project construction. This is H. R. 4663, which was approved by the House nearly a month ago.

Under normal circumstances, Mr. Chairman, I would appear here to seek a favorable report on the bill of which I am coauthor, S. 178. However, although there are a number of significant differences between the two measures, I now am recommending that your subcommittee approve and recommend the passage of the House bill, which was sponsored by the distinguished chairman of the House Interior and Insular Affairs Committee, Representative Clair Engle of California.

I am taking this course because of a number of influencing circumstances. The need for water in California is so urgent and the time element involved in enacting desired legislation is so great that I believe H. R. 4663 should be approved so that further delay will be avoided in beginning construction of this commendable project.

The Trinity River project, which would be fully integrated with the Central Valley project, and was envisioned years ago as a fundamental feature of that development, has been thoroughly studied and investigated over a period of more than 30 years. It has been approved and endorsed by 2 Federal administrations and 2 State administrations since the detailed plans for construction were com-

pleted in 1952. I wish to point out that the first finding of feasibility was made by Secretary of the Interior Chapman in 1953 and affirmed by former President Truman. The present Secretary of the Interior, Secretary of the Interior, Secretary McKay, early this year recommended immediate construction.

The project also was officially approved by the former Governor of California who is now the Chief Justice of the United States, Earl Warren, and has been endorsed without qualification by his successor, Goodwin J. Knight. Furthermore, only this year both houses of the California Legislature have adopted resolutions formally urging Congress to authorize this construction.

I wish to give a brief outline of the purpose and main features of this development and then mention some of the differences between the Engle bill and the bill of which I am coauthor, about which I spoke. Detailed technical information will be given, of course, by witnesses from the Department of the Interior. And there are representatives of the Governor of California present, Hon. Frank Durkee, Director of Public Works, representing the Governor of California; Hon. George C. Fleharty, the mayor of Redding; Hon. Edwin J. Regan, State senator; and a number of other representatives of California.

The Trinity River project would involve one large storage dam, with capacity of 2,500,000 acre-feet, on the Trinity River, with a powerplant with capacity of 90,000 kilowatts as an integral feature. There would be 2 small diversion dams, and 2 tunnels transporting water through the mountains, and 3 other powerplants with combined capacity of 143,000 kilowatts. The actual water diversion would average in the vicinity of 700,000 acre-feet per year and as a result of the planned integration with the rest of the Central Valley project will make available a total of about 1,190,000 acre-feet annually. The hydroelectric features will add 1,067,000,000 kilowatt-hours annually to the Central Valley project output.

The project has been described as gold plated from the viewpoint of financial feasibility. The primary benefit-cost ratio is 1.86 to 1 and the indirect ratio 3.31 to 1. It would cost approximately \$220 million, according to the latest available Bureau of Reclamation estimates, and all but \$262,000 of this is reimbursable. The power features, which represent approximately three-fourths of the total cost, would be repaid in 26 years, and the cost for electricity is estimated at only 4.6 mills.

The primary object of these works would be to maintain agricultural production. Virtually all new land that might be brought into cultivation would be used for production of crops which are not surplus.

The urgency of this legislation can be illustrated by a statement more than 2½ years ago by former Secretary of the Interior Oscar Chapman. What he said at that time in forwarding the first feasibility report is even more true today. Secretary Chapman stated:

The Central Valley project as conceived by both the State of California and the Federal Government is not a static thing. It must continue to grow with the growth of the great Central Valley. \* \* \* The Trinity River division and the Sacramento canals unit are urgently needed to provide electric energy and water for irrigation. \* \* \* These two developments taken together are a logical extension of the existing Central Valley project.

I wish to point out that the Sacramento canals were authorized in 1930 and now are actually under construction. The Trinity project would provide much of the water they are intended to convey.

The availability of water in the Trinity River is unquestioned. At the present time 13 million acre-feet annually waste into the Pacific Ocean from the Klamath and the Trinity. Only about 17 percent of the flow of the Trinity will be diverted. Furthermore, I want to emphasize that the transmountain diversion is an interbasin operation wholly within the confines of the same State.

The House bill, H. R. 4663, is limited to authorizing the proposed Trinity project. The bill of which I am coauthor, S. 178, would authorize in addition an integrated San Luis Reservoir which is irrelevant to these present hearings. The Department of Interior has not yet filed its proposed final report on feasibility on this project and thus, of course, our State government has been unable, as Federal law requires, to pass judgment on it.

There is a unique feature in the House bill about which I wish to comment. Following President Eisenhower's suggestion that multipurpose projects might be undertaken on a partnership basis, proposals were made to allow a privately owned utility to operate the hydroelectric works included in the Trinity project. Personally I believe in this instance, since all other generating plants in the Central Valley project are federally operated, the Trinity plants should be also. But to permit careful study of the partnership possibility, the Engle bill directs the Secretary of the Interior to continue its studies and negotiations and report with recommendations to Congress in not less than 18 months. I approve of this provision, because it will give Congress a full opportunity to decide whether the Trinity powerplants should be federally or privately operated.

Two other provisions of the House bill which are different from S. 178 should be mentioned. I believe both should be retained but I think one of them might be revised and broadened.

At the instance of Congressman Scudder, whose district embraces the downstream area concerned, the House adopted an amendment which is the last proviso of section 3, the clause which guarantees not less than 50,000 acre-feet annually to Humboldt County and users below the Trinity Dam. This guaranty added to the bill by Congressman Scudder will remove any basis for apprehension that the Trinity project might adversely affect a section of our State where lumbering is an important part of the economy. I concur in this amendment.

Both the House bill and the Senate bill have a rather unique feature which recognizes an almost unparalleled situation encountered in the Trinity project. They make provision for financial support by the Federal Government to Trinity County, where the main reservoir would be located. This is thoroughly justified because this county, sparsely settled, with a 1950 population of only 5,087 and with only 5 townships, already is largely owned by the Federal Government. With an estimated 72 percent of its area presently controlled by the United States, the taking of land for the reservoir will inevitably reduce the tax base from which this county derives its revenues. On the other hand, the construction of this project will bring in a large number of additional residents, which undoubtedly will impose finan-

cial burdens in the form of highway maintenance and additional police, welfare, and health problems.

The House bill authorizes payment of in-lieu taxes—a form of financial aid I firmly believe in and have proposed should be generally provided through a bill of which I am coauthor—but I do not think in these circumstances that provision goes far enough. I doubt if the equivalent in-lieu payments would be sufficient to reimburse the county for additional expenses it will be forced to assume, at least during the construction period. On the other hand, there is an urgent need for this authorizing legislation to be speedily enacted. I do not feel this bill should be delayed by haggling over details of financial aid, particularly since the Congress has already appropriated \$1 million toward the Trinity construction subject to enactment of an authorization. I might add, Mr. Chairman, that that has been done this session, in the 84th Congress.

This legislation will be another constructive move toward solving the most pressing problem which perplexes the entire State of California and will carry forward Federal and State plans for the advancement of all sections of our State.

Senator WATKINS. How does this affect the southern part of the State?

Senator KUCHEL. The Trinity River project, I will say to you, Senator Watkins, is primarily designed to benefit the northern part of the State government. The State government, I might say, over the years has developed its own State water plan, and that water plan is something which we in California will undertake to build ourselves, we hope as speedily as possible, and we will pay for it ourselves. The Trinity project, however, as part and parcel of the Central Valley project, would be designed to be of assistance to the valley areas in the State.

Senator WATKINS. That is all.

Senator ANDERSON. Senator Kuchel, do you not think it would be helpful if someone tried to show us on the map where this is, what is involved in it?

Mr. LINEWEAVER. Mr. Murray of the Bureau of Reclamation will do that, Mr. Chairman.

#### **STATEMENT OF A. N. MURRAY, PLANNING ENGINEER, BUREAU OF RECLAMATION, SACRAMENTO, CALIF.**

Mr. MURRAY. I am A. N. Murray, regional planning engineer, of the Bureau of Reclamation in Sacramento.

Senator ANDERSON. Congressman Engle, I know you are supposed to speak next, but this makes it a whole lot easier, and if you will indulge me I would like to know where this project is.

Representative ENGLE. Surely.

Mr. MURRAY. The main features of the existing Central Valley project are shown on this map. For orientation, the State capital is here about the center of the map at Sacramento. The town of Redding, with a population of around 10,000, is about 160 miles north of Sacramento.

Fresno in the San Joaquin Valley is about the same distance south of Sacramento.

Shasta Dam forms the largest reservoir in California, and it is located just north of Redding. Nine miles below Shasta is Keswick Dam, which acts as an afterbay or reregulatory dam for the releases of water made at Shasta.

Water released from storage in Shasta Reservoir after passing through Keswick, is combined with other waters coming in from tributaries and used down the length of the Sacramento Valley for irrigation of this very large area shown here in green, and will be used in the future for irrigation of additional areas that are shown on the map in yellow. Sacramento River water, commingled with water from other tributaries, enters the delta of the Sacramento and San Joaquin River just south of the town of Sacramento and from there flows out into the San Francisco Bay.

In the delta area, the water is pumped at the Tracy pumping plant, and from there flows a distance of 120 miles to a point on the San Joaquin River known as Mendota pool. This canal was originally designed, and is largely used, to put replacement water into the San Joaquin River at Mendota. It is necessary to do that in connection with the operation of the San Joaquin Valley portion of the existing Central Valley project.

For many years, there had been established rights to use of water from the San Joaquin River for irrigation of large areas along the river below Mendota, and before that water could be stored and diverted at Friant to bring water into the southern San Joaquin Valley, it was necessary to replace it. That is done by means of water brought through the Delta-Mendota Canal.

Senator ANDERSON. What has the Trinity River division got to do with that dam?

Mr. MURRAY. I will try to come to that in just a moment.

Senator MILLIKIN. Did you say "the Fryingpan"?

Mr. MURRAY. The Friant Dam.

Senator ANDERSON. We have a man with a one-track mind over here.

Mr. MURRAY. The main features of the existing project are already completed. The water diverted at Friant Dam is sent into the southern San Joaquin Valley through Friant-Kern Canal and augments the naturally available supplies in that area.

One can see, then, that basically the original Central Valley project was designed to augment irrigation service in the Sacramento Valley and, even more, to bring water into the southern portion of the Central Valley where water is quite deficient.

As a part of the growth of the Central Valley project, to which Senator Kuchel referred, the American River division, consisting of Folsom Dam and Nimbus Dam and the Sly Park unit, are very near completion at the present time. Folsom Reservoir, with a capacity of a million acre-feet, augments the amount of water that is available for use in its immediate local service area and further augments the supply available for the San Joaquin Valley.

The Trinity River division, now being considered by the Congress, is located about 25 or 30 miles west of the Sacramento River in the vicinity of Shasta Dam. Its purpose is to bring an additional water supply into the Sacramento River, thus making it possible to irri-

gate still more land in the Sacramento Valley, and to augment the supply which can be transferred south into the San Joaquin Valley.

Senator ANDERSON. Is that water that would not normally flow into the Sacramento River?

Mr. MURRAY. Yes, sir; that is correct.

Senator ANDERSON. You mean it is a transmountain diversion?

Mr. MURRAY. It is a transmountain diversion.

This map, entitled, "Central Valley Project, Trinity River Division," portrays the entire Klamath River Basin, and adjacent to it the northern part of the Sacramento River Basin. Shasta Dam is located just north of Redding, and Keswick Dam 9 miles below it.

The Klamath River, as you see on the map, originating in Oregon, flows into California and to the ocean near the town of Requa. The Klamath River is joined about 40 miles up from its confluence with the ocean by the Trinity River, which originates in a watershed adjacent to the Sacramento River and flows south roughly parallel to the Sacramento, and finally turns west, north, and then enters the Klamath River.

The works proposed in the Trinity River division legislation consists of a large reservoir shown in red on the map, a smaller reservoir formed by a smaller dam, which would turn water through two tunnels, the water finally entering Keswick Reservoir just below Shasta.

Four powerplants, 1 at Trinity Dam, 1 small one at the Lewiston Dam, and 2 fairly large ones at the tunnels, heading over from the Trinity, would develop the power made possible by bringing the water across and dropping it through around 1,500 feet of head. The water—entering Keswick Reservoir as it does—can there be reregulated in the same way that the releases are at Shasta at the present time. By operating the 2 sections of the Central Valley project, Shasta and Keswick as 1 section and the Trinity River features as the other section, in coordination with one another, we get, of course, a much larger total output from the enlarged project than would be the case if they were operated separately.

Senator ANDERSON. In other words, the dams along the Trinity will actually be of benefit to the Keswick Reservoir in its present output.

Mr. MURRAY. We anticipate a modest increase in electric energy generated at Keswick powerplant by means of the water brought over from Trinity.

Senator ANDERSON. I think that is enough for the present, unless some member wants additional information. Thank you.

Mr. Engle?

#### STATEMENT OF HON. CLAIR ENGLE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Representative ENGLE. Mr. Chairman, I want to express my appreciation to you and to the other members of this committee not only for your expedition in handling this legislation, but the general good cooperation and excellent working relationship between our two committees in this session of Congress, which I believe has been unprecedented in the amity and happy accord that has existed on both ends of the Capitol.

Senator ANDERSON. I just want to say there that we have appreciated it here on this side, Mr. Engle, just as you have. I think we have nearly cleaned our calendar of House bills, and it is a pleasant experience.

Representative ENGLE. I had the pleasure of putting a Senate bill through yesterday, Mr. Chairman, and we intend to try to handle your bills just as fast as we can.

I would like to ask unanimous consent that Congressman Moss, who is otherwise engaged, be given the privilege of filing a statement at an appropriate place in the record; and I would like to request, Mr. Chairman, that I be permitted to revise and extend my own remarks, inasmuch as I intend to make only a brief statement, in deference to the people who have come here from California to testify on this legislation.

Senator ANDERSON. The statement of Congressman Moss will follow yours in the record, and you may be allowed to take your notes that you have this morning and amplify them as much as you wish, so that we may hear the testimony from these people from California.

Representative ENGLE. Senator Kuchel has made an excellent statement with reference to this project. There are several items in the history of it that I think should be mentioned, and I will mention those briefly.

The first is that this project was reported without a dissenting vote by the House committee. The project was initially authorized on January 2d, 1953, by a finding of feasibility under section 9 (a) of the 1939 Reclamation Act by Secretary of Interior Chapman. In other words, this project has the unique distinction of being presently an authorized project, and it is so designated and considered on the official records of the Interior Department. The presence of this bill here I expect to explain in just a minute.

Subsequent to the finding of feasibility, under section 9 (a) of the 1939 act, by Secretary Chapman, and on February 17, 1955, the present Secretary of the Interior, Secretary McKay, approved the Trinity River project in a supplemental report and recommended its immediate construction.

The supplemental report, incidentally, changed some features of the project, mainly in the size of the reservoir and the power production, and we think significantly improved the project. But it is correct to say that this project, therefore, has had the approval both of the present Secretary of the Interior and his predecessor, Secretary Chapman.

The Commissioner of Reclamation, Mr. Dexheimer, is here, and will testify shortly. He appeared before our committee and testified in favor of the project and recommended its immediate construction.

The State engineer of California, on April 9, 1953, approved the original report by Secretary Chapman, and on May 28, 1955, filed a similar recommendation with reference to the supplemental report prepared and filed by Secretary McKay, the present Secretary of the Interior.

Governor Goodwin Knight has vigorously endorsed this project. He sent a telegraphic message to our committee when the project was before us, and I understand he has a message for this committee; and there is present here also Mr. Durkee, the director of public works for the State of California, to appear and present the governor's official views.

Both houses of our State legislature have passed resolutions in the past session recommending the immediate construction of this project.

Senator ANDERSON. Congressman Engle, would you permit me to interrupt you to say that I do have a message from Governor Knight? I failed to bring it with me at this time, but I will insert it in the record at this point. It is a telegram strongly urging construction of the project.

(The telegram referred to is as follows:)

SACRAMENTO, CALIF., July 11, 1955.

HON. CLINTON P. ANDERSON,

*Chairman, United States Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.:*

I wish to reiterate my support of the authorization of the Trinity River division of the Central Valley project, California, pursuant to legislation now pending before your committee and to urge its passage at this session of the Congress. I do not consider that this legislation will in any way be inconsistent with later authorization of the San Luis project, including conditions mutually satisfactory to the United States and the State of California for the integration of San Luis project with the California water plan and the Feather River project, which action I have heretofore and do now support.

GOODWIN J. KNIGHT,  
*Governor of California.*

Representative ENGLE. Thank you very much, Mr. Chairman.

The House Committee on Appropriations, as has been stated by Senator Kuchel, has approved a million dollars in the current public-works appropriation bill for the commencement of construction of this project upon passage of this authorizing legislation.

In the last session of Congress, the Interior Department sent up \$99,000 in a construction item on the Central Valley project. That was stricken out by the Appropriations Committee, because the Appropriations Committee believed that a project of this size should have congressional authorization, and notwithstanding the finding of feasibility made by Secretary Chapman. I thereupon introduced this legislation, and that is why it is before you today.

But this legislation is unique, then, in these particulars: First, technically, this is an authorized project, and on two separate occasions, once by the Interior Department and once by the Appropriations Committee itself, it has been recommended for construction funds. The Bureau of the Budget this year sent up \$400,000 for additional advanced planning on this project, and that amount is included in the million dollars allowed by the Appropriations Committee.

Now, the need for this project is predicated upon a report, a unanimous report, made by our committee after an investigation in California in October of 1951. We took a subcommittee out to California to determine whether or not the water supplies of the Central Valley project were overcommitted for the present supplies.

The committee made a unanimous recommendation in its report, which is on file and available to you, and I will just quote one section of it.

This is what the committee said. And, as I say, this was a unanimous finding by the subcommittee which went out there at that time. They said, and I quote:

For all practical purposes the developed water supplies of the Sacramento River are overcommitted and oversubscribed. Increased uses of water from the Sacramento River from the beginning of project construction in 1935 to the present are about 3 times the expected increase of 300,000 acre-feet which was

estimated by the State of California and the Bureau of Reclamation officials in the original plans for the operation of the Central Valley project.

And the committee proceeded to recommend that, in order to fill the gap between the existing supplies of water and the present uses, steps be taken immediately to proceed to secure additional waters to firm up the water supplies for the Central Valley project.

Now, with reference to the cost-to-benefit ratio, Senator Kuchel has already mentioned the cost-to-benefit ratio, but I want to add this one point, and that is that the Trinity River project can be authorized, constructed, and paid for, and still leave in the Central Valley project \$170 million in profit; that is, profit to the Federal Government. And it must be remembered that this is the last major addition, so far as I know, to the Central Valley project in California.

In other words, if you take the subsidy to irrigation, which is often criticized on these projects, and would add it outright to the cost of this project, there would still be over \$100 million, \$110 million, in profit, in the Central Valley project for the Federal Government.

That is the reason, I think, Mr. Chairman, why this project has had the unanimity of support that it has had throughout the years. And I hope that this committee will pass the bill and that it may be passed in this session of Congress.

That will close my remarks for this time, except for questions.

Senator ANDERSON. Let me ask you this: As chairman of the committee in the House, you have occasion to review a great many projects as they are presented to you. Does this have a comparable benefit ratio, or is it somewhat better than the average?

Representative ENGLE. This is the best project that our committee has ever handled in my experience.

Senator ANDERSON. I realized that a Californian would be modest, but I thought if I tried hard I could get that out of you.

Representative ENGLE. And this is generally recognized even by the traditional opponents of reclamation, that if they are going to vote for any project in the United States, they would vote for this one. And that statement was made on the floor of the House during the debate.

Senator ANDERSON. It struck me that the benefit ratio was very high, and I thought that ought to be very clearly brought out.

(The statement of Representative Moss follows:)

#### STATEMENT OF CONGRESSMAN JOHN E. MOSS RE H. R. 4663

Mr. Chairman, the Trinity River project is the next logical extension of the important Central Valley project which has added so much to the productive capacity of the West. Although the dam and power houses planned to make use of Trinity River water in northern California are not in my congressional district, the water and power developed as part of the project are vital to my district.

The direct importance is indicated by the fact that Trinity River water most likely will be needed for full development of the Sacramento canals unit of the CVP, a project authorized in 1950 and now under construction. These canals will help turn dry-farmed land into productive specialty crop farms; they will help bring food at a lower cost to dining room tables throughout the Nation.

The Trinity project is needed urgently, not only for the future development of the West but to help replace the fast receding underground water tables in northern California. It takes several years to build the water projects. Further delay will have an adverse effect on the economy of the State and the Nation.

Your subcommittee has before it all the factual information on the project, showing, I am confident, both its value and importance. California officials are solidly behind the effort to add the Trinity to the CVP and many local agencies, such as the Sacramento Municipal Utility District, are taking steps to help meet the State's phenomenal growth and corresponding water and power needs.

As you know, the cost of the development in dollars will be repaid to the Federal taxpayers. In addition, an important asset will be gained to help take care of the future growth problems of the West.

I do not want to burden you with unnecessary technical details, but I wish to comment on one point brought up in connection with the Trinity project. The question has been raised whether Trinity power will be sold at less than the cost of production and, thus, be subsidized by the power sold from other units the Central Valley project.

- Power produced at Shasta and Keswick units of the CVP is based on construction costs of some 10 years ago when prices were some 50 percent less than present costs. Naturally, power production costs at the Shasta and Keswick units are less than comparable costs of the Trinity unit.

For integrated Federal multipurpose projects, however, it is the practice to sell project power at the average of the production cost for all units. Trinity power, theoretically, then might be sold at less than production cost while power from the other units integrated into the entire CVP system would be sold at slightly higher than actual production cost. This is a long accepted practice in Federal multipurpose projects just as it is an accepted and approved practice for private utilities.

The importance of the Trinity project is overshadowed only by the need for its completion as soon as possible. I urge the subcommittee to approve the project as passed by the House.

Senator ANDERSON. Congressman Scudder has left a letter, which we will put in the record at this point.

(The letter referred to is as follows:)

CONGRESS OF THE UNITED STATES,  
HOUSE OF REPRESENTATIVES,  
Washington, D. C., July 14, 1955.

CHAIRMAN, IRRIGATION AND RECLAMATION SUBCOMMITTEE,  
*Senate Committee on Interior and Insular Affairs, Senate Office Building.*

DEAR MR. CHAIRMAN: You have for consideration H. R. 4663, authored by my colleague from California, Congressman Clair Engle, which would authorize the Secretary of the Interior to construct, operate, and maintain, the Trinity River division—Central Valley project of California, under Federal reclamation law.

The Trinity River originates in Trinity and Humboldt Counties in northern California. The river then flows northerly and westerly through Humboldt County and empties into the Klamath River, which flows northerly into the Pacific Ocean.

When this bill was first proposed, the residents of Humboldt and Del Norte Counties objected to the diversion of this river, as there are water needs in those two counties for a certain amount of the water that flows in the river. There was included in the bill a proviso that would maintain a flow of water in the Trinity River during the months of July through November, sufficient to maintain fish life.

The residents of the counties requested a provision be placed in the bill that would guarantee to them sufficient water to provide for their expanding economy.

You will note the proviso on page 4, line 4, "That not less than 50,000 acre-feet shall be released annually from the Trinity Reservoir and made available to Humboldt County and downstream water users."

This apparently will satisfy the downstream users, and their objection to the project as originally proposed, has thereby been removed.

I feel that this project, from a power standpoint, is feasible, and that the water diverted to the Central Valley of California will supplement the irrigation needs of the valley.

Respectfully submitted.

HURBERT B. SCUDDER, M. C.

Senator ANDERSON. Congressman Sisk, may we have a statement from you?

**STATEMENT OF HON. B. F. SISK, A REPRESENTATIVE IN CONGRESS  
FROM THE STATE OF CALIFORNIA**

Representative SISK. Mr. Chairman, I appreciate the opportunity to appear before you to urge your favorable action and authorization of the Trinity Division of the Central Valley project in California. And, Mr. Chairman, as the author of a similar bill, which Senator Kuchel mentioned in his statement, I would like at this time to join with Senator Kuchel in the feelings that he expressed with reference to the bills which you have before your committee and which we have before our committee in the House, a combined bill of the Trinity-San Luis. I feel, of course, that at the present time, due to certain things that have developed, it is well that we proceed with this bill, as proposed by Congressman Engle, for action on the Trinity.

Now, in my opinion, and that of the people of the State of California, this project in the highest degree combines the interests of the Nation and of the State. It has been called the best remaining reclamation project in the West. Its cost-benefit ratio is outstandingly good. It not only will pay its own way, but will add substantially to the Nation's wealth, its income, and its tax revenues. Considered strictly from the viewpoint of economics, the Trinity project is good business and a good investment.

While I am mindful of the value of Trinity development as a sound business venture, I am even more concerned with it in terms of its urgent necessity as an essential step toward the full conservation and utilization of water resources which will vitally affect the living, the happiness, and the future of millions of people.

We cannot live without water and the water to fill our needs is wasting away to the sea. Trinity will save a lot of it and will provide the electric energy to put the water where it is needed. It will do it, not on a handout or subsidy basis but at a profit.

Saving our water and putting it on the land is going to require the combined efforts of the Federal Government, the State, and local agencies. It is going to have to be a cooperative program, and I want to assure this committee that the people of California are not holding back waiting for the Federal Government to help them. Our local districts are going ahead with conservation projects to the limit of their ability and the State of California is developing statewide water plans which will strain the capacity of the State to finance, but which must be carried through if our pressing needs are to be met. Our best engineers are certain these Federal, State, and local projects will physically compliment each other and the compelling necessities insure their coordination for the common benefit.

Authorization of the Trinity development will be a big step forward. Our water needs are urgent and immediate, not primarily to place new land under cultivation, but to save what we have and keep it in production and to raise crops we need rather than those we have in surplus. Even a short delay in authorization, which would be reflected in delayed completion, could seriously jeopardize the welfare of many people.

I most strongly urge your immediate action to approve the Trinity River division and clear the way toward placing our wasted water on the farms and in the homes which cannot continue without it.

And that concludes my statement, and I appreciate the opportunity to appear before you, Mr. Chairman.

Senator ANDERSON. Thank you very much, Congressman. We appreciate your coming over and visiting us about this project.

Representative SISK. Thank you.

Senator KUCHEL. Mr. Chairman, State Senator Regan is going to be compelled to leave on the 1 o'clock plane. Could he make a brief statement at this time?

Senator ANDERSON. Surely.

**STATEMENT OF EDWIN J. REGAN, STATE SENATOR OF CALIFORNIA,  
TRINITY COUNTY, CALIF.**

Mr. REGAN. Mr. Chairman and members of the committee; my name is Regan, Edwin J. I am State senator from the State of California. I represent in the California State Senate the Shasta and Trinity area.

As a member of the joint committee of the senate in California, we had made an investigation into the efficacy of this project, and I think California is unanimous that this is one of the good projects, and it is recommended.

Today I have been asked to appear by the county of Trinity, the county in which the dam will be located. And my particular remarks will be directed to the certain protective features which have been included in this bill; one being the release of water of 150 cubic second-feet for the preservation of fish life, which is essential in that area, because of the tremendous salmon and steelhead runs in the Trinity River, which is one of the great recreational fishing streams in California, and the second feature of the bill about which the county is particularly interested is that feature which gives, on page 6 of H. R. 4663, section 5, authorization to the Secretary to make payments from construction appropriations to Trinity County of such additional costs of preparing, maintaining, and constructing roads as are incurred by it during the period of construction; and then that the Secretary is further authorized and directed to pay to Trinity County annually an in-lieu tax payment out of the provisions during construction, and from the gross revenues of the project during the operation.

And I think in the brief statement I have made on behalf of the county, you will understand the problem as it affects that area.

The Federal land ownership is not an idle or academic question in the West, as you gentlemen know. I think it is important to realize that California is now 47 percent federally owned. California has approximately 100 million acres of land. 47 million acres of those lands are now owned by the Federal Government. But those are not lands which have always been off the tax rolls. Because approximately 15 years ago, 37 percent of California was then federally owned. And today there has been an increase of in excess of 7 million acres of land in Federal ownership in the State of California. Those lands are not on the tax rolls, and the impact on local government is very tough.

It represents a very real impact on State and local economy. When a comparison is made of the percentage of Federal ownership

in the West to the other States of the Nation, it is not difficult to appreciate the position of the 11 Western States that payments in lieu of taxes by the Federal Government for lands it holds from the local tax rolls is one of justification and equity.

The average percentage of Federal ownership in the remaining 37 States is 4.76 percent, with a low in Iowa of 0.29 of 1 percent.

Senator ANDERSON. Would you go back over that again?

Mr. REGAN. The average percentage of Federal ownership in the remaining 37 States, that is, other than the 11 Western States, is 4.76 percent, with a low in Iowa of 0.29 of 1 percent, and a high in South Dakota of 17.23 percent. Notably the seat of the Federal Government, here, the District of Columbia, is only 33.41 percent federally owned.

Now a comparison with the 11 Western States: Arizona is now 69.43 percent federally owned. California is 46.14 percent federally owned. Colorado is 37.35 percent; Idaho, 64.69 percent; Montana, 36.54 percent; Nevada, 84.71 percent; New Mexico, 45.62 percent; Oregon, 52.75 percent; Utah, 71.33 percent; Washington, 34.99 percent; and Wyoming, 51.61 percent. Those are the Federal ownerships of lands which are not on the tax rolls.

Now, the State of California has attempted to absorb some of the burden imposed by this, by making payments in lieu of taxes on State lands held for natural resource purposes, because the State recognizes the principle that a higher level of government has a moral duty to protect the integrity of the lower political subdivisions. In addition to these direct payments in lieu of taxes, California pays a larger amount to local government than any of the States and also apportions a greater amount per capita.

For the fiscal year ending 1952, California made subventions in the amount of \$73.67 per capita, while the all-State average was \$33.06. Payments to local governments amounted to 57.4 percent of the total general expenditures in California, and surely no one could seriously argue that the 46.14 percent Federal ownership is not reflected in the fact that California must pay more for local government than any other State.

The county of Trinity where the dam will be located, is composed of 2,042,240 acres. Of this area, 1,456,984 acres are owned by the Federal Government, which is 71 percent of that entire county. The remaining 29 percent of the land must now supply 100 percent of the cost of county governmental services.

So it is not difficult to understand why Trinity County does not have the finest roads or the finest schools or the finest fire departments, or other features, which government contributes to the welfare of its citizens.

The local taxpayer is now absorbing all that he could possibly bear in that area. The Trinity County taxpayer is paying \$3.03 per hundred, which is the 4th highest rate in the State of California.

But I think it would be interesting to note here that in the little districts, however, where the dam would be located, there is a more difficult situation. A comparable one would be the so-called Weaver-ville area. The tax rate there is \$6.57. The Hayfork area, which is just beyond that, is almost \$10—\$9.41 is the tax rate now. And in the area where the dam would be located, in order that the services be supplied for the influx of population, where you would have to have additional schools and additional police protection, and so on, the

county feels it is imperative that the principle of payments in lieu of taxes be continued.

I think you do have a comparable situation with reference to the Tennessee Valley Authority, where such payments are made.

In the fiscal year 1952, the Federal Government paid to California's school districts \$1,475,000 as payments in lieu of taxes, by reason of military establishments, most notably the county of Los Angeles, which received some \$70,000.

Senator ANDERSON. More than that, is it not?

Mr. REGAN. That is Los Angeles itself. That is not where one of the principal installations is found.

Senator ANDERSON. I thought they got more than that because of its being an impacted area.

Mr. REGAN. I believe not, Senator; 27 percent of that county is owned by the Federal Government and they have a tax rate of \$1.93, which is a lot different from the tax rates which I have just quoted here for the little county up north.

So the local government there feels that it takes this position. It is certainly willing and desirous that projects of this kind be constructed, and it wants to do everything possible to see that these projects are constructed. But when there is such an impact on the tax base by reason of the lands which are not on the tax rolls, and when additional lands beyond the 72 percent of Federal ownership which will be taken from the tax rolls by reason of the location of the project are considered, then it feels that there has been a principle adopted previous to this time that the impact is recognized by the Congress and that studies have already been made by the Congress on these matters.

In fact, some years ago I participated with Senator Guy Cordon, of Oregon, in preparing a report for the Congress, for one of your subcommittees, on the impact of Federal ownership on local government.

The Legislature of the State of California has issued a senate-interim-committee-on-public-lands report, in which it feels that there must be a reexamination and reconsideration of the problem of the impact of Federal ownership on local government.

It has been recognized by committees of the Congress. It has been recognized by the committees of the Western States. And we feel that under the circumstances, here, the protective features which are included in this legislation should be continued as the bill makes its progress, which we hope it will make, through the Congress.

Senator ANDERSON. Thank you very much, Senator Regan. That is a good statement. And we are interested, those of us around this table, particularly, in these publicland areas, and we do know your problem and are very happy to have your statement about it.

Are there additional questions about it?

Secretary Aandahl?

Governor, we are glad to welcome you back again, and we are happy to have your testimony on this matter.

#### STATEMENT OF FRED G. AANDAHL, ASSISTANT SECRETARY OF THE INTERIOR

Mr. AANDAHL. Mr. Chairman, I have a very brief statement that I would like to read.

I appreciate the privilege of appearing before your committee to express the views of the Department of the Interior regarding the proposed Trinity River facilities to expand reclamation development in the Central Valley of California.

The Central Valley project is an outstanding project of the reclamation program. Construction of the originally authorized features of the project is virtually completed and completion of the Folsom Reservoir and related works is being approached rapidly. Progress on construction of the Sacramento canals unit is in the initial stages. These works have and will continue to fulfill a great need in expanding the irrigation base of the Central Valley, but the demands for irrigation service, spurred by the phenomenal growth of California in the past two decades, have grown faster than can be met by these new facilities. We recognize, therefore, the need for further expansion of reclamation facilities for the Central Valley and are prepared to support appropriate measures for their accomplishment.

To this end we have prepared a supplementary report on the Trinity River division which proposes certain enlargements to the existing authorized project. This supplementary report was submitted to the Bureau of the Budget on July 12 and has not yet been cleared. Neither has a report on the bill been cleared by budget, so I cannot give to your committee information on the relation of the Trinity River division to the program of the President.

SENATOR ANDERSON. Has the Department not reported on the Trinity River section at any time?

MR. AANDAHL. We have sent a report on the bill in advance of clearance through the Bureau of the Budget, at the specific request of the committees; but we have not been able to state the relationship of our report to the program of the President.

This proposed addition to the Central Valley project would increase its irrigation-water yield by 1,190,000 acre-feet annually, or enough to fully irrigate almost 350,000 acres of land. It would, in addition, increase the electric-power supply to the area by more than 1 billion kilowatt-hours annually, a major part of which would be used in pumping irrigation water, including the potential San Luis unit. An addendum was prepared and attached to the supplementary report analyzing the possible development of the Trinity River division through the sale of falling water and non-Federal construction of the power facilities.

The extensive investigations and studies underlying the proposed Trinity River division establish its engineering and economic feasibility and its desirability as an addition or complement to the existing Central Valley project.

With respect to the possibilities of non-Federal construction of the power features and the sale of falling water, I would like to point out that the Department now recommends that this be done if a satisfactory contract can be worked out. Reauthorization of the Trinity River division subject to the reclamation laws would permit the Department of the Interior to build the entire project, including the power features. In case non-Federal construction of the power features is to be recognized as a probable method, it would be well to have a specific provision in the act authorizing the Department at its discretion to enter into suitable contracts for the sale of falling water and non-Federal construction of the power features. A preliminary

informal offer by the Pacific Gas & Electric Co., to enter into such an arrangement has been made to Mr. Spencer, Regional Director of the Bureau of Reclamation. Present indications are that through the sale of falling water (1) the Government capital expenditures can be reduced by more than \$50 million, (2) the Federal investment in Central Valley project power facilities would be repaid earlier since higher cost Trinity power would not be pooled with the present supplies, and (3) the needed integration and exchange of Trinity power with local steam generation to supply necessary irrigation pumping power can be accomplished effectively at suitable rates.

I would like to submit for the record a copy of the letter the Department of the Interior received from the Bureau of the Budget dated April 28 relative to our May 4, 1955, report on S. 178.

(See budget report on H. R. 105, p. 7.)

Senator ANDERSON. I do not quite understand this statement, Mr. Secretary. What do you mean, here, when you say that—

present indications are that through the sale of falling water (1) the Government capital expenditures can be reduced by more than \$50 million, (2) the Federal investment in Central Valley project power facilities would be repaid earlier, since higher cost Trinity power would not be pooled with the present supplies.

Is it your belief that you can cut this project loose from the power rates that are being charged at Shasta and Friant and various other dams and that Pacific Gas & Electric can peddle that power at 7 or 8 mills, when other power is available at 2 or 3 mills?

Mr. AANDAHIL. Would you like me to take each of those three items separately?

Senator ANDERSON. Well, yes. I can understand that if they sell the falling water to a private firm, they can do that. But I do not quite understand what the private firm is going to do with it, if it has to sell it at a rate that is several times higher than is available through pooling.

Mr. AANDAHIL. In explanation to item No. 2 of the statement to which you are referring, the cost of the Central Valley power, the production of Central Valley power, exclusive of Trinity power, is 1.84 mills.

Senator ANDERSON. Yes. I said 2 or 3 mills.

Mr. AANDAHIL. With Trinity power added, the cost of all power in the Central Valley would be 3.04. And I believe that includes the transmission to the Tracy substation.

Senator ANDERSON. What does Trinity power cost, alone?

Mr. AANDAHIL. I believe I had better ask Mr. Murray to see if he can answer that question.

Senator ANDERSON. Yes. Supposing we are going to offer this power to Pacific Gas & Electric. What is it going to cost?

I don't want to stop and refigure what the total Central Valley output is. But by taking what Central Valley now is and figuring the million kilowatts or whatever it is going to be in Trinity, if it jumps it a full mill and then some, a mill and a quarter, it must be very expensive power, is it not?

Mr. AANDAHIL. Mr. Murray?

Mr. MURRAY. The cost of the additional generation produced by the Trinity plants would be approximately 5 mills. I cannot give you an exact figure on that, Senator, but it is very close to 5 mills. And that amount of power, weighted into the entire Central Valley

project, results in the figure that Secretary Aandahl gave you, and would result in a rise in the overall.

Senator ANDERSON. What are they going to do with 5-mill power when it can buy power at 1.84 mills?

Mr. AANDAHL. In making an analysis of possible sale of the falling water—

Senator ANDERSON. No. I would kind of like to stay on this power question. Do I understand that the industries of California, northern California, that are dependent for their growth upon cheap power, look with favor upon a jump in their power rate from 1.84 mills to 3.04 mills?

Mr. AANDAHL. That would be the result on the cost of power that the Government would have for sale under the Central Valley project if we have Federal construction of the power facilities at the Trinity project.

Senator ANDERSON. Well, since we hear that there is no tax paid on that and therefore it is cheap, and private power is going therefore to be still higher, where do you think they are going to sell that higher power?

Mr. AANDAHL. If we would enter into a contract for the sale of falling water, we would expect the purchaser of the falling water to install the power generating and power transmission facilities. And we would expect an annual payment from the purchaser of the falling water for that falling water that would amortize the Federal investment in the joint facilities of the project. And the information that we have now, which is embodied in the offer that has been made by the Pacific Gas & Electric, would make such payments to the Federal Government, and the price of Trinity power would then not be pooled with the remainder of the Central Valley project.

Senator ANDERSON. Yes. And I so understand. But tell me what they are going to do with this 5½-mill power, or whatever it may be when they get through. Because they have to add taxes onto it as a private utility. And their costs are going to go up to maybe 6 mills. They can generate it with steam at San Francisco for part of that, much less than 6 mills. Why are they going to pay 6 mills for it?

Mr. AANDAHL. Of course, it would not be my purpose to outline just how they are going to use that power. But they are making an offer for the falling water that is attractive to the Government and attractive to the Central Valley project.

Senator ANDERSON. Are they making an offer for the falling water that is comparable to what it is worth?

Mr. AANDAHL. I would say reasonably so.

A final contract, of course, has not been negotiated, and I would not want to express a firm opinion until the contract has been negotiated. But the offer that has been made, in general terms, appears to be reasonably satisfactory.

Senator ANDERSON. Well, can you give us those general terms for the record?

Mr. AANDAHL. I have here a copy of a letter that was submitted to the regional director, Mr. Spencer, by the Pacific Gas & Electric Co., and that embodies the early offer that was made under the date of January 13. Since that time negotiations have been in progress, and a number of the items in this offer have been refined, so that

they are somewhat different than in this particular offer. But I will be glad to submit this for the record.

(The material referred to, when received, will be filed with the committee.)

Senator ANDERSON. Thank you. What I am trying to get to, Mr. Secretary, is this. That Central Valley power is important to northern California, is it not?

Mr. AANDAHL. That is correct.

Senator ANDERSON. Now, if it is now costing 1.84 mills, do the people who now buy that power recognize that if the Trinity project is completed they are going to have to start paying 3.04 mills, if developed?

Mr. AANDAHL. The cost of Central Valley power at the present time at the Tracy substation is 1.84 mills.

Senator ANDERSON. Is that not the figure I just used?

Mr. AANDAHL. Yes. But the average price that the Bureau of Reclamation is getting for the power that it sells from the Central Valley project is 4.48 mills. And, of course, a portion of the power revenues are used in the area of irrigation.

Senator ANDERSON. Yes. Well, you will still want to do that, will you not? You are not trying to chop off the irrigators out there, are you?

Mr. AANDAHL. That is correct.

Senator ANDERSON. Now, if the cost now when delivered to the Tracy substation is 1.84 mills, and by the construction of the Trinity power you get a pooled rate of 3.04, you are going to have to raise this rate at Tracy comparably, are you not? Unless you take it out of the irrigators' hides?

Mr. AANDAHL. With the present rates—and, of course, now you are talking about Federal construction of the power facilities.

Senator ANDERSON. Yes. Because if you sell it to somebody else, you are not going to tell me that since they have to pay taxes—I have been reading all this literature that the taxpayers' leagues have put out against the upper Colorado River project. And since they have to pay taxes on all these other things, surely they cannot generate it any more cheaply than the big Government stations can, can they? Does it not cost them just as much to buy generators as it does the Federal Government?

Mr. AANDAHL. Substantially the same.

Senator ANDERSON. Well, actually it costs them a little more, generally. But substantially the same. Does it not cost them the same amount for labor as it does the Federal Government?

Mr. AANDAHL. Substantially the same.

Senator ANDERSON. Where are they going to save any money on it?

Mr. AANDAHL. Well, I am not concerned about the savings or the additional expense that the utility that purchases the falling water may have.

Senator ANDERSON. Well, I have to be.

Mr. AANDAHL. The thing in which I am primarily interested is the effect that the sale of falling water will have on the Central Valley project.

Senator ANDERSON. Yes.

Mr. AANDAHL. If the Federal Government installs the power facilities because of the fact that this power generated in the Trinity project is higher cost power than in the other facilities of the Central

Valley project, the other elements of the Central Valley project, if the rate is kept the same, we will have to pick up about one million and a half dollars annually of the expense of the power in the Trinity project.

Senator ANDERSON. Now, who is going to pay that?

Mr. AANDAHL. That will be absorbed in the Central Valley pool if the power facilities are constructed by the Federal Government. If the Federal Government sells falling water and it does not construct those power facilities, that \$1,500,000 will not need to be picked up by the other features of the Central Valley.

Senator ANDERSON. We will come to that in a minute. May we stay with what the Federal Government is going to do? Because I understand it is contemplated that the Federal Government will do it.

Mr. AANDAHL. Yes. The House bill provides an 18-month study period, during which the Department can report to the Congress on the contract that is in prospect, and Congress can then take further action on it.

Senator ANDERSON. But the Trinity power, if the Government builds the plant, will run about 5 mills.

Mr. AANDAHL. That is correct. And of course, that will be pooled with other Trinity power.

Senator ANDERSON. Other Trinity power?

Mr. AANDAHL. Excuse me. Other Central Valley power.

Senator ANDERSON. Other Central Valley power. And raise the rate from 1.84 to 3.04 at Tracy. Now, if the rate so jumps at the present time, where would it jump, do you suppose, if the basic cost went to 3.04.

Mr. AANDAHL. It is my understanding that the rate can remain at 4.48, according to the studies that we have available at the present time—

Senator ANDERSON. Now we are getting into real financing. How could that be done?

Mr. AANDAHL. And the payout—

Senator ANDERSON. No, stay with that for a minute.

Mr. AANDAHL. And the payout still be made within the required number of years.

Senator ANDERSON. Tell us about that.

Mr. AANDAHL. Well, if power costs 3.04, there is a profit in selling it at 4.48.

Senator ANDERSON. Then there must be a terrific profit in selling it, when it costs 1.84, at 3.04.

Mr. AANDAHL. That accounts for the sizeable reserves that are building up in the Central Valley project for the aid of irrigation.

Senator WATKINS. In other words, you have a subsidy there for irrigation.

Mr. AANDAHL. That is correct.

Senator WATKINS. From power.

Mr. AANDAHL. Yes.

Senator WATKINS. Do the power users object to that?

Mr. AANDAHL. We have not had a great deal of contacts.

Excuse me. You are asking me if the power users object to the rate of 4.48?

Senator WATKINS. Yes.

Mr. AANDAH. There has been none that has come to my attention. Perhaps those in the regional office could answer that more specifically.

Senator WATKINS. I think you would have heard about that if there had been any. The power has been sold at that, has it not?

Mr. AANDAH. It has. And there has been no objection that has come to my office.

Senator ANDERSON. If the sale of falling water is made, does this proposal that you have submitted here, which is going into the record, indicate how it is to be sold, or what the price for it is to be?

Mr. AANDAH. No. In fact, we have only gotten into the early stages of contract negotiations. And I could not give any information further than to the effect that an offer has been made that seems to have the possibilities of being very helpful to the Central Valley project.

Senator ANDERSON. You are familiar with the activities of the Department of the Interior in this field, because this comes under your general direction.

Mr. AANDAH. That is correct.

Senator ANDERSON. How many places in the United States has the Department of the Interior sold falling water on a large multiple-purpose project?

Mr. AANDAH. I don't think there is any exact precedent for this arrangement, but it is one of the approaches to the overall partnership program that we are trying to develop.

Senator ANDERSON. Would these people like to be partners in the building of the dam and the tunnel?

Mr. AANDAH. That has not been explored.

Senator ANDERSON. Do you not think it is something that you ought to explore?

Mr. AANDAH. There would be a possibility.

Senator ANDERSON. In other words, I can understand that you could be partners in the profit end of it and not the construction, but I would think the Department of the Interior would have some responsibility, that if they are to be partners they should go all the way. Partnership involves sharing of risk as well as profits, does it not?

Mr. AANDAH. Insofar as the Department of the Interior would be a party to a partnership arrangement in connection with power, we would expect reasonable value for any of the advantages that were made available to the partner. And that will be set up in an analysis that will be made of the proposal.

Senator ANDERSON. What will the total cost of this project be? Will that be developed by the Bureau of Reclamation?

Mr. AANDAH. Yes. The total cost with Federal construction is around \$219 million; the commercial construction of the power facilities.

Senator ANDERSON. Very well. Do you have additional questions?

Senator WATKINS. This 3.04 mills: where is that sold? at the load centers, or at the bus bar, or what?

Mr. AANDAH. The 3.04 cost of power is the cost of the power to the Federal Government. That is, the cost of generation to the Federal Government for power at the Tracy substation, brought from the projects down to the Tracy substation. And that power is sold under numerous contracts that the Bureau of Reclamation has in the Central

Valley. And those contracts yield a revenue to the Government of about 4.48 mills.

Senator WATKINS. 4.48?

Mr. AANDAH. 4.48.

Senator WATKINS. And to whom is this sold? Who buys it?

Mr. AANDAH. Some of it is sold for irrigation pumping. Some of it is sold to the Ames Laboratory. The larger block of it is sold to the Sacramento Utility District.

Senator WATKINS. Do they all pay the same price?

Mr. AANDAH. The price for domestic and industrial use is the same.

Senator WATKINS. What is the rate for irrigation pumping?

Mr. MURRAY. There are two rate schedules set up in the Central Valley Basin. The 4.48 which the Secretary is speaking of is a pool, an estimated income, by application of 2 rate schedules to the different classes of service.

I could furnish that for the record.

Senator WATKINS. That is the income to the Federal Government from power sales.

Mr. MURRAY. Yes, sir.

I could furnish copies of those rate schedules for the record.

(The material referred to is as follows:)

[Schedule R2-S1]

UNITED STATES DEPARTMENT OF THE INTERIOR, BUREAU OF RECLAMATION, REGION II

CENTRAL VALLEY PROJECT, CALIFORNIA

INTERIM SCHEDULE OF RATES FOR WHOLESAL POWER SERVICE TO CUSTOMERS HAVING THEIR OWN GENERATION FACILITIES

*Effective.*—January 1, 1952.

*Available.*—In the area served by Central Valley Project.

*Applicable.*—To wholesale power customers, for light and power service supplied through one meter at one point of delivery, who have and maintain generating equipment in operating condition capable of serving loads on not more than 24 hours' notice, and who, by appropriate contract, agree to such integration of their power system and the power system of the United States by interchange, purchase, and sale of capacity and energy, as will best achieve the efficient use of the production capacity of both parties.

*Character and conditions of service.*—Alternating current, sixty cycles, three-phase, normally delivered and metered at the low voltage side of substation. The service available hereunder will be considered in two categories: (1) firm power service, and (2) withdrawable power serve, herein termed secondary energy. The delivery and continuity of supply of secondary energy are not assured and such service may be withdrawn in whole or in part at any time on not less than 24 hours' notice.

*Monthly rate.*—

Demand charge: \$0.75 per kilowatt of billing demand.

Energy charge: First 130 kilowatt-hours per kilowatt of highest 30-minute integrated demand measured during the month at 4 mills per kilowatt-hour; next 130 kilowatt-hours per kilowatt of highest 30-minute integrated demand measured during the month at 3 mills per kilowatt-hour; all over 260 kilowatt-hours per kilowatt of highest 30-minute integrated demand measured during the month at 2 mills per kilowatt-hour.

Secondary service billing demand credit: For and in consideration of the customer's generating capacity, if maintained in good operating condition, and provided the customer contracts to purchase his system energy requirements in lieu of operating his own fuel burning generating equipment (except that which may be generated as a result of maintaining such equipment in standby condition and as by-product generation from production of steam for heating or other

purposes) during any billing period when secondary energy is available and as offered by the United States, the number of kilowatts of billing demand on which the demand charge will apply shall be the Contractor's system demand less the Contractor's capacity, but not less than the contract rate of delivery for firm power as specified in the contract: *Provided*, That in no event shall the number of kilowatts of billing demand on which the demand charge will apply, exceed the Contractor's system demand. For use in computing demand charges, the customer shall furnish to the United States, not later than five days after the end of the month during which service was furnished hereunder, a statement of the Contractor's system demand. The Contractor's system demand is defined as the maximum 30-minute integrated demand in kilowatts on the Contractor's power system during the month. The Contractor's capacity is defined as the sustained load carrying ability of the Contractor's electric generating plant less station use, as determined by test and as limited by transmission and substation facilities. If the Contractor purchases power under a bona-fide power contract from a supplier other than the United States, appropriate deduction shall be made from the Contractor's system demand for power actually taken under such contract before applying this rate schedule.

*Minimum bill.*—\$1.00 per month per kilowatt of the highest 30-minute integrated demand measured during the month but not less than the contract rate of delivery for firm power as specified in the contract.

*Billing demand.*—The billing demand will be the highest 30-minute integrated demand measured during the month or the contract rate of delivery for firm power as specified in the contract, whichever is the greater, but in no event shall the billing demand exceed the Contractor's system demand.

*Adjustments.*—

For character and conditions of service: If delivery is made at transmission voltage so that the United States is relieved of substation costs, five-percent discount will be allowed on the demand and energy charges.

For transformer losses: If delivery is made at transmission voltage but metered at the low-voltage side of the customer's substation, the meter readings will be increased two percent to compensate for transformer losses.

For power factor: None. The customer will normally be required to maintain a power factor at the point of delivery of not less than 90 percent lagging.

---

## UNITED STATES DEPARTMENT OF THE INTERIOR

### BUREAU OF RECLAMATION, REGION 2

#### CENTRAL VALLEY PROJECT, CALIFORNIA

#### INTERIM SCHEDULE OF RATES FOR COMMERCIAL IRRIGATION AND/OR DRAINAGE PUMPING SERVICE AND FOR WHOLESALE FIRM POWER SERVICE WHEN SUPPLIED IN CONJUNCTION THEREWITH

*Effective.*—August 1, 1950.

*Available.*—In the area served by the Central Valley project.

*Applicable.*—To commercial customers for their own use, or for resale for, irrigation and/or drainage pumping and purposes incidental thereto supplied through one meter at one point of delivery. Wholesale firm power service for purposes other than irrigation and/or drainage pumping service when supplied in conjunction with pumping service through the same meter at the same point of delivery shall be supplied hereunder. Not applicable to standby or auxiliary service or to the sale of dump energy.

*Character and conditions of service.*—Alternating current, sixty-cycles, three-phase, delivered and metered at the low-voltage side of substation. Rates of delivery for pumping service and for wholesale firm power service shall be separately stated in the contract. A seasonal period of delivery for pumping service is permitted hereunder provided the seasonal service months are stated by contract.

*Monthly rate.*—

Demand charge: \$0.75 per kilowatt of billing demand.

Energy charge: First 130 kilowatt-hours per kilowatt of billing demand at 4 mills per kilowatt-hour. Next 130 kilowatt-hours per kilowatt of billing demand

at 3 mills per kilowatt-hour. All over 260 kilowatt-hours per kilowatt of billing demand at 2 mills per kilowatt-hour.

**Minimum bill.**—The monthly minimum charge shall be \$1 per kilowatt of the contract rate or rates of delivery in effect during such month, except that during the period specified as seasonal service months, there will be no monthly minimum charge but in lieu thereof a seasonal minimum charge shall apply which shall be equal to the product of \$1 times the number of seasonal service months times the sum of the kilowatts of contract rates of delivery for seasonal pumping service and firm power service, if any.

**Billing demand.**—The billing demand will be the highest 30-minute integrated demand measured during the month.

**Adjustments.**—

For character and conditions of service: If delivery is made at transmission voltage so that the United States is relieved of substation costs, 5 percent discount will be allowed on the demand and energy charges.

For transformer losses: If delivery is made at transmission voltage but metered at the low-voltage side of customer's substation, the meter readings will be increased 2 percent to compensate for transformer losses.

For power factor: None. The customer will normally be required to maintain a power factor at the point of delivery of not less than 90 percent lagging.

[Schedule R2-F2 (Supersedes Schedule R2-F1)]

UNITED STATES DEPARTMENT OF THE INTERIOR, BUREAU OF RECLAMATION, REGION 2

CENTRAL VALLEY PROJECT, CALIFORNIA

INTERIM SCHEDULE OF RATES FOR WHOLESALE FIRM POWER SERVICE

**Effective.**—August 1, 1950.

**Available.**—In the area served by the Central Valley project.

**Applicable.**—To wholesale power customers for light and power service supplied through one meter at one point of delivery. Not applicable to standby or auxiliary service or to the sale of dump energy.

**Character and conditions of service.**—Alternating current, sixty-cycles, three-phase, normally delivered and metered at the low-voltage side of substation.

**Monthly rate.**—

Demand charge: \$0.75 per kilowatt of billing demand.

Energy charge: First 130 kilowatt-hours per kilowatt of billing demand of 4 mills per kilowatt-hour. Next 130 kilowatt-hours per kilowatt of billing demand at 3 mills per kilowatt-hour. All over 260 kilowatt-hours per kilowatt of billing demand at 2 mills per kilowatt-hour.

**Minimum bill.**—\$1.00 per month per kilowatt of contract rate of delivery.

**Billing demand.**—The billing demand will be the highest 30-minute integrated demand measured during the month.

**Adjustments.**—

For character and conditions of service: If delivery is made at transmission voltage so that the United States is relieved of substation costs, 5 percent discount will be allowed on the demand and energy charges.

For transformer losses: If delivery is made at transmission voltage but metered at the low-voltage side of customer's substation, the meter readings will be increased 2 percent to compensate for transformer losses.

For power factor: None. The customer will normally be required to maintain a power factor at the point of delivery of not less than 90 percent lagging.

Senator WATKINS. I would like to get it cleared up just what the power brings in to the Federal Government and what the rate is that it is sold at.

Mr. MURRAY. The average rate at which sold commercially is the rate the Secretary quoted, 4.48 mills.

Senator WATKINS. That is the average rate at which the Government sells to the various agencies that buy it?

Mr. MURRAY. That is correct.

Senator WATKINS. Do you have any private utilities buying any of that power at that rate?

Mr. MURRAY. The Pacific Gas & Electric Co. buys a portion of the output, yes.

Senator WATKINS. What proportion? Do you know?

Mr. MURRAY. I don't have that offhand, Senator.

Senator WATKINS. Can you furnish it to us?

Mr. MURRAY. Yes, sir.

Senator WATKINS. I wish you would.

(The material referred to is as follow:)

*Central Valley project—Year ended Dec. 31, 1954*

		Kilowatt-hours
Energy available:		
Gross generation	-----	2, 714, 787, 801
Receipts from other systems (interchange)	-----	687, 498, 422
Total	-----	3, 402, 286, 223
Energy disposition:		
Sales to Pacific Gas & Electric Co.:		
Firm	-----	392, 950, 250
Nonfirm	-----	1, 150, 720, 538
	-----	1, 543, 670, 788
Sales to others	-----	949, 180, 385
Delivered to other systems (interchange)	-----	734, 984, 189
	-----	3, 227, 835, 362
Sales and interchange	-----	3, 227, 835, 362
Losses	-----	174, 450, 861
Total	-----	3, 402, 286, 223

Senator KUCHEL. Mr. Chairman?

Senator ANDERSON. Senator Kuchel.

Senator KUCHEL. Mr. Secretary, first of all, is it not true that the Bureau of the Budget, under this administration, both last year and this year, made recommendations for appropriations for the Trinity project?

Mr. AANDAH. Yes, that is correct.

Senator KUCHEL. Now, the bill which Senator Knowland and I have introduced provides specifically for the construction of the Trinity River project, including the production of hydroelectric power, and the appropriate transmission lines, by the Federal Government. That is a position which has been endorsed by the present government of California, under the administration of Governor Knight and previously under the administration of the then Governor Warren. The House bill, which is before this committee, as you have suggested, and as I alluded to in my own statement, provides for a study period of 18 months on the question of who will produce the power.

In justification of that amendment to the House bill, which was made while it was being considered in the committee there, the House committee report goes on to say, on page 5:

The Pacific Gas & Electric Co. has submitted to the Department and to the committee a proposal whereby the company would construct the power facilities and pay the Federal Government annually for the falling water. The Department of Interior has made no final recommendation on the Pacific Gas & Electric proposal, because the engineering and economic studies, together with the negotiations incident to that proposal, are incomplete. The committee therefore inserted language in this bill directing the Department of the Interior to continue its studies and negotiations and to report the result thereof to the Congress not later than 18 months after enactment, together with its recommendations thereon.

I think that was done; so that the Congress might subsequently have the considered judgment of the Department of Interior upon the offer which has been made in January of this year.

Now, in your statement to Senator Anderson, you used some language, if I may say so, Mr. Secretary, to indicate that the Department has already at least tentatively arrived at a decision, to wit, to accept the offer. I want to be quite sure, however, of that. Is it a fact that the Department has now reached a basis upon which it can or will find that that offer should be accepted?

Mr. AANDAHL. The Department has not reached a decision to accept the offer that has been made by the Pacific Gas & Electric Co. The Department has reached a decision that the sale of falling water offers a possibility that can be of advantage to the Central Valley project. And we would like to pursue the negotiations of such a contract, and if a satisfactory contract can be worked out, which we think it can be, we would then recommend the approval of that contract.

Senator KUCHEL. Do I take it from that, Mr. Secretary, that the Department is unable today to have an opinion or a considered judgment on the offer which has been made to you?

Mr. AANDAHL. We could not recommend approval of the specific offer at this time.

Senator KUCHEL. Because I was going to add for the record: Is it not true that the State of California, to which you sent the original offer which was made by the Pacific Gas & Electric Co., while not passing judgment on the policy question involved, did raise objections other than on policy to the offer which was made.

Mr. AANDAHL. They made some further analyses of the prices and the values that were involved in the offer.

Senator KUCHEL. In other words, with the amendment in the House bill, which I have urged this committee to approve, I want to make sure that we are proceeding in good faith, and that the Department will consider the public interest involved under the 18-month provision during such a period of time as it may require to develop that considered judgment, so that under the terms of the 18-month section, were it to be adopted by the Congress and signed into law, your Department's recommendations on the power question would only be arrived at by a study that would take into consideration the position which the State of California has taken, which would take into consideration questions raised by the State government; and that the mind of the Department is not now foreclosed in pursuing that question.

Mr. AANDAHL. Yes. That is entirely correct. As far as negotiating a contract is concerned, the question is wide open.

In our recommendation, we only express the opinion that we see the possibility of an advantageous arrangement in the sale of falling water. But the detail of a contract for that purpose has not reached the point where we could express any opinion on it.

Senator KUCHEL. I do not want to pontificate. But I represent the people of California. And I hope the committee may look with favor and the Congress may look with favor on this legislation. And if I am back here next year, and if this legislation has been adopted, I would want to have the Department's judgments on the production of the hydroelectric energy spread out upon this table and gone into very

thoroughly, as I think is the intention in the bill as it has come before us, Mr. Chairman.

Senator ANDERSON. May I just ask you this: The plan proposed by Pacific Gas & Electric in this proposal involves an increase in the capacity from 233,000 kilowatts to 362,000 kilowatts. It involves an expenditure on the part of the Federal Government, even if you are just selling the falling water, of \$168 million, or more. How much of that would bear interest? Would pay interest? Would return interest?

Mr. AANDAHL. If falling water is sold, all of the Federal investment in joint facilities that can be allocated to power would be interest bearing.

Senator ANDERSON. But if the Federal Government did not have any power installation, how much of it would be allocated to power?

Mr. AANDAHL. There would be quite a sizable portion of the cost of the joint facilities that would be allocated to power. I think in round numbers I can give you the off-the-cuff figure of about \$110 million out of the total cost being allocated to power.

Senator ANDERSON. Well, these people proposed to pay \$3½ million a year for this falling water. The Government's investment in it will be \$168 million a year. The average rate of Government investments is somewhere near 3 percent, I mean bonds, so that the Government is going to pay \$5 million a year for its installation and get back \$3½ million from Pacific Gas & Electric.

Mr. AANDAHL. No. Just a moment. The \$168 million would not be invested in power. That would be the total cost of the Government project, including the investment in storage for irrigation, and the investment in the diversion facility for irrigation purposes. The investment in power, that is, the portion of the joint costs that could be allocated to power, would be about \$110 million.

Am I substantially correct in that figure?

Mr. MURRAY. That is correct.

Senator ANDERSON. Out of 168; or out of the first figure of 186? There is a difference, is that not so?

Mr. MURRAY. I don't recognize the \$186 million figure.

Senator ANDERSON. Is that your proposed capital cost of the construction of the plant, not counting transmission facilities? What do your figures show for the cost of building the dams and the tunnels, and so forth?

Mr. MURRAY. \$154 million.

Mr. AANDAHL. But because of the increased generating capacity proposed in the offer, the tunnels would have to be somewhat enlarged, and that cost would be increased for that reason.

Senator ANDERSON. I am able to follow that. But I am going to start again on this.

What do you have for the Trinity Dam and Reservoir—\$90 million?

Mr. MURRAY. Yes.

Senator ANDERSON. Trinity powerplant, \$12 million?

Mr. MURRAY. Trinity powerplant, \$12 million?

Senator ANDERSON. That is right. But that will come out to \$168 million. You better be careful if you start using those figures, because that is what they have got here. They have \$12 million plus two-million-odd dollars. And that comes to \$15 million.

Mr. MURRAY. Is that from Pacific Gas & Electric?

Senator ANDERSON. Yes, it is. And I am going to try to find where the \$32 million is.

Now, you have got \$12 million, there. You have \$5 million for the Lewiston Dam and Reservoir.

Mr. MURRAY. That is correct.

Senator ANDERSON. You have \$666,000 for the Lewiston powerplant.

Mr. MURRAY. That is right.

Senator ANDERSON. \$30 million for the towerhouse tunnel.

Mr. MURRAY. That is correct.

Senator ANDERSON. \$7,592,000 for the towerhouse powerplant.

Mr. MURRAY. \$10,070,000.

Senator ANDERSON. That is the switchyard added.

Mr. MURRAY. That is adding the switchyard.

Senator ANDERSON. Well, leave the switchyard out. It will be worse if you add the switchyard. How about the towerhouse diversion dam? \$1,082,000.

Mr. MURRAY. That is correct.

Senator ANDERSON. \$31 million for Matheson Tunnel. \$6,900,000 for Matheson powerplant. Put them down and see if they come to \$154 million or \$186 million.

Mr. MURRAY. Well, I have the company's letter here before me. Their totals are \$186 million.

Senator ANDERSON. And yours are \$154 million for the same items?

Mr. AANDAH. Mr. Chairman, that \$186 million, however, is investment in addition to the investment in power facilities. That includes the Federal investment for storage, and diversion for irrigation purposes, the amounts allocated to those purposes, as well as the amounts that would be allocated to power. That is the total cost of the project to the Federal Government.

Senator ANDERSON. I hope I am not confused. I think I understand that. He gave a figure of \$154 million. And I want to know where it comes from.

Mr. MURRAY. The \$154 million figure, Senator, is the cost of the joint facilities. That includes the Trinity Dam, the Lewiston Dam, the Trinity and towerhouse tunnels, the towerhouse diversion dam—all of which are joint facilities used both for power and for irrigation purposes. And that is the cost of those facilities, as estimated in our report.

Now, I might say that there is one reason for differences in costs here in the company's offer, and that is the thought that they have advanced that the sizes of the tunnels should be somewhat larger.

Senator ANDERSON. That is taken care of in another column of this, if you have ever read it.

Mr. MURRAY. Yes, sir; I have.

Senator ANDERSON. Well, then, let us stay to the one column, please. Their figures show a saving of \$51 million, and that is mentioned here in the Secretary's statement.

Mr. MURRAY. That is correct.

Senator ANDERSON. That \$50 million is based upon \$186 million for the construction of these facilities. You say the figure is \$154 million. Now, if you figure is right, there isn't any saving of \$50 million. It is a saving of \$20 million.

Well, we can get the figures later on.

Mr. AANDAHL. I don't follow that step there, Mr. Chairman. If our figure is correct, the saving would be still more. And on the basis of the analysis that Mr. Murray just read, the saving I believe would be \$64 million or \$68 million.

Senator ANDERSON. Well, I hope arithmetic was one of your specialties in school. It sure was mine. Let's go to it.

Mr. AANDAHL. The total cost of the project under our analysis is \$219 million.

Senator ANDERSON. That is right.

Mr. AANDAHL. The cost of the joint facilities, if there is non-Federal construction of the power, would be \$154 million. Under our figures, the difference would be the saving in Federal investment if there is not Federal construction of the power facilities.

Now, the proposal made by the Pacific Gas & Electric would increase the size of the tunnels, which are joint facilities. They are diverting water for irrigation, and as it is diverted, it would run through generating plants and would generate power. So the tunnels are a joint facility, and they belong to that \$154 million investment. But under the Pacific Gas & Electric Co. proposal, where they want 362,000 kilowatts of capacity, those tunnels would be increased. And according to their figures, this joint cost figure would increase from \$154 million to \$186 million, and if that increase took place in the joint facilities then there would be an increase in the total cost.

Senator ANDERSON. Now, Mr. Secretary, if you will just take a look at these figures, you will find out that what you have just said is absolutely incorrect, I believe. Let me remind you that in this figure the Matheson Tunnel is in at \$31,246,000 in the \$186 million figure. But in the increased capacity, it is in at \$36,540,000. And the \$186 million does not represent the increased cost of the tunnels.

Do you want to take them individually and try to find out whether it does or not? Would you like to look at it? If you look at it, you will see the \$186 million involves \$31 million for Matheson Tunnel, and not \$36 million.

Senator WATKINS. What document are you reading from, Senator?

Senator ANDERSON. I am reading from Pacific Gas & Electric's proposal.

Senator WATKINS. Are there additional copies, so that we can follow you there?

Senator ANDERSON. I think while they are preparing the figures, I can explain, Senator Kuchel, that I subscribe to what you said in your original statement, that you felt that the power revenues ought to be pooled, since you have such a substantial investment in power revenues. I am only concerned about what Governor Aandahl calls the partnership features of this. If I could buy the installation at Grand Coulee on the same basis that the Pacific Gas & Electric would take this, I could well afford to retire from the Senate and not work again the rest of my life. And I am just trying to make sure that we understand the partnership proposal. That is all.

Senator KUCHEL. Mr. Chairman, may I ask one or two more questions?

Senator ANDERSON. Certainly.

Let me have my figures while he does it. I am not trying to be harsh, because I know your fine reputation, and I know what a good

Governor you were, and I am not trying to be critical about this at all. I am just trying to make sure. This may be the only chance we have at a hearing of this kind to know what the partnership proposal is so that we may be continuing it. As Senator Kuchel said, if we approve this project and I hope we may, if it passes the Congress, and I hope it will, then I hope that before we get into these partnership transactions we do lay all the papers out across the table and all of us understand what we are doing.

Mr. AANDAH. I am very glad to have the committee pursue this question for our mutual advantage.

Mr. MURRAY. My apologies, Senator. I should have picked this up a little bit quicker. The \$154 million to which I referred is an allocated part of the cost of the Trinity facilities chargeable against—

Senator ANDERSON. You understand that when I used the term it was not an allocated figure.

Mr. MURRAY. That is right. This is charged against the joint features of the project. There is \$65 million in single-purpose power facilities, some of which are included in the \$186 million figure that the company has, but separated in the 2 figures that we have been talking about, \$154 million and \$65 million, to make a total of \$219 million.

Senator ANDERSON. Well, I think the subject of arithmetic is one we can get into. As long as you say it is an allocated figure, that is something else. You could allocate it all to something else, and I would not know what it was. But this is the figure submitted by you.

Mr. MURRAY. We did not submit it. That is the company's submittal.

Senator ANDERSON. Then will you read me what your figure is on the Trinity Dam and Reservoir, if it is not \$90,399,000?

Mr. MURRAY. No. You are correct, Senator.

Senator MILLIKIN. I did not understand. What does this boil down to? I thought this was clear to me at the outset. Now I am confused.

Senator ANDERSON. I was only trying to find out for my own satisfaction, Senator Millikin, how much of this money was allocated to irrigation, which is just additional water pouring into that river, and which may be properly chargeable there, so that I might know whether the Government was getting a fair price for falling water. Frankly, I know of no yardstick for selling falling water.

Senator WATKINS. How about Hoover?

Senator ANDERSON. We do not sell falling water in the Hoover Dam.

Senator WATKINS. That is the effect of it; is it not?

Senator ANDERSON. No.

Senator WATKINS. At least, I have been so advised, that that was the effect of it. They put in their own generating plants.

Senator MILLIKIN. Could we have the whole thing summarized up to this point?

Senator ANDERSON. Well, I think, Senator Millikin, all I would say is that there is a partnership proposal that was involved in this that I think we would want to study in connection with the amendment which has been put on in the House, that would give 18 months for a determination of that. I would want to know who was going to make the determination and where it was going to be submitted. I

strongly incline to the suggestion made by Senator Kuchel, that since Shasta and Friant and these other dams are federally operated into one pool, they would have a great deal more satisfaction if they tried to integrate this power into the pool. And since Secretary Aandahl has testified that even though this power is a little expensive, it can be put into the pool without raising the 4.48 rate, I think that is probably where I would think it ought to go.

The committee would study it and come to its own conclusion. I think that would end up all the questions I had on it with Governor Aandahl.

Senator KUCHEL. Mr. Chairman, I do just want to take the time of the committee to suggest that in the House hearings during April, the chairman of the Interior Committee, Mr. Engle, directed this question to the Secretary. I read from page 69.

Now, what would you say if we struck out the authorization for the Federal Government to build the power features and put in the bill an amended direction to the Interior Department to enter into a contract with the Pacific Gas & Electric Co. to build and operate the powerhouses according to their proposal?

Mr. AANDAHL. I would feel that that would be undesirable at this time. The negotiations have hardly begun, and there are so many uncertainties that I would feel such a procedure would be unwise. If the committee is inclined to give some recognition to the falling water proposal, it would be my suggestion that the authorizing language in section 1 of this bill remain substantially as it is, but that a proviso clause be added directing the Secretary of the Interior to further study the possibilities of selling falling water, and at his discretion to contract for the sale instead of constructing the power facilities.

The last sentence of that statement, Mr. Secretary, was included in your prepared statement here today. But I am sure that you would agree that your answer, your complete answer, to wit, that it would be undesirable for a decision to be made today, and that the negotiations have just begun, and there are uncertainties, remains the same now as it was then.

Mr. AANDAHL. That is entirely correct. And the opinion expressed before the House committee is just as true now as it was then.

Senator KUCHEL. In other words, this is a multiple-purpose project, and so far as the construction of the dam is concerned, it could proceed as it is urgently needed, and this question of power, as is provided for in the House bill, could be deferred, without injury to the undertaking now.

Mr. AANDAHL. That is correct. The only difference from the position taken in the House bill and the recommendation on the part of the Department of Interior is that we suggested that it be made an executive matter for executive determination after the contract for the sale of falling water had been negotiated and all the information was before us. The House committee has taken the position that they would like to have Congress take another look at it. And we are not going to seriously object to that.

Senator ANDERSON. Well, I think it would make a great deal of difference as to the speed with which this bill might leave the committee, if it is left to an executive decision as to whether it will or will not contract for the sale of falling water. I think I might just as well say frankly that I am going to be one of those who will try to keep the bill off the Senate floor as long as I could and kill it if I possibly could. Because I think the first time the Secretary of

Interior sold falling water, he should not do it by mere executive decision. He ought to let the Congress in on that. That is a very important public question. And I really believe that the language of the House bill is preferable to the testimony of the Department that the Secretary be authorized to enter into a contract when he is ready.

That is a matter that the committee can get into at a later time. It is a discretionary matter.

Mr. AANDAHL. And we are not offering any particular objection to the opinion that is expressed by the committee.

Senator ANDERSON. I appreciate that. I do think that the consideration of selling falling water from a large dam is a pretty serious consideration. I think the Congress might have a look at it, as it has a look at a great many other things.

Is this regarded as a dam to be built on navigable waters? Is that river navigable in the ordinary sense?

Senator WATKINS. With a canoe, perhaps.

Mr. AANDAHL. I would not want to venture an answer at this moment.

Senator ANDERSON. Will the dam be built on lands owned by the United States, or lands to be acquired by the United States? Is that public land up there on which the dam is going to be built?

Mr. MURRAY. A great deal of it. Most of it is in the national forest.

Senator ANDERSON. We had some questions raised here in the committee on the Hells Canyon Dam, because it was built on a navigable stream and was going to be built on public lands. I just wonder what the answers to those two questions are.

Mr. MURRAY. Practically all of the area that would be covered by the main reservoir site and also the Lewiston Reservoir is now within the borders of a national forest and is federally owned. There are, however, scatterings of private holdings running all through that area, that would enter into it, so it is not entirely federally owned.

Senator KUCHEL. What about the other question the chairman asked? I did not hear that.

Mr. MURRAY. As to the navigable stream? We would like to supply that for the record, Senator Kuchel.

(The material referred to, when received, will be filed with the committee.)

Senator ANDERSON. Are there questions of Secretary Aandahl?

If not, we will call on Mr. Dexheimer.

#### STATEMENT OF W. A. DEXHEIMER, COMMISSIONER OF RECLAMATION

Mr. DEXHEIMER. Mr. Chairman, I have no prepared statement for the committee. Mr. Spencer, the regional director, and Mr. Murray, the planning engineer, are here to testify on any details.

Senator ANDERSON. Why don't you bring them both up here?

Mr. Murray, come up here next to Senator Watkins, if you will, please. It will be easier for the reporter.

Mr. DEXHEIMER. I will be glad to answer any questions. And I would like, if the committee would permit it, to be excused so that I could catch a plane this afternoon for a commitment I have in Denver tonight. But I would be glad to stay over if the committee wishes.

Senator ANDERSON. We will start, then, with Mr. Spencer, the regional director.

**STATEMENT OF CLYDE H. SPENCER, REGIONAL DIRECTOR OF THE  
BUREAU OF RECLAMATION, SACRAMENTO, CALIF.**

Mr. SENCER. Mr. Chairman, my name is Clyde H. Spencer, regional director of the Bureau of Reclamation, region II, Sacramento. And I have a prepared statement, but in view of the fact that Mr. Murray has explained the map on the wall, I will skip through that in order to save time, if it will help the committee any.

Senator ANDERSON. Yes; go right ahead.

Mr. SPENCER. With the committee's permission I would like to make a brief introductory statement outlining the way in which the Trinity River project fits in as a logical "next step" in the development of the water resources of the Central Valley Basin. After the statement I would be pleased to answer any questions that the committee may have.

The Central Valley project was first authorized as a Federal Reclamation project by the Congress in 1937 (act of Aug. 26, 1937; 50 Stat. 850). The principal initial features of the Central Valley project are shown on this map [indicating] and consist of Shasta and Keswick Dams and powerplants, the Delta Cross-Channel, Contra Costa Canal, Delta-Mendota Canal, and Friant Dam, Friant-Kern Canal and Madera Canal. Backbone transmission lines adequate to convey the output of Shasta and Keswick plants to the vicinity of Tracey where our largest pumping load is located also were authorized. All these works are now completed and in operation.

Friant Dam, Friant-Kern Canal, and Madera Canal, located in the San Joaquin Valley, were designed to regulate and convey San Joaquin River water to areas of serious water shortage on the east side of that valley. Friant Dam also provides space for flood control. Long before the Central Valley project was authorized, owners of a large area on the lower west side of the San Joaquin Valley had established rights to use of San Joaquin River water. Therefore, before water could be impounded at Friant it was necessary to bring Sacramento River water to a point on the San Joaquin River known as Mendota Pool in order to provide a substitute supply. The Delta-Mendota Canal serves this purpose. In the late fall, winter and spring months, water for that canal is obtained from natural flow entering the Sacramento-San Joaquin Delta. During the summer months this is supplemented by releases of water stored in Shasta Reservoir.

Shasta Dam, Reservoir, and powerplant, and the companion Keswick Dam and powerplant are the principal features of the initial project in the Sacramento Valley. In addition to the important San Joaquin Valley irrigation service, the initially authorized features of the project make it possible to provide a large amount of new irrigation in the Sacramento Valley, to improve navigation along the Sacramento River, to control floods, and to hold back the intrusion of saline waters into the Delta area.

By the time World War II ended, it was obvious that the initial features of the project were hopelessly inadequate to meet the very large demands for water brought about by California's and the

Nation's increasing population. The Congress therefore authorized the American River development in October of 1949 (63 Stat. 852), which incorporated into the Central Valley project, Folsom Dam and Reservoir, Folsom powerplant, the Sly Park unit, and Nimbus Dam, Reservoir and powerplant, together with a high voltage transmission line to connect the American River plants to the backbone Central Valley project lines at Elverta. These works are under construction now and are scheduled to be completed in 1955.

In September of 1950 the Congress again added new features to the Central Valley project by authorizing the Sacramento Canals unit (64 Stat. 1036). These canals will convey water to approximately 205,000 acres of land in the Sacramento Valley. Construction is underway on the Currey Canal and design work on the Tehama-Colusa Canal is now in progress. We anticipate initiating construction on the Tehama-Colusa Canal as soon as the formation of irrigation districts, now underway, moves ahead so that adequate repayment contracts can be secured.

Intermittently from 1942 to February of this year the Bureau of Reclamation carried out a substantial planning program in the Trinity River area looking forward to a possible expansion of the Central Valley project to include a Trinity unit. Detailed reports recommending a development substantially the same as contemplated in pending legislation have been approved by the Secretary. In transmitting the views of the State of California on the Interior Department reports the director of public works of the State endorsed the project as engineeringly and economically feasible and recommended that it be constructed at the earliest practicable date.

Based on our thorough investigations, it seems to me that the Trinity River unit is a logical addition to the Central Valley project. The basic elements of the plan are simple. They are the same as those proposed by previous investigators, including the division of water resources of the State of California, the Federal Power Commission, and the Corps of Engineers. The area involved is shown on this map of the north coastal area of California.

The Klamath River Basin, of which the Trinity is a part, is one of the largest basins in California from the standpoint of water availability. Studies of the Division of Water Resources of California shown that nearly 40 percent of all the runoff of the entire State occurs in the Klamath River Basin. Annual precipitation in the area often reaches 80 to 100 inches.

A nearly infinite number of routes exist through which water can be conveyed from a large reservoir on the Trinity River to the Sacramento River watershed. The plan presented in my report of July 1954 to the Commissioner is a sound one, is workable, and demonstrates feasibility. Obviously it may change in detail as further field investigations show ways of improving the project or saving on costs. The specific features presented in the Bureau's engineering reports consist of a dam and reservoir on the Trinity above the village of Lewiston with a capacity of 2,500,000 acre-feet to conserve and regulate Trinity River flows; a small dam at Lewiston through which all water needed downstream can be released, while at the same time serving as a diversion dam to turn surplus water toward the Sacramento Valley on the east; 2 tunnels to convey the surplus water from the Trinity to the Sacramento; 4 powerplants at appropriate

points; and backbone transmission lines to carry the power to the south. Water entering the Sacramento River would be brought in above the existing Keswick Reservoir, thus increasing the output of Keswick powerplant without any additional expense.

So far we have merely touched on the irrigation benefits of the Trinity project. I would like to call the committee's attention to the fact that the operation of the Trinity River division would permit, on an average annual basis, the diversion of over 700,000 acre-feet of Trinity water to the Sacramento River Basin which, when coordinated with the Central Valley project system, would provide an additional 1,190,000 acre-feet of irrigation water for the Central Valley. Of this quantity, 665,000 acre-feet would be used annually to meet the ultimate needs of the Sacramento Canals unit of the Central Valley project; 525,000 acre-feet annually would be available for use on other lands in the Central Valley. While thus improving irrigation supplies in the water-short Central Valley, the project will increase the electric energy produced by the Central Valley project by 1,067 million kilowatt-hours annually.

In proposing a project which would take water from one of the coastal basins and bring it into the Central Valley Basin, we have been acutely aware of the importance of not depriving the basin of origin of the water which it needs now or may need in the future. Our plans contemplate making available ample water to meet the needs of the Trinity River Basin. One important local water need is for an adequate supply of water of favorable temperature for fish life. In arriving at quantities of water which should be released to flow on down the channel of the Trinity River for preservation of fish, we have relied upon detailed studies by the Fish and Wildlife Service. These have been reviewed carefully by the California State Fish and Game Commission and endorsed except for details which we believe can be adjusted readily in final planning. We believe these releases also will meet foreseeable consumptive requirements in the downstream portion of the Trinity River Basin. In planning the project one of our basic criteria has been that of meeting these minimum downstream requirements as a first order of priority.

The estimated cost of the Trinity River division works presented in the Bureau's report is \$219,282,000. The entire sum would be reimbursable except \$215,000 for minimum recreational facilities recommended at Trinity and Lewiston Reservoirs and \$47,000 for fish-protection facilities.

The Trinity division would be a sound investment for the country in view of the favorable ratio of primary benefits alone to total cost of 1.86:1. Total benefits resulting from the development would outweigh the cost in a ratio of 3.31:1.

Our reports contain detailed repayment studies of the Central Valley Project including the Trinity River division. Our analyses show that the projected power rates will assure repayment of costs allocated to commercial power in 1989 with interest at 3 percent. This is without using that interest for repayment purposes. Costs allocated to irrigation will be repaid by 2013 with the aid of about \$67 million in power revenues. Costs allocated to municipal water service will be repaid by 2005 with interest at 2½ percent. By the year 2013, repayment would be secured on all features constructed and a surplus of about \$171 million will have been accumulated.

Senator ANDERSON. How much in costs will be allocated to irrigation? You say they will be repaid with the aid of \$67 million from power revenues. I thought you said only about \$80 million was being charged in all. So only \$13 million will be charged for this 700,000 acre-feet of water.

Mr. MURRAY. No, sir. This is based on integrating with the entire Central Valley project. This is only one unit.

Senator ANDERSON. I know it is only one unit. My question is: How much is allocated against irrigation?

Mr. MURRAY. The total allocation for the entire project, including the Trinity River division, to irrigation, is \$399 million.

Senator ANDERSON. No. What is allotted to irrigation because of Trinity River.

Mr. MURRAY. We have not allocated the costs of the Trinity River features by themselves, as among irrigation, power, and so forth.

Senator ANDERSON. Then how can you get the amount that was allocated to power? You gave a figure on that. If you have not done it, how can you do it?

Mr. MURRAY. In the case, Senator, of the study that we made on falling water, we made such an allocation to get an approximation of the power costs of the joint features.

Senator ANDERSON. If you did that, you can subtract from the \$219 million and get it; can you not?

Mr. MURRAY. The total cost of the joint features was the \$154 million, allocated, as I told you. Of that total, \$44 million is allocated to irrigation and \$110 million is allocated to power.

Senator ANDERSON. Now, \$44 million is allocated to irrigation. And the irrigation is without interest, under the reclamation bill. So you are going to take \$67 million of power revenues to pay the \$44 million?

Mr. MURRAY. No, sir. The two figures are not related.

Senator ANDERSON. Do I read this correctly, or don't I?

Costs allocated to irrigation will be repaid by 2013 with the aid of about \$67 million in power revenues.

Does that say that you are going to take \$67 million in power revenue to pay the irrigation, or doesn't it?

Mr. MURRAY. Of the total project, including the Trinity River division. The figures are not related to the \$44 million allocation.

Senator ANDERSON. Why are we not on the Trinity River division of it?

Mr. MURRAY. Because the entire project, Senator, is estimated financially on the basis of a total, enlarged Central Valley project as is provided in the Trinity River bill, H. R. 4663.

Senator ANDERSON. Do I understand that if we came in here for a consideration of a dam on the upper Colorado River project, you would give us a consolidated balance sheet taking in Hoover Dam, Davis Dam, Parker Dam, and the whole upper Colorado River project, for goodness sake?

Mr. MURRAY. No, sir.

Senator ANDERSON. Then why can we not have one on this division?

Mr. DEXHEIMER. Senator, it has been our practice in allocation and in payout studies to consider a project as an authorized project

similar to the Missouri River Basin, the Columbia Basin, the Central Valley project, the upper Colorado River project, where all of the various costs are put in for the project, for the authorized features of the project, and then the cost allocations and the payout studies are made for the overall project, with a schedule showing when we would start certain features. This is just one division of the overall Central Valley project. So that our studies are not broken down as you would like to have them here. We have not made that cost allocation on any of those existing projects in that manner. We just make the overall allocation and payout studies on the overall project.

I think that is typical of private utility projects, where the later higher cost power projects, for example, are pooled. Their revenues and their costs are pooled, and an average rate is made on the basis of those costs.

Senator ANDERSON. Now, then, taking the whole Columbia River Basin, do you calculate that same way with reference to Hells Canyon? Do you consider the Grand Coulee Dam and all the rest of them? Was that the basis on which you reported on Hells Canyon Dam?

Mr. DEXHEIMER. No, sir. The Hells Canyon Dam was not an authorized project in the Columbia Basin.

Senator ANDERSON. This cannot be too well authorized, or you would not be back here looking for authorization.

Mr. DEXHEIMER. This is a portion, however, of the Central Valley project. We are assuming it will be authorized by the Congress as a portion of the Central Valley project. And there are so many other things, power and water, that tie together, that it would be most difficult to try to separate it and make it a single project standing alone.

Senator ANDERSON. I checked a moment ago the figure of \$70,000 for Los Angeles County. The Office of Education reports that for the school year 1953-54 the school districts of Los Angeles County received total Federal payments of \$1,163,000 for operation and maintenance, and for construction received \$4,244,717, from 1950 to 1952. So that I don't understand the \$70,000 figure. I don't worry about it, except that it struck me as a strange figure.

Go ahead, I think it would be a little easier, though, if we knew what this project involved, what this matter we have under consideration involved, in costs, how you are allocating it, and what you are doing with it.

Mr. DEXHEIMER. It would be an impractical thing to separate it, because of the multiple uses in Central Valley of the water and the power for the pumping and the overall payout studies that would be required.

Senator ANDERSON. But you find it would be possible to separate the power out? That is the interesting thing. You can separate that out, but you cannot separate the irrigation out.

Mr. DEXHEIMER. It is a little easier, because the things that are specifically ascribed to power, of course, the penstock, the enlarged

tunnels, and things of that kind, are easier to separate out not only physically but from cost standpoint. Then in the reservoirs you have a joint use, and you have a joint use in the tunnels for irrigation and power. So that there you allocate how much of that is needed on a basis of the uses by prescribed formulas that are set up.

Senator ANDERSON. Proceed.

Mr. SPENCER. Since our 1954 report was completed, the Pacific Gas & Electric Co. has offered to construct the power facilities proposed in the departmental reports with the Federal Government constructing the storage and water conveyance features. Also, we have studied, in a general way, the possibility of selling falling water to a non-Federal agency. The results of this study are presented in my report of January 6 to the Commissioner of Reclamation, which is incorporated in his report of January 19 to the Secretary.

Senator ANDERSON. Do you have a copy of that?

Mr. MURRAY. Yes, sir.

Senator ANDERSON. Has that report been submitted to us here?

Mr. MURRAY. I believe copies of it have been made available to the committee, Senator.

Mr. DEXHEIMER. Senator, that report was sent up informally to the committees of the Congress at the same time it went out to the States and Federal agencies for comments, 3 or 4 months ago.

Mr. SPENCER. In recent months the Pacific Gas & Electric Co. has furnished additional data from time to time which have made possible more detailed appraisal of the possibility of selling falling water. However, the whole subject is highly complex, and extended negotiations would be required before it could be certain that a workable plan could be outlined which would be favorable to the Central Valley project.

If any legislation enacted provides for full exploration of the falling-water proposal, construction could be started on the storage facilities immediately and completion of the overall project would not be delayed. It seems to me that the major items to be considered in exploring the falling-water proposal are:

- (1) The price to be charged for falling water;
- (2) Details of joint operation;
- (3) Any necessary changes in the plan of development, including sizes of tunnels, penstocks, and powerplants;
- (4) Arrangements for exchange of power for irrigation pumping and support of long-term power commitments; and
- (5) Effect on plans for future additions to the Central Valley project such as the San Luis unit.

In conclusion, I believe that whether the Trinity River unit is built as an all-Federal project as a part of the Central Valley project or the power facilities are built by a non-Federal agency, this development will be an important and much-needed addition to the Central Valley project.

I appreciate the opportunity of appearing before this committee.

Senator ANDERSON. Mr. Dexheimer, do you have any place in the United States where you have a joint operation, as I mentioned, in item 2?

Mr. DEXHEIMER. You mean with a non-Federal agency operating?

Senator ANDERSON. Operating the water, and you trying to operate the irrigation systems, so that the water is available for irrigation when needed. Would you have a conflict there, or could you have a conflict?

Mr. DEXHEIMER. I don't believe we could, Senator Anderson. The Boulder Canyon Project Act provided an opportunity for a similar arrangement. However, it didn't work out that way. And we sell the power at the bus bar. But there the Bureau of Reclamation retains control of the water and the discharges that are necessary for irrigation.

Senator ANDERSON. Is there any place in the United States where you have a program where the Bureau of Reclamation has control of the water and a private hydroelectric company has control of the water also for their purposes?

Mr. DEXHEIMER. No, sir, none that I know of.

Senator ANDERSON. This would be the first one, then, of that nature?

Mr. DEXHEIMER. Unless it would be a very small one, sometime in the past that I am not aware of, I believe that is correct, yes, sir.

Senator ANDERSON. You do not believe there might be any difficulty in conflict of administrations there? Who would be the final judge as to whether the water would be allowed to flow through the tunnel?

Mr. DEXHEIMER. The Bureau of Reclamation would have to have absolute control over discharge of water from any reservoir and scheduling of that, and the power generation would have to be subordinated to other uses by contract.

Senator ANDERSON. Would you probably have any difficulty selling the securities under those circumstances?

Mr. DEXHEIMER. I don't believe so, under those circumstances, those particular circumstances, because that would be based on engineering judgment as to the amount of water that would be available for generation of power.

Senator ANDERSON. We will come now, then, to Mr. Murray.

Mr. MURRAY. I do not have a statement, Senator.

Senator ANDERSON. Has anyone submitted anything to us on the cost of this, other than an overall figure?

Mr. DEXHEIMER. Yes, sir. The costs indicated by Mr. Spencer a few moments ago—the overall cost of \$219,282,000. That is including the Federal construction of power facilities.

Senator ANDERSON. We have never had a copy of this. Would it be proper for the Senate Committee on Interior to have a copy of it? This is dated January 19, 1955. The report on the Trinity River division of the Central Valley project, which we now have before us.

Mr. DEXHEIMER. I felt quite sure that you sent copies of that informally at the time it was sent out to the various States.

Senator ANDERSON. We have never had copies of it at all, and the bill is here before us. It does seem to me that we ought to be allowed to have a copy of it.

Mr. DEXHEIMER. Of course, you realize that until the report from the Bureau of the Budget comes, we cannot send it to you formally.

Senator ANDERSON. That may be the difficulty, whether it is formal or informal.

Senator WATKINS. Do we have copies, whether we got them formally or informally? That is what I am interested in.

Senator ANDERSON. No; we don't.

Senator MILLIKIN. Can they not supply us with a copy to put an end to this talk about it? Can we not get a copy and have it available?

Mr. MURRAY. Yes.

Senator ANDERSON. Are there any questions?

Mr. Durkee?

Mr. Durkee, will you state your name and identify yourself for the record, please?

### **STATEMENT OF FRANK B. DURKEE, DIRECTOR OF PUBLIC WORKS OF THE STATE OF CALIFORNIA**

Mr. DURKEE. My name is Frank B. Durkee, and I am director of public works of the State of California, Mr. Chairman.

I wish to thank the committee for this opportunity to appear. I feel that Senator Kuchel's statement and that of Congressman Engle have covered this matter quite fully from the standpoint of the State, but I have a brief statement which I would like to present.

I am appearing before you today at the direction of Gov. Goodwin J. Knight in support of H. R. 4663, which would authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division, Central Valley project, California, under Federal reclamation laws. I would like to say also, Mr. Chairman, that it is at the invitation of Senator Kuchel that I am here.

The proposal for the diversion of the waters of the Trinity River to the Central Valley of California is not new. It has been given consideration for more than a generation. As early as 1924, a board of consulting engineers appointed by the Federal Power Commission reported that the advantages of such a diversion outweighed its disadvantages. In the years between 1925 and 1930, plans for the diversion of the Trinity River to the Sacramento River Basin were studied by the State engineer of California, and a plan for such a diversion was included in the State water plan submitted to the legislature in 1931. Other reports have been made by the United States Forest Service, the Corps of Engineers, and more recently, by the Bureau of Reclamation.

Senator MILLIKIN. Where does the Trinity River rise? In what State?

Mr. DURKEE. It rises in Trinity County, Calif., Mr. Chairman.

Senator MILLIKIN. I thought it rose in Oregon.

Mr. DURKEE. It flows into the Klamath River, and the Klamath River arises in the State of Oregon.

Senator MILLIKIN. Is the State of Oregon agreeable to the project?

Mr. DURKEE. I know of no opposition from the State of Oregon.

Senator MILLIKIN. Have they been consulted?

Mr. DURKEE. Perhaps the representative of the Bureau could answer that more fully. I have never heard of any opposition to the project by the State of Oregon, as a State.

Senator MILLIKIN. I would like to know whether the State of Oregon has been consulted, and whether it agrees to this project.

Mr. DEXHEIMER. May I say they have been consulted. We have their comments and we have summarized those. They are before the Bureau of the Budget. We hope that will be up before this committee in the next few days. Oregon did not object to the project.

Senator MILLIKIN. Thank you very much.

Mr. DURKEE. On July 30, 1927, following further study of the diversion of Trinity River water to the Sacramento River Basin, the State of California, through its department of finance, filed applications with the State division of water resources for the appropriation of water from the Trinity River for the development of power and for use for irrigation, domestic purposes, salinity control, and navigation, in the Sacramento and San Joaquin Valleys. These applications are still in good standing and are subject to assignment to the Federal Government.

As the representative of the Governor of California, I have, on two previous occasions, submitted to the Secretary of the Interior, under the terms of the Flood Control Act of 1944, reports stating the views and recommendations of the State of California on the Trinity River division project. One submission was made in connection with the proposed report of the Secretary, dated May 2, 1952, and the other was made in connection with his proposed report dated February 17, 1955, the one on which H. R. 4663 is based.

The views and recommendations on both of these reports are supported by detailed studies made of the Trinity River division project by the division of water resources of the State department of public works, supplemented by studies made by all other interested State agencies. It was requested in both reports that the State's views and recommendations be sent by the Secretary of the Interior to the President of the United States and to the Congress. It is understood that has been done. I may be in error, in view of the statements made this morning, Mr. Chairman.

In my letter of transmittal of the State's views on the 1952 report of the Secretary of the Interior on the Trinity River division project, dated April 13, 1953, it was stated that the increase in the population of California during the past decade and further continued rapid growth predicted for the future, require development of the State's water and power resources in consonance with such increasing population and the accompanying industrialization and agricultural expansion. The Trinity River project would serve to meet in part this need and would be highly beneficial to the economy of California. It is further stated in that report that the position of the State of California, based on the studies made, is that the Trinity River project is engineeringly and economically feasible and that it should be constructed at the earliest practicable date.

In my letter of transmittal of the State's views on the 1955 report of the Secretary of the Interior on the Trinity River division project, dated May 28, 1955, I again stated that the project should be developed to make the greatest possible contribution to the water and power resources of California and that it continues to be the position of the State of California that the project should be constructed at the earliest practicable date.

At the recent session of the California State Legislature both the senate and the assembly, by separate actions, as has been previously stated to you this morning, memorialized the Congress and the Presi-

dent of the United States to enact such legislation as may be required to bring about the immediate authorization and construction of the Trinity River division and San Luis projects.

In conclusion, gentlemen, I respectfully request, on behalf of the State of California, that your committee take favorable action on the pending legislation to authorize the Secretary of the Interior to construct, operate, and maintain the Trinity River division project.

Thank you, Mr. Chairman.

ADDITIONAL STATEMENT OF FRANK B. DURKEE, DIRECTOR OF PUBLIC WORKS OF THE STATE OF CALIFORNIA, WITH ENGINEERING AND FINANCIAL FEASIBILITY OF THE TRINITY RIVER DIVISION PROJECT

1. *Engineering feasibility.*—The engineering feasibility of the project is not questioned. A summary of previous reports and investigations is set out in the State's comments on the 1952 report of the Secretary of the Interior. (H. Doc. 147, 83d Cong., 1st sess., p. 3.)

2. *Financial feasibility.*—The Central Valley project, as presently completed and operated, has been demonstrated to be financially feasible to a high degree. If the Trinity project is integrated with Central Valley project, financially and operationally, as provided by H. R. 4063, the combined and enlarged Central Valley project will still be financially feasible, as demonstrated by analyses included in the report of the Secretary of the Interior.

The State's comments included an analysis of the project operated as a separate entity. This also demonstrated the Trinity project to be financially feasible, if power available for commercial sale were sold at approximately 7.2 mills per kilowatt-hour. There is a market for this power in northern California at this rate or higher (State's report of May 1955, pp. 35 and 36).

In other words, the project can be made financially feasible, either standing alone or as a part of Central Valley.

Therefore, we say that the Trinity River project is engineeringly and financially feasible. Its need, likewise, is unquestioned.

Senator ANDERSON. Thank you very much, Mr. Durkee.

Are there questions?

Senator WATKINS. I have none.

Senator ANDERSON. Senator Millikin?

Senator MILLIKIN. Is there any irrigation from the river in Oregon? I have not got that clear in my mind.

Senator ANDERSON. From the Trinity there is none, but there is from the Klamath.

Mr. DEXHEIMER. Senator, the Trinity River itself is entirely in California; but it enters the Klamath River near the ocean, and there is a very large amount of irrigation on the Klamath in Oregon. That river arises in Oregon. And the only interest, really, of Oregon, in the Trinity development would be the amount of depletions that the Trinity might make, which in effect, might possibly affect the amount of water they would have to let go from the Trinity, that they would not be able to develop in Oregon. So there is no irrigation directly involved on the Trinity River, except a provision for future possible developments in California or the lower Klamath Basin, where there is some possibility of future development.

Senator MILLIKIN. Has anybody raised any questions about moving the water from one watershed to another?

Mr. DEXHEIMER. No, sir.

Senator MILLIKIN. All right. Thank you.

Senator ANDERSON. Are there any further questions?

Mr. Jackman, you are going to have to leave early. I am going to take you now.

Will you state your name and your position?

**STATEMENT OF WILLIAM JACKMAN, PRESIDENT, INVESTORS LEAGUE, INC., NEW YORK CITY, N. Y.**

Mr. JACKMAN. Thank you very much, Mr. Chairman.

I am William Jackman, president of the Investors League, Inc., with headquarters at 175 Fifth Avenue, New York City, N. Y. The league I represent is the largest and most successful organization of investors, with thousands of members who reside in every State of the Union.

I am grateful for the opportunity to appear before this distinguished committee, and to register the support of the Investors League, Inc., for private development of the power generation and transmission facilities of the Trinity River project in California.

I am not here as a representative of the utility industry but rather as a spokesman for the investing public: Those persons who have contributed in no small measure to building our industrial might to a point of world leadership and as such have created for our citizens the highest standard of living known to man.

We are keenly aware of the importance of this issue, not only as between public or private development of our power resources but also as it applies to our basic concepts of free enterprise. For here is a clear case of a private concern ready, willing, and able to do a job and do it well. We feel quite strongly that they should be allowed the right to do so.

Senator ANDERSON. You mean by that that they should stand willing to build the dams?

Mr. JACKMAN. Just the power end of the project.

Senator ANDERSON. Well, has that not been true of Grand Coulee and many others, that after the dams have been built and millions expended on the project, nearly anybody can put in a generator?

Mr. JACKMAN. Well, that is true, too. But we believe in this case where the utility companies have come along and made an offer, they should be given an opportunity to do it. I don't think in other cases you have had a similar offer.

It has been brought out at the hearings today about this sale of water. I don't know much about the sale of water. But nevertheless I think in this case, where free enterprise has entered into the picture, where it is a joint matter, we believe that they should be given every consideration as to whether they can or cannot. Far be it from us to say whether they can or not, but we think the committee should give that serious consideration.

As I said, we are keenly aware of the importance of this issue, not only as between public or private development of our power resources, but also as it applies to our basic concepts of free enterprise. For here is a clear case of a private concern ready, willing, and able to do a job and to do it well. We feel quite strongly that they should be allowed the right to do so.

As a matter of fact, President Eisenhower expressed this viewpoint quite adequately in a speech which he made in 1952, when he stated:

No Federal project, large or small, will be undertaken which the people can actively do or help to do for themselves; no Federal project will be undertaken which can be handled by private enterprise.

I know of no better situation to which this statement can apply than the one before you today.

In line with the administration's partnership policy, the report submitted to the Secretary of the Interior by the Reclamation Commissioner, Mr. Dexheimer, indicated that private developments of the power features not only would be acceptable, but would prove beneficial to the Government.

We thoroughly support this position of private enterprise-Federal Government partnership development of the Trinity River area.

Sound business administration dictates that Government should encourage taxpaying enterprises, rather than expand tax-consuming Government projects. The proposal of the Pacific Gas & Electric Co., for partnership construction of this project, would save the taxpayers at least \$50 million.

A Federal Government outlay of this amount, in addition to the \$155 million estimated for the construction of the dams and reservoirs would further aggravate the budgetary deficit under which we are now living, and would make the realization of our goal of a balanced budget that much more difficult.

We must bear in mind that all of the business of the United States, which is developed by private resources, are taxpaying enterprises. It is such enterprises which supply the billions of dollars the Nation needs annually to meet its expenses. Public power projects are non-taxpayers. Their initial cost must be met through taxation and if they prove unsuccessful and are unable to meet their operating costs, taxpayers must make up the deficit.

The Pacific Gas & Electric Co. would provide at least \$171 million more in net revenue to Federal, State, and local governments, over the project repayment period. This is money that would otherwise be lost to these governments. Of the total the Federal Government would realize \$70 million in taxes and \$36 million in the form of net savings to the Government.

We must not forget it takes an average investment of over \$12,000 to build the tools and facilities necessary to create one job in industry. In the public-utility field the investment needed is probably many times greater than this average amount. The investors for whom I am speaking have shouldered the responsibility in the past and will do so in the future provided it can be done in an environment of freedom.

The only alternative is for the Government to assume the role of investor—a costly and politically dangerous procedure.

I am not an engineer so I am therefore not qualified to pass on the technical merits of the Pacific Gas & Electric Co.'s plans. I can only speak out in defense of our system of private capital and to urge that you lend the weight of this committee toward the encouragement of such endeavors.

The league believes that the basic criteria for considering a case of this nature is that whenever free enterprise can do the job they should be allowed to do so. Only in the case where private enterprise is unwilling or unable to do it, the Federal or State Governments should, providing that such undertakings are in the public interest. Public activity should never be at the expense of taxpaying enterprise.

I think that provides the answer to the question.

Since the House hearings on this subject were concluded in April the Investors League, through its California chapter, has been seeking to gauge local public opinion on this matter. The tremendous amount of mail we have received, both from our members in Cali-

fornia and bordering States, indicates wholehearted support for our position. During the latter part of last May, at investor conventions in San Francisco and Los Angeles, a resolution in support of partnership development of the Trinity River project was unanimously adopted.

The resolution states as follows :

Whereas legislation has been introduced in Congress to authorize construction of the Trinity River development in California by the Department of the Interior ; and

Whereas the Investors League, Inc., believes that development of the Trinity River should be carried out at the least cost to Federal taxpayers ; and

Whereas the Department of the Interior has announced that construction of power facilities by local enterprise at the Federal Trinity River Development would save the Federal Government millions of dollars ; and

Whereas it appears that development under this partnership plan would result in beneficial broadening of the local tax base ; and

Whereas this organization supports the announced policy of the present administration of removing the Government from commercial activities in competition with its citizens and of encouraging development of hydroelectric power by local, public, or private enterprise in partnership with the Government at Federal dams. Now, therefore, be it

*Resolved.* That the Investors League, Inc., approves development of hydroelectric power on the Trinity River by local enterprise ; and be it further

*Resolved.* That this organization hereby respectfully urges the Governor of the State of California, Senators Knowland and Kuchel and members of the California congressional delegation and the Interior and Insular Affairs Committees of the Senate and House of Representatives of the United States to obtain suitable legislation by Congress authorizing construction of Trinity River power facilities by any local, public or private agency which is willing and able to build said facilities in the public interest ; and be it further

*Resolved.* That the Secretary of the Investors League, Inc., is hereby directed to send copies of this resolution to the President of the United States, the Secretary of the Interior, the Governor of the State of California, Senators William F. Knowland and Thomas H. Kuchel, each member of the congressional delegation from California, and to the Interior and Insular Affairs Committees of the Senate and House of Representatives of the United States."

Thank you.

Senator ANDERSON. On page 2, you suggested that Mr. Dexheimer had indicated that private development of the power features would not only be acceptable but would prove beneficial to the Government.

Mr. JACKMAN. That was in the case of falling water.

Senator ANDERSON. Did Mr. Dexheimer indicate that private development of the power features would not only be acceptable but would prove beneficial to the Government ?

Mr. JACKMAN. He referred, Mr. Chairman, to this contract that they were negotiating or talking about with the Pacific Gas & Electric.

Senator ANDERSON. Did he, I say, state, when he discussed that, that it would not only be acceptable, but would prove beneficial to the Government ?

Mr. JACKMAN. It would prove beneficial if they could sell the water. But I don't think that had been done before. And that was tied to the generating of power. Therefore, it would be beneficial.

Senator MILLIKIN. The question is whether he said that, is it not ?

Senator ANDERSON. That is what I am trying to find out.

Mr. Dexheimer, did you testify before the House committee that the private development of the power features would not only be acceptable but would prove beneficial to the Government ?

Mr. DEXHEIMER. I said that it might prove beneficial, provided that the contract which would be entered into would provide the

same—or at least as good or better—arrangements so far as irrigation pumping power was concerned. The releases of water for irrigation and all of the other things that would need to be considered, and the rates for the pumping power would also have to be at least as good as those that were developed by the Federal Government. And I also indicated that the negotiation of that contract would be most difficult, because of the complicated nature of it, and the P. G. & E. proposal, which would require us to change our plans for pumping facilities, capacities, and so on.

Senator MILLIKIN. I take it, Mr. Chairman, that the statement referred to was made in the hearing in the House.

Senator ANDERSON. Yes.

Senator MILLIKIN. Then it is on record, and we can compare the two and draw our own conclusions as to whether the witness has made a correct summary of what Mr. Dexheimer said.

Senator ANDERSON. That is correct.

It is now 25 minutes till 1. Do you want to go on, or do you want to stop now?

Is Mr. Heffington here?

Senator KUCHEL. Mr. Heffington sent a wire to you, Senator, so there will be no personal appearance.

Senator ANDERSON. We will be glad to have his statement. I congratulate the junior Senator from California on moving the list along.

Mr. Fleharty? And Mr. Carr, don't you want to come along with him?

Mayor Fleharty, will you state your name? It is obvious of course what you are here for, but I will be glad to have you identify yourself for the record.

#### **STATEMENT OF GEORGE FLEHARTY, MAYOR OF THE CITY OF REDDING, CALIF.**

MR. FLEHARTY. Mr. Chairman and members of the committee, my name is George Fleharty. I am the mayor of Redding, Calif., and with your permission, I will condense my statement as briefly as possible in the interest of the valuable time of the members of the committee.

Our city is located approximately 5 miles from the lowest feature of the proposed Trinity River project. I appear before you today on behalf of the city of Redding, Calif., to urge passage of H. R. 4463. As briefly as possible, I shall state the reasons why we believe it would be sound Federal policy to enact into law H. R. 4663.

The Trinity River project has been studied by both State and Federal agencies periodically for more than 30 years. Former witnesses have informed you the project is definitely one of the best yet to be constructed in the United States and has a high ratio of benefits to cost. There is no question about its financial feasibility. Because we in the city of Redding, and the county of Shasta, have seen first hand the benefits that come from Shasta Dam and other features of the Central Valley project we urge that you take action to make this part of the Central Valley project a reality. It is a logical addition which would furnish more water to the area that is desperately in need of it and more power can be generated to help pay the cost of irrigation.

The Sacramento River portion of the great Central Valley has approximately 1 million acres of fertile land not now in production, which needs only water to become productive. Irrigated acreage in the Sacramento Valley has increased at an average rate of 20,000 acres per year, over the past 20 years. The experience in this development has been that this acreage has developed on lands that were formerly planted in dry farm grains of the variety now in surplus production. In short, it is our considered judgment that placing these lands in specialty crop production will make a direct contribution toward a more stabilized, and better balanced, agricultural economy.

Senator MILLIKIN. Mr. Chairman, may I ask: What are the principal crops to be produced by this water?

Senator ANDERSON. Senator Millikin suggests he would like to know what the principal crops are which would be influenced by this water, or helped by it.

Mr. FLEHARTY. The crops in the total area were introduced in the presentation in the House record. They would primarily be vines, row crops, orchards, permanent pastures, such as clover, beans, tomatoes, strawberries, specialty crops which have a very high commercial value per acre.

Senator MILLIKIN. Thank you.

Senator WATKINS. What about cotton and rice?

Mr. FLEHARTY. The cotton is primarily in the San Joaquin Valley. There is very little cotton in the Sacramento Valley. In fact, I think there is none.

Senator KUCHEL. There isn't any.

Senator WATKINS. Has this supply anything to do with the releasing of other water which could be used for cotton?

Mr. FLEHARTY. In the present project, as such, the Trinity project, it would not, Senator.

Senator WATKINS. You do not produce any rice?

Mr. FLEHARTY. There is a limited amount of rice in the Sacramento Valley, yes. The project would not bring additional acreage under rice cultivation, however, through these additional waters.

One local example of such land utilization is the production of strawberry plants. The frozen strawberry industry has greatly expanded demands for this crop and newly irrigated lands in Shasta County are currently producing a crop with a gross dollar yield of \$5,000 to \$7,000 per acre. The county of Shasta has approximately 175,000 acres of fertile land not now under irrigation, a part of which could be developed in conjunction with the Trinity River project.

The people in the city of Redding are particularly concerned and respectfully request your approval of that part of the bill which appears on page 2, line 22, to page 3, line 5, wherein it says:

The works authorized to be constructed shall also include a conduit or canal extending from the most practical point on the Sacramento River near Redding in an easterly direction to intersect with Cow Creek, with such pumping plants, regulatory reservoirs, and other appurtenant works as may be necessary to bring about maximum beneficial use of project water supplies in the area.

The authorization of these works would make it possible to irrigate about 20,000 acres of land adjacent to the Sacramento River and east of the city of Redding, in Shasta County. A small supply of water has been made available from Shasta Dam for similar land a few miles north. Experience has proven that a number of people who work in

the area can improve their living standards by small tracts and part-time farming.

We in the city of Redding are anxious to develop more of this irrigable land, especially in small family-size tracts, even on a part-time basis, because it definitely stabilizes the economy of the area. At present our economy is based largely on lumber and lumber manufacturing, a strictly seasonal industry. Layoffs in the lumber plants would not affect workers so seriously if they could settle on small pieces of land and produce some of the family needs. This seems to be in the keeping with basic objectives and principles of the Federal reclamation program. It is especially important where we have such large and continuing increases in population, as we are experiencing in all of California and the other Western States.

The members of this committee will be interested to know that the Orland reclamation project, one of the first authorized by the Congress and located about 75 miles south of Redding, has developed an economy based on small farms which has been a great asset to the northern part of Glenn County. It is estimated that the income taxes from the area every 2 years are now equal to the total Federal investment, which has made it possible to sell many manufactured items that come from the States east of the Mississippi River.

Senator ANDERSON. Do I understand that the total amount of money that comes from the Federal Treasury flows back to it every 2 years from income taxes?

Mr. FLEHARTY. Yes, sir.

Senator ANDERSON. We have made statements about the Salt River Valley of Arizona, and that has been my pet example up to now, but I am happy to have this one. Because in the Salt River Valley they have paid back that enormous project several times over in income taxes. They are still paying back the cost of it in assessments from the land and power features. And after all that is done, then the income taxes will continue to pour money into the Federal Treasury for many, many long years to come. And I am glad to know we have found one that can do it every few years.

Senator WATKINS. We have a small project in Utah that does not quite approach that, but I think it is coming along in that direction.

Senator ANDERSON. You would not expect anything in Utah to be quite as good as it grows in California.

Senator WATKINS. I should be quite careful to say that.

Senator ANDERSON. Nevertheless, I am quite glad to have your confirmation of their experience.

Proceed, Mr. Fleharty.

Mr. FLEHARTY. The benefits to our national economy certainly justify national assistance in meeting the water problems in northern California where the local people cannot finance and develop these resources fast enough to meet the growing need.

In closing, may I point out to you that this project is of such vital importance to the State and to the Nation that Senator Knowland, Senator Kuchel, and Congressman Engle as well as Congressmen Sisk, Moss, and Hagen have joined in a bipartisan effort to get the project underway as soon as possible. On the State level, Governor Knight has on several occasions urged immediate construction of the Trinity project by the Federal Government. Every major office-

holder in California representing both political parties have taken a similar stand. On the local scene, both the Redding Chamber of Commerce and the central labor council have adopted identical resolutions endorsing immediate construction in line with H. R. 4663. We are solidly behind that bipartisan effort because reclamation, over a long period of years, has been a fruitful, extremely successful, bipartisan program for the good of the entire Nation.

If I might add one more paragraph: As representing an area directly concerned with the eventual outcome of the power partnership proposal, I was gratified to hear Secretary Aandahl reaffirm his position taken in April at the hearings of the House of Representatives. The Department of the Interior's statement this morning that it now represents such a partnership is disturbing to us in that Mr. Spencer's opinion was that it would take 5 or 6 months at least to reach a conclusion on the justification of such a partnership. We hope that the Department will not prejudge this important issue. We strongly support the 18-month provision of H. R. 4663 and express the utmost confidence in the wisdom in Congress to render the proper decision following the completion of these negotiations.

Senator ANDERSON. I am sorry to say, Mr. Mayor and Mr. Examiner, that the Senate is now voting on the Knowland resolution. We will have to go and vote. We will resume at 2 o'clock.

Senator WATKINS. I would like to congratulate the mayor on his statement. I think it was good.

I have used the same kind of argument before for the Colorado project.

Mr. FLEHARTY. Thank you.

Senator ANDERSON. That last sentence in there is one to which we all subscribe, that over a long period of years this reclamation work has been fruitful and extremely successful.

(Whereupon, at 12:47 p. m., the hearing was recessed until 2 p. m.)

#### AFTERNOON SESSION

The committee reconvened at 2 p. m., upon the expiration of the recess.

Senator ANDERSON. The committee will come to order.

Mr. Carr, will you proceed please?

#### **STATEMENT OF LAURENCE W. CARR, REDDING, CALIF., APPEARING ON BEHALF OF THE COUNTY OF SHASTA, CALIF., AND REDDING, CALIF., CHAMBERS OF COMMERCE**

Mr. CARR. Mr. Chairman, a number of matters that are contained in my statement have been covered, and I will attempt to paraphrase and at the same time keep the committee advised where I am.

Senator ANDERSON. Suit yourself. You are up close to this project and if you want to proceed, you may.

Mr. CARR. My name is Laurence W. Carr, of Redding, Calif. I am a member of the Water Resources Board of Shasta County, Calif. I am appearing here on behalf of the county of Shasta, Calif., and its board of supervisors. I also represent the Redding (Calif.) Chamber of Commerce. Needless to say the organizations which I represent have dedicated themselves for some time to unqualified support

of the Trinity River division of the Central Valley project, and to seeing this project become a reality. The area which I represent will be the primary beneficiary from the construction of this project, and is probably more acutely aware of its necessity than any other area in the State of California.

The project itself, however, is not a sectional affair, and in advocating the project we are not promoting a sectional interest within the State of California. Considering that the project is actually to be constructed in a rather remote area of the State, the almost unbelievable unanimity of support throughout the State of California, from every geographical area of the State, as well as at the top level of the State government, is the most eloquent proof of the worthiness of the project. I will deal with the unanimity of statewide support in a moment in my brief statement. However, I should like to point out certain background facts that I hope will assist the committee in a better appreciation of the urgent necessity of this project.

The Trinity River is a tributary of the Klamath River, which flows through southern Oregon and northern California. The Klamath Basin carries 18½ percent of all of the surface water which flows through the State of California. The Division of Water Resources of the State of California estimates that approximately 70 million acre-feet of water flow to the ocean through the various watersheds within the State. Of this 70 million, 13 million flow through the Klamath Basin alone, which is located in a very remote corner of the State. The Trinity River supplies 27 percent of this 13 million acre-feet, or a total of 31½ million acre-feet.

When we speak of this water running into the Pacific Ocean, we speak for the most part of its running to waste in the ocean, for most of this water represents precipitation. As most of the members of the committee appreciate, we have the so-called dry season, that falls during the months of December through May, whereas during the months of June through November no rainfall or precipitation of any appreciable amount can be expected in any of the great Central Valley or lowlands of the State of California. This season in all the arid States of the West is known as the irrigating season. This is a season during which a major part of the irrigation is done with impounded water, stored up during the rainy season. In the mountains within a few miles of Redding, in Shasta and Trinity Counties, upward of a hundred inches of rain fall during the months of December through May, into the Trinity watershed and other watersheds which flow into the Klamath River and waste into the Pacific Ocean. On the other hand, in the Sacramento and San Joaquin Valleys, the water shortage has become so acute that in one place in the San Joaquin Valley approximately 500,000 acres are in danger of reverting to desert. I might add that this year being a very bad year in California, and the impounded water being at the lowest level in years, that the situation is more critical than ever, and has a great deal to do with our interest in the urgent commencement of the project.

At the present time they are drilling in that valley for water up to depths of 2,000 feet with wells costing between seventy and seventy-five thousand dollars. The result of this deep-well pumping has been that the water table in the San Joaquin Valley is receding continuously. As a result, the House committee, as Congressman Engle men-

tioned this morning, made the study and the findings which are set forth on page 2 of my statement.

A special subcommittee of the House, meeting with a joint water-problems committee of the State legislature, in 1951, made the following findings and reached the following conclusions:

For all practical purposes the developed water supplies of the Sacramento River are overcommitted and oversubscribed. Increased uses of water from the Sacramento River from the beginning of project construction in 1935 to the present are about 3 times the expected increase of 300,000 acre-feet which was estimated by the State of California and the Bureau of Reclamation officials in the original plans for the operation of the Central Valley project.

That special committee filed a report which states as follows:

Construction of additional storage facilities to conserve water for use in the Central Valley should be commenced as soon as possible. The committee recommended that additional storage facilities be constructed as soon as possible to augment the deficient supply of water in northern California and to firm up the water supply for the Central Valley project if such facilities are required within the limits of economic feasibility.

So acute is the water situation in the State of California that a special legislative session was proposed in 1955, to deal solely with the subject of water. In my own county of Shasta there are 50,000 acres from a total of 200,000, of fertile land capable of producing specialty crops and livestock, which are almost completely unproductive now due to the lack of water. If this project is built, 20,000 acres of land will be served directly by the project. The additional 30,000 can be served by the construction of additional supplementary facilities by local agencies.

The urgent problem, therefore, is to find a source of this additional water. Engineers in their detailed statement to this committee have shown how logical the Trinity River division is, as an immediate source of the water that is so critically required. Transferring a small portion of the waters of the Trinity and Klamath watershed into the Sacramento Valley will produce more than average results.

Because of the fall involved the power production resulting as a by-product of the project is maximum. Testimony before this committee indicates that there is a ready market for all of this power. The testimony before the committee as to the financial returns from the sale of power and the tremendous cost-to-benefit ratio of this project show why it is high on the list among all of the reclamation projects in the United States, as a sound Federal project.

It is for this reason, therefore, that no organized opposition exists anywhere in the State of California to this project. On the other hand the Governor of California, in January 1955, stated as follows in his annual message to the State legislature:

The Trinity River project is now being planned by the Federal Government. California has informed the Secretary of the Interior that the project is feasible from an economic and an engineering standpoint and should be constructed at the earliest possible date. I recommend that this session of the legislature approve a joint resolution urging the Congress to begin consideration of this construction project, including all of its power facilities, at the earliest possible date.

Again in April the Governor stated as follows, in a further message to the legislature:

The plan of the Department of the Interior for the development of the Trinity project has heretofore been submitted to, and favorably recommended by, the executive branch of the State government on April 15, 1953.

There is now pending in the Congress legislation to provide for Federal construction of this project as a unit of the Central Valley project, I reiterate my recommendation of last January that the legislature adopt a joint resolution urging the Congress to take favorable action on appropriate legislation to authorize construction of the project.

The Water Resources Board of the State of California on June 4, 1954, adopted a resolution memorializing Congress, stating among other things, as follows:

That the Trinity River division project be constructed at the earliest practicable date; \* \* \*

The State Legislature of California in May 1955 passed a resolution memorializing Congress to construct the Trinity project at the earliest practicable date. This resolution received unanimous approval by the State senate and was approved by a majority of the assembly.

In the 1954 State elections, every major candidate for public office in California, both at the State and Federal level, regardless of party affiliation, declared his support of this project. All informed public officials in our State recognize that it is the soundest immediate solution to the critical water problem which has arisen from California's tremendous growth of the past decade. Much of the water that is needed will be required to salvage land already in production. The new land to be placed into production will in large measure be converted to specialty crops and production of meat and dairy products. The acreage now in dry farming grain production will be reduced and will therefore help to reduce present agricultural surpluses in those crops.

For the foregoing reasons the agencies which I represent respectfully urge your favorable action on H. R. 4663. Thank you.

Senator ANDERSON. Thank you very much.

Mr. CARR. I have a statement, Mr. Chairman, of Mr. Clair A. Hill, who is a consultant engineer for the county of Shasta on water problems, appeared before the House committee, and Mr. Hill also is the chairman of the California Water Resources Board which has adopted the resolution urging favorable action. I would like at this time to file the statement of Mr. Hill on behalf of the county also.

Senator ANDERSON. The statement will be reproduced in the record at this point.

(The statement referred to, when received, will be filed with the committee.)

Senator ANDERSON. Mr. Lyons?

**STATEMENT OF BARROW LYONS, APPEARING ON BEHALF OF CALIFORNIA FARM RESEARCH AND LEGISLATIVE COMMITTEE, SANTA CLARA, CALIF.**

Senator ANDERSON. Will you state your name and your position for the record, please?

Mr. LYONS. My name is Barrow Lyons. I have been asked to read a statement from the California Farm Research and Legislative Committee, Santa Clara, Calif.

Senator ANDERSON. You may proceed.

Mr. LYONS. My home is in Washington, D. C. This is addressed to Hon. James E. Murray, the chairman. I presume it should be addressed to Senator Anderson at the moment.

Senator ANDERSON. No, indeed. Senator Murray is the chairman. Mr. LYONS (reading) :

Gentlemen, you have before you for consideration, and our committee urges that this consideration be favorable, H. R. 4663 (Representative Clair Engle, California) already enacted by the House of Representatives, and providing for construction, operation, and maintenance by the United States Department of Interior of a major storage reservoir on the Trinity River, Calif., with a capacity of 2,500,000 acre-feet, a conveyance system and appurtenant works and power facilities to transport Trinity River water to the Sacramento River.

The necessary approval has been given to this project by all Federal and State agencies as required by law and both Houses of Congress have included in appropriation bills passed for fiscal 1955-56 the sum of \$1 million to start construction pending Senate approval.

Construction of the Trinity River project is the next logical step in fulfilling the requirements of a basinwide Central Valley project of which Shasta, Keswick, Friant, and Folsom, all authorized by the Congress as Federal reclamation projects, are now in operation although Folsom will not be fully operating until later this year.

The bill before you will provide an additional average of 704,000 acre-feet of irrigation water to be coordinated with and distributed through the facilities of the presently operating Central Valley project system in some measure replenishing the constantly receding underground water supply which is the life-blood of agriculture in this semiarid State.

Most of the water diverted from the Trinity will be used in the Sacramento canals now under construction as a Federal project. Due to a series of dry years, sharply increased population following World War II and more intensive agricultural production to satisfy demand, Central Valley project supplies, even with the volume which will be available from Folsom Dam this summer, are insufficient to service the Sacramento canals.

Irrigable acres to receive water from the canals amount to some 205,000, almost entirely within the counties of Tehama, Glenn, Colusa, and Butte.

Senator MILLIKIN. May I ask if that is publicly owned land or privately owned land? This 205,000 acres, are they publicly or privately owned lands?

Mr. MURRAY. They are privately owned lands.

Senator ANDERSON. Are they over the mountain and down the other side? Are they all on the other side of the mountain? Are they all supplied by transmountain diversion?

Mr. MURRAY. Yes, sir.

Senator ANDERSON. There are none in the valley of the Klamath?

Mr. MURRAY. No, sir.

Senator ANDERSON. Proceed, please.

Mr. LYONS (reading) :

It is anticipated that half these irrigated lands will be devoted to forage crops for feeding dairy and beef cattle to meet present and future California deficiencies in milk and meat production.

Much of the remaining land to be irrigated will be devoted to fruit and nuts. The additional water supply will be extremely beneficial in raising the whole water table of the area and preventing further deterioration through drought of the heavy investment in producing orchards in the entire area.

It has always been the conviction of our committee that the Nation and the world need more, not less food, and that so-called surpluses are really the result of an ineffective system of distribution.

This premise has long been recognized as valid by many members of your committee who have consistently introduced and supported legislation to make more food and fiber available to underprivileged families at home and abroad. And these Senators know that our committee has given its vigorous support to these measures.

With our own rapidly mounting population and standard of living we cannot afford to lose the productivity of vast acres throughout the Nation because of an inadequate water supply. Members of your committee also know that our

group of farmers and organizations who work with us have given all possible support to reclamation projects in States other than in California. We feel that all these projects contribute to the national interests.

Senator ANDERSON. I am sure Senator Millikin, having had California testify against his pet bill, and how he and I joined in the effort of the Colorado bill, and have California testify against that, take that last statement with some slight degree of reluctance.

Senator MILLIKIN. It is some very slight approbation, Mr. Chairman. I think it is a favorable offense.

Senator ANDERSON. I think so, too.

Senator MILLIKIN. It is very difficult, I have observed, for one section of the country to note the welfare of other projects equally with their own.

Senator ANDERSON. Senator Millikin's project in Colorado, the Arkansas project, which he has so consistently supported, depends on a transmountain diversion out of the Colorado River watershed, which is looked upon in a very dubious light by the people in California, this being a transmountain diversion.

Mr. ENGLE. Mr. Chairman, may I interrupt to say that, in order that the record may speak correctly, that I am a Californian who last year voted for the Colorado-Frying Pan-Arkansas. It is now in my committee. It will be marked up on Saturday by the subcommittee. I support it now as in the past.

Senator ANDERSON. We only wish that more Daniels could come to judgment.

Senator MILLIKIN. I wish to say that I appreciate the gentleman's attitude. It just goes to show that if we are patient in these things it will all work out.

Senator ANDERSON. You understand, we are just having a little fun at this end of the table. You may go ahead.

Mr. LYONS (reading) :

Agricultural production is a continuing wealth-producing process. It creates new farm commodities each year. It provides jobs for farm labor, skilled and unskilled. It is a vital factor in transportation, processing, farm machinery, containers, sprays and insecticides, gas, oil, and electricity.

Federal investment in reclamation projects is returned to the Treasury many times over in taxes from the new wealth created.

From a dollars-and-cents standpoint the Trinity project is far and away the soundest reclamation investment the Federal Government could make. Annual benefits would exceed annual costs by a ratio of more than 3 to 1.

The framework into which the project will be geared is already in operation. Completion of the initial water storage phase of Trinity is a matter of but a few years. The great hydroelectric potential of the project, approximately 233,000 kilowatts, will ensure quick payoff of Government investment, and water costs low enough to come within the budgets of the project's farm water users.

Officers and members of our committee have been closely identified with their own farming operations and with water conservation and reclamation projects during their working lives and during the 14½ years in which we have functioned. We belong to granges, farm bureaus, and farmer cooperatives. Among our number are former and present members of the State legislature, the State board of agriculture, mayors, and city councilmen, irrigation and water conservation district officials.

Our members have given unqualified support to the Central Valley project since it was accepted by the Federal Government. We were active in the campaign which resulted in the authorization and construction of Folsom Dam on the American River. Many of us helped form irrigation districts to contract for Central Valley project water.

We want to see this vital project keep pace with the growth of California and the growth of our Nation. We offer you our cooperation in this great obligation of which authorization of the Trinity River project is the immediate step.

Respectfully, for the committee :

JOE C. LEWIS,  
*Buttonwillow, Chairman.*

Mrs. GRACE McDONALD,  
*Santa Clara, Executive Secretary.*

Senator ANDERSON. Thank you. Are there any questions?

Senator MILIKIN. Mr. Chairman, I would like to ask: Do they have irrigation districts in this area similar to those we have in our part of the country, which assumes the obligation that we pay the charges against the project?

Mr. LYONS. They do, indeed.

Senator ANDERSON. Thank you.

The next witness will be Mr. Henley, who is accompanied by Mr. Binkley.

**STATEMENTS OF ALBERT T. HENLEY, SANTA CLARA VALLEY  
WATER CONSERVATION DISTRICT; AND THAD C. BINKLEY,  
ENGINEER, ALAMEDA COUNTY WATER DISTRICT**

Mr. HENLEY. Mr. Chairman, my name is Albert T. Henley. Mr. Binkley and I constitute a delegation to this committee from a citizen's committee in our area of California, which I would like to describe for a moment, and, parenthetically, I can tell the Chair, which may gratify the committee, that during the lunch hour we reduced our statement very largely and it will not take as long as we had supposed it would.

Last year, pursuant to a number of requests from a number of organizations who were disturbed at the ever-growing water shortage in an area which lies just to the east and south of the eastern tip of San Francisco Bay, an area comprising southern Alameda County, all of the valley floor of Santa Clara County, and northern San Benito Valley. This is all one long valley and it has common needs.

At the request, as I say, of these organizations, the Santa Clara County Planning Commission called a public meeting which was very well attended by representatives of this area, and from that meeting was born the committee which we represent.

The committee is called the Citizens' Committee for the Importation of Water. It consists of more than 50 active members who, again, are truly representative of a cross section of our economic life.

They are from all portions of this rich and populous area I am speaking of, which, for convenience, I will call the Santa Clara County, which, as I have stated, extends north into Alameda and southern San Benito County, which has common interests and common needs.

Our chairman is Jack Z. Anderson, formerly a representative in Congress from the 10th Congressional District. Mr. Anderson asks me to extend greetings to you who are here who remember him during his tenure.

Among the members are persons representing a number of interests and organizations in this committee. These include the three county governments, also the chambers of commerce, both through their local water committee, and the State Agricultural Committee; the Central Labor Council and the Building and Construction Trades Council; banks and title companies, farm organizations, most specifically the

water committee of the local Farm Bureau. The local newspapers supported this actively, including the Mercury and the News, and the public districts in the area concerned with the acquisition and distribution of water took an active part in our work.

The first job of the committee was the drafting of legislation which is now completed. That legislation was presented to the California State Legislature in its recent session, this spring, and was passed.

It was signed into law on June 24 by the Governor.

The objective is to provide for the creation of the three-county authority, the title which will be Santa Clara-Alameda-San Benito Water Authority, which will comprise the existing public agencies within the area having the appropriate powers, following an election within those public agencies.

The work necessary to bring these elections about is now going forward.

The reason this is pertinent to my presentation is that the central job which is envisioned for this tricity authority is the importation of water into our area.

One of the guiding reasons for the committee's work and for its existence, as a matter of fact, is the Miller-Engle-Anderson Act, which is now Public Law 356 of the 81st Congress.

During its consideration here, it was known as H. R. 165.

The act reads in part, if I may state :

The Secretary of the Interior, through the Bureau of Reclamation, is hereby further authorized and directed to conduct the necessary investigations, surveys and studies, for the purpose of developing plans for disposing of the water \* \* \* and a conduit or conduits with necessary pumping plants and supplemental works extending from the most feasible diversion point on the central valley project of California to serve lands and municipalities in Contra Costa, Alameda, Santa Clara, and San Joaquin Counties.

During the consideration of the bill by the House Committee on Public Lands, a report was made by that committee, being Report No. 241 of the 81st Congress, which reads in part :

Among the investigations which are to be made and reported on are studies of the feasibility of diversion canals leading north and south from Folsom Reservoir to serve the lands in El Dorado, Sacramento, and Placer Counties, and Santa Clara and Alameda Counties.

Perhaps more interesting to the committee is the finding of this committee when it was considering the bill, this being a quotation from the report of the Senate Committee on Interior and Insular Affairs, number 606, reading in part :

The committee also finds that there is an immediate and critical need for water in Santa Clara, San Benito, and southern Alameda Counties, Calif. The committee believes that the relation of the Central Valley project to the water supply situation in Contra Costa, Alameda, Santa Clara, and San Benito Counties should be clarified as rapidly as possible, and that the water needs and potentialities of those counties be determined in the immediate future.

The committee was also gratified by a senate joint resolution recently passed by our senate in assembly in California in final form on June 8, 1955.

I will skip the "whereas" items and proceed immediately to the central paragraph which reads :

*Resolved by the Senate and Assembly of the State of California jointly, That the Legislature of the State of California respectfully memorializes the Congress of the United States and the Secretary of the Interior through the Bureau of*

Reclamation to take such action as may be necessary to conduct and complete with the least possible delay the necessary investigations, surveys and studies for the purpose of providing plans and feasibility reports to furnish a supply of water from the Central Valley project to Santa Clara, San Benito, Santa Cruz, Alameda, and Contra Costa Counties, all generally in keeping with section 2 of the Act of October 1948, authorizing the American River Division, Central Valley project.

Senator MILLIKIN. Mr. Chairman, may I ask what is the population of the area to be served by the proposed project?

Senator ANDERSON. Well, of course, if you are going to take in Santa Clara Valley with some of those areas, it is quite a little.

Senator MILLIKIN. I am talking about the area that will be served by this project.

Mr. HENLEY. That, Mr. Chairman, I am not prepared to answer. The project, as a whole, would naturally serve, as you have been told, the entire Central Valley of California.

Senator MILLIKIN. I understand that.

Senator ANDERSON. There are only about 5,000 people in the area where the dam will be constructed, but the water flows into the whole Central Valley project of California, and it serves the four counties which we mentioned. It serves a good many hundreds of thousands of people there.

Mr. BINKLEY. If I might comment, the current population of the areas that Mr. Henley refers to would probably be in the neighborhood of 400,000. But that is just the beginning. We are just on the threshold of a terrific growth. Chances are that by the end of the century, it will approximate 3 or 4 million.

Senator KUCHEL. Was your question to the Trinity project?

Senator MILLIKIN. It goes to the project before this committee. How large is the population?

Mr. HENLEY. I am unable to answer.

Senator ANDERSON. Could we use the 400,000 figure as being about right?

Senator KUCHEL. It is far more than that, Mr. Chairman. You divide 13 million and put 7 down south and 6 up north, and in this area Congressman Engle and I believe you might find it in the neighborhood of a million and a half or 2 million.

Mr. ENGLE. I would think so. That would be conservative.

Senator ANDERSON. The Senator from Colorado recognizes that nothing is more dangerous than to try to estimate the population of California on any particular day.

Mr. HENLEY. I am sure it is clear in the Chair's mind that the area mentioned by Senator Kuchel is the large area which is going to be served by this project, whereas the area that I represent or that our committee represents is merely the three counties that I have been speaking of in the south end of San Francisco Bay.

Senator KUCHEL. Immediately adjacent to this area that we call the Central Valley.

Mr. HENLEY. Yes. It is just over the hill, as it were, 25 miles from the water conduit.

On the basis of the legislation that I have mentioned, and other favorable consideration, we feel that our people have a legitimate, a direct, and, I might say, even an anxious interest in Central Valley project water.

The legislation also reflects the facts which are to be found in that valley, and which Mr. Binkley will elaborate on, the facts of a disastrous water shortage.

I would like to emphasize that we have not been idle; we have not sat by and allowed this situation to develop without doing anything about it.

We have expended large sums of money and have taxed ourselves heavily to create the necessary conversion works, to capture winter floods and to release them later during the dry season for percolation into the underground to recharge our underground supply, because our supply there, without any substantial exception, is from ground water.

The attorneys on the committee will be familiar with the rule of law which requires that a litigant before he may proceed to an upper court must have exhausted his remedies. We feel we are in a position of having exhausted our remedies and we are properly before this body asking for relief.

The shortage, no matter what we have done for ourselves, is present and growing. In other words, we see no alternative to the introduction of an outside supply to our area. The Trinity diversion will add to the supply of surplus waters in the Central Valley project. And, that being so, our interest, as I said before, is direct and legitimate, and we are urging this committee to receive favorably or to act favorably upon H. R. 4663.

As I have said, I will ask Mr. Binkley to carry on with as much detail as time will permit.

Senator ANDERSON. State your name in full, Mr. Binkley.

Mr. BINKLEY. I am Thad C. Binkley, a resident of Saratoga, Calif. I am the engineer for the Alameda County Water District, which is a public agency that has for its function the conservation of water and distribution of water for municipal purposes in southern Alameda County in the area immediately east of the southern arm of the bay.

I am appearing, as Mr. Henley has mentioned, on behalf of the citizens' committee for importation of water, and, also as he has mentioned, the committee represents an area although located in three separate counties where the water problem of the entire area is common.

We have banded together under this committee with the idea that jointly we can expedite the importation of water to relieve our present serious water shortages.

The committee, of course, favors and urges the early completion of the Trinity project to bring additional water into the Sacramento Valley, some of which will be surplus and will enter the delta. From the southwest side of the delta some of this should be available for transmission into our area, which is just on the other side of the hill, as we call it. There is a range about 750 feet in height separating us from the delta. A project for transmission of delta water into our area is not at all infeasible as our demand grows.

The San Francisco Bay area, of course, as a whole, is experiencing enormous growth.

Senator ANDERSON. Do I understand that this water would normally not touch you at all but would flow into the delta area, and you propose to lift it 750 feet over a mountain range and bring it into the San Jose area?

Mr. BINKLEY. That is correct. The Central Valley water will not reach our area by gravity. It has to be lifted. The exact lift and other features of the project are not yet determined. It has been under study by State agencies and by various other groups.

At this moment, there is no agreed project for bringing it in to us. Nonetheless, it appears entirely feasible as soon as our requirements reach the proportions that would justify the capital investment required.

One project would anticipate diversion very close to the Central Valley pumping plant near Tracy, lifting the water to a tunnel at or near elevation 600, and thence by gravity into southern Alameda County, Santa Clara County, and on down into San Benito County.

Senator ANDERSON. A 600-foot lift is not trivial.

Mr. BINKLEY. That is quite true. Of course, an important point in this whole water problem in our area is the necessity of delivering water at low cost. So one of the purposes of this group of agencies joining together was that the combined need would be great enough that the project will become feasible and the pumping lift and capital investment and other features would be economically justified.

The areas that we are discussing have been in the past largely agricultural, and agriculture still is the mainstay of the area.

However, in southern Alameda County and in the Santa Clara Valley, the trend toward industrialization and urbanization is very evident and going on at an accelerated rate.

Senator ANDERSON. Let me ask the Bureau of Reclamation a question.

Is this part of the project? I cannot follow it. It seems to me this is a wholly different subject. Am I wrong in that? Is this part of the project?

Mr. MURRAY. It has not been so proposed; no, sir.

Senator ANDERSON. How do you people come into this hearing, if I may ask it that way?

Mr. HENLEY. Because we are looking ahead to the necessity which we see of importing water, and any project, and this is one of those, which adds to the supply of Central Valley is of interest to us, and of vital interest to us.

That is why we are here, and why we have made this 3,000-mile trip.

Senator ANDERSON. But if we consider the project, we will not be considering a 600-foot lift up to drop it over from the delta into the Santa Clara Valley.

Mr. HENLEY. No, Mr. Chairman.

Senator ANDERSON. You may go on, but I fail to see this.

Senator KUCHEL. I think this, Mr. Chairman: I think, as one of the gentlemen indicated earlier, we have had an astounding increase in population.

Senator ANDERSON. As modestly as you can, you still have to admit there has been increased population in California. I will agree to that.

Senator KUCHEL. It is roughly 400,000 people a year. These people here come from an area which now boasts one of the largest cities in the State, San Jose. Of course, the chairman is acquainted with the growth in Alameda County. I take it that their understand-

able apprehension prompts them to urge the committee to consider bringing the waters down into the San Joaquin with the hopes that ultimately the Bureau of Reclamation and the State government might be able to recommend to the Congress that waters were there which might, in some subsequent piece of legislation, be made available to that area.

Senator ANDERSON. I do not want to rule anybody out, but I do think we ought to have testimony, Senator Kuchel, which relates to this project. As I said a moment ago, we are off the Senate floor primarily to hear about this project, and if this is a future hope, there are probably a dozen of these in California.

I do not want to be discourteous about it, but I do not follow the connection or see the connection.

You may proceed.

Mr. BINKLEY. Mr. Chairman, the feeling of our committee was this, that our hope is to import water from the San Joaquin Valley to our area. In order to do so, naturally, water must get there.

Out of the proposed Trinity project, there will be a certain amount of surplus water that will enter the delta. Our district, the Alameda County Water District, has made application to the division of water resources of the State for the appropriation and diversion of 40,000 acre-feet of that water per year. Another agency of Alameda County has made application for 360,000 acre-feet of those waters.

Senator ANDERSON. Does not the constitution of the State of California give to the State of California the right to divide up its own waters? Can we decide whether this water goes to Alameda County or some other part of the State?

Mr. BINKLEY. I do not believe so.

Senator ANDERSON. I think if we pass on a project that lifts it over the mountain and drops it into the river, we are through.

Mr. BINKLEY. That is undoubtedly true, but, nonetheless our hope is to get more water into the delta that will be available to us in our area, and to be able then to go to the State of California to allot us a portion of it. That is why we are here.

Senator MILLIKIN. Mr. Chairman, I would like to ask if this project which has just been described, not the one in the bill, is essential to the well-being of the project that we are considering.

Senator ANDERSON. Can we have an answer to that from the Bureau of Reclamation?

Do you regard this project that is now being described, the three-county project, as essential to the welfare of the Trinity River project?

Mr. MURRAY. We have not studied it in that light at all, sir.

Senator ANDERSON. Is it tied into your calculations?

Mr. MURRAY. No, sir.

Senator ANDERSON. I am not trying to stop you, but I still say that your forum is the State of California, where you will try to get some of this water once it gets over the mountain, if it gets over the mountain.

But go ahead.

Mr. BINKLEY. I probably can sum up my comments. I was going to go into more detail. If you tell me they are not relevant, however, they can be waived. I was going to go into some detail on the steps that the various agencies have taken in developing their own resources, and try to show how urgent our need is, also how the Trinity project can benefit us.

Mr. BINKLEY. That is correct. The Central Valley water will not reach our area by gravity. It has to be lifted. The exact lift and other features of the project are not yet determined. It has been under study by State agencies and by various other groups.

At this moment, there is no agreed project for bringing it in to us. Nonetheless, it appears entirely feasible as soon as our requirements reach the proportions that would justify the capital investment required.

One project would anticipate diversion very close to the Central Valley pumping plant near Tracy, lifting the water to a tunnel at or near elevation 600, and thence by gravity into southern Alameda County, Santa Clara County, and on down into San Benito County.

Senator ANDERSON. A 600-foot lift is not trivial.

Mr. BINKLEY. That is quite true. Of course, an important point in this whole water problem in our area is the necessity of delivering water at low cost. So one of the purposes of this group of agencies joining together was that the combined need would be great enough that the project will become feasible and the pumping lift and capital investment and other features would be economically justified.

The areas that we are discussing have been in the past largely agricultural, and agriculture still is the mainstay of the area.

However, in southern Alameda County and in the Santa Clara Valley, the trend toward industrialization and urbanization is very evident and going on at an accelerated rate.

Senator ANDERSON. Let me ask the Bureau of Reclamation a question.

Is this part of the project? I cannot follow it. It seems to me this is a wholly different subject. Am I wrong in that? Is this part of the project?

Mr. MURRAY. It has not been so proposed; no, sir.

Senator ANDERSON. How do you people come into this hearing, if I may ask it that way?

Mr. HENLEY. Because we are looking ahead to the necessity which we see of importing water, and any project, and this is one of those, which adds to the supply of Central Valley is of interest to us, and of vital interest to us.

That is why we are here, and why we have made this 3,000-mile trip.

Senator ANDERSON. But if we consider the project, we will not be considering a 600-foot lift up to drop it over from the delta into the Santa Clara Valley.

Mr. HENLEY. No, Mr. Chairman.

Senator ANDERSON. You may go on, but I fail to see this.

Senator KUCHEL. I think this, Mr. Chairman: I think, as one of the gentlemen indicated earlier, we have had an astounding increase in population.

Senator ANDERSON. As modestly as you can, you still have to admit there has been increased population in California. I will agree to that.

Senator KUCHEL. It is roughly 400,000 people a year. These people here come from an area which now boasts one of the largest cities in the State, San Jose. Of course, the chairman is acquainted with the growth in Alameda County. I take it that their understand-

able apprehension prompts them to urge the committee to consider bringing the waters down into the San Joaquin with the hopes that ultimately the Bureau of Reclamation and the State government might be able to recommend to the Congress that waters were there which might, in some subsequent piece of legislation, be made available to that area.

Senator ANDERSON. I do not want to rule anybody out, but I do think we ought to have testimony, Senator Kuchel, which relates to this project. As I said a moment ago, we are off the Senate floor primarily to hear about this project, and if this is a future hope, there are probably a dozen of these in California.

I do not want to be discourteous about it, but I do not follow the connection or see the connection.

You may proceed.

Mr. BINKLEY. Mr. Chairman, the feeling of our committee was this, that our hope is to import water from the San Joaquin Valley to our area. In order to do so, naturally, water must get there.

Out of the proposed Trinity project, there will be a certain amount of surplus water that will enter the delta. Our district, the Alameda County Water District, has made application to the division of water resources of the State for the appropriation and diversion of 40,000 acre-feet of that water per year. Another agency of Alameda County has made application for 360,000 acre-feet of those waters.

Senator ANDERSON. Does not the constitution of the State of California give to the State of California the right to divide up its own waters? Can we decide whether this water goes to Alameda County or some other part of the State?

Mr. BINKLEY. I do not believe so.

Senator ANDERSON. I think if we pass on a project that lifts it over the mountain and drops it into the river, we are through.

Mr. BINKLEY. That is undoubtedly true, but, nonetheless our hope is to get more water into the delta that will be available to us in our area, and to be able then to go to the State of California to allot us a portion of it. That is why we are here.

Senator MILLIKIN. Mr. Chairman, I would like to ask if this project which has just been described, not the one in the bill, is essential to the well-being of the project that we are considering.

Senator ANDERSON. Can we have an answer to that from the Bureau of Reclamation?

Do you regard this project that is now being described, the three-county project, as essential to the welfare of the Trinity River project?

Mr. MURRAY. We have not studied it in that light at all, sir.

Senator ANDERSON. Is it tied into your calculations?

Mr. MURRAY. No, sir.

Senator ANDERSON. I am not trying to stop you, but I still say that your forum is the State of California, where you will try to get some of this water once it gets over the mountain, if it gets over the mountain.

But go ahead.

Mr. BINKLEY. I probably can sum up my comments. I was going to go into more detail. If you tell me they are not relevant, however, they can be waived. I was going to go into some detail on the steps that the various agencies have taken in developing their own resources, and try to show how urgent our need is, also how the Trinity project can benefit us.

Senator KUCHEL. Let me say this to you, in all courtesy. I think for the purposes of that area of our State your comments are very important. They are not, very frankly, in my judgment, completely relevant to the question of the Trinity.

I see the connection. I want to help. But I think it is a problem that you should take up with your representatives in Congress and with the State government rather than here.

Senator ANDERSON. We are here under very strange circumstances today. Would you mind filing a statement for the record with us that covers the entire matter? I say to you I am glad to have your statement.

There will be other markets for this water besides those which the Bureau of Reclamation has considered. I think it is extremely pertinent to say that there will be other sections of California that will be wanting water steadily as population increases, and that that adds generally to the desirability of the Trinity River project. But when you get to particularizing, that is not a matter with which we should concern ourselves.

I have tried to be courteous to the witnesses today, and I am not trying to chop you off. We are here with the permission of the Senate to sit only because it is an emergency. We are supposed to be on the Senate floor. We have obtained permission to sit, but we would like to be back on the floor taking part in the debate pertaining to the Reserve policy.

I would suggest, if you do not mind, Mr. Binkley, that you summarize your remarks and file your statement, and also any further statement which Mr. Henley may wish to file.

Mr. HENLEY. I think we can sum it up by saying that we have an interest which is vital to act, and we are here to urge the passage of this act simply because it will benefit us not tomorrow but in the future. Thank you very much.

#### STATEMENT OF T. C. BINKLEY RE HEARING ON TRINITY DIVISION OF THE CENTRAL VALLEY PROJECT

Pursuant to permission granted by the chairman of this committee, this statement is filed to round out my testimony given this date.

The Citizens Committee for Importation of Water represents an area of nearly 250,000 acres, lying adjacent to and south of the southern arm of San Francisco Bay, Calif. 50,000 acres is located in southern Alameda County, east of the bay, the balance being in the rich agricultural areas of the Santa Clara Valley and San Benito County.

In this area lies some of the most valuable agricultural land in the State. The population of the area is now around 400,000, however, the rapid trend toward urbanization and industrialization is evidenced by studies of growth in southern Alameda County. Here the population now is estimated at 30,000; nearly double what it was 5 years ago. By 1960 this population is expected to reach 60,000 and, dependent upon economic conditions, may total 500,000 by the end of the century. These figures apply to southern Alameda County alone, they are an example of the rate of growth that may be experienced in much of the area.

At the present time the tricity area is basically agricultural and wholly dependent on ground water for irrigation, which is the lifeblood of the area. Ground water also provides most of the municipal needs.

With the rapid transition from agricultural to other uses requiring greater quantities of water, the ground water supply is being depleted at an alarming rate. In southern Alameda County alone the overdraft of the ground water is estimated at 12,000 to 15,000 acre-feet per year. In the Santa Clara Valley this figure is around 50,000 acre-feet for the current year. In the southern

Alameda County area, water levels have been drawn down to the point where salt water is encroaching into the excellent ground-water basin. This may render it useless for all time and is a serious loss. In the Santa Clara Valley area water levels are at an alltime low and are still falling. In San Benito County, ground water is exhausted in some areas.

Hence it is apparent that local water supplies in the three-county area are grossly deficient. It is estimated that Santa Clara Valley alone will ultimately require importation of 234,000 acre-feet per year from a supplemental source. For southern Alameda County this figure is estimated at 88,000 acre-feet and adding the needs of San Benito County, the ultimate supplemental supply required will exceed 360,000 acre-feet per year.

To meet this need we are looking to all sources of outside water and the most likely appears to be surplus secondary water available in the delta region. Studies made by the State division of water resources indicate that diversion of water from this source to the three-county area is feasible.

We are, therefore, greatly interested in any project that augments the supply of water in the delta area in order that there will be ample to take care of our ultimate requirements. The Trinity division of the Central Valley project will be a big help in this direction. Water routing studies indicate an average of over 340,000 acre-feet per year of surplus water to be released to the delta region by the Central Valley project after completion of the Trinity project.

It is our firm conviction that the Trinity project is a good project and serves vital purposes. We feel that it can definitely assist us in solving our future water problems and we heartily endorse it for the following reasons:

It is the first step in developing a vast reservoir of water now existing and wasting into the Pacific Ocean from the north coastal area of California.

It provides new supplies of irrigation for use in the Sacramento Valley, thereby relieving tension between the northern areas of origin and the southern areas of need.

It provides very substantial supply of secondary water that will be available to us in our areas of need.

The water from the Trinity will be new water to the thirsty Central Valley and its advent will be like a blood transfusion to the whole State of California.

I also request permission of the chairman to file at this time a statement of E. R. Hanna, chairman of the board of directors of the San Benito County Water Conservation and Flood Control District, dealing with this matter.

I want to express my appreciation to the committee for the opportunity of appearing and testifying in this vital matter.

Senator ANDERSON. Thank you, gentlemen.

(The following statement was submitted for the record on behalf of the San Benito County Water Conservation and Flood Control District:)

**STATEMENT FROM THE SAN BENITO COUNTY WATER CONSERVATION AND FLOOD CONTROL DISTRICT URGING COMPLETION OF THE TRINITY RIVER DIVERSION PROJECT**

Water is vital to the economy of San Benito County. All of our valley area is irrigated from wells. Land values are quite high, with bare land selling for around \$2,000 per acre. This same land, with full bearing orchard, is selling for around \$3,500 per acre. These values are predicated on good wells. Without good wells, the land value drops to less than \$200 per acre.

The entire economy of this area is fixed on the value of the farmland. Local government and schools are geared to the assessed valuation of this land, which produces from \$15 to \$25 per acre in taxes from bare land.

Wells in this area are failing daily. Some areas have gone deeper and pumped chemically contaminated water that has killed all vegetation. The situation is very serious and cannot be solved by bigger and deeper wells. We must have a supplemental supply of water, and we must have it soon to prevent the entire local economy from degenerating into chaos.

Local rainfall is neither sufficient nor reliable for full replenishment of our underground supply. Much of the area is so contaminated with underground boron water that surface irrigation is the only solution. The needs of this area can only be met by water imported from other watersheds.

Ours is not a case of reclamation of wasteland, but the necessity of preventing the economic collapse of one of the richest farmland areas in the country.

The need is present and growing daily. Some of the valley area has already commenced a rapid decline in assessed valuation, as land is steadily being diverted from truck farming to dry farming. Dry farming cannot sustain either our population or the economy we have created over the past 100 years.

Trinity River diversion represents a supplemental source of water for all of the water-deficient lands of California, plus the power necessary to transport the water to the areas of need. As an area of need, we have a vital interest in the full and rapid development of the Trinity project.

Delay in securing our water supply can be disastrous to us. We need the water now, not in the future. We respectfully urge that the Trinity diversion be fully completed as rapidly as possible.

E. R. HANNA,  
*Chairman, Board of Directors.*

Senator ANDERSON. The next witness will be Mr. Gerdes.

**STATEMENT OF ROBERT H. GERDES, EXECUTIVE VICE PRESIDENT  
AND GENERAL COUNSEL, PACIFIC GAS & ELECTRIC CO.**

Mr. GERDES. Mr. Chairman, my name is Robert H. Gerdes. I am executive vice president and general counsel of the Pacific Gas & Electric Co. I have with me Mr. Walter Dreyer, the company's vice president and chief engineer; Mr. John Bonner, civil engineer; and Mr. William Kuder, attorney.

We want to thank the committee for this opportunity to appear before it. We have a prepared statement which, I understand, has been passed to the members of the committee. I would like to have that prepared statement made a part of the record.

Senator ANDERSON. Without objection that will be done at this point. (Statement referred to follows:)

**STATEMENT ON TRINITY RIVER PROJECT IN CALIFORNIA BY ROBERT H. GERDES,  
EXECUTIVE VICE PRESIDENT AND GENERAL COUNSEL, PACIFIC GAS & ELECTRIC CO.**

There is now before this committee H. R. 4663, a bill to authorize the Secretary of the Interior to spend \$225 million on construction of 2 reservoirs on the Trinity River, tunnels from the Trinity to the Sacramento River and 4 powerplants and related electric facilities as part of the Central Valley project in California.

Last April, we appeared before the House Committee on Interior and Insular Affairs at the hearing on this bill. We described the Pacific Gas & Electric Co.'s offer to build and pay for the power features of the Trinity River project and also to pay the Federal Government \$3,500,000 a year for falling water under a partnership arrangement with the United States Bureau of Reclamation. We pointed out that this partnership would save the Government \$50 million in capital outlay and over the project repayment period would provide \$171 million more net revenue to Federal, State, and local governments than if the project were constructed by the Bureau alone.

H. R. 4663 directs the Secretary of the Interior to continue to a conclusion engineering studies and negotiations for the purchase of falling water by a non-Federal agency. Within 18 months from the date of the act, the Secretary must submit to Congress any agreement that may be reached, together with his recommendations thereon. Such agreement shall not become effective until it is approved by Congress.

Before the House Committee we urged that the bill should permit partnership construction of the Trinity power facilities by a non-Federal agency under the safeguards established by Congress in the Federal Power Act. It is still our belief that this offers the most practical method of providing for partnership construction of the Trinity project.

## TRINITY PARTNERSHIP FIRST PROPOSED IN 1954

Our partnership proposal was first advanced at a hearing before a House subcommittee at Redding, Calif., in April 1954. We subsequently made further studies of the Trinity project, based upon operation studies completed in late 1954 by region 2 of the Bureau. These studies enabled us to make the formal offer which we submitted to the Bureau last January.

Conservation and use of the Trinity water resources are of vital concern to the State of California. They concern us, too, as a California enterprise which provides essential services to most of the homes, communities, farms, and industries in 48 of the State's 58 counties. Our power, payrolls, and taxes make a basic contribution to the prosperity of the State.

Our company owns and operates 57 hydroelectric plants interconnected with 13 steam-electric plants and the plants of several other agencies; 22 of our hydroelectric plants are located within an 85-mile radius of the proposed Trinity project. Within this area we have installed nearly three-quarters of a million kilowatts. In addition, in the same area we are building or have under application to the Federal Power Commission 9 more plants with a total capacity of 840,000 kilowatts.

Since 1946, the company has constructed power facilities aggregating 2,700,000 kilowatts, more than 4 times the combined capacities of the Shasta, Keswick, Folsom, and Nimbus plants of the Central Valley project. By 1956, postwar additions in new hydro- and steam-power capacity will amount to 3 million kilowatts, increasing the system total to 4,400,000. The 11-year postwar construction program will represent an investment of \$1,600 million, of which \$1,200 million is for electric facilities.

This program is meeting the power needs of the area with ample reserves. We are continuing to expand, ahead of growing power demands.

Water, not power, is the problem in California.

## COMPANY'S OFFER TO BUILD TRINITY POWER FACILITIES

Our studies show that the most advantageous use of the water power resources of the Trinity project would be obtained by integrating its operation with the company's regional power system. To obtain the maximum benefit of such integrated operation, the installed capacities of the Trinity powerplants should be 362,000 kilowatts. Of this, 321,000 kilowatts would be dependable under a suitable water release schedule.

The company has offered to construct these powerplants and related transmission facilities at its own expense.

The figures on the map and profile before you show the installed power capacities proposed by the company and the Bureau. You can see that our plants would be at the same locations. At Trinity Dam, the company would install the same power capacity as the Bureau—90,000 kilowatts; at Lewiston, we would produce 2,300 kilowatts; at Tower House, 126,000; and at Matheson, 144,000. The combined installed capacities of the company plants would be 362,300 kilowatts, or 129,300 more than the Bureau would build.

The company could develop more than half again as much power capacity from the Trinity project as the Bureau proposes because the company's powerplants would be integrated with its widespread regional power system. On the other hand, the plant capacities proposed by the Bureau were designed for a smaller independent system.

I want to emphasize that although we propose larger plant capacities, this is no reflection on the planning of the Bureau of Reclamation. The simple fact is, that if the plants are integrated with our widespread regional system, it is more economical to install the larger capacities.

The larger power capacity of our plants would require tunnels 20 percent larger in diameter. This would increase the tunnel peak flow capacity, and thus the peaking capacity of the plants, by more than 80 percent. Under our plan, the peak flow through Tower House and Matheson tunnels would be increased from 1,700 cubic feet per second to 3,130. The added cost to the Government of constructing larger tunnels and penstocks was taken into account in arriving at the net savings our plan would make possible.

The coordination proposed by the company would enable the best use of project water for power purposes and would give the power its greatest value.

For the use of falling water through these plants, the company would pay the Government \$3½ million a year. We calculate this to be its full value based

on the present cost of alternative steam power. This payment is equivalent to more than \$4.50 for each acre-foot of water diverted through the plants. Farmers pay \$3.50 an acre-foot for firm irrigation water from the Central Valley project. As you know, none of the Trinity falling water would be consumed in the power operation.

Clyde H. Spencer, director of region 2 of the Bureau, stated at the House committee hearing that he thought the amount of the payment for falling water could be determined by negotiation. If by any chance we should not reach agreement, the company is willing to have the falling water payment fixed by the Federal Power Commission. We would agree that the Commission's determination would be final and conclusive.

#### ADVANTAGES OF COMPANY PARTNERSHIP

Construction and operation of the Trinity power facilities by the company, rather than by the Federal Government, would provide the following advantages:

(1) A net saving to the Federal Treasury of nearly \$50 million in capital outlay for power facilities.

(2) An estimated \$36 million more net revenue over the project repayment period. This would result from the assured annual payment of \$3,500,000 together with the net savings in annual costs to the Government made possible under the company's proposal.

(3) The company would pay \$2,700,000 a year in taxes on the Trinity power facilities.<sup>1</sup> This would increase annual revenues of the Federal Treasury by \$1,400,000 and would provide an additional \$1,300,000 a year for State and local governments. Over the repayment period these tax revenues would aggregate \$70 million to the Federal Government and \$65 million to State and local governments.

In Trinity County our taxpayments would be nearly tripled. Our total payment would rise to about \$325,000 a year. This would represent 44 percent of the total taxes levied by the county. Our annual payments in Shasta County would increase to nearly \$2,900,000, or more than one-half of the total taxes levied in the county.

H. R. 4663 and S. 178 would require the Federal project to make in-lieu payments to Trinity County for loss of taxes only on "the value of the real property and improvements taken" for project purposes. Under the partnership plan, the Government could make such payments on property taken for Federal construction of the dams, reservoirs, and tunnels. In addition, the company would pay taxes in both Trinity and Shasta Counties on the powerplants and related facilities.

(4) The company Trinity plants would provide 125,000 kilowatts more dependable capacity at load center than would be made available by the Bureau's Trinity plants. However, after giving credit for additional capacity estimated to be made dependable in existing plants under the Bureau's Trinity plan, the net gain under our plan would be 65,000 kilowatts.

The Bureau's ability to meet its present commercial power commitments from existing plants would not be impaired.

(5) Under the company proposal, 5 percent more Trinity water would be available to users in the Central Valley.

#### LOWEST COST WATER AND POWER FOR SAN LUIS

Several bills now before Congress and several proposals under study by the State of California provide for the construction of the San Luis reservoir and related facilities to furnish water to the west side of the San Joaquin Valley.

Whether San Luis should become a part of the Central Valley project or of the State's Feather River project, or of both, the company's cooperation would result in benefits to water users and taxpayers.

The additional net revenue to the Government under the company's proposal for Trinity could be used to reduce the cost of project water or to assist the financing of the San Luis unit or other needed water projects in California.

<sup>1</sup> Total taxes accrued for 1954 amounted to \$104 million of which \$54 million was for the Federal Government and \$50 million for State and local governments. Taxes charged to operation represented 25.3 percent of the company's gross operating revenue. They exceeded wages and salaries paid to all operating employees by \$47 million and exceeded by \$16 million the dividends paid for the year 1954 to the 217,000 stockholders who own the business.

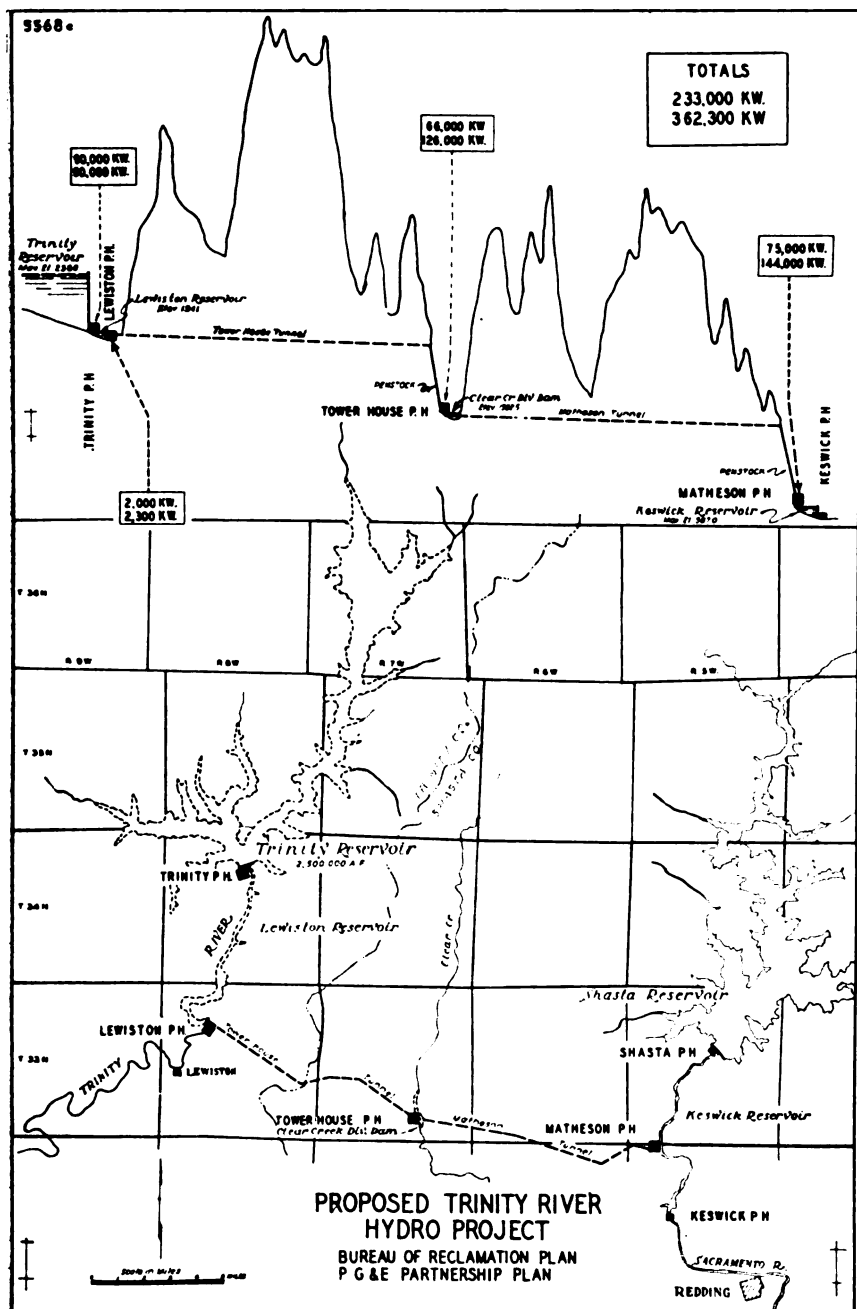

5560

on the present cost of alternative steam power. This payment is equivalent to

As a part of its partnership proposal, the company is willing to supply power from its system for San Luis pumping on an exchange basis. Any deficiencies in available project power could be supplied by delivery of off-peak energy generated by company plants. Such an exchange contemplates the construction of off-canal water storage to permit the maximum use of this low-cost energy whenever practicable.

This exchange would be made at Tracy. The only charge to the Bureau for exchange power would be for transmitting it from Tracy to the San Luis pumps. We guarantee that such charge would be less than the cost to the Government if the Bureau undertook to build transmission lines to the pumps.

#### COMPANY AIDS WATER CONSERVATION IN CALIFORNIA

The company long has recognized the desirability and necessity of conserving and putting to maximum beneficial use the waters of California. For more than 30 years we have contributed to the development of water for irrigation and we fully support the policy of constructing sound reclamation and flood-control projects.

Nearly a million and a half acre-feet of storage capacity in 57 reservoirs owned by the company supplies water not only for power generation but also for irrigation and other beneficial uses in the Central Valley.

The company has followed a policy of cooperation with the Federal Government, local irrigation districts, cities and other Government agencies in the development and storage of water. In many cases the company, by contracting to purchase the power output, has provided an assured market for electric power generated by public irrigation and water-supply projects and thereby has aided in financing their construction.

The company also has constructed powerplants in connection with the Narrows Dam built by the United States Army engineers on the Yuba River, the Melones Dam of the Oakdale and South San Joaquin Irrigation Districts on the Stanislaus River, and dams of the Nevada Irrigation District on the Yuba and Bear Rivers. Under partnership arrangements with these agencies, our payments for the use of falling water released from these dams through our powerplants have made a substantial contribution toward repayment of the cost of the water-conservation works.

We have demonstrated that cooperation between public and private agencies best serves the public interest. We offer our cooperation in connection with the Trinity and San Luis projects, and any other water-conservation projects which the State or Federal Government may authorize.

#### CALIFORNIA REGULATES COMPANY POWER RATES

The company would distribute Trinity power to its 1,600,000 electric customers throughout northern and central California without discrimination. The power would be sold at rates established by the California Public Utilities Commission. The commission has continuously and effectively regulated the electric rates, financing, and operation of public utilities since 1914. Under such regulation, payments made by the company for the use of Trinity falling water would be entered as an operating expense on our books. The company can make no profit on the falling water it purchases. All that it is allowed is a fair return on its own investment in facilities used and useful in service to the public. Any benefits from purchase of water power must be passed on to consumers in the form of lower electric rates.

Today our customers pay 15 percent less for each kilowatt-hour of electricity used in their homes than they did in 1939, although the prices of most other goods and services they buy have at least doubled since that time. Despite the fact that more than 25 cents of every dollar collected by us is paid out in taxes, we have preserved this low-rate level by advanced engineering and efficient management.

Trinity power would be sold by the company at the lowest possible rates consistent with sound business principles.

#### PARTNERSHIP INVOLVES NO TRINITY DELAY

No delay in construction of the Trinity project would result from our partnership proposal. At the House committee hearing, Commissioner of Reclamation Wilbur A. Drexelheimer stated that up to 18 months is available for partnership negotiations after construction of the Trinity Dam is started. Clyde H. Spencer,

director of region 2 of the Bureau of Reclamation, testified that in his opinion negotiations could be completed within a year. We share this opinion. There is no reason why Trinity construction cannot be started immediately after Congress authorizes it.

#### POWER PARTNERSHIPS AUTHORIZED BY CONGRESS

The legislative pattern for partnership development may be found in three acts passed by Congress in 1954. These are: (1) Public Law 544, authorizing the Priest Rapids project on the Columbia River where a local public-utility district proposes to build a power facility at a dam to be constructed by the Federal Government; (2) Public Law 436, deauthorizing a Federal project on the Coosa River in Alabama, to allow the Alabama Power Co. to construct 5 dams on the river at a cost of \$100 million; and (3) Public Law 476, authorizing partnership between the State of Oklahoma and the Federal Government to build the Markham Ferry Dam.

These acts provide for construction of power facilities at Government water projects by local agencies under Federal Power Commission license.

Licenses are limited to a maximum term of 50 years. The Government has the right to recapture the power facilities at their depreciated cost upon the termination of the license. The power operation must be approved by the Commission as the one best adapted to a comprehensive development of the water resources for all beneficial public purposes, including recreation. Licensees must pay for benefits provided by Federal dams. Operation of plants constructed under license is subject to the continuous supervision of the Commission.

#### BENEFITS TO GOVERNMENT FROM PARTNERSHIP PLAN

Our formal offer on Trinity was first published in the press on February 21 of this year. The favorable public response to our plan has been impressive. To date, more than 200 organizations throughout northern and central California have adopted resolutions endorsing construction of Trinity power facilities by local enterprise. A partial list of these organizations is attached to this statement.

H. R. 4663 would authorize appropriation of \$225 million for construction of the Trinity River division of the Central Valley project.

The Bureau estimates that Federal operation of power facilities proposed in the bill would return \$237 million in revenues over the project repayment period.

If Trinity power facilities are built and operated by the company under its partnership proposal, payments for falling water, taxes, and savings to the Federal Government over the same period would amount to \$343 million, or \$106 million more to water users and Federal taxpayers. In addition, the company would pay \$65 million in taxes on these power facilities to State and county governments. This amounts to a net gain to the public of \$171 million from the partnership development.

The Federal Government already has spent approximately \$800 million on water resources development in California. Another \$800 million will be required to complete presently authorized Federal water projects. The most comprehensive Federal development of water in California can be achieved if our public and private agencies willing and able to share this financial burden become working partners in the Federal reclamation program.

The company's cooperation in the Trinity River power development will make possible the earliest construction by the Federal Government of needed water conservation works in California with the least cost to taxpayers and with maximum benefits to water users in the Central Valley.

The following California organizations have formally endorsed construction of Trinity power facilities by local enterprise in partnership with the Federal Government. This list includes statewide farm and business organizations, farm organizations, labor unions, taxpayers associations, boards of supervisors, city councils, local civic organizations, business groups, and others:

California Farm Bureau Federation  
California State Chamber of Commerce

**Mr. GERDES.** In the interest of time, Mr. Chairman, I will endeavor to condense the statement as best I can.

Last April, we appeared before the House Committee on Interior and Insular Affairs at the hearing on H. R. 4663, and described the Pacific Gas & Electric Co.'s offer to build and pay for the power features of the Trinity River project and also to pay the Federal Government \$3½ million a year for falling water under a partnership arrangement with the United States Bureau of Reclamation.

We pointed out that this partnership would save the Government \$50 million in capital outlay, and over the project repayment period would provide \$171 million more net revenue to Federal, State, and local governments than if the project were constructed by the Bureau alone.

Before the House committee, we urged that the bill should permit partnership construction of the Trinity power facilities by a non-Federal agency under the safeguards established by Congress in the Federal Power Act.

It is still our belief that this offers the most practical method of providing for partnership construction of the Trinity project.

I wish to emphasize, however, Mr. Chairman, that we do not suggest any change in the bill as it has passed the House.

#### P. G. & E. REGIONAL POWER SYSTEM; POSTWAR CONSTRUCTION

The company distributes gas and electricity through a very large area of California. We serve 48 of the State's 58 counties. The company owns and operates 57 hydroelectric plants which are interconnected with 13 steam-electric plants and the plants of several other agencies.

Since 1946, the company has constructed power facilities aggregating 2,700,000 kilowatts, more than 4 times the combined capacities of the Shasta, Keswick, Folsom, and Nimbus plants of the Central Valley project.

By 1956, postwar additions in new hydro and steam power capacity will amount to 3 million kilowatts, increasing the system total to 4,400,000 kilowatts.

The 11-year-postwar-construction program will represent an investment of \$1,600 million of which \$1,200 million is for electric facilities.

This program is meeting the power needs of the area with ample reserves. We are continuing to expand ahead of growing power demands.

Water, not power, is the problem in California.

## COMPANY'S OFFER TO BUILD TRINITY POWER FACILITIES

Our studies show that the most advantageous use of the waterpower resources of the Trinity project would be obtained by integrating its operation with the company's regional power system. To obtain the maximum benefit of such integrated operation, the installed capacities of the Trinity powerplants should be 362,000 kilowatts. Of this, 321,000 kilowatts would be dependable under a suitable water-release schedule. The company has offered to construct these powerplants and related transmission facilities at its own expense.

Senator ANDERSON. Would the 362,000 kilowatt capacity represent a larger transmountain diversion?

Mr. GERDES. Under the proposal that we have made, there would be about 5 percent more water that could be diverted from the Trinity watershed into the Central Valley watershed. I will go into that a little more later, Mr. Chairman.

Mr. Chairman, we have on the board a map and profile which shows the installed power capacities proposed by the company and the Bureau. You can see that our plants would be at the same locations as those proposed by the Bureau. At Trinity Dam, the company would install the same power capacity as the Bureau, 90,000 kilowatts; at Lewiston, we would produce 2,300 kilowatts; at Tower House, 126,000; and at Matheson, 144,000.

The combined installed capacities of the company plants would be 362,300 kilowatts, or 129,300 more than the Bureau would build.

The company could develop more than half again as much power capacity from the Trinity project as the Bureau proposes because the company's powerplants would be integrated with its widespread regional power system. On the other hand, the plant capacities proposed by the Bureau were designed for a smaller independent system.

I want to emphasize that although we propose larger plant capacities, this is no reflection on the planning of the Bureau of Reclamation. The simple fact is, that if the plants are integrated with our widespread regional system, it is more economical to install the larger capacities.

Senator ANDERSON. Do they not integrate with some other projects of theirs?

Does not the Bureau of Reclamation integrate into the power developed at Shasta, Folsom, and various other places?

Mr. MURRAY. Yes, sir, Mr. Chairman.

Mr. SPENCER. That is correct, Mr. Chairman.

Senator ANDERSON. How do you explain the difference at Matheson between their 145,000 kilowatts and your 75,000 kilowatts?

Mr. MURRAY. The power installations which are presented in our reports were worked up several years ago and were designed to fit in with an independent system to the maximum that that could be justified.

Senator ANDERSON. You do not plan to tie it into Shasta or other areas?

Mr. MURRAY. They were tied to Shasta, but tied to much smaller total power system than is proposed here by the company.

Senator ANDERSON. But if the population growth that we have been hearing about takes place, someone will need that power; will they not?

Mr. MURRAY. That is true. If we were reviewing it on the basis of the present time, and on the basis of integration with the company plants in their entire system, we would be proposing plants of probably the same size.

Mr. GERDES. The reason that we can install these larger plants and utilize the power is that we can use these plants for what is commonly called peaking purposes and fit that power into our system.

Senator ANDERSON. Do you not buy power now from Shasta?

Mr. GERDES. We do.

Senator ANDERSON. Why could you not buy your peaking power from this outfit just as well as generate yourself? They can build one 144,000 kilowatts just as well as you can; can they not?

Mr. GERDES. Physically it could be built, but in order to utilize a plant of that size it would have to be fitted into a large regional system, such as ours.

Senator ANDERSON. Where does the power from Friant go?

Mr. GERDES. No power is produced at Friant Dam, Mr. Chairman. Power is generated not only at Shasta and Keswick Dams, but also at the Folsom and Nimbus Dams. Folsom and Nimbus are located on the American River. All of those plants are a part of the Central Valley project.

Senator ANDERSON. Do they sell their power only to small, independent companies?

Mr. GERDES. They have an agreement with the Pacific Gas & Electric Co. which you might characterize as a power exchange and wheeling contract. It has been frequently so designated.

In substance, the Bureau delivers substantially of its power into the company's system, and now most of that power is transmitted by the company to other customers.

Senator ANDERSON. All right.

Mr. GERDES. The larger power capacity of our plants would require tunnels 20 percent larger in diameter. This would increase the tunnel peak-flow capacity, and thus the peaking capacity of the plants, by more than 80 percent. Under our plan, the peak flow through Tower House and Matheson tunnels would be increased from 1,700 cubic feet per second to 3,130. The added cost to the Government of constructing larger tunnels and penstocks was taken into account in arriving at the net savings our plan would make possible.

The coordination proposed by the company would enable the best use of project water for power purposes and would give the power its greatest value.

For the use of falling water through these plants, the company would pay the Government \$3.5 million a year. We calculate this to be its full value based on the present cost of alternative steam power. This payment is equivalent to more than \$4.50 for each acre-foot of water diverted through the plants. Farmers pay \$3.50 an acre-foot for firm irrigation water from the Central Valley project. As you know, none of the Trinity falling water would be consumed in the power operation.

Clyde H. Spencer, director of region 2 of the Bureau, who testified today, stated at the House committee hearing that he thought the

amount of the payment for falling water could be determined by negotiation. If by any chance we should not reach agreement, the company is willing to have the falling-water payment fixed by the Federal Power Commission. We would agree that the Commission's determination would be final and conclusive.

#### ADVANTAGES OF COMPANY PARTNERSHIP

Construction and operation of the Trinity power facilities by the company, rather than by the Federal Government, would provide the following advantages:

1. A net saving to the Federal Treasury of nearly \$50 million in capital outlay for power facilities.

2. An estimated \$36 million more net revenue over the project repayment period. This would result from the assured annual payment of \$3,500,000 together with the net savings in annual costs to the Government made possible under the company's proposal.

3. The company would pay \$2,700,000 a year in taxes on the Trinity power facilities. This would increase annual revenues of the Federal Treasury by \$1,400,000 and would provide an additional \$1,300,000 a year for State and local governments. Over the repayment period these tax revenues would aggregate \$70 million to the Federal Government and \$65 million to State and local governments.

In Trinity County our taxpayments would be nearly tripled. Our total payment would rise to about \$325,000 a year. This would represent 44 percent of the total taxes levied by the county. Our annual payments in Shasta County would increase to nearly \$2,900,000 or more than one-half of the total taxes levied in the county.

H. R. 4463 and S. 178 would require the Federal project to make in-lieu payments to Trinity County for loss of taxes only on "the value of the real property and improvements taken" for project purposes. Under the partnership plan, the Government could make such payments on property taken for Federal construction of the dams, reservoirs, and tunnels. In addition, the company would pay taxes in both Trinity and Shasta Counties on the powerplants and related facilities.

4. The company Trinity plants would provide 125,000 kilowatts more dependable capacity at load center than would be made available by the Bureau's Trinity plants. However, after giving credit for additional capacity estimated to be made dependable in existing plants under the Bureau's Trinity plan, the net gain under our plan would be 65,000 kilowatts.

The Bureau's ability to meet its present commercial power commitments from existing plants would not be impaired.

5. Under the company proposal, 5 percent more Trinity water would be available to users in the Central Valley.

Mr. Chairman, under the next heading in our statement we have discussed our proposal to exchange power for the San Luis project.

Senator WATKINS. Before you leave that, may I be permitted a question?

Mr. GERDES. Surely.

Senator WATKINS. I note that you figure what you can pay based on what it would cost a steam plant to replace that power with.

Mr. GERDES. That is the basis on which we arrived at the \$31½ million payment for falling water.

Senator WATKINS. What would be the answer to the chairman's question, if you are going to be a partner to this enterprise, why not be a partner in constructing the reservoirs and tunnels?

Mr. GERDES. One of the problems would be that if we constructed the reservoirs and the tunnels, the property would be subject to taxation. As shown by Bureau of Reclamation studies, the project by itself, neither the power phases of it nor the water phases of it, pays its expenses. If the whole project were constructed by private enterprise, the situation would be much worse because there would be no interest-free irrigation capital and because of the taxes that would be paid. As you know, private enterprise cannot take on a project that would have large annual losses.

Senator ANDERSON. Then the project standing by itself is not feasible?

Mr. GERDES. I did not say it was not feasible. I stated that the Bureau study that was introduced here—and to which Secretary Aandahl referred—stated, and Mr. Aandahl stated, that the power phases of the Trinity project itself would result in a loss of a million and a half dollars a year.

Senator ANDERSON. And the power phases were to pay for the irrigation. So what will pay for the irrigation?

Mr. GERDES. As the witnesses for the Bureau testified this morning, they pooled it with the Central Valley project and, so pooled, it was shown by them to be feasible.

Senator WATKINS. What is the cost per kilowatt-hour on the production under the Government program on this project?

Mr. GERDES. I do not know.

Senator WATKINS. You say it would be a loss. What does it cost to produce electricity?

Mr. GERDES. Well, the State of California filed a report on this subject. Mr. Durkee described that report.

Senator WATKINS. I want your view.

Mr. GERDES. I was going to quote Mr. Durkee, because the State has made the study.

Senator WATKINS. Can you not answer that question?

Mr. GERDES. We did not make an independent study of that specific item.

Senator WATKINS. How do you know you are going to save money?

Mr. GERDES. We have no reason to doubt the State engineer's figure. He estimated that the power from Trinity would cost 7.2 mills per kilowatt-hour.

Senator WATKINS. The hydro plant would cost that much?

Mr. GERDES. That is what—

Senator WATKINS. What is included in that, just the cost of the generation, or the transmission lines, or subsidies for carrying the irrigation?

Mr. GERDES. That is the cost of generation and transmission to load center, as I recall it.

Senator WATKINS. Where would the load center be?

Mr. GERDES. Tracy is regarded as the load center for the Central Valley project.

Senator WATKINS. What would it cost them to put a transmission line from the production point to the load center?

Mr. GERDES. Their estimates are contained in the record here. Mr. Bonner, perhaps, can supply that figure.

Mr. BONNER. I believe it is \$19 million for transmission and \$11 million for substation facilities.

Mr. GERDES. That is as I recall it, for transmission and substation facilities.

Senator WATKINS. Am I correct in this statement that you in effect said that the power operation here would be at a loss if the Government ran it?

Mr. GERDES. That is not my statement. That is the statement of the Bureau of Reclamation which was made here today. Secretary Aandahl made the statement, as I heard him this morning, that the Trinity, with the power sold at the rates at which they propose to sell it, will result in a loss of a million and a half dollars a year. The State of California estimate is that the loss will be something over 3 million.

Senator ANDERSON. That is not in Mr. Aandahl's prepared statement.

Mr. GERDES. I thought I heard him say that, Mr. Chairman.

Senator WATKINS. I did not remember it. I am quite surprised.

Senator ANDERSON. Then we understand that this project fails by a million and a half dollars, according to the Bureau of Reclamation, of being able to pay out, including both irrigation and power?

Mr. GERDES. They make that statement with respect to the power features.

Senator ANDERSON. And \$3 million according to the State of California?

Mr. GERDES. What was that?

Senator ANDERSON. \$3 million was the figure that someone else had.

Mr. GERDES. That was the State engineer.

Senator ANDERSON. I think we better go back to the Bureau of Reclamation for just a minute, because it says: Trinity division will be a sound investment for the country in view of the favorable ratio of primary benefits alone to the total cost of 1.86 to 1. Can you supply me with the figures on which 1.86 to 1 is calculated?

Mr. MURRAY. Yes, sir.

Senator Anderson, in the report, a copy of which has been given to you today, and which we understand had been supplied to the committee staff previously, entitled "Supplementary Report on the Trinity River Division, July 1954," on pages 7 and 8 of that report, of the supplementary report—

Senator ANDERSON. I have one for January 1955. This is an addendum.

All right, here it is.

Mr. MURRAY. On pages 7 and 8 are presented the estimates of cost, and the estimates of benefits which would flow both cost and benefit-wise from the Federal investment of \$219 million in the Trinity facilities if those facilities are added to and operated as an integral part of an enlarged Central Valley project.

Senator ANDERSON. Let us look at it by itself.

Mr. MURRAY. We have never analyzed the Trinity River project or considered that it would operate separately and by itself.

Senator ANDERSON. I recognize that it does not. But there are some 30 projects listed in the upper Colorado storage bill. They do not take and lump all of them together and say, "We did not analyze Flaming Gorge, we did not analyze the silt, we did not analyze the Seedskadee." Why do you handle this one this way?

Mr. MURRAY. I am not qualified to talk about the upper Colorado storage project.

Senator ANDERSON. We will talk to you about this one. Can you give us an analysis of this one by itself? They seem to have some information on it, why do you not?

Mr. MURRAY. The only analysis that we have of the Trinity River division standing by itself is the analysis presented on pages 7 and 8 in which the costs and the returns in the form of direct and indirect returns on the Federal investment are compared.

Senator WATKINS. Can you tell us what it would cost per kilowatt-hour to produce electricity at your Trinity plant?

Mr. MURRAY. We testified this morning on the basis of some rough calculations, that the incremental power output produced at the Trinity plants would average approximately 5 mills.

Senator ANDERSON. This incremental output is a bad term. We have been dealing with the incremental power of Dixon-Yates and we found out we did not know what it was for a long time. Can you tell us how much the electrical energy costs, skipping the words "incremental power"? Just put it in mills per kilowatt.

Senator KUCHEL. Can you define that term for the record?

Senator ANDERSON. When we got through with it, the incremental power was the power they were going to generate that was going to be firm at all times not counting the power they were going to sell back to themselves in the Arkansas Power & Light, and not counting the peak power and not counting the rest of it. When we got through, we were a little bit at sea, not being great experts.

You tell us how many kilowatts you are going to generate, how much it will cost you to do it, and how much per kilowatt-hour. They have a figure of 7.2. Do you have a figure like that?

Mr. MURRAY. I have a figure like that, but I do not agree with the 7.2 mills. May I refer, if you have a copy of the House hearing, to pages 42 and 43?

Senator ANDERSON. We do not have that.

Mr. MURRAY. We have derived that from the repayment studies summarized in as brief a form as we can in the long complex tables that appear in that July 1954 supplemental report. You will notice that these two sets of figures derive the cost of firm power from the Central Valley project both with the Trinity River and without it.

This morning I made a rather rapid computation comparing the 1.84 mills and the 3.04 mills that are shown in those two tabulations, and calculated an average figure of approximately 5 mills for the cost of the power generated by the Trinity River division. The figure is approximate because the two pay-out periods on which these two charts are made are a little different.

Senator WATKINS. Where is that price figured?

Is that the load centers or at the bus bar?

Mr. MURRAY. At load center.

Senator WATKINS. That is about \$19 million?

Mr. MURRAY. Yes, that is about right.

Senator WATKINS. To put the transmission line in. That takes into consideration the cost of transmission?

Mr. MURRAY. Yes, sir; in both cases.

Mr. GERDES. I would like to make myself clear.

Senator KUCHEL. Let me interrupt. Where does this 7.2-mill figure come from?

Mr. MURRAY. I don't know.

Senator ANDERSON. What is the one you have like it that is not the same?

Mr. MURRAY. Approximately 5 mills.

Senator ANDERSON. One is an attractive figure and one is an unattractive figure.

Mr. MURRAY. I don't know where the 7 mills came from.

Senator ANDERSON. Tell us how you got the 7.2.

Mr. GERDES. That 7.2 figure is contained in the State engineers' report.

Senator ANDERSON. May we have the State engineers' report filed for our records?

Mr. LINEWEAVER. We do not have it.

Mr. GERDES. I want to make myself perfectly plain. We are in no way challenging the feasibility or desirability of the Trinity River project.

Senator ANDERSON. I want to make myself plain, too. If the State engineer of California figured out this current was going to cost 7.2 mills and we are using figures of 3.4 and 5 mills, and figures of that nature, we ought to get our figures together to begin with, and it is very important.

You did say this powerplant would lose \$11½ million a year. The Bureau of Reclamation does not agree with that.

You say the State agrees it will lose 3 million a year.

Mr. MURRAY. The million and a half dollars a year is our figure.

Senator ANDERSON. If you lose a million and a half dollars on the powerplant, do you expect to make it back from the irrigation?

Mr. MURRAY. Our repayment studies are all predicated upon pooling the costs and revenues from Trinity with the Central Valley project.

Senator ANDERSON. We have spent most of the day trying to get them unpooled. We are like Mr. Lewis, we want to disaffiliate.

Mr. MURRAY. I can't testify to anything else.

Senator ANDERSON. In order to get the benefits, you have to know what is going to be beneficial and what will be detrimental. If I am any judge of this, we thought power revenues would help pay for irrigation.

Mr. MURRAY. They will.

Senator ANDERSON. If the power revenues are going to lose a million and a half dollars a year—and you say that is your figure—how can they pay for anything?

My guess is they are going to keep on costing money; isn't that right?

If I lose a million and a half dollars in a branch, which I could not do, but if I did, or any proportion of it, increasing the volume would not help me. I would be going further into the hole.

Mr. GERDES. They can avoid that loss by accepting a partnership proposal with us, which will eliminate the \$1,500,000 loss.

Senator ANDERSON. The only reason you can get in the partnership deal is you get it at an advantageous price.

Mr. GERDES. No, we do not get it at an advantageous price. We have no expectation or even hope of getting it at an advantageous price.

Senator ANDERSON. You have no part of the obligation in building the dam. If you take all the great power projects in the country and let somebody else build the dam and you put a generator in and pay all the cost of the generator, you would do well even if you paid \$31½ million on top.

Senator WATKINS. We have a different story because he said the amount they offered is what it would cost them for the steam plant to produce the same electricity. They are offering to pay that, too.

That will bring more money to the Treasury and they will not lose on that kind of a deal.

Senator ANDERSON. I agree.

Senator WATKINS. That is why I asked him that very question, what would be the answer to the question you asked? Why would they be willing to take on the construction of the dam and all that?

Actually, it looks like a better deal if the figures are correct.

Senator ANDERSON. I think this has been a very informative session because it gives us an idea of what the project is all about. I do not say it is improper for you people to pay the equivalent of the cost of generating current by the use of coal as fuel.

Mr. GERDES. In our case, oil or gas.

Senator ANDERSON. You burn very good gas, brought from a good part of the country. I would not mention where it comes from.

Mr. GERDES. A lot comes from your State.

Senator ANDERSON. That is a fair and comparable figure. That is the figure that you are using, and it has no relationship necessarily to the cost of the generation of the power.

Mr. GERDES. Correct.

Senator WATKINS. It seems to be a better price, probably save the Government, if their figures are correct, it would seem to be a much better price.

Senator ANDERSON. If I had kilowatts to sell, I would try to sell it to the best spot. If I could get 3 mills for it one place and 5 mills at another place, it would not take me long to find out where I wanted to sell it.

Senator WATKINS. What was your cost per mill at the steam plants?

Mr. GERDES. Our cost of generating power at our system load factor is in the neighborhood of 7 mills per kilowatt-hour.

Senator WATKINS. You are willing to pay 7 mills for this power?

Mr. GERDES. Approximately 7 mills for this power.

Let me correct that: We will pay more than 7 mills but that is because we will be buying it at a load factor much lower than our system load factor and supplement from our other plants the supply that we would get from our proposed Trinity plants.

Senator WATKINS. I do not understand.

Mr. GERDES. We would be buying this falling water to generate peaking power and paying more than 7 mills for it. However, we would supplement that peaking power by energy generated in our steam plants. The cost of such energy from our steam plants does not involve the capital charges, but only the cost of fuel.

Senator WATKINS. I can understand that because for peaking you would have to start up your steam plants and that cost is better than 7 mills.

Mr. GERDES. At our system load factor——

Senator WATKINS. You said load factor?

Mr. GERDES. That means percent of the time that you use the maximum power capacity. In other words, it is the ratio of the average use to the maximum demand.

Is that correctly stated?

Mr. BONNER. Yes.

Senator ANDERSON. In other words, is it not true that if you have a fuel cost of 2 mills and another cost that may come in there, that you might raise a mill or mill and a half for depreciation and use of equipment, they cannot hope to get that load running a hundred percent all the time. They have peaks and valleys. By the time they get through, they level it all out, and even though the fuel cost may be way down and other costs down, you cannot apply that and you end up with about 7 mills.

We found in the steam plants in TVA and elsewhere, even though they may generate some of it at 1.8 or 2 mills, by the time they get through with their load factor it goes up to 4 or 5.

Senator WATKINS. I can understand it.

If that is what they want it for, I can see why they can pay 7 mills. We, of course, in all these projects where we have irrigation water for supplemental purposes, that supplemental water is much more expensive than any water the farmers have under the old gravity system they had many years ago that they got early by just building a rather cheap distribution system.

They can afford to pay for the last acre-foot of water they need to make a success, they can pay more for it. I can understand that theory if that is it.

Mr. GERDES. Mr. Bonner tells me the cost of Trinity power under the company's proposal will work out to about 10 mills per kilowatt-hour, at the load factor at which we would generate the Trinity power.

Senator ANDERSON. Is there any possibility that a proposal could be made to sell you current without going into who installs the turbines and let the Government do the whole job and give you a contract for power?

Mr. GERDES. Mr. Chairman, we have been buying power from the Central Valley project since the time that the first generators turned over, as I recall it, in 1944. Since that time, every year we have been buying power from the Bureau of Reclamation; for quite a period we bought substantially all of their power.

As a matter of fact, we paid the Bureau of Reclamation, if I remember the figure correctly, better than \$65 million for power during the period since 1944.

Senator ANDERSON. If we are going to finish your testimony, we will have to go on.

Mr. GERDES. I want to emphasize that in no way are we urging that the Trinity is not feasible. On the contrary, we urge the Congress to authorize the Trinity project under the bill before you.

Senator WATKINS. Even if you do not buy the power?

Mr. GERDES. Yes, whether we buy it or not, we think it is something that is desirable for the State.

Senator ANDERSON. Your testimony apparently is, too, that the Trinity project standing by itself lacks millions of dollars of being feasible.

Mr. GERDES. That isn't my testimony. I was merely referring to figures contained in the Bureau reports and in their testimony. I mentioned it in answer to the question from the Senator regarding why we couldn't take over this dam and all the tunnels and the rest of it.

Senator WATKINS. On the partnership basis, you ought to go in and help pay for the cost of those.

Mr. GERDES. Under our proposal we would put in all the capital in the power facilities and, in addition, we would pay \$3½ million a year. That \$3½ million would be used by the Government to help pay for the capital cost of the dams and tunnels and the water features of the project.

Senator WATKINS. I think, Senator, it seems as though this project is based somewhat on the same theory we have in the upper Colorado storage.

We have one dam, for instance, at a certain rate per kilowatt-hour, and we have others that are more expensive but they are all pooled together. The theory they are proceeding on is to put all this in the Central Valley and take some of the cheaper power produced, and it sweetens up the whole load.

Senator ANDERSON. This has been helpful in bringing out what the proposal is, because I didn't understand it this morning.

Mr. GERDES. What our proposal does, we believe, is to make the power phase of the project assist to a much greater degree, the repayment of the project.

Now, I stated that were were for the Trinity project, and we are. However, there are included in this bill construction of certain transmission facilities, which we believe are unnecessary. I don't think it is necessary to discuss that now, in view of the bill before you, which provides for a study of partnership construction.

Senator ANDERSON. Mr. Murray, do you have anything to say before we get off this subject?

Mr. MURRAY. I feel an obligation, because of the question raised about the million and a half dollars, to make a statement inasmuch as Secretary Aandahl testified on that this morning.

May I refer to page 6 of the letter of January 19 from the Commissioner to the Secretary with respect to the Trinity River project. It is on the cover of that report you have, Senator Anderson.

On page 6, the million and a half dollars a year which Secretary Aandahl referred to this morning is presented.

Senator KUCHEL. Where did he refer to it?

Mr. MURRAY. I think he referred to it in oral testimony. It was not in his prepared statement. He referred to it in oral testimony.

Basically, this figure is derived as a computation of the amount of money annually that has to be contributed by the present Central Valley project to the enlarged project by reason of the addition of Trinity.

Senator Watkins' statement has exactly summarized the situation. The Trinity power is more costly, is a higher cost power than is the

power produced from the present Central Valley project. The two are, however, pooled and sold essentially at the same rate. The result is that the present Central Valley project is contributing a million and a half dollars a year over the pay-out period in support of the enlarged project, by reason of the higher cost power.

It is in that sense that the Secretary spoke of the loss incurred by reason of this higher cost power.

Another way of explaining it is to look at it in this way. The power facilities from the present Central Valley project are now estimated to pay out in the year 1967, about 22 years from now. If the Trinity River project is constructed and added to the project, we estimate the total power facilities will be paid out in the year 1989, a difference of about 22 years more by reason of the Trinity power being more costly power than that generated.

Senator KUCHEL. Give me that again. What is the pay-out period?

Mr. MURRAY. The commercial power allocation on the existing Central Valley project as it now is estimated to pay out in 1967, about 22 years from now.

Senator ANDERSON. Twenty-two years from now?

Mr. MURRAY. Twelve years from now.

If the Trinity project is constructed, the power, of course, is more costly and the total power investment would not then be repaid until the year 1989.

Senator WATKINS. Is that commercial power alone?

Mr. MURRAY. Yes, sir.

Senator WATKINS. You describe your power divisions. You have commercial power? What other kind do you have?

Mr. MURRAY. The other kind is power for irrigation pumping.

Senator WATKINS. What do they pay for that?

Mr. MURRAY. That is paid for in irrigation water rates. We carry it on our books as intraproject charge.

Senator WATKINS. How much do you allocate for the power—

Mr. MURRAY. We add a part of the cost of the power-generating facilities to irrigation. That is repaid along with the other irrigation costs, and we have an intraproject transfer of funds in the amount of  $2\frac{1}{2}$  mills for each kilowatt-hour used for irrigation pumping.

Senator WATKINS. They are charged  $2\frac{1}{2}$  mills?

Mr. MURRAY. That is the effect to reflect cost of operating and maintaining this service.

Senator WATKINS. That is noncommercial?

Mr. MURRAY. Yes; a substantial amount.

Senator WATKINS. You do not have repayment contracts with any of the users of the water or power for the overall cost of the project?

Mr. MURRAY. Yes.

Senator WATKINS. When did you get them? Are they not all under 9 (e) contracts?

Mr. MURRAY. Yes.

Senator WATKINS. That is merely a rental proposition, is it not?

Mr. MURRAY. They will repay the cost over the estimated repayment period.

Senator WATKINS. But that is just the rental. You rented to them on the theory it is a rental and the United States will forever own the project, both water and power; is that right?

Mr. MURRAY. They are sold on a water-service contract under section 9 (e).

Senator WATKINS. Did I describe it correctly that it is a rental contract?

Mr. MURRAY. I, personally, don't view it that way; no, sir.

Senator ANDERSON. How do you view it?

Mr. MURRAY. I view those contracts—granted on their face they are water-service contracts with a term of 40 years—but I know they will be renewed.

Senator WATKINS. At the end of 40 years?

Mr. MURRAY. Yes.

Senator WATKINS. And at the end of another 40 years they will still be renewed under your theory?

Mr. MURRAY. If at that time there was nothing further to be done to the project.

Senator WATKINS. We went into it thoroughly a number of years ago. That is a rental proposition, you have no repayment contracts obligating the water users to pay anything but a rental.

Mr. MURRAY. That is correct.

Senator WATKINS. That is a rental contract.

Senator ANDERSON. What would happen if we asked the Bureau of Reclamation to give us, as it does on most other projects, a breakdown of this project showing its feasibility, what it was going to cost, and what you are going to get for it, and then pool it in the whole Central Valley project?

It strikes me like if I happened to live on the coast and had a swimming pool and tried to figure how much it cost me by totaling the cost of operating the Pacific Ocean.

I want to know what my pool will cost. I want to know what this project will cost. Can you not give us a figure of how this project works out by itself?

Mr. MURRAY. The Trinity River project is designed to operate and be influenced by the operations of the entire Central Valley project. Its operations are intimately coordinated with that of the rest of the project.

Senator ANDERSON. I understand that.

Mr. MURRAY. I don't see any way to haul it out and look at it in the sense you described, other than the way we have done by comparing the benefits and the costs of the features that are constructed.

Senator WATKINS. We inquired of the engineers to break down each one as to the cost of power.

Senator ANDERSON. Your answer is if we expect to get that information, the information will have to be gotten by the committee on its own time the best way it can.

Mr. MURRAY. I am sure we in the Bureau will do the best we can to help the committee on that, and I am quite certain that I and the members of my staff are probably as able to do it as anyone else. It has been done—in a sense of subtraction type of thing—by subtracting out, but that doesn't recognize the integrated nature of the operation.

Senator ANDERSON. Suppose we do not care to recognize the integrated purpose of the operation for the purpose of starting this project by itself.

I do not say we would not care to look at the integration when we get through, but is there anything wrong with letting us know how the project works out by itself?

Mr. MURRAY. The nearest thing that I could suggest at this time is that you look at the analysis presented in this addendum report which is about as good an effort as can be made now to segregate the repayment of the Central Valley project, and to segregate Trinity out of it. Certainly we would be glad to furnish the committee a further statement on it, explaining it and outlining that repayment project as best we can.

I am sure we would have to qualify it to point out the integrated nature of the project in so doing, but I think we can furnish something more direct along that line to the committee.

Senator WATKINS. I would like to find out how much it will cost per acre-foot for water delivered to the land and the cost per acre for the water supply needed. That is what we were required to do in the other. It was difficult but we did it, and then we added it to the other to make the overall project, were ready to pool our income and resources and taxes and ability to pay all in one pool, make it one project, with a lot of separate units. You have not done that.

(Mr. Murray subsequently submitted the following information in response to Senator Watkins inquiry.)

Annual costs of distributing to the land water made available in the Sacramento River will vary from about \$5 per acre on existing systems whose capital costs have been amortized, to about \$15 per acre on new systems being constructed under reclamation laws.

Senator WATKINS. You built that on piecemeal and it started away back in the depression days or beyond that, and has been added to; first was flood control and then reclamation and I do not know what else.

The State has been in it, private enterprise has been in it, today you do not have any repayment contracts with anybody in the sense you have it with other projects.

Mr. MURRAY. We don't have Central Valley contracts in the terms of section 9 (d) on the dams, power facilities and main canals serving numerous districts.

Senator WATKINS. It is in the business of renting water as well as power. Call them service contracts, but most every place else they would be called rental on water.

Mr. MURRAY. I will be glad to furnish for the record the best analysis we can in answer to Senator Watkins' and your questions.

Senator WATKINS. As far as I am concerned, I think that it is proper to pool all resources; it should have been done a long time ago. The people in the area should pool resources, just like the man on the canal.

The man at the top of the canal does not get a better deal, since he only has probably 400 yards to carry his water, than the man down at the other end of the canal. It will be clearer to everybody if you make it plain that is what you are trying to do and show how it does integrate.

Mr. MURRAY. I am sure there has been no intent on the part of the Bureau to conceal that essential aspect of the proposed operation of the Trinity project.

Senator WATKINS. Suppose your water supply fails for any reason and the Government has not been made whole. Are the water users under obligation to pay whether they have the water or do not have it?

Mr. MURRAY. Our contracts provide for the delivery of water.

Senator WATKINS. If you do not deliver water, you do not get money?

Mr. MURRAY. That is correct.

Senator WATKINS. In the other States, we have to pay whether we have water or not. That is the legal obligation.

Senator ANDERSON. Mr. Murray, if you would give us the figure by itself, it might look bad, but at the same time it would give us a chance to demonstrate how much better the project was when it was integrated. That is what we want to find out.

This is a part of the Central Valley project but, just the same, we have a right to find out what the individual parts are going to cost. You may want to have choices as to the construction of various parts of it.

While you say there was no attempt to conceal anything, and I am willing to concede that, I did not catch the fact that the power revenues were not paying for the irrigation until we got into this discussion this afternoon. I thought the power revenues were going to pay for this thing.

Senator WATKINS. It is the power revenue that comes from the over-all pool of the Central Valley.

Senator ANDERSON. I see it now.

Mr. MURRAY. It not only does to the extent of \$67 million, but accumulates a subsidy of \$170 million for even more expensive irrigation projects.

Senator ANDERSON. Do you know of any other projects in the country where the power features operate at a loss?

Mr. MURRAY. We don't consider that the power project, or, rather, the power features here operate at a loss.

Senator WATKINS. If it operated alone, it would.

Senator ANDERSON. Maybe that is a special viewpoint that the taxpayer has on this, but anything that loses a million and a half dollars to me operates at a loss.

Mr. MURRAY. Mr. Gerdes touched on a typical example in pointing out that this power, at the load factors that would be in force under the offer the company has made, might cost them 10 mills but they might sell that wholesale at 6½ mills.

Mr. GERDES. No. You don't mean to imply there are any markups like that.

Senator ANDERSON. That was a markdown.

Mr. GERDES. I beg your pardon.

Senator ANDERSON. We are getting everybody confused.

Mr. MURRAY. That is a perfectly common utility practice; it is common sense to operate a utility that way.

Senator MILLIKIN. Could we get the staff or somebody to review again this whole power question under any of the aspects that have been presented so we will know what is involved?

Senator ANDERSON. I think they will be happy to do that. We are not going to do it here.

Before you leave, Mr. Murray, will you get with other officials of the Bureau of Reclamation and work it out, and with Mr. Lineweaver

and other members of the staff so that we may have a report. It need not be in the hearings but so we have something on which we should base a judgment.

After all, this committee is asked to spend \$219 million of the money of the Government of the United States, and that is still quite a little money. We like to know what we are doing when we spend it.

(The information referred to is as follows:)

We agree the tabulations on pages 1, 2, and 3 are best presentation possible in response to Senator Anderson's request.

*Allocation of costs of features comprising Trinity River division, Central Valley project,<sup>1</sup> July 15, 1955, requested by Senator Anderson at hearing on June 24, 1955*

**Power:**

Commercial.....	\$156,538,000
Irrigation pumping.....	18,155,000
Municipal and industrial pumping.....	390,000
Subtotal.....	<u>175,083,000</u>

**Irrigation:**

Joint features.....	43,937,000
Power (irrigation pumping).....	18,155,000

Subtotal.....	62,092,000
---------------	------------

Commercial power (total).....	156,538,000
-------------------------------	-------------

Municipal and industrial (total) <sup>2</sup> .....	390,000
---	---------

Fish and wildlife (total).....	47,000
--------------------------------	--------

Subtotal.....	219,067,000
---------------	-------------

Minimum basic recreational facilities <sup>3</sup> .....	215,000
--	---------

Total.....	219,282,000
------------	-------------

<sup>1</sup> Data from table I, Addendum to Supplementary Report dated July 1954, Jan. 6, 1955, and Supplementary Report, July 1954, both on Trinity River division, Central Valley project.

<sup>2</sup> Results from application of standard cost allocation procedures. No additional M. and I. service is provided in Trinity River division.

<sup>3</sup> Added in Commissioner's report of Jan. 19, 1955, to the Secretary, which was adopted by Secretary McKay as his proposed report on Feb. 17, 1955.

**NOTE.**—The integrated nature of the operations of the Trinity, Shasta, and American River divisions of the Central Valley project and their coordinated operation with tributary inflow entering Sacramento River below Keswick Dam make it impractical to allocate the costs of the Trinity division as it might be operated separate and apart from the existing features of the CVP. Consequently, the allocations shown above are based on incremental costs, benefits, revenues, and operations—measured as the differences between (1) the existing Central Valley project and (2) the existing project plus the Trinity River division.

*Annual cost of power, Trinity River division, Central Valley project<sup>1</sup>—  
July 15, 1955*

Amortization of commercial power allocation of \$156,538,000 in 50 years at 3 percent-----	\$6,080,000
Operation, maintenance, and replacement <sup>2</sup> -----	1,731,000
<b>Total-----</b>	<b>7,811,000</b>
\$7,811,000 divided by 1,067,000,000 kilowatt-hours <sup>3</sup> equals 7.3 mills per kilowatt-hour. <sup>4</sup>	
Amortization of commercial power allocation of \$156,538,000 in 50 years at 2½ percent-----	5,505,000
Operation, maintenance, and replacement <sup>2</sup> -----	1,731,000
<b>Total-----</b>	<b>7,236,000</b>
\$7,236,000 divided by 1,067,000,000 kilowatt-hours <sup>3</sup> equals 6.8 mills per kilowatt-hour. <sup>4</sup>	

<sup>1</sup> Based on and subject to qualifications in table dated July 15, 1955.

<sup>2</sup> Includes minor amount of O. M. and R. properly chargeable against production of project pumping (irrigation and municipal water).

<sup>3</sup> Annual increase in firm power production of Central Valley project due to integrated operation of Trinity River division with existing features of the project.

<sup>4</sup> Based on coordinated operation with existing features of the Central Valley project. The Trinity River division would not be constructed as a physically separate project; if it were so constructed, the cost of producing the same amount and type of power as the integrated project produces would be even higher than shown. Through integrated operation, advantage is taken of Federal investments already made in Shasta, Keswick, Folsom, and Nimbus Dams, Reservoirs, and powerplants. Further, the ratio of direct benefits to costs (1.86 to 1) shown in the report approved by the Secretary on Feb. 17, 1955, is conservative since the cost side of that ratio includes an allocated share of the cost of the Delta-Mendota Canal, an already constructed part of the Central Valley project.

As noted in testimony at the July 14 hearing, the average cost of Trinity power of approximately 5 mills was derived from the tables on pp. 42-43 of the hearing before the Irrigation and Reclamation Subcommittee of the House of Representatives on H. R. 4663, and reflects in part the pooling of Trinity costs with other Central Valley revenues. The 5-mill average cost thus is consistent with the average subsidy of \$1,500,000 from the Central Valley project shown in the table on p. 6 of the report, which the Secretary approved on Feb. 17, 1955.

*Annual cost of irrigation water (in Sacramento River), Trinity River division,  
Central Valley project<sup>1</sup>—July 15, 1955*

Irrigation allocation, Trinity River division-----	\$62,092,000
Annual cost, <sup>2</sup> repayment in 50 years without interest-----	1,242,000
<b>\$1,242,000</b>	
-----	= \$1.04 per acre-foot capital repayment.
<b>1,190,000 acre-feet</b>	
<b>\$705,000</b>	
-----	= 0.59 per acre-foot operation, maintenance, and re-
<b>1,190,000 acre-feet</b>	<b>placement.</b>
<b>Total-----</b>	<b>1.63 per acre-foot.</b>

<sup>1</sup> For 1,190,000 acre-feet of water made available for diversion from the Sacramento River under an irrigation demand schedule. Diversions subject to deficiencies in critically dry years estimated to occur not oftener than once in 25 years.

<sup>2</sup> Should be reduced slightly since annual O. M. and R. cost of \$705,000 should be charged partly to M. and I. water service and fishery preservation. Reduction would be minor.

Senator KUCHEL. May I ask one question of Mr. Murray before he sits down?

You stated that the Trinity project as contemplated by the Department of the Interior would prolong the pay-out period about 20 years from the presently contemplated date for Central Valley of 1967.

Mr. MURRAY. That is commercial power facilities only.

Senator KUCHEL. I understand. So that, subsequent to the new pay-out period, assuming Trinity were constructed, that item would amount to profit, would it not? No questions about that?

Mr. MURRAY. Profit on the commercial power investment.

Senator KUCHEL. On the commercial power?

Mr. MURRAY. That is correct.

Senator KUCHEL. Secondly, when you prepare this statement, Mr. Murray, I wish that you could furnish the members of the committee the Department of the Interior's original concept of what the Central Valley project included.

We have talked about the Central Valley project here. We have had it in California.

There is a State statute in California with respect to it. Now, if the Trinity project was to be part of the Central Valley project originally, I think the members of the committee ought to know that. If it came in subsequently, I think they ought to know why it came in subsequently and on what basis, because if I understand the theory of the Bureau, it is that all these segments together constitute one project that is not new in this country and that the undertaking during the 1930's in our State was actually an undertaking of something which would include a number of these units.

I think that concept ought to be clearly demonstrated to the committee so that when by piecemeal, which God knows is the only way you get things done back here, you come in in 1954 and ask consideration of a unit that is not brandnew but was conceived in the overall Central Valley project from the beginning. I think that ought to be done.

(In response to Senator Kuchel's request, Mr. Murray subsequently submitted the following statement on the Department of Interior's concept of the Central Valley project:)

The Central Valley project of the Federal Government is based very largely on the same project as it was authorized for construction by the State of California in 1933. The Central Valley Project Act authorized construction of a project which was to be "a single object and the units thereof collectively constitute one project." Units authorized as initial parts of the project included the facilities which subsequently became authorized as a Federal undertaking in the act of Congress of August 26, 1937 (50 Stat. 850). The California Legislature provided that additional units could be added to the project and such additions subsequently were authorized from time to time.

The Trinity River project, while never authorized as a part of the State's Central Valley project, was adopted by the State legislature as a unit in the State water plan, and thus was placed in a status which logically might have led to its incorporation in the Central Valley project.<sup>1</sup>

At the time of the original planning of the Central Valley project by the Bureau of Reclamation both Shasta and Folsom Reservoirs were considered for possible construction as the initial storage unit to provide water for export to the San Joaquin Valley. Consistent with the original State project, the Bureau finally recommended Shasta as the initial unit and it was subsequently constructed and placed in operation.

In the American River Development Act of 1949 (63 Stat. 852), Folsom Dam and Reservoir, Folsom powerplant, the Sly Park unit, and Nimbus Dam, Reservoir, and powerplant, and transmission lines to connect these powerplants to the backbone Central Valley project lines were authorized by the Congress. The act provided that the works were to be integrated in their operation and in their financing with the initial features of the Central Valley project.

In the act of September 26, 1950 (64 Stat. 1036), the Congress again reauthorized the Central Valley project, this time to include the Sacramento Canals unit. This act also specifically provided that the canals were to be integrated in their operation and in their financing with other features of the Central Valley project.

<sup>1</sup> By subsequent act of the legislature the Trinity River project was removed from the State water plan in 1945. In 1955 the legislature memorialized the Congress by resolution to construct the Trinity River project.

The State Central Valley Project Act of 1933, as amended, authorizes the Water Project Authority to issue revenue bonds as a means of financing construction of the project by the State. All bonds issued for construction of the initial features or subsequent additions were to be repaid within a period of not to exceed 70 years after the beginning of the construction of the project.<sup>2</sup> Within this time limitation, it appears costs and revenues were to be pooled in the financing of the project.

Thus it can be seen that the Central Valley project, as it has been considered by the Federal Government in various acts of Congress and in various reports of the Interior Department, is, in general, consistent with the Central Valley project as it was initially authorized by the State of California. Both levels of Government have viewed the project as a growing enterprise capable of providing expanding service to water users within the State.

A. N. MURRAY.

In the limited time available we have been unable to determine whether there has been a judicial adjudication of whether the Trinity River is itself a navigable stream. In the same limited time we have been unable to examine the Army's existing "308 report" on the Klamath River and tributary to ascertain whether the Department of the Army has expressed itself on this question. There is some indication, however, from material at hand that diversions from the Trinity would affect the navigable capacity of the Klamath River. At page 4 of the report of the State of California dated April 1953, which is set forth in House Document 147, 83d Congress, 1st session, there is a reference to a report to the Federal Power Commission on the uses of the Trinity River, Calif., by Board of Engineers, D. C. Henny, U. S. Grant III, W. F. McClure, and E. W. Kramer. One of the conclusions to that report as set forth at page 4 of the State of California's comments is as follows:

"(i) Navigation is confined to Klamath River below the mouth of Trinity. It may be interfered with to a small extent by diversion, which, on the other hand, may benefit Sacramento navigation."

Senator WATKINS. It ought to be done and that is what we have done under the Colorado project; we brought the whole thing at once and everybody screamed to high heaven.

You fellows have tried to get under the wire one at a time. You are back where we are. We are glad to welcome you threefold.

Senator KUCHEL. During the 1930's, Congress must have been made completely aware of the project known as the Central Valley project but, at any rate, I think the committee should have a historical statement of just what was contemplated.

Senator WATKINS. I would say it was 1947 and 1948 when I sat on this same committee and held a complete investigation of the Central Valley. They found out they did not know much about it. Nothing was explained. Some were started by Presidential order, flood control, et cetera. It does not follow any previous reclamation pattern.

That is my memory of it. I sat for the most part listening to them. I think it was of benefit and has done a great deal of work.

Senator ANDERSON. We are going to have to leave shortly.

Mr. GERDES. I can get through with this in about 2 minutes, I believe.

Senator ANDERSON. I might give you more.

Mr. GERDES. The company has followed a policy of cooperation with the Federal Government, local irrigation districts, cities, and other government agencies in the development and storage of water.

In many cases the company, by contracting to purchase the power output, has provided an assured market for electric power generated by public irrigation and water supply projects and thereby has aided in financing their construction.

<sup>2</sup> Sec. 11560, California Water Code.

The company also has constructed powerplants in connection with the Narrows Dam built by the United States Army engineers on the Yuba River, the Melones Dam of the Oakdale and South San Joaquin Irrigation Districts on the Stanislaus River, and dams of the Nevada Irrigation District on the Yuba and Bear Rivers.

Under partnership arrangements with these agencies, our payments for the use of falling water released from these dams through our powerplants have made a substantial contribution toward repayment of the cost of the water-conservation works.

We have demonstrated that cooperation between public and private agencies best serves the public interest. We offer our cooperation in connection with the Trinity and San Luis projects, and any other water conservation projects which the State or Federal Government may authorize.

#### CALIFORNIA REGULATES COMPANY POWER RATES

The company would distribute Trinity power to its 1,600,000 electric customers throughout northern and central California without discrimination. The power would be sold at rates established by the California Public Utilities Commission.

The commission has continuously and effectively regulated the electric rates, financing, and operation of public utilities since 1914. Under such regulation, payments made by the company for the use of Trinity falling water would be entered as an operating expense on our books.

The company can make no profit on the falling water it purchases. All that it is allowed is a fair return on its own investment in facilities used and useful in service to the public. Any benefits from purchase of waterpower must be passed on to consumers in the form of lower electric rates.

Today our customers pay 15 percent less for each kilowatt-hour of electricity used in their homes than they did in 1939, although the prices of most other goods and services they buy have at least doubled since that time. Despite the fact that more than 25 cents of every dollar collected by us is paid out in taxes, we have preserved this low rate level by advanced engineering and efficient management.

Trinity power would be sold by the company at the lowest possible rates consistent with sound business principles.

#### PARTNERSHIP INVOLVES NO TRINITY DELAY

No delay in construction of the Trinity project would result from our partnership proposal. At the House committee hearing, Commissioner of Reclamation Wilbur A. Dexheimer stated that up to 18 months is available for partnership negotiations after construction of the Trinity Dam is started.

Clyde H. Spencer, director of region 2 of the Bureau of Reclamation, testified that in his opinion negotiations could be completed within a year. We share this opinion.

There is no reason why Trinity construction cannot be started immediately after Congress authorizes it.

## POWER PARTNERSHIPS AUTHORIZED BY CONGRESS

The legislative pattern for partnership development may be found in three acts passed by Congress in 1954. These are:

(1) Public Law 544, authorizing the Priest Rapids project on the Columbia River where a local public utility district proposes to build a power facility at a dam to be constructed by the Federal Government;

(2) Public Law 436, deauthorizing a Federal project on the Coosa River in Alabama, to allow the Alabama Power Co. to construct 5 dams on the river at a cost of \$100 million; and

(3) Public Law 476, authorizing partnership between the State of Oklahoma and the Federal Government to build the Markham Ferry Dam.

These acts provide for construction of power facilities at Government water projects by local agencies under Federal Power Commission license.

Licenses are limited to a maximum term of 50 years. The Government has the right to recapture the power facilities at their depreciated cost upon the termination of the license.

The power operation must be approved by the Commission as the one best adapted to a comprehensive development of the water resources for all beneficial public purposes, including recreation. Licensees must pay for benefits provided by Federal dams.

Operation of plants constructed under license is subject to the continuous supervision of the Commission.

H. R. 4663 would authorize appropriation of \$225 million for construction of the Trinity River division of the Central Valley project.

The Bureau estimates that Federal operation of power facilities proposed in the bill would return \$237 million in revenues over the project repayment period.

If trinity power facilities are built and operated by the company under its partnership proposal, payments for falling water, taxes, and savings to the Federal Government over the same period would amount to \$343 million, or \$106 million more to water users and Federal taxpayers.

In addition, the company would pay \$65 million in taxes on these power facilities to State and county governments. This amounts to a net gain to the public of \$171 million from the partnership development.

The Federal Government already has spent approximately \$800 million on water resources development in California.

Another \$800 million will be required to complete presently authorized Federal water projects.

The most comprehensive Federal development of water in California can be achieved if our public and private agencies willing and able to share this financial burden become working partners in the Federal reclamation program.

The company's cooperation in the Trinity River power development will make possible the earliest construction by the Federal Government of needed water-conservation works in California with the least cost to taxpayers and with maximum benefits to water users in the Central Valley.

I want to add at this time that we urge that the committee approve the bill which is before you.

Senator ANDERSON. Thank you very much.

I think that the testimony you have given us has been very helpful in permitting us to understand what the proposal was, and I certainly did not previously understand it. I think that if the bill does pass the Congress, that the Secretary of the Interior in his negotiations with and recommendations to Congress to make a comparable analysis of financial results from installations by the Bureau of the same capacity as those proposed by the Pacific Gas & Electric Co.

The comparison seems to be on 233,000 kilowatts as against 362,000 proposed by P. G. & E. and probably the Bureau ought to recompute, using the same set of figures because, as you point out, they can do the same thing.

If you should happen to have a member of your staff staying here, I think it would be useful if that person could take a look at the computations made up here for the benefit of the committee and give us your subsequent comments on them, as to whether you think the partnership proposal is still preferable in view of the studies that may be made as we go along.

In other words, I think your contribution has been useful, and we would like your comments and advice.

Mr. GERDES. We will be glad to make available any of our engineering services that you would like to have. If we can aid in cooperating with the committee, we will be very happy to do so.

Senator ANDERSON. I do not want to necessarily stop the hearing if there are further questions. I personally made a 4 o'clock appointment, in connection with another matter. But this ends the list of formal witnesses.

Senator Kuchel, do you have others you wish to put on the stand?

Senator KUCHEL. No, sir.

Senator ANDERSON. We should give you permission to file with the committee such telegrams, letters, and statements as you desire to file, and Congressman Engle, if you desire to supplement your original remarks with additional comments, statements or studies, in view of the testimony here today, we will be glad to have that.

Representative ENGLE. Of course, I would be glad to see the Department present the statement they referred to. I merely want to say, by way of emphasis, that the power features of this project pay out in 26 years with the integration proposed in this legislation, and thereafter the entire power revenues are straight profit.

It is a matter of bookkeeping, and I am sorry there has been confusion about it, but this project is precisely what it was stated to be. I was not kidding anybody when I said it was a project with a 3.31 to 1 benefit-to-cost ratio, and in 26 years it pays out and everything is velvet from then on.

I am in hopes the Department can get on to this right away, because we are in the last few days of this session and I was in hopes that we could get this thing along so we would not be delayed into another year.

Senator ANDERSON. I recognize you do want to regard this as an integrated operation, and I commend Senator Watkins for saying that the areas in the upper Colorado need to be regarded as an integrated

The State Central Valley Project Act of 1933, as amended, authorizes the Water Project Authority to issue revenue bonds as a means of financing construction of the project by the State. All bonds issued for construction of the initial features or subsequent additions were to be repaid within a period of not to exceed 70 years after the beginning of the construction of the project.<sup>2</sup> Within this time limitation, it appears costs and revenues were to be pooled in the financing of the project.

Thus it can be seen that the Central Valley project, as it has been considered by the Federal Government in various acts of Congress and in various reports of the Interior Department, is, in general, consistent with the Central Valley project as it was initially authorized by the State of California. Both levels of Government have viewed the project as a growing enterprise capable of providing expanding service to water users within the State.

A. N. MURRAY.

In the limited time available we have been unable to determine whether there has been a judicial adjudication of whether the Trinity River is itself a navigable stream. There is no reason why Trinity construction cannot be started immediately after Congress authorizes it.

## POWER PARTNERSHIPS AUTHORIZED BY CONGRESS

The legislative pattern for partnership development may be found in three acts passed by Congress in 1954. These are:

(1) Public Law 544, authorizing the Priest Rapids project on the Columbia River where a local public utility district proposes to build a power facility at a dam to be constructed by the Federal Government;

(2) Public Law 436, deauthorizing a Federal project on the Coosa River in Alabama, to allow the Alabama Power Co. to construct 5 dams on the river at a cost of \$100 million; and

(3) Public Law 476, authorizing partnership between the State of Oklahoma and the Federal Government to build the Markham Ferry Dam.

These acts provide for construction of power facilities at Government water projects by local agencies under Federal Power Commission license.

Licenses are limited to a maximum term of 50 years. The Government has the right to recapture the power facilities at their depreciated cost upon the termination of the license.

The power operation must be approved by the Commission as the one best adapted to a comprehensive development of the water resources for all beneficial public purposes, including recreation. Licensees must pay for benefits provided by Federal dams.

Operation of plants constructed under license is subject to the continuous supervision of the Commission.

H. R. 4663 would authorize appropriation of \$225 million for construction of the Trinity River division of the Central Valley project.

The Bureau estimates that Federal operation of power facilities proposed in the bill would return \$237 million in revenues over the project repayment period.

If trinity power facilities are built and operated by the company under its partnership proposal, payments for falling water, taxes, and savings to the Federal Government over the same period would amount to \$343 million, or \$106 million more to water users and Federal taxpayers.

In addition, the company would pay \$65 million in taxes on these power facilities to State and county governments. This amounts to a net gain to the public of \$171 million from the partnership development.

The Federal Government already has spent approximately \$800 million on water resources development in California.

Another \$800 million will be required to complete presently authorized Federal water projects.

The most comprehensive Federal development of water in California can be achieved if our public and private agencies willing and able to share this financial burden become working partners in the Federal reclamation program.

The company's cooperation in the Trinity River power development will make possible the earliest construction by the Federal Government of needed water-conservation works in California with the least cost to taxpayers and with maximum benefits to water users in the Central Valley.

I want to add at this time that we urge that the committee approve the bill which is before you.

Senator ANDERSON. Thank you very much.

I think that the testimony you have given us has been very helpful in permitting us to understand what the proposal was, and I certainly did not previously understand it. I think that if the bill does pass the Congress, that the Secretary of the Interior in his negotiations with and recommendations to Congress to make a comparable analysis of financial results from installations by the Bureau of the same capacity as those proposed by the Pacific Gas & Electric Co.

The comparison seems to be on 233,000 kilowatts as against 362,000 proposed by P. G. & E. and probably the Bureau ought to recompute, using the same set of figures because, as you point out, they can do the same thing.

If you should happen to have a member of your staff staying here, I think it would be useful if that person could take a look at the computations made up here for the benefit of the committee and give us your subsequent comments on them, as to whether you think the partnership proposal is still preferable in view of the studies that may be made as we go along.

In other words, I think your contribution has been useful, and we would like your comments and advice.

Mr. GERDES. We will be glad to make available any of our engineering services that you would like to have. If we can aid in cooperating with the committee, we will be very happy to do so.

Senator ANDERSON. I do not want to necessarily stop the hearing if there are further questions. I personally made a 4 o'clock appointment, in connection with another matter. But this ends the list of formal witnesses.

Senator Kuchel, do you have others you wish to put on the stand?

Senator KUCHEL. No, sir.

Senator ANDERSON. We should give you permission to file with the committee such telegrams, letters, and statements as you desire to file, and Congressman Engle, if you desire to supplement your original remarks with additional comments, statements or studies, in view of the testimony here today, we will be glad to have that.

Representative ENGLE. Of course, I would be glad to see the Department present the statement they referred to. I merely want to say, by way of emphasis, that the power features of this project pay out in 26 years with the integration proposed in this legislation, and thereafter the entire power revenues are straight profit.

It is a matter of bookkeeping, and I am sorry there has been confusion about it, but this project is precisely what it was stated to be. I was not kidding anybody when I said it was a project with a 3.31 to 1 benefit-to-cost ratio, and in 26 years it pays out and everything is velvet from then on.

I am in hopes the Department can get on to this right away, because we are in the last few days of this session and I was in hopes that we could get this thing along so we would not be delayed into another year.

Senator ANDERSON. I recognize you do want to regard this as an integrated operation, and I commend Senator Watkins for saying that the areas in the upper Colorado need to be regarded as an integrated

operation, and that is why we have appreciated the kindly reception you have given our project over there, and I am sure we will give you the same kind of courteous treatment here.

Representative ENGLE. We had water coming out of the Trinity, dumping into the Sacramento River, going into the same canals, we integrate Trinity with Shasta and Keswick. To try to figure it out separately under something not proposed and physically not contemplated cannot be done. It would be nice if you could do it that way. But you run the Trinity powerhouse in connection with Keswick and Shasta.

Senator WATKINS. You have a counterpart of Glen and all the other dams.

Representative ENGLE. It is like trying to unscramble the eggs.

Senator ANDERSON. Thank you very much.

Senator Kuchel, did you have something you wanted to put in the record at this time?

Senator KUCHEL. Yes, sir, Mr. Chairman.

I have a resolution here from the Assembly of the State of California, a letter from the State of California Department of Agriculture transmitting a factual data report, and I also have several telegrams, all of which I would like to have made part of the record, Mr. Chairman.

Senator ANDERSON. Very well.

(The material referred to above follows:)

[Assembly Journal, State of California, June 8, 1955]

#### MOTION TO MEMORIALIZE CONGRESS

Mr. Dolwig moved that the Assembly of the State of California respectfully memorialize the Congress and the President of the United States to enact such legislation as may be required to bring about the immediate authorization and construction of the Trinity-San Luis project and that in such authorization the Congress make provisions mutually satisfactory to the United States and the State of California for the integration of the San Luis project with the California State water plan; and further,

That the chief clerk of the assembly transmit copies of this motion to the President and the Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the Secretary of the Interior and to the Secretary of the Army.

#### CALIFORNIA STATE SENATE JOINT RESOLUTION No. 26

##### Relative to the Trinity River-San Luis Reservoir project

Whereas the increasing needs of population, industry, agriculture, and national defense call for the immediate development of certain California water projects now under consideration by the Congress of the United States and the Legislature of the State of California; and

Whereas the Legislature of the State of California has made a study of many of these projects and agreement has been generally expressed that construction of the Trinity-San Luis project should be initiated immediately; and

Whereas it has been generally agreed that the Trinity River-San Luis project is economically feasible in accordance with existing standards fixed by reclamation law and integration of such project with the federally operated Central Valley project will, during this period of urgency, increase the economic feasibility of both projects and speed the day when supplemental water can be made available; and

Whereas it has been generally agreed and concurred in by the United States Bureau of Reclamation that the San Luis phase of the project can be so planned and designed that it may, in the interests of the fullest and most economic utili-

zation of the State's precious water resources, be integrated with the California State water plan; now, therefore, be it

*Resolved by the Senate and the Assembly of the State of California, jointly,* That the Congress and the President of the United States are respectfully urged to enact such legislation as may be required to bring about the immediate authorization and construction of the Trinity-San Luis project and that in such authorization the Congress make provision mutually satisfactory to the United States and the State of California for the integration of the San Luis project with the California State water plan; and be it further

*Resolved,* That provision be incorporated in any Federal legislation authorizing construction of the Trinity-San Luis project to require that the United States proceed in conformity with State water law; and be it further

*Resolved,* That the secretary of the senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the Secretary of the Interior and to the Secretary of the Army.

STATE OF CALIFORNIA,  
DEPARTMENT OF AGRICULTURE,  
*Sacramento, July 11, 1955.*

Hon. THOMAS H. KUCHEL,  
*Member, United States Senate,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR KUCHEL: We are keenly aware of your activity in support of the so-called Trinity River project. We believed that additional support data from an official agricultural angle might include material which would be helpful to you in your effort. We have been encouraged to do this by virtue of the apparent overwhelming sentiment in favor of proceeding with this project. We send this material to you for whatever use you may care to make of it.

Very sincerely,

W. C. JACOBSEN, *Director.*

FACTUAL DATA REPORT FAVORING AUTHORIZATION FOR THE TRINITY RIVER DIVISION, CENTRAL VALLEY PROJECT, BUREAU OF RECLAMATION, UNITED STATES DEPARTMENT OF THE INTERIOR

(Compiled and submitted by California State Department of Agriculture)

The Trinity River Division in northwestern California, Trinity and Shasta Counties, is urgently needed to supply additional water to the Central Valley project of the Bureau of Reclamation for use in both the Sacramento and San Joaquin River Basins, and for additional power generating capacity for northern California.

The importance of imported water to the San Joaquin River Basin, where large areas are experiencing an alarming drop in ground water supplies as a result of heavy pumping, cannot be overemphasized.

Serious economic curtailment of farming activity portends in certain of the areas designed to be served by Trinity water.

The water of the Trinity, confluent with the Klamath, is now flowing wastefully to the sea.

California and the Nation cannot afford such extravagance.

The Department of Interior Appropriation Act for fiscal year 1956 includes \$1 million as initial appropriation for construction of the Trinity River Division, contingent upon congressional authorization. This act has been passed by both the House of Representatives and the Senate. The act would become effective, and the funds available for expenditure, if the Senate passes H. R. 4663 and the bill is approved by the President.

Farm organizations favoring construction of the Trinity River Division include: The California State Grange and the Sacramento Valley Irrigation Committee. Many individual Grange, Farm Bureau organizations and irrigation and other water districts throughout the Central Valley also are on record as favoring the proposed development.

In a letter dated April 13, 1953, the director of public works of the State of California, Frank B. Durkee, transmitted, in conformity with the requirements of the 1944 Flood Control Act, the official comments of the State on the proposed report of the Secretary of the Interior.

In his letter, the Director of Public Works concludes :

"It is the position of the State of California, based on the study and report of the Division of Water Resources, that the Trinity River project is engineeringly and economically feasible and that it should be constructed at the earliest possible date. I personally concur in this position."

On May 28, 1955, Director Durkee restated the position of the State of California as regards the Trinity River project.

In a letter on that date sent to Secretary of the Interior, Douglas McKay, Director Durkee said :

"The Trinity River project should be developed so as to make the greatest possible contribution to the power and water resources of California. It continues to be the position of the State of California that the Trinity River project should be constructed at the earliest practicable date."

Reference is made to the following paragraph from Bulletin No. 2, publication of the State water resources board, titled "Water Utilization and Requirements of California, October 1954" :

"Results of the statewide water resources investigation to date indicate that if California is to attain growth and development commensurate with her manifold resources, nearly all of the potential reservoir storage capacity of the State must be constructed and dedicated to operation for water conservation purposes."

Therefore, and following review of H. R. 4663, as the bill passed the House of Representatives on June 21, House Documents 53, 73, and 147 of the 83d Congress, and the Interior Department's supplementary report on the Trinity River division, CVP, the administrative staff of the State department of agriculture is convinced that authorization of the Trinity project will be one of the most important steps needed to promote agricultural stability in the Sacramento and the San Joaquin Valleys of California.

Firm water supplies delivered to nearly 350,000 acres of land will make it possible for California to meet the tremendously increasing demands of its growing population as well as that of the Nation at large.

For many years California has led all States of the Union in irrigated agriculture, and today about 7 million acres within the State are served with irrigation water. This constitutes by far the greatest single demand on the developed water supplies of California, and about 90 percent of the water beneficially used in the State is utilized by irrigated agriculture.

State reports show that since 1940 there has been a marked acceleration in the placing of new lands under irrigation in California. This has been caused by increased requirements for agricultural produce brought on by World War II, and by similar demands of the rapidly growing population of the State and the Nation.

The eventual need for a high degree of development of the irrigable lands of California is assured.

Specifically, as regards the Trinity River division, large quantities of dependable irrigation water are necessary to production of the forage crops so important to California's beef cattle and dairy industry.

Portions of the Sacramento Valley and San Joaquin Valley lands which would receive water developed by the Trinity River project would be devoted to the production of forage crops. Other portions will be devoted to specialty crops produced largely in California.

Analyses of the data presented in House Documents 53 and 73 lead us to believe that the net primary annual irrigation benefits of \$12,569,000, as shown in the Interior Department's supplementary Trinity report of July 1954, are conservative. There is no doubt also but that the food processing and distributing industry in California would augment these direct farmer benefits tremendously.

The Trinity River division will make available about 1,190,000 acre-feet of water annually which will irrigate the equivalent of approximately 350,000 acres of agricultural land in Sacramento and San Joaquin Valleys of California.

Likewise, the proposed development will provide about 1,067 million kilowatt-hours of electric energy annually by operating the Trinity River powerplants in coordination with the Shasta, Folsom, Keswick, and Nimbus hydroelectric plants of the Central Valley project.

This power is needed for increased irrigation pumping and the fast-growing northern California power market area.

A measure of the power needed for irrigation pumping can be obtained when it is realized that new irrigation on the west side of the San Joaquin Valley in

Madera, Fresno, and Northern Kings Counties will require over 700 million kilowatt-hours annually to move water from the delta to irrigate 500,000 acres in that area.

National recreation and fish and wildlife benefits would also result from the project.

Net annual equivalent primary benefits which will accrue to the proposed development are estimated by the Bureau of Reclamation at \$20,415,000. Irrigation water service will account for about 62 percent of this total.

It is anticipated that slightly over half of the irrigation water to be made available by the Trinity River division will be used in the Sacramento Valley.

The lands to be irrigated are virtually all in dry farming status at present with major emphasis on the production of grain and native pasture.

A relatively wide variety of crops can be successfully grown in the area; however, it is anticipated that, under conditions of full development, livestock and orchard enterprises will constitute the major basis for the area's economy.

It is proposed by the Bureau of Reclamation to divert the remainder of the irrigation water made available by the proposed development to lands on the west side of the San Joaquin Valley in the service area of the Delta-Mendota Canal. These lands are predominantly excellent in quality, suitable for a wide variety of crops, and much of the service area has been developed to irrigation through the expenditure of large sums of private capital; however, the locally available ground water and surface water supplies are inadequate for the area.

Under conditions of full development with project water available, it is anticipated that seventy-five percent of these lands will be used for the production of high value truck, field, and forage crops such as melons, vegetables, and alfalfa, destined both for cash sale and for consumption by dairy stock supplying milk to the San Francisco Bay and other urban markets.

California's present population exceeds 12,400,000 persons. Authorities in the statistical study of population estimate that there will be over 20 million mouths to feed in the State in 1975.

Live weight shipment of meat animals destined for immediate slaughter into the State in 1953 exceeded 1 billion pounds; the average population of California for that year was less than 12 million.

The indicated increase in requirement for meat can be provided in only two ways, by increasing shipments into the State and by increased meat production on irrigated land. Recourse will have to be made to both sources of supply since the meat produced with Trinity division water will only partially satisfy the increasing deficiency in locally available meat supplies.

In common with the Nation as a whole, California has experienced a surplus of fluid milk during the past decade; however, increasing demand by the State's rapidly growing population is effectively alleviating this surplus problem, and dairy technicians are in agreement as to the requirement for a considerable expansion in fluid milk production in the years immediately ahead.

A portion of this increase can be provided through conversion of existing manufacturing milk dairies to market milk production, the remainder must come from dairies to be established on nearby irrigated land.

Increased production of fruits, nuts, and vegetables in California will be required both for local consumption and elsewhere in the Nation. Increasing per capita consumption coupled with a growing national population indicates a ready market for these agricultural commodities.

The diversification of agriculture contemplated under the project development will tend to strengthen the local economy and result in additional opportunity on farms adequate in size to support a farm family.

The increased trade and service associated with more intensive agricultural development will also contribute significantly to the economic benefits resulting from the provision of additional irrigation water supplies.

As previously indicated but not detailed, the Trinity River division is consistent with the basic plan of the State of California for progressive augmentation of the water resources of the State.

---

SAN JOSE, CALIF., July 11, 1955.

Senator JAMES MURRAY,

*Senate Office Building, Washington, D. C.*

The board of directors of the Water and Power Users Association of Santa Clara County urge your support of H. R. 4663. Though the Trinity project

will not be complete until we build the San Luis Dam and Canal with Federal funds and use project power to send the water south into the San Joaquin Valley.

ALDEN B. CAMPEN, *Secretary-Treasurer.*

---

WEAVERVILLE, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,  
*Washington, D. C.*

Approval of your bill for the Trinity River division is recommended on the basis of need, feasibility, and as development of a known resource. Also approve 18-month study period on P. G. & E. "partnership" proposal. As county of origin benefits in bill to local government are economically vital.

TRINITY JOURNAL,  
By JOHN STEPLING, *Publisher.*

SACRAMENTO, CALIF., July 9, 1955.

THOMAS H. KUCHEL,  
*Member, United States Senate,  
 Senate Office Building, Washington, D. C.:*

It will not be possible for me to be in Washington, D. C., to appear at committee hearings. Will appreciate it if you will advise the committee that California State Grange urges the adoption of the bill to start construction on Trinity project. The construction of this important. Development of water conservation should be undertaken at the earliest possible date.

---

GEORGE SEHLMAYER.

WEAVERVILLE, CALIF., July 13, 1955.

HON. THOMAS H. KUCHEL,  
*Senate Office Building, Washington, D. C.:*

Regret unable to attend Trinity project hearing July 14. Urge the committee consider the following: Trinity project has been in the planning stages for over 30 years. Authorization of the Trinity project was given serious consideration prior to construction of Shasta Dam. Estimated population of California by 1970 is 20 million people. Underground water supplies in California are dropping at alarming rate. Some of most productive land in State is in danger of reverting to desert. Additional water must be made available to even maintain the status quo. Waters of the Sacramento are already overcommitted. The Trinity project because of engineering and economic feasibility is the best remaining undeveloped project of its size in the United States.

ARMON HEFFINGTON,  
*President, Californians for Trinity, Sacramento-San Luis.*

Senator KUCHEL. There is also a group of telegrams favoring Trinity from individuals.

REDDING, CALIF., July 13, 1955.

HON. THOMAS H. KUCHEL,  
*Senate Office Building, Washington, D. C.:*

Urgent by request that you use your most diligent efforts to have Trinity River project approved.

W. H. MACKIMMOND,  
*Trinity Center, Calif.*

---

REDDING, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,  
*Senate Office Building, Washington, D. C.:*

Continued support of the Trinity program will be greatly appreciated.

---

FRANK D. PLUMMER.

REDDING, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,  
*Senate Office Building, Washington, D. C.:*

Your continued interest in Trinity project will be appreciated.

---

R. A. THOMAS.

REDDING, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,  
*Senate Office Building, Washington, D. C.:*

Trinity development important to California your support needed.

---

ELMER JUNKANS.

Senator THOMAS KUCHEL,  
*Washington, D. C.:*

Water facilities and water resources are greatly needed in this area. Your continued support of the Trinity project will be greatly appreciated.

CLARK L. MORFORD,  
*A Shasta Union High School Teacher,  
 and Farmers Insurance Agent.*

REDDING, CALIF., July 13, 1955.

Senator KUCHEL,

*Senate Office Building, Washington, D. C.:*

Important to this district your continued support of Trinity bill.

WILLIAM B. NYSTROM.

REDDING, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,

*Senate Office Building, Washington, D. C.:*

We urge you to give your wholehearted support to the Trinity River project, H. R. 4663, and do everything possible to secure passage of same.

FRED AND MURIEL DUSEL.

REDDING, CALIF., July 13, 1955.

Senator THOMAS H. KUCHEL,

*Senate Office Building, Washington, D. C.:*

I earnestly urge anything you can do to effect passage of the Trinity River Project.

EARL LEE KELLY, Jr.

REDDING, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,

*Senate Office Building, Washington, D. C.:*

Your many friends in this area urge your support on the Trinity River Project.

WELDON OXLEY, C.

REDDING, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,

*Senate Office Building, Washington, D. C.:*

Urgently request your continued approval of Trinity River diversion project at this time in view of California's united stand.

CAREY GUICHARD.

*Redding Record Searchlight.*

REDDING, CALIF., July 13, 1955.

Senator THOMAS KUCHEL,

*Senate Office Building, Washington, D. C.:*

Please support the Trinity River bills; as they are most important to this area as well as the State.

SIG KRIEGSMAN, Jr.

REDDING, CALIF., July 13, 1955.

THOMAS KUCHEL,

*Senate Office Building, Washington, D. C.:*

I urge you to favor the passing of the Trinity County Dam project that we so badly need, both for irrigation and power.

H. W. K. WITTNER,

*Publicity Chairman, Republican Central Committee.*

REDDING, CALIF., July 13, 1955.

Senator KUCHEL,

*Senate Office Building, Washington, D. C.:*

This is to request your enthusiastic and active support on the Trinity River project. Our representative, Laurence Carr, and Mayor George Fleharty, are appearing in Washington today supporting this project.

McCOLLS DAIRY PRODUCTS Co.,

JOHN FITZPATRICK.

Senator ANDERSON. Thank you very much. The meeting is adjourned.

(Whereupon, at 4 p. m., the hearing was adjourned.)

## HELENA VALLEY IRRIGATION DISTRICT

---

THURSDAY, SEPTEMBER 29, 1955

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The conference was convened, pursuant to notice, at 10:30 a. m., in room 224, Senate Office Building, Hon. Joseph C. O'Mahoney, acting chairman of the Committee on Interior and Insular Affairs, presiding.

Present: Senator O'Mahoney.

Present also: Goodrich W. Lineweaver, staff assistant for reclamation and irrigation of the Committee on Interior and Insular Affairs; Floyd E. Dominy, Chief, Division of Irrigation, Bureau of Reclamation; and Edward Frye, assistant to the Assistant Secretary of the Interior Aandahl; Charles Murray, administrative assistant to Senator James E. Murray, of Montana, on behalf of Senator Murray; James Sullivan, administrative assistant to Senator Mike Mansfield, of Montana, on behalf of Senator Mansfield; Merrill W. England, administrative assistant to Representative Lee Metcalf, of Montana, on behalf of Representative Metcalf; E. W. Rising, on behalf of the State Water Conservation Board of the State of Montana; William W. Woodruff, professional staff member, Committee on Appropriations of the United States Senate.

Senator O'MAHONEY. This session is being held at the request of Senator Murray, chairman of the Committee on Interior and Insular Affairs, who, under date of September 22, wrote me from Butte, Mont., asking me to hold this conference in order to determine when construction on the Helena Valley unit of the Missouri River Basin project in Montana is likely to begin.

I announced last week that the hearing would be held on Thursday afternoon, and thereafter received a telephone call from Mr. Herrin, of this area, asking to be heard for himself and two companions. Of course, I said we would hear him. The three of them arrived yesterday, and are here this morning.

In the meanwhile, we have been unable to secure the presence of Secretary McKay, Assistant Secretary Aandahl, or Commissioner Dexheimer, each of whom is out of the city. But in view of the fact that Mr. Rossiter and the other three gentlemen from the valley are here, it was deemed desirable to proceed with the hearing.

Mr. Lineweaver, let me ask you to make an opening statement with respect to the basic facts of this case. The construction, I think, was authorized when the Flood Control Act of 1944 was enacted, and an appropriation has since been made.

**STATEMENT OF GOODRICH W. LINEWEAVER**

Mr. LINEWEAVER. Yes; that is correct. The Helena Valley unit was authorized through the approval of Senate Document 191, referred to in the Flood Control Act of 1944. Subsequent to that, the Bureau of Reclamation proceeded with investigations of the Helena Valley unit area, and the plans for the unit as presently conceived are substantially different from what they were originally outlined. Also, the cost of the unit has gone up from about \$1.8 million to an estimated cost of somewhere between eleven and twelve million dollars.

In 1954, the Budget Bureau sent to the Congress a supplemental estimate for several projects in which it included the Helena Valley unit, with an estimate for \$250,000 and with a proviso that construction or no expenditures of this fund should be made until a repayment contract covering 30 percent of the estimated cost had been executed.

After hearings before the House and Senate Appropriations Committees, the Senate finally modified the proviso to state that none of the funds for the Helena Valley unit should be expended until a repayment contract was executed. The 30-percent limitation was eliminated. So the appropriation was finally passed in the supplemental appropriation bill for 1955 toward the close of the last session of Congress.

Senator O'MAHONEY. Where was the limitation requiring 30-percent repayment made?

Mr. LINEWEAVER. The Budget Bureau recommended that.

Senator O'MAHONEY. Which committee of Congress altered that?

Mr. LINEWEAVER. The Senate committee altered that. The House included the items in the supplemental appropriation bill as it passed the House with the 30-percent proviso included. When it came before the Senate, the Appropriations Subcommittee, over which Senator Cordon was then presiding, modified the proviso to eliminate any percentage.

Senator O'MAHONEY. When was that appropriation passed?

Mr. LINEWEAVER. Along in July of 1954.

Senator O'MAHONEY. A year ago.

Mr. LINEWEAVER. Yes, sir.

Senator O'MAHONEY. It was in the appropriation bill.

Mr. LINEWEAVER. In the supplemental appropriation bill.

Senator O'MAHONEY. Was it for fiscal 1955?

Mr. LINEWEAVER. Yes, sir.

Senator O'MAHONEY. When did the fund become expendable?

Mr. LINEWEAVER. It would be expendable when a repayment contract was executed.

Senator O'MAHONEY. Regardless of the fiscal year?

Mr. LINEWEAVER. Yes, sir; it is a continuing fund.

Senator O'MAHONEY. Is that your understanding, Mr. Dominy?

Mr. DOMINY. Yes, that is our understanding.

Senator O'MAHONEY. What was done then with respect to the repayment contract?

Mr. LINEWEAVER. Under instructions, as the record shows, the negotiations were opened with the local interests out there, of which Mr. Rossiter, president of the district, can tell more in detail.

Senator O'MAHONEY. Opened by whom?

Mr. LINEWEAVER. By representatives of the Bureau of Reclamation.  
Senator O'MAHONEY. Is it to be understood, then, that the Bureau of Reclamation and some of the settlers formed an irrigation district?

Mr. LINEWEAVER. Yes, sir, I will touch on that.

Senator O'MAHONEY. But they entered negotiations?

Mr. LINEWEAVER. Yes, sir.

Senator O'MAHONEY. Is there any question about that, Mr. Dominy?

Mr. DOMINY. No, sir.

Senator O'MAHONEY. That is the fact?

Mr. DOMINY. Yes, sir.

Mr. LINEWEAVER. I don't think it proper for me in this opening statement to go into the details of the negotiations.

Senator O'MAHONEY. No, I just want you to state the bare facts.

Mr. LINEWEAVER. Yes, sir. Along about last fall, then, the Budget Bureau heard the recommendation of the Department, and sent up an estimate in January, following hearings before the Budget Bureau, for the Helena Valley unit for \$3 million to continue construction, assuming that the \$250,000 would have been expended.

Senator O'MAHONEY. To continue construction?

Mr. LINEWEAVER. Yes, sir. They had an initial appropriation of \$250,000 in the supplemental bill. They set up \$3 million to continue construction.

Hearings were held on that during the appropriation hearings before both the House and Senate committees.

The House committee reported out the public works appropriation bill for 1956 in which an appropriation for the Bureau of Reclamation was included, and eliminated the \$3 million estimate for Helena Valley.

Senator O'MAHONEY. Was that the bill in which the House Committee on Public Works eliminated almost all of the reclamation projects?

Mr. LINEWEAVER. No, sir; I would not say almost all of them; probably half a dozen.

Senator O'MAHONEY. Half a dozen were eliminated.

Mr. LINEWEAVER. Yes, sir. We can place in the record why the committee, without naming Helena Valley, eliminated several items for the Missouri River Basin project, because of a lack of report or finding by the Department with respect to adequacy of future power revenues to discharge the cost of the irrigation works over and above the ability of the water users to repay. Later the committee in its report said it had eliminated Helena Valley because of no repayment contract.

Senator O'MAHONEY. What happened after that action by the committee?

Mr. LINEWEAVER. The bill was reported out to the floor and under an amendment offered on the floor, the entire amount for reclamation construction was restored, including the \$3 million for Helena Valley.

Senator O'MAHONEY. Was that the amendment offered by Congressman Miller of Nebraska?

Mr. LINEWEAVER. I believe it was Congressman Miller, the ranking minority member of the House Interior Committee?

Senator O'MAHONEY. And the House adopted that amendment?

Mr. LINEWEAVER. Yes, sir.

Senator O'MAHONEY. And several projects were restored.

Mr. LINEWEAVER. Yes, sir. Then the bill came over to the Senate and the Senate reported the bill out practically as it passed the House so far as reclamation was concerned.

Senator O'MAHONEY. You say practically; was there any change?

Mr. LINEWEAVER. Not insofar as Helena Valley was concerned. There were several other items added, including the Owl Creek unit in Wyoming for \$900,000, which was urged by you, and \$4 million for the Yellowtail Dam, in Wyoming-Montana. Those were two items that I recall offhand.

If you desire, I will have the entire list inserted in the record.

Senator O'MAHONEY. That is not necessary.

Mr. LINEWEAVER. Those two items were written in by the Senate Appropriations Committee, and approved by the Senate and accepted in conference, along with the restoration of \$3 million for the Helena Valley unit.

Senator O'MAHONEY. So what we have is an appropriation bill substantially approving the budget estimate.

Mr. LINEWEAVER. Yes, sir.

Senator O'MAHONEY. But changing the provision with respect to the repayment contract?

Mr. LINEWEAVER. No, sir; there is no proviso with respect to the \$3 million appropriation. That was tacked onto last year's \$250,000 appropriation.

Senator O'MAHONEY. The repayment contract had already been negotiated?

Mr. LINEWEAVER. No, sir; it had not been completed, but negotiations were in progress.

Senator O'MAHONEY. Would it be your understanding, and do the facts show, that it had progressed far enough to justify a recommendation from the Department of the Interior to the Bureau of the Budget, and approval by the Bureau of the Budget of the \$3 million appropriation?

Mr. LINEWEAVER. Yes, sir, Mr. Chairman, on pages 3 and 4 of the committee print, there is a copy of the appropriation justification filed by the Department and the Bureau with the Appropriation Committees, and which presumably was approximately the same as filed with the Budget Bureau. In this justification which is reproduced on pages 3, 4, and 5 of the committee print, at the top of page 4 appears this statement:

A draft of a repayment contract has been approved by the Commissioner.

Further on down on page 4, it states:

A draft of a 40-year repayment contract with a 5-year development period was approved by the Commissioner on November 5, 1954, for use in the formation of an irrigation district. The contract provides for repayment of \$832,000 of construction costs from full supply lands assigned for repayment by irrigation in a 40-year period. An additional contract may be considered to provide a water supply for 4,623 acres needing supplemental water. All proposed revenues are consolidated to achieve a projectwide payout of reimbursable construction costs. No specific allocations have been shown to other than irrigation in the tentative allocation other than the \$6,000 specific cost to recreation.

Senator O'MAHONEY. This lays the basis for the reason for this hearing.

Mr. LINEWEAVER. Yes, sir.

Senator O'MAHONEY. Senator Murray indicated to me that the Interior Department and the Bureau of Reclamation seem to develop some hesitation about proceeding with the construction.

Mr. LINEWEAVER. Yes, sir. May I complete the chronology a little more, Senator?

About the time that the hearings were going on before the House and Senate Appropriations Subcommittees (you will recall, because of the change in the nomenclature of the Appropriations Committee setup in the House) the hearings on the public-works bill—which is a new name for an appropriation bill this year—were delayed until late in the spring. Almost simultaneously with the hearing before the Appropriations Committee, Judge Fall, of the District Court of Helena—

Senator O'MAHONEY (interposing). The Appropriations Committee of the House.

Mr. LINEWEAVER. The House in May and the Senate later in June.

Judge Fall, on the petition of more than 60 percent of the full supply landowners of the Helena Valley, entertained a petition for the formation of the Helena Valley Irrigation District under Montana law. Judge Fall heard a number of witnesses. I have his statement here, and his final order. Subsequent to the hearing, he took the case under advisement and gave both sides opportunity to file briefs.

Along in the latter part of June, Judge Fall entered an order forming the district of some twelve or thirteen thousand acres of full supply land. He did not include any of the supplemental water land in the district. He signed the order on the 28th day of June 1955.

Senator O'MAHONEY. Who were the parties to this action?

Mr. LINEWEAVER. The owners of full supply land, of whom Mr. Rossiter was named as commissioner for division No. 1, Mr. John Baucus for division No. 2, Mr. Albert L. Olson for division No. 3, Mr. Henry Hibbard for division No. 4, and Mr. Al Hrella for division No. 5.

Senator O'MAHONEY. Were there any other participants in the case?

Mr. LINEWEAVER. Mr. Rossiter can give you the full story on that.

Senator O'MAHONEY. Was the Interior Department represented?

Mr. LINEWEAVER. Mr. Aldrich, the project manager for the Bureau of Reclamation in the Great Falls area, was a witness and excerpts of his testimony appear in the committee print.

Senator O'MAHONEY. On what page?

Mr. LINEWEAVER. Page. 16.

Senator O'MAHONEY. What is the position of Mr. Aldrich?

Mr. LINEWEAVER. He is projects manager of the Bureau of Reclamation at Great Falls, Mont.

Senator O'MAHONEY. He has jurisdiction over this project.

Mr. LINEWEAVER. I would say it comes within his jurisdiction.

Senator O'MAHONEY. Who asked the questions, do you know, which are set forth here?

Mr. LINEWEAVER. I would not know. Judge Fall simply sent this excerpt.

May I say this, Mr. Chairman: at the time that Judge Fall concluded the hearings, he made a statement from the bench, a copy of which will be inserted in the record, in which he said it had been a

long hearing, and he had given everybody an opportunity to be heard, and that he had come to his conclusion after thorough consideration of all phases of the case.

Under date of August 30, Judge Fall wrote to Senator Murray commenting on the action of the Bureau of Reclamation in not going ahead with the repayment contract and the construction as outlined in his court.

On August 17, Commissioner Dexheimer wrote to Senator Murray advising that additional repayment contract coverage would be required before construction could proceed. That letter appears in the committee print.

Senator O'MAHONEY. Let this letter of Commissioner Dexheimer be inserted in the record at this point in the presentation of Mr. Line-weaver together with replies.

(The documents referred to which appeared in the committee print are as follows:)

LETTER TO SENATOR MURRAY

DEPARTMENT OF THE INTERIOR,  
BUREAU OF RECLAMATION,  
Washington D. C., August 17, 1955.

HON. JAMES E. MURRAY,  
*United States Senate, Washington, D. C.*

MY DEAR SENATOR MURRAY: A repayment contract with the Helena Valley Irrigation District, Montana, is now before the Department for approval as to form. As soon as it is approved and executed, contract coverage will be attained for 12,533 irrigable acres of the 17,631 used in the definite plan report as the basis for the initiation of construction of the unit.

In order to assure compliance with the directives of Congress, however, and adhere at the same time to long-established Bureau policy, contract coverage for an additional 5,100 acres is needed to reach the full 17,631 acres mentioned in the definite plan report and in presentations to the Bureau of the Budget and the Congress. These 5,100 acres are lands now provided with a partial water supply through facilities constructed by the water users.

Perhaps because of differences in benefits to be derived from construction of the Helena Valley unit along with other reasons, the supplemental lands did not join with the lands in the Helena Valley Irrigation District which are to receive a full supply through the unit. Efforts thus far to organize the supplemental lands into a separate irrigation district have been unsuccessful. We believe, however, that supplemental irrigation service is essential and that in time suitable arrangements can be perfected to permit district organization and contract execution.

Since submittal of the definite plan report, a third water market has entered into the picture—that being the municipal and industrial market for the city of Helena. The city has retained a firm of consulting engineers to review water supplies and help develop a long-range plan. In this connection discussions between the city, its engineers, and the Bureau are in progress. However, they have not entered into the stage of contract negotiations. The existence of this potential market in itself does not offer the necessary assurance of financial returns to justify initiation of construction on the Helena Valley unit.

To summarize as matters now stand, a contract is before the Department which would be adequate to return to the Government full operation and maintenance costs and approximately \$800,000 of the estimated \$12 million construction cost of the unit within a period of 40 years. This contract will cover the Helena Valley Irrigation District which includes the lands to receive a full irrigation supply through project works. Thus far local support for the organization of a second irrigation district covering the lands to receive a supplemental irrigation supply has not been forthcoming. In addition to the supplemental lands which would return an amount approximately equal to full supply lands on the construction cost of the unit within a 40-year period, a potential municipal and industrial market exists in the city of Helena. Although the contribution of the city toward the capital costs of the unit is yet to be determined, it is known that this could be a significant amount.

In view of the above and with much regret, we are instructing the regional director in Billings to advise interested local groups that construction of the Helena Valley unit will not be initiated until the requirements for water service and repayment arrangements in advance of construction, as presented to and recognized by the Congress, have been met. This would be accomplished when suitable contracts have been negotiated with either the city of Helena or the supplemental lands, or with both of them.

Sincerely yours,

W. A. DEXHEIMER, *Commissioner.*

---

LETTER FROM REPRESENTATIVE METCALF

CONGRESS OF THE UNITED STATES,  
HOUSE OF REPRESENTATIVES,  
Washington, D. C., August 23, 1955.

Mr. W. A. DEXHEIMER,  
*Commissioner, Bureau of Reclamation,  
Department of the Interior, Washington, D. C.*

DEAR MR. DEXHEIMER: Your letter of August 17, 1955, informing me of your instructions to the regional director of the Bureau in Billings to delay the construction of the Helena Valley unit until a repayment contract has been executed by those who would use water from the project for the purpose of irrigating supplemental lands, has been forwarded to me by my Washington office.

I have been in close touch with the people who organized this project from the beginning. A secretary from my field office was present at the first meeting held in the State capitol 2 years ago. It has never been contemplated that the owners of the lands which would receive supplemental irrigation benefits would form an irrigation district, would execute a contract, or join with those receiving a full supply of water. I have talked with some of those who would make only a partial use and they have been adamant in their refusal to enter into a contract.

However, we have all recognized the situation you suggest in your letter, "that supplemental irrigation service is essential" and therefore the plan provided for the sale of water to these individuals. Most of the early negotiations with the Bureau and officials of the Billings regional office were concerned with the solution of this problem of the refusal of the supplemental users to enter into a contract or form an irrigation district, and I am sure that in your files you have correspondence and reports stating that if the supplemental users were required to execute a contract the project might as well be abandoned. The alternate proposal for disposition of water to the supplemental users on a sale basis was adopted. My files contain a summary of negotiations by my field secretary confirming this, and I have today talked with Mr. W. A. Rossiter who confirms this. He is preparing a chronological account of the entire history of the development of the project and will submit it to you in the next few days.

Of course the need for water for the city of Helena was never considered in the early stages of negotiations, as you point out in your letter. What the city does or does not do is dependent on the engineering report and waiting for action on its part would delay construction several years. My own opinion is that the city will ultimately turn to the Helena Valley for a source of supply for additional water, but this should be regarded as a development since the project was suggested that gives an additional reason for construction and not as a condition precedent to construction.

If I had ever been told that the Bureau was going to insist on repayment contracts from the supplemental users, I wouldn't have turned a hand for the project. Mr. Rossiter would never have made trips to Washington to testify before congressional committees. Helena citizens would never have gone to the trouble and expense of organizing an irrigation district. Because we all knew that the supplemental users would only come in on a sales basis. But we all did work for the project, relying on assurances from the Bureau that the contract which was recently submitted would be approved and with faith that after the construction was finished ultimately even the supplemental users would appreciate the benefits to be derived and help pay for it.

Your recent directive is like changing the rules in the middle of the game. The contract submitted is in conformity with our understanding all along and in conformity with the expressed declarations of the Bureau. The residents of Helena Valley will regard it as an unwarranted breach of faith on the Bureau's part if now you insist on the execution of a contract by the supplemental users, something that was never anticipated and that was always accepted as impossible.

I urge you to reconsider your recent directive, approve the submitted contract, and begin construction on the Helena Valley unit.

Very truly yours,

LEE METCALF, M. C.

---

LETTER FROM SENATOR MANSFIELD

UNITED STATES SENATE,  
Washington, D. C., September 14, 1955.

Mr. W. A. DEXHEIMER,  
*Commissioner, Bureau of Reclamation,  
Department of the Interior, Washington, D. C.*

DEAR MR. DEXHEIMER: On my return from abroad on an assignment for the Senate Foreign Relations Committee, I was most distressed to learn that the Bureau of Reclamation had advised local groups that construction of the Helena Valley unit be held up until contracts have been negotiated with either the city of Helena or the supplemental water users, or with both.

At the time of my departure early in August, I understood that the only remaining obstacle to construction was the approval of minor adjustments in a repayment contract with the Helena Valley Irrigation District, Montana, which is now before the Bureau. This insistence on a contract with the supplemental water users or the city of Helena is an about-face on the part of the Bureau, according to all the information I have at my disposal.

At the time of the hearings on the negotiation and formation of the plans for the irrigation district, allowances were made for supplemental water users, but it was agreed that the feasibility of the project did not depend upon additional water users becoming part of the Helena Valley Irrigation District. If this had been required, I am sure that the district would never have been formed. This action is a repudiation of statements made by regional representatives of the Bureau in the State.

Your letter of July 27, 1955, gave no indication that repayment contracts would be necessary from additional water users prior to construction of the unit. You made reference to service for the supplemental water users, but certainly not by contract.

As you know, Congress appropriated \$3 million to begin construction on this unit, believing that everything was ready except for signing the contract. If Congress had been advised to the contrary, it is likely that such a large appropriation would not have been approved. All indications lead me to believe that this recent reversal was made in haste and without proper study.

Attached is letter from the Governor of Montana, J. Hugo Aronson, and a copy of resolution No. 905 of the State water conservation board urging that the Bureau withdraw this recent order and begin construction on the Helena Valley unit. Please return the enclosures when they have served their purpose.

In closing, I wish to restate my protest of August 25, by telegram, and ask that you reconsider your recent directive, approve the submitted contract, and begin construction on the Helena Valley unit in the interests of the farm and rural economy of western Montana.

With best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

Enclosure.

## LETTER FROM ACTING CHAIRMAN TO ASSISTANT SECRETARY AANDAHL

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
September 27, 1955.

HON. FRED G. AANDAHL,  
*Assistant Secretary of the Interior,  
Department of the Interior, Washington, D. C.*

DEAR GOVERNOR AANDAHL: Senator Murray has referred to me as acting chairman of the Senate Committee on Interior and Insular Affairs, your letter of September 23 with respect to the Helena Valley repayment-construction program. The enclosed copy of your letter to Senator Hayden, chairman of the Senate Appropriations Committee, has been noted.

The conference on Thursday afternoon, September 29, at 2 p. m. in room 224, Senate Office Building, will be held as scheduled because Helena Valley residents have asked to be heard at that time. Your assistant, Mr. Frye, has advised that Secretary McKay, yourself, and Commissioner Dexheimer will not be available for this conference due to previous commitments. However, I respectfully request that an authoritative spokesman for the Secretary of the Interior and the Department of the Interior be present at the conference Thursday afternoon.

I am enclosing additional copies of the committee print on the Helena Valley situation.

Copies of this letter are going to Secretary McKay and Commissioner Dexheimer by riding page.

Sincerely yours,

JOSEPH C. O'MAHONEY, *Acting Chairman.*

Enclosures.

## LETTER FROM ASSISTANT SECRETARY AANDAHL TO CHAIRMAN MURRAY

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington, D. C., September 23, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
Washington, D. C.*

MY DEAR SENATOR MURRAY: We wish to acknowledge your letters of September 6, 1955, and September 13, 1955, concerning the extent of repayment contract coverage prerequisite to commencement of construction of the Helena Valley unit, Missouri River Basin project.

This matter has been reviewed fully in the light of the views expressed at the Appropriations Committee hearings and in the light of developments with respect to prospective arrangements with the supplemental water-supply lands. This review forced us to the conclusion that the proposed repayment contract with the Helena Valley Irrigation District which includes only the full water-supply lands could not be construed as satisfying what we interpret to be the views of the Appropriations Committees with respect to adequate repayment coverage prior to commencement of construction.

In view of the representations made by you and the other members of the Montana congressional delegation as well as State and local officials with regard to the urgency of immediate commencement of construction of the Helena Valley unit and in view of the circumstances leading to the formation of the Helena Valley Irrigation District, we are seeking the counsel and guidance of the Appropriations Committees in this matter. A copy of our letter of today to the chairmen of the House and Senate Appropriations Committees is enclosed.

We regret the confusion that has arisen with regard to Helena Valley unit repayment requirements and ask your indulgence pending receipt of the views of the chairmen of the Appropriations Committees. Please be assured that upon receipt of those views, this matter will receive immediate attention.

Sincerely yours,

FRED G. AANDAHL,  
*Assistant Secretary of the Interior.*

Enclosure.

## COPY OF LETTER TO CHAIRMAN HAYDEN OF SENATE APPROPRIATIONS COMMITTEE

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington, D. C., September 23, 1955.

Hon. CARL HAYDEN,  
Chairman, Appropriations Committee,  
United States Senate, Washington, D. C.

MY DEAR SENATOR HAYDEN: We earnestly solicit the counsel and guidance of the Appropriations Committee with regard to the repayment and construction program for the Helena Valley unit, Missouri River Basin project.

The Supplemental Appropriation Act, 1955 (Aug. 26, 1954, 68 Stat. 800, 814), and the Public Works Appropriation Act, 1956 (July 15, 1955, 69 Stat. 354, 357), made available \$250,000 and \$3 million, respectively, for the construction of the Helena Valley unit by the Bureau of Reclamation. A serious question has arisen with regard to the extent of repayment contract coverage which should be obtained before construction of the unit should be commenced.

The Helena Valley unit as now designed and proposed for construction includes capacity and facilities to serve some 13,000 irrigable acres with a full water supply and also capacity to provide a supplemental water supply to some 4,600 acres currently being irrigated. Federal construction of irrigation distribution works is limited to the 13,000 acres of full supply lands. It was contemplated that the full and supplemental water-supply lands in addition to meeting full operation and maintenance costs of the unit would repay approximately \$1.5 million in 40 years or about 13 percent of the construction cost of the unit. The Bureau of the Budget in connection with the initial appropriation request for this unit recommended that construction of the unit not be undertaken unless the water users had executed a contract to repay approximately 30 percent of the construction cost. The Congress in considering and approving the initial appropriation of \$250,000 in the Supplemental Appropriation Act, 1955, omitted any reference to the 30 percent but stipulated: "That no part of this appropriation shall be used to initiate construction of the Helena Valley unit, Montana, until a repayment contract has been executed."

Initially, it was contemplated that there would be a single contract executed with one district encompassing all of the lands to be served by the Helena Valley unit. Subsequently, the prospect of inclusion of the supplemental water lands in the proposed irrigation district became less likely as considerable discussion developed around suggestions of other means by which the supplemental water lands might arrange to procure project water. As the matter proceeded, it became clear that the supplemental water lands were not to be included in the district. Accordingly, on November 5, 1954, the Bureau of Reclamation gave informal approval to a form of contract for use prospective to the formation of the Helena Valley Irrigation District, dealing only with the some 13,000 irrigable acres of full supply lands for which a distribution system was to be built by the United States. It was believed that in due course the owners of the supplemental lands would form an organization of their own for the purpose of contracting with the United States for a supplemental water supply. It was believed also that a repayment contract initially with the 13,000 acres of full supply lands would provide an acceptable basis for going ahead with the construction of the Helena Valley unit. We are advised that this general approach played an important part in the legal proceedings leading to the formation of the Helena Valley Irrigation District in June 1955.

On July 5, 1955, the Board of Commissioners of the Helena Valley Irrigation District approved a proposed water service and repayment contract under which the district would assume the full cost of operation and maintenance of the Helena Valley unit (estimated at \$49,500 per year, or \$3.95 per acre) and would pay over a 40-year period a total of about \$800,000 to apply on the construction cost of the unit. Thereafter the printed hearings of the Appropriation Committees in connection with the fiscal year 1956 fund request for the Helena Valley unit became available and the proposed repayment arrangements for the Helena Valley unit were reconsidered in the light of the views expressed at the appropriation hearings together with developments concerning prospective arrangements with the supplemental water-supply lands. It was then determined that construction should not be undertaken until further commitments for payment of the costs were obtained.

It was estimated that about \$700,000 additional to apply on construction cost would be paid by the owners of the approximately 4,600 acres of irrigable lands

outside of the Helena Valley Irrigation District for a supplemental water supply. Since preparation of the original plan a potential additional market for Helena Valley unit water in the city of Helena has developed. At only a slight additional cost, the unit works can serve also the needs of the city of Helena for a municipal water supply to meet the anticipated future growth of the city. Discussions with city officials and their consulting engineers are now firming up this possibility. Preliminary thinking is that the city may repay with interest as much as \$942,000 to apply on the cost of construction of the Helena Valley unit.

At this time it is not possible to predict when repayment arrangements will be completed with either the lands in need of a supplemental water supply or the city of Helena. Postponement of construction of the Helena Valley unit until repayment arrangements with either the supplemental lands or the city of Helena, or both, are completed in addition to the proposed contract with the Helena Valley Irrigation District will mean that construction of the unit will be delayed indefinitely. In view of the circumstances leading to the formation of the Helena Valley Irrigation District and the apparent understanding of the water users of the district, that upon formation of a district including only the 13,000 acres of full supply lands and execution of a repayment contract by such a district, construction of the Helena Valley unit would proceed, we have been urged to proceed immediately with construction of the Helena Valley unit. Among those urging immediate construction following execution of the proposed repayment contract with the Helena Valley Irrigation District are Senator James E. Murray, Senator Mike Mansfield, Representative Lee Metcalf, Representative Orvin B. Fjare, Governor Aronson of the State of Montana, the State of Montana Water Conservation Board, and District Judge Victor H. Fall, first judicial district, Helena, Mont.

The Governor and the board have pointed up an additional reason for urging immediate construction of the unit in that some 3,500 acres of land in the Helena Valley Irrigation District are currently being irrigated by nonfederally constructed pumping plants which are now in hazardous condition with the result that there is a real possibility of interruption of water deliveries during a critical period of irrigation. The lands in question will be served by the gravity system proposed for construction as part of the Helena Valley unit.

We shall appreciate your advice on this matter at your earliest convenience so that we may know whether or not your committee believes that the Bureau of Reclamation should proceed with immediate construction of the Helena Valley unit. A similar letter on this matter is being sent to the chairman of the House Appropriations Committee.

Sincerely yours,

FRED G. AANDAHL,  
*Assistant Secretary of the Interior.*

Mr. LINEWEAVER. A few weeks previous to that, on July 27, Commissioner Dexheimer wrote to Senator Mansfield in a letter that appears starting at the bottom of page 7 of the committee print, appendix A.

Senator O'MAHONEY. Is that different in any respect?

Mr. LINEWEAVER. Yes, sir.

Senator O'MAHONEY. Let that be inserted also by reference.

Mr. LINEWEAVER. That letter indicates that only a few adjustments in the contract would be necessary.

After the receipt of the letter of August 17 by Senator Murray, copies were made public. Thereupon the district people there, and members of the Montana delegation, become very much disturbed about it, also the Governor of Montana and the State water conservation board.

On that occasion, then, under date of September 6, Senator Murray wrote to Secretary McKay, asking for an explanation or information regarding the change in the status of the negotiations with the district. That is, with respect to requiring additional repayment coverage.

Again on September 13, Senator Murray wrote another letter to Secretary McKay, following representations from the people in Mon-

tana, including the Governor and Judge Fall, with respect to what was termed a "change in signals" by requiring additional repayment coverage in the form of an additional contract from the supplemental water users, or from the city of Helena.

Senator O'MAHONEY. I think that covers the situation sufficiently at this point, except for the exchange of the letters which were addressed to Senator Murray and to Senator Hayden, chairman of the Senate Appropriations Committee, by Assistant Secretary of the Interior, Fred Aandahl, in acknowledgment of the letters written by Senator Murray on September 6 and September 13.

In the letter to Chairman Hayden of the Appropriations Committee, Secretary Aandahl has said in effect that the matter was being held up for the consideration of the Committees on Appropriations of both Houses.

(The letters referred to are as follows:)

LETTER FROM SENATOR MURRAY TO SECRETARY MCKAY

SEPTEMBER 6, 1955.

HON. DOUGLAS MCKAY,

*Secretary of the Interior,*

*Department of the Interior,*

*Washington, D. C.*

DEAR MR. SECRETARY: I am very much disturbed by Commissioner Dexheimer's letter of August 17 relative to the repayment and construction program for the Helena Valley unit, Missouri River Basin project, Montana. My concern has been heightened by information from Montana, especially with respect to representations made by Interior-Reclamation spokesmen regarding the construction program in connection with court approval of the formation of the Helena Valley Irrigation District.

You will recall that last year when the Bureau of the Budget recommended a \$250,000 appropriation to start construction of the Helena Valley unit, some political capital was made in Montana about this being a new start approved by the Eisenhower administration.

The Helena Valley Irrigation District was organized in good faith with the plain understanding, I am advised, that the form of repayment contract had been approved and that construction would start when the district was formed and repayment contract agreed to. The water users, in signing up for the formation of the district, agreed to the repayment contract as presented by Reclamation, I am informed, with the understanding that construction was to start.

The understanding was reinforced by the action of Congress this year in appropriating \$3 million for construction of the unit, as recommended by you and the Bureau of the Budget. The significance of the action of the House in restoring the appropriation after the Appropriations Committee had eliminated the amount must be recognized. Testimony before the House and Senate Appropriations Committees is confirmatory.

Frankly, Mr. Secretary, I am at a loss to understand what is going on with respect to the Helena Valley unit. The attached letter to me from Judge Fall, who approved the formation of the irrigation district, together with his letter to President Rossiter, of the irrigation district, adds to my mystification.

In order that I may have a clear understanding of the matter from the beginning to the present status, I will appreciate your giving instructions that the Committee on Interior and Insular Affairs shall be furnished promptly with a chronological report that will cover the following points:

1. Original instructions to the field with respect to negotiations of a repayment contract with the district particularly as it affected terms and the construction program.
2. Reports from the field with respect to negotiations.
3. Comments of Reclamation and Interior on negotiations or commitments to Congress in appropriations hearings or to the district.

4. Copy of contract (a) reported to Congress as approved on November 5, 1954, and accepted by district commissioners; (b) amendment to article 17 subsequently submitted to district but rejected by board.

5. Explanation of the conflicting points raised by Judge Fall in his letters to me and to Mr. Rossiter as contrasted with the previous representations by Reclamation as an agency of the Department.

6. Clarification of conflicts which Interior or Reclamation can contribute including any justification for present position of Reclamation or Department as contrasted with previous commitments.

As a United States Senator from Montana and as chairman of the Senate Committee on Interior and Insular Affairs, I am concerned with results rather than recriminations. Our experience with the Yellowtail Dam controversy illustrated that if we get all of the facts on the table, a solution is forthcoming.

It is my hope, Mr. Secretary, that you will take appropriate action to bring about a prompt solution of the vexing problems involved in the Helena Valley unit program.

I am bringing this matter to your direct attention as the responsible head of the Department of the Interior. Copies of this letter and the enclosures, as a matter of information, are being sent to Assistant Secretary Aandahl and Commissioner Dexheimer.

I thoroughly appreciate the administrative responsibility of the Department and Reclamation with respect to repayment commitments before construction begins, and I am not challenging that procedure, in the Helena Valley, especially in view of the proviso in the Supplemental Appropriations Act of 1954 requiring a repayment contract before construction. What is puzzling, however, is the change in signals somewhere along the line after the landowners had agreed to what they were told was an officially approved form of contract. Plus this, of course, are the unchallenged statements in the record of appropriations hearings and the justification material filed with the Appropriations Committee of Congress on the subject of the Helena Valley repayment contract approval.

Sincerely yours,

JAMES E. MURRAY, *Chairman.*

#### LETTER FROM SENATOR MURRAY TO SECRETARY MCKAY

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*September 14, 1955.*

Hon. DOUGLAS MCKAY,

*Secretary of the Interior, Washington 25, D. C.*

DEAR MR. SECRETARY: Attached to my letter of September 6, relating to the Helena Valley Irrigation District repayment-construction program, was a request for a reply with explanations by September 20. While I have been in Montana the past week, I have been urged to expedite replies to many inquiries I have received on this disturbing matter. Therefore, I am requesting that I have a reply by September 16.

Governor Aronson has sent me a copy of a strongly worded resolution by the State water conservation board, a copy of which was forwarded to you, requesting that you withdraw the demand for additional contractual arrangements on the Helena Valley unit. He urged my help and support to that end. The irrigation district has also forwarded me a copy of its resolution of August 26 detailing the proceedings leading up to its agreement to the contract draft originally presented to the water users.

I have also received a second letter from Judge Fall, who presided at the court proceedings at which the formation of the Helena Valley Irrigation District was approved. He enclosed an excerpt from the transcript of the hearings in substantiation of the basis for his ruling.

You are doubtless aware, Mr. Secretary, of the congressional history of the initial appropriation for the Helena Valley unit in the Supplemental Appropriation Act for fiscal year 1955. When the Budget Bureau recommended an initial appropriation of \$250,000 in a supplemental estimate in March 1954 it included a proviso that a repayment contract covering not less than 30 percent of the irrigation costs of the Helena Valley unit should be executed before construction should begin. The Congress rejected the 30 percent requirement and

merely stipulated that a repayment contract was to be executed before the initiation of construction.

I am sending copies of this letter to Assistant Secretary Aandahl, and Commissioner Dexheimer, as I did with respect to my request of September 6.

I trust it will not be an inconvenience to expedite the reply to my request.

Sincerely,

JAMES E. MURRAY, *Chairman.*

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Butte, Mont., September 22, 1955.*

Hon. JOSEPH C. O'MAHONEY,  
*Acting Chairman, Committee on Interior and Insular Affairs, United States Senate, Washington, D. C.*

DEAR SENATOR O'MAHONEY: Please refer to my note to you of September 9, requesting you to serve as acting chairman of our committee.

I am advised from Washington that Secretary of the Interior McKay had not, up to today, acknowledged receipt of my letters of September 6 and 13, relative to what appears to be a disconcerting change in signals somewhere along the line with respect to repayment contract negotiations on the Helena Valley unit, Missouri River Basin project, in Montana. I telegraphed Secretary McKay today calling his attention to the failure to respond to or even acknowledge my requests, copies of which had been sent to Assistant Secretary Aandahl and Commissioner Dexheimer, who have direct administrative jurisdiction in matters of this character. However, I feel the head of the Department cannot divest himself of responsibility by inaction.

In my telegram to the Secretary, I advised him that the failure to indicate that the Helena Valley situation was not being cleared up left me no alternative but to call a conference, under the auspices of the Senate Committee on Interior and Insular Affairs, where the whole subject could be reviewed and publicly aired. A copy of this telegram is attached for your information.

While I hesitate to impose on your time, I request that for this purpose you call a conference of Interior-Reclamation officials, including the Secretary, for Thursday, September 29, at 2 p. m. In the meantime, I have instructed that, for the information of yourself and all others concerned, a committee print be prepared as a report which will reveal all pertinent correspondence, official appropriation justifications, excerpts from testimony before Appropriation Committees, et cetera. You are to be furnished a copy of the print as early as practicable so you can familiarize yourself with the problem, and the apparently inexplicable manner in which it has been handled.

Incidentally, I recall few incidents that have aroused State and court officials, and local irrigationists to the extent that has been the case with this Helena Valley matter.

I hope this inquiry can be wound up promptly and satisfactorily in an hour or so on Thursday. If it is possible for me to get back to Washington, which I doubt, I will be glad to join you in the conference.

Incidentally, you may desire to ask the Department to bring us up to date on the Yellowtail right-of-way negotiations with the Crow Indians. It seems to me we must keep on top of this problem or the Yellowtail Dam construction will be stalemated.

Sincerely yours,

JAMES E. MURRAY, *Chairman.*

#### LETTER TRANSMITTING TELEGRAM

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*September 22, 1955.*

Hon. DOUGLAS MCKAY,  
*Secretary of the Interior,*  
*Department of the Interior, Washington, D. C.*

DEAR MR. SECRETARY: On telephonic instructions from Senator Murray, I am having delivered directly to your office the attached copy of a telegram dated today at Butte, Mont., from the Senator, as chairman of the Senate Committee on

Interior and Insular Affairs. Copies of the telegram are also being delivered to Assistant Secretary Aandahl and Commissioner Dexheimer.

The telegram relates to the Helena Valley repayment-construction program in Montana and the Senator's letters to you of September 6 and 13, to which our records show no acknowledgment, as well, of course, as no clarification of the matters presented.

I will be pleased to transmit promptly any response you may have to Senator Murray.

Sincerely yours,

RICHARD L. CALLAGHAN, *Chief Clerk.*

---

TELEGRAM TO SECRETARY MCKAY FROM SENATOR MURRAY

BUTTE, MONT., *September 22, 1955.*

MR. RICHARD CALLAGHAN,

*Chief Clerk, Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.*

Please have delivered directly to office of Secretary of Interior McKay, with copies to Assistant Secretary Aandahl and Commissioner Dexheimer, the following telegram with a request that acknowledgment, if not a complete reply, be made to me at my Washington office before the close of business September 23:

Dear Secretary McKay: Both my senatorial office and that of the Senate Committee on Interior and Insular Affairs advise me that no replies have been received to my letters to you of September 6 and September 13. Both communications dealt with the Helena Valley repayment-construction program and requested replies by September 20 and September 16.

I will ignore so far as I am concerned what appears to be at least oversights somewhere in your Department of a respectful request from me as a United States Senator and chairman of a regularly constituted committee authorized to inquire into matters of this kind. However, since my arrival in Montana, I have been besieged with inquiries on this subject.

These inquiries have come from the Governor of Montana, chairman of the State water conservation board, the judge of the court that approved formation of the Helena Valley Irrigation District, as well as the citizen water users concerned. None of us can understand the lack of response by the Department of the Interior, which has the responsibility for administering the reclamation law.

Therefore, Mr. Secretary, you leave me no alternative but to have a public inquiry where all the facts can be made a matter of public record. Accordingly, I, as chairman of the Senate Committee on Interior and Insular Affairs, will call a conference on the subject at the earliest convenient date. You, as the responsible head of the Department, will of course be expected to be present, together with such other Interior and Reclamation officials who can assist in getting clarification of this perplexing situation. The main objective, of course, is to get a repayment contract executed so that construction of the Helena Valley unit can start as the Congress intended when the \$3 million appropriation was made for fiscal year 1956.

Sincerely,

JAMES E. MURRAY, *Chairman.*

---

LETTER FROM SENATOR O'MAHONEY TO SECRETARY MCKAY

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*September 23, 1955.*

HON. DOUGLAS MCKAY,

*Secretary of the Interior,*

*Department of the Interior, Washington, D. C.*

DEAR MR. SECRETARY: Please refer to Chairman Murray's telegram of September 22 to you from Butte, Mont., relative to a conference on his behalf with Interior-Reclamation officials on the Helena Valley unit repayment-construction program problems. In accordance with a request from Senator Murray, I am scheduling the conference as acting chairman of the Senate Committee on In-

terior and Insular Affairs for 2 p. m., Thursday, September 29, in room 224, Senate Office Building. Because of Senator Murray's correspondence addressed directly to you, I trust you will find it convenient to be present.

I am sending copies of this invitation to Assistant Secretary Aandahl and Commissioner Dexheimer, who, I understand, have direct responsibility in the Helena Valley matter.

Copies of a committee print directed by Chairman Murray will be furnished all concerned before the conference.

Please have the committee staff advised who will be present at the conference both with respect to Helena Valley and as to any information on the Yellowtail Dam right-of-way progress in which both Senator Murray and I are directly interested.

Sincerely yours,

JOSEPH C. O'MAHONEY,  
*Acting Chairman.*

Carbon copy: Assistant Secretary Aandahl, Commissioner Dexheimer.

Mr. LINEWEAVER. That is right.

Senator O'MAHONEY. These committee prints Nos. 1 and 2 will be filed with the record. There is no need of inserting anything in the record except the letters which I have already indicated.

(Committee prints Nos. 1 and 2 were filed with the committee.)

Senator O'MAHONEY. Mr. Dominy, does this statement of facts accord with the Bureau's understanding?

Mr. DOMINY. Except for one minor point that I would like to mention. Mr. Lineweaver in the opening part of his summary used the word "continue" in connection with the \$3 million request in fiscal 1956. I believe he said we made the request to continue the construction on the Helena Valley unit. As a matter of fact, construction had not commenced and could not commence in our judgment until the limitation imposed by Congress concerning the actual establishment of repayment arrangements had been accomplished.

Senator O'MAHONEY. What was done with the original appropriation?

Mr. DOMINY. The original appropriation was used—what money was needed from that appropriation—to continue preconstruction activities, such as additional design and detailed investigation. But none of it was used to start actual construction work on the features of the project. The request in fiscal 1956 was therefore not on the basis of continuing construction; it was on the basis that, assuming repayment coverage to satisfy the requirements of the Congress, could be obtained, and it seemed possible and reasonable that they could be, the Department said it would like to have \$3 million additional to what was appropriated in fiscal 1955 so as to carry on an orderly construction program. But that request was predicated on satisfactory repayment arrangements being concluded.

Senator O'MAHONEY. Is it your understanding that the action of the Senate committee was to the effect that a repayment of \$800,000 would be sufficient?

Mr. DOMINY. No, sir; that is not the Bureau's and the Department's interpretation of the several actions of the Congress.

Senator O'MAHONEY. What was the actual language of the committee report? Do you have that, Mr. Lineweaver? This is with respect to the repayment contract.

Mr. LINEWEAVER. The Senate committee did not have anything in its report with respect to the Helena Valley repayment. Mr. Wood-

ruff, the clerk of the Senate subcommittee, calls my attention to the House committee report on the public works bill for 1956, in which this paragraph with respect to the Helena Valley unit—understand, this is the House committee report :

Additional funds for this project, Helena Valley unit, have been denied in view of the fact that a repayment contract has not yet been executed, and that approximately 86 percent of the project repayment must come from power revenues of the Missouri Basin project. As in the case of the Michaud Flats project, this action is taken without prejudice to the merits of the project.

Then subsequent, as I stated, the House by floor vote reinstated the funds for the Helena Valley unit, and Michaud Flats and several others.

The Senate committee report made no reference whatever to the Helena Valley unit or any requirements for repayment.

Senator O'MAHONEY. Let me ask, Mr. Dominy, if it is a fact that the repayment contract was negotiated by the Bureau of Reclamation with settlers on the proposed project.

Mr. DOMINY. Yes, sir. From the start, the Bureau urged that all of the 17,631 acres to receive water, both the lands to receive a full supply as well as the lands proposed for a supplemental supply, be incorporated if at all possible in a single district, and have a single repayment contract. That did not prove feasible. The owners of lands to receive supplemental water did not permit their lands to be included within the district. So in that event we did go ahead with a repayment contract on the basis of the 12,553 acres of full-supply lands in the district.

In our judgment that did not resolve the problem concerning the requirements of repayment, which have been laid down in the actions before the Appropriations Committees of the Congress.

Senator O'MAHONEY. Mr. Rossiter, are you ready to testify?

Mr. ROSSITER. Yes, sir.

Senator O'MAHONEY. Will you please come forward and take the stand?

Mr. ROSSITER. Yes, sir.

Senator O'MAHONEY. Let me first insert a telegram which I received yesterday from Gov. J. Hugo Aronson, of Montana. I will read it into the record. This is addressed from Helena, Mont., September 27, 1955, to me as acting chairman of the Committee on Interior and Insular Affairs.

It is very important that construction of Helena Valley unit proceed at once. Engineering details are complete and with approval of repayment contract by Bureau and its execution here construction can go forward. Present pumping facilities now being operated by State for part of district lands are in imminent danger of failure which would leave many families in a distressed position. I urge prompt favorable action on this project.

J. HUGO ARONSON,  
*Governor of Montana.*

A resolution of the State Water Board of Montana will also be inserted.

In addition to that telegram, I have 12 additional telegrams, all coming from Helena, Mont., with respect to this matter. These telegrams are opposed to the project, but in any event, I enter them in the record at this point, together with a letter from Judge Fall to Senator Murray.

(A previous letter from Governor Aronson with the resolution of the State Water Board of Montana and the telegrams referred to are as follows:)

LETTER FROM GOVERNOR ARONSON TO SENATOR MURRAY

STATE OF MONTANA,  
OFFICE OF THE GOVERNOR,  
Helena, September 9, 1955.

HON. JAMES E. MURRAY,  
Senate Office Building, Washington, D. C.

DEAR SENATOR MURRAY: The State water conservation board at its meeting September 7, 1955, adopted a resolution relative to delay in construction of the Helena Valley unit by the Bureau of Reclamation.

A copy of this resolution has been forwarded to the Honorable Douglas McKay, Secretary of the Interior, and I enclose a copy for your information.

As set out in the resolution, the board has a very real interest in securing construction of this project in that it is presently making a considerable sacrifice to furnish an irrigation supply to certain of the lands, through an antiquated pumping system. Failure of this system is going to leave many farm families in the valley in distress.

We will appreciate your help and support in this matter.

With kindest regards, I am

Yours sincerely,

J. HUGO ARONSON,  
Governor.

STATE OF MONTANA, STATE WATER CONSERVATION BOARD—RESOLUTION No. 905

Whereas, the State water conservation board has been notified that the Commissioner of the Bureau of Reclamation is requiring certain additional contractual arrangements before the Helena Valley unit can be placed under construction, and

Whereas this is a reversal of commitments made and often repeated by representatives of the Bureau of Reclamation as to conditions precedent to the construction of the Helena Valley unit and if allowed to prevail, lays open to question the integrity of an agency of the Federal Government, and constitutes a breach of faith with the water users involved, as well as this board, and will most certainly destroy the confidence of the citizens of Montana in any future negotiations with the Bureau of Reclamation, and

Whereas the requirement of such additional contractual arrangements is unwarranted from a financial standpoint in that the present repayment plan was adopted at the behest of the Bureau of Reclamation and the amount of repayment ability of the project remains unchanged, and

Whereas this board on November 12, 1953 advised Commissioner Dexheimer that it would undertake to continue irrigation service to some 3,500 acres of the lands now a part of the Helena Valley Irrigation District, which obligation it assumed pending a promise of construction of the Helena Valley unit as an integral part of the Canyon Ferry project, and to continue to furnish an irrigation supply to this 3,500 acres is rapidly becoming an impossibility because of the obsolete and worn out pumping system used for this purpose, and threatens each year to demand replacements beyond the financial ability of this board, and

Whereas citizens of Montana have made a considerable sacrifice of time, effort and money to meet all requirements previously made known to them and have formed the Helena Valley Irrigation District and are ready and willing to proceed under proposals made both orally and in writing by high officials of the Bureau of Reclamation: Now, therefore, be it

*Resolved*, That State water conservation board does hereby request the Honorable Douglas McKay, Secretary of the Interior, to withdraw the demand relative to additional contractual arrangements imposed as requirements precedent to construction of the Helena Valley unit, and immediately submit to the Helena Valley Irrigation District a repayment contract carrying terms in compliance with the negotiations and understandings heretofore reached by officials of the Bureau of Reclamation and the local water users, and upon the execution of said repayment contract that construction of the project be promptly initiated.

Resolution adopted September 7, 1955.

## LETTER FROM JUDGE FALL TO SENATOR MURRAY

FIRST JUDICIAL DISTRICT,  
Helena, Mont., August 30, 1955.

HON. JAMES E. MURRAY,  
*Senate Building, Washington, D. C.*

MY DEAR SENATOR MURRAY: Enclosed herewith is copy of letter which I have forwarded to Mr. Rossiter and to the other Members of Congress from Montana.

I want to call this particularly to your attention. I believe this copy letter is self-explanatory, and I understand that you have already been apprised of the situation with reference to the Helena Valley Irrigation District and what the Bureau of Reclamation has done recently in connection therewith. I feel very strongly about this for the reason that all of the facts are very clear in my mind, and I have never known an instance where such a gross breach of faith took place in any action by any governmental agency. I am frank to tell you that if any private individual within this jurisdiction should perform a comparable act, I should, without question, have him before me for contempt of court.

I think my views on this are probably entitled to somewhat more consideration than the litigants themselves for the reason that I was not an advocate in this proceeding at all, but presided only in the role of judge and formed the district as a result of the representations made by the representatives of the Bureau of Reclamation. In that connection, I might add that I have not the slightest question as to the good faith of the representatives who testified in my court. I am sure they spoke correctly and truthfully with reference to their own authority at the time of the hearing. This is simply a case of where someone back in Washington backed out on a committed promise made in a hearing in my court.

I am definitely disturbed about this because if we cannot accept promises by our Government made under the circumstances wherein they were made here, then it seems to me that a serious weakening is taking place in our governmental function.

I hope that you will find it possible in your good office to straighten out this situation. I know that you will give it the attention it merits, but I wanted to let you know that I feel very strongly about the situation.

Sincerely yours,

VICTOR H. FALL, *District Judge.*

---

HELENA, MONT., September 28, 1955.

Senator J. C. O'MAHONEY,  
*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

I've ranched in Helena Valley 53 years. Own 240 acres, 175 under proposed project. Under project will be forced to drain, plow, and level. Will be out of production 4 to 6 years. Then buy proposed water. Now have successful, well-balanced ranch program. Am definitely against project.

Mrs. MOSENA HELBERG.

---

HELENA, MONT., September 28, 1955.

Senator O'MAHONEY,  
*Senate Office Building, Washington, D. C.:*

As a landowner in the Helena Valley, I protest the formation of the Helena Valley Irrigation district. The cost is prohibitive for the 5,000 acres that can be benefited. For the remaining acres necessary it would be ruinous and totally unnecessary.

R. B. DOWNS.

---

HELENA, MONT., September 28, 1955.

Senator J. C. O'MAHONEY,  
*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

Urge entire Helena Valley unit of irrigation be held up indefinitely inasmuch as millions of acres are idled by the Government. Sons of our pioneer

farmers face ruin if forced to drain pastures and abandon hayfields to drain seeped lands, giving up productive economic programs which the Bureau demands.

GEORGE and ED LAMB.

---

HELENA, MONT., September 28, 1955.

Senator J. C. O'MAHONEY,

*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

We protest easing acreage requirements to activate Helena Valley unit. Millions of acres now lie idle in United States. Why put new ground into use? Established farms are to be destroyed by the project. Needed water can be had from Montana Water Conservation Board much more readily and economically.

PETER J. GROSS.

---

HELENA, MONT., September 28, 1955.

Hon. JOSEPH O'MAHONEY,

*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

We have 1,000 acres in the Helena Valley and have 317 inches of adjudicated water. We do not want more water and if a canal is run above our place it would make it too wet. We are definitely against proposed Helena Valley irrigation District.

TOM HERRIN.

---

HELENA, MONT., September 28, 1955.

Senator J. C. O'MAHONEY,

*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

Urge an impartial investigator come to interview farmers opposed to contract on Helena Valley project and report to Department of Interior before reclamation Bureau be authorized to squander more millions to destroy present prosperity here. Already much misinformation has been used to promote the district.

HUGH D. SMITH.

---

HELENA, MONT., September 28, 1955.

Senator J. C. O'MAHONEY,

*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

We protest forming of Helena Valley irrigation project. Having farmed for 43 years, we feel from actual experience, plus hard labor, involved it would be a nonpaying proposition to enter into such an enormous cost to taxpayers, more profits gained from grazing than irrigated land, as less cost is involved.

JOHN HURNI.  
EMILIE HURNI.

---

HELENA, MONT., September 28, 1955.

Senator J. C. O'MAHONEY,

*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

In regard to the hearing over the Helena Valley water project, May I as prospective supplementary water user, state that I have no desire nor intention of using any water under such any proposed project. At present I have decreed water rights and wells to supply my water needs. Would appreciate your support in this matter.

M. G. DONALDSON.

TOWNSEND, MONT., *September 28, 1955.*

HON. JOSEPH O'MAHONEY,  
*Acting Chairman, Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

Can buy Helena Valley six times for the price to build canal. Water too high priced for short growing season. Government farm-support loss during 1955 already over \$799 million. I need my meadowland and pasture as is. Do not want to be forced to raise cultivated crops. Do not want to be drained. We have had enough trouble with Government control.

HENRY A. MEYER.

HELENA, MONT., *September 28, 1955.*

Senator O'MAHONEY,  
*Acting Chairman, Senate Interior Committee, Washington, D. C.*

HONORABLE SENATOR O'MAHONEY: As a prospective supplementary user from the Canyon Ferry irrigation project, I am opposed. My land is subirrigated, and any additional water above me would necessitate a drainage system. Do not want my land cut up with ditches. Have sufficient irrigation water now.

M. A. HALVERSON.

TOWNSEND, MONT., *September 28, 1955.*

HON. JOSEPH O'MAHONEY,  
*Acting Chairman of Senate Interior Committee,  
Senate Office Building, Washington, D. C.:*

Helena Valley project too expensive to be feasible. Have included acres of subirrigated pasture land that is better as is. Have creek water. Why get more debt to grow more surpluses? Poor land won't justify the high-priced water.

PERRY L. STANFILL.

HELENA, MONT., *September 28, 1955.*

HON. JOSEPH O'MAHONEY,  
*Acting Chairman, Interior Committee,  
Senate Office Building, Washington, D. C.:*

I have a ranch in the Helena Valley and make my living by raising wild hay and pasture, also trading in livestock. My ground is subirrigated; more water will ruin my land; the water level is up 5 feet now over last year, and the driest August since 1941. If they run a canal above my place, I would have to move on account of the seeping. I am against the canal.

LEONARD FRANK.

Senator O'MAHONEY. Mr. Rossiter.

### STATEMENT OF W. A. ROSSITER, CHAIRMAN OF BOARD OF DIRECTORS, HELENA VALLEY IRRIGATION DISTRICT

Mr. ROSSITER. I am chairman of the Helena Valley Irrigation District as finally formed. I also represent the Helena Valley Water Users Association, and the Lakeside Water Users Association, which were the associations that were operating the old plant as it is now being used, and on which irrigation has for the past 30 to 40 years furnished water for the Helena Valley.

Mr. Chairman, I appreciate the opportunity of taking your time in this matter. I have been here 2 or 3 times on it, and have been intimately acquainted with the negotiations of the matter from its inception.

The present situation, as pointed out by the governor, which has brought this on, is that the plants in Helena Valley have deteriorated over a large number of years inasmuch as the Montana Power Co. originally operated them, and they had a 30-year contract.

Senator O'MAHONEY. With whom?

Mr. ROSSITER. With the people in Helena Valley, to furnish water. That was in connection with their storage on the Missouri River. It is way behind my time.

Senator O'MAHONEY. The Montana Power Co.?

Mr. ROSSITER. Yes. They had a 30-year contract which ran out in 1942. At that time they stated that they were through with being in the irrigation district, and were going to quit.

Senator O'MAHONEY. With whom was this contract made?

Mr. ROSSITER. That was with the individual farmers in the valley.

Senator O'MAHONEY. Do you know how many were participating in the contract?

Mr. ROSSITER. To be perfectly frank, I do not know the total. It would be somewhere around much the same number as are there now.

Senator O'MAHONEY. How many acres?

Mr. ROSSITER. That originally covered around 12,000. Over the years that deteriorated down so that now it is down around 5,000 that are being irrigated under that.

Senator O'MAHONEY. In other words, only 5,000 acres out of the 12,000 originally included in the Montana Power Co. contract are now receiving water.

Mr. ROSSITER. That is right, that are now being served.

Senator O'MAHONEY. Do you wish the committee to understand that the Montana Power Co. facilities were not adequate to perform the necessary job of supplying water to the 12,000 acres plus?

Mr. ROSSITER. That is right. The service was not adequate. The costs were too high so that a large part of the land went out because the farmers could not keep up the cost on an acre-foot basis which the Montana Power Co. was selling it at. They went out naturally because of that. So it deteriorated down until now it is around five or six thousand acres that are being irrigated. Their contract ran out so that they did not have to go ahead with it any more. They said, "We are out of the irrigation business."

Senator O'MAHONEY. When did that happen?

Mr. ROSSITER. That happened in 1942. Then because of the war, they agreed to go on on a stopgap basis until the war was over. When that came to an end, we felt that the water was going out, and we made an arrangement with the water conservation board to take over the operation of the plant.

Senator O'MAHONEY. You mean the State water conservation board?

Mr. ROSSITER. The Montana State Water Conservation Board, to take over the plants, and operate them under contracts with individual water users associations which were formed. Of course, the water conservation board did not have the money and facilities in any way to rehabilitate the plant and put it in operating condition as it should be, so it has just been limping along with the condition of the plant as the Montana Power Co. left it.

You can well see how that would be. As they came to the end of their contract, they did not keep up the plants, and let them deteriorate

to the point so that they were not in very good condition when we took them over.

Senator O'MAHONEY. How did the Bureau of Reclamation get into the picture?

Mr. ROSSITER. When the Canyon Ferry Dam was first instigated—when they came to Congress—one of the main features of the dam along with the other incidental flood control and power features, was that it would furnish irrigation to the area. Knowing that the power company was going out, we all felt that this was the answer to our problem. We were negotiating with the Bureau about getting water out of the Canyon Ferry Dam, that they were building.

In the construction of the dam with this in mind they left an outlet as an integral part of the dam which is now sealed off. This outlet was to take water out of the dam for this particular project.

Senator O'MAHONEY. I understand you, then, to say that when the Canyon Ferry Dam was built, it was so planned by the Bureau of Reclamation as to provide an outlet from which water could be diverted for the use of this particular project.

Mr. ROSSITER. That is right.

Senator O'MAHONEY. But that was never done?

Mr. ROSSITER. No, that was not done as an integral part of the construction of the dam. In other words, the final irrigation works were not taken in during the period of construction of the dam. Opening was left there so that when the time came for putting in an irrigation district, all they had to do was to open up the upper side of the plug, and the water would flow out into the system that was to be built.

Senator O'MAHONEY. When was that Canyon Ferry Dam completed?

Mr. ROSSITER. That was completed, I think, in 1954 finally. It started in 1952.

Senator O'MAHONEY. What were you doing for water in the meantime?

Mr. ROSSITER. Under our contract with the water conservation board, they have been operating these two pumping plants that were turned over to them without cost by the Montana Power Co. as just a stopgap proposition. We have kept up the repairs and have been limping along with the present plants.

Senator O'MAHONEY. When did you first talk of having a reclamation project of your own for this valley?

Mr. ROSSITER. All the time that the Canyon Ferry Dam was being build, we felt, and were interested in seeing what they were going to do, and kept in touch with the Bureau as to the progress being made.

In 1953—the latter part thereof—the Bureau representatives came to the people and asked a group to get together. That group was sparkplugged originally by the Lakeside Water Users Association and the Helena Valley Water Users Association.

Senator O'MAHONEY. But in 1944 the Flood Control Act containing reference to the Missouri Valley overall plan was enacted.

Mr. ROSSITER. That is right. Of course, the people in the area had gone into that. We went into it when Montana Power Co. indicated that they were going to quit. We started on the idea of getting water from any dam that was available.

Senator O'MAHONEY. With whom did you negotiate that?

Mr. ROSSITER. There was no actual negotiation at that time.

Senator O'MAHONEY. You had conversations, did you not? Whom did you approach to get the Bureau of Reclamation interested?

Mr. ROSSITER. To be perfectly frank, I was not in the matter at that time, and I am not conversant who was approached other than that I know that meetings were held, and Mr. Sloan was the first one that came out and proposed it under the Pick-Sloan Act. He held public meetings, and at that time it was gone into.

Senator O'MAHONEY. Were you there at the time that Mr. Sloan came out?

Mr. ROSSITER. I was at the first meeting that Mr. Sloan had in Helena when he described what was going to happen to the development of the Missouri River.

Senator O'MAHONEY. What statement was made on behalf of the Bureau of Reclamation by Mr. Sloan or anybody else with respect to the inclusion of Helena Valley in the Missouri Basin Pick-Sloan plan?

Mr. ROSSITER. At that time I don't think Mr. Sloan was particularly acting for the Bureau of Reclamation. He was developing the overall picture of the Missouri Basin. He described a very vast operation. He was going to irrigate 35,000 acres in Helena Valley. He was going to take water rights and transfer them up above. It was a big program. That was a public meeting. A major part of his conversation was on the benefits to be derived in the area from irrigation from this development.

Senator O'MAHONEY. Now, tell us about the more recent developments, and the initiation of negotiations with the Bureau of Reclamation and the presentation of the matter to the court.

Mr. ROSSITER. In November 1953 the Bureau representatives in our district asked the water conservation board to call a meeting of the interested parties. This meeting was held.

Senator O'MAHONEY. By that, you mean that Bureau representatives asked the State board of conservation to call a meeting?

Mr. ROSSITER. That is right.

Senator O'MAHONEY. Can you name the persons who did this?

Mr. ROSSITER. Mr. Aldrich was there, I remember, and Mr. Lubbe.

Senator O'MAHONEY. Is that the Mr. Aldrich who testified before Judge Fall?

Mr. ROSSITER. That is right.

Senator O'MAHONEY. Very well.

Mr. ROSSITER. Mr. Lubbe, another employee of that area. My recollection is that there was an attorney of the Bureau there. I am not sure of his name. I would not say what his name was. The members of the State water conservation board were there. The Governor was not present at that time. The officers of the Lakeside Water Users Association were there, and the officers of the Helena Valley Water Users Association were all present.

At that time we were informed that the Bureau had requested Mr. Aldrich to determine just what the people in the valley wanted, and what they could do in relation to forming a district, and what repayment costs they could handle. They were sent out at that time to investigate what could be done to now initiate the Helena Valley project. Several hours were taken up in that meeting.

It was determined by the various people there as to about what amount could be repaid on this project and what this land could stand and how the district could be formed, and what it would entail. At that very inception date, of this project, all the acres of land that would be incorporated were brought up.

We were well aware of the condition of interfering with decreed water rights at that time, and knew that we would have to stand or fall on the basis of full supply land. By that I mean that we felt and feel at the present time that money would be derived from sale of water to supplemental water users who had decreed rights, but as far as contracting with them and getting them to agree to a fixed amount of acreage for which they would buy a fixed amount of water, that it was an impossible situation. They felt that they were satisfied with the amount of water that they had, and that they could farm and that they would not commit themselves to a guaranteed annual charge.

Senator O'MAHONEY. Who were these individuals?

Mr. ROSSITER. Those are the supplemental water users, as we call them, and which show in the record as encompassing somewhere around 4,200 to 4,600 acres. They are people who have decreed rights on creeks that run into the valley from various directions. Of course, their only cost is the upkeep of their ditches. It is much cheaper than any pumping plant.

Senator O'MAHONEY. Do I understand you to say that you and your associates who wanted the fully supply had no intention at any time of interfering with the State water decrees which these other individuals owning 4,600 acres held?

Mr. ROSSITER. That is right.

Senator O'MAHONEY. You did not seek to have them participate in the repayment contract?

Mr. ROSSITER. That is right. In a written repayment contract, guaranteeing a yearly return or repayment to the Government, because of the fact that we had in various meetings seen what their reaction to it was. In fact, going back to this first meeting of Sloan's he proposed that.

Senator O'MAHONEY. Were they included in the contract that was negotiated by the Bureau?

Mr. ROSSITER. They were not included. They were not only not included, but during none of the negotiations which were carried on from that date in November 1953, up to July 1954, was there any attempt to include them. There was never any request direct to us to negotiate any contract with them.

Senator O'MAHONEY. When you say no request was made of you, do you mean to have the committee understand that the Bureau of Reclamation made no request to include them?

Mr. ROSSITER. The Bureau of Reclamation did not attach any strings to this project at all, that we had to negotiate a contract and get that tied down in a written contract for these supplemental lands to bear in the expense of this contract to initiate construction.

The first resolution drawn by these water-users associations, which appear in committee print on page 23—and this was the resolution which initiated the negotiations for this unit—contains this wording:

That the board of directors of the two associations go on record as recommending to their water users the acceptance of the recommended plan of the

Bureau of Reclamation with a modification that the district to be formed only take in the acreage that will have to have a full supply of water and that the acreage needing supplemental supply be handled on a sale of water basis.

That was the joint resolution of the two associations.

Then in the resolution of the Helena Valley Water Users Association, singly, which was part of this project, which starts on the bottom of page 23, the motion was passed:

That the Helena Water Users Association join with the Lakeside Water Users Association as being in favor of the recommended plan of the Bureau of Reclamation for Helena Valley on a smaller district, leaving out of the district the lands which only use supplemental water, and that the said Helena Valley Water Users Association was of the opinion that \$5.25 per acre would be the maximum amount that the water users could economically pay for the land to be irrigated.

We have never deviated from that position. If the Bureau of Reclamation was going to insist on a written contract with the supplemental water users, we never felt that the project could go. All our negotiations have been on that basis.

Senator O'MAHONEY. Let me ask you to define the Lakeside Water Users Association.

Mr. ROSSITER. Under the old original operation of Montana Power Co., there is what is known as Helena Lake, in which they have two pumping plants. One pumping plant is on the south side of the lake and one on the north side. The one on the south side of the lake pumps water in an easterly direction and takes care of a lot of the lands on the uplands, and the other plant goes around the valley and encompasses land that is out further in the valley. Montana Power Co. operated them as one system.

When we took over with the water conservation board, it split up into two systems. One association was formed to take over one plant, and the other association to take over the other plant. One was called the Lakeside, and the other the Helena Valley. That is where the two names come from.

Senator O'MAHONEY. Are any of the supplemental water users members of either of those organizations?

Mr. ROSSITER. No. The supplemental water users did not take water out of the original pumping plants and were not members of the two associations.

Senator O'MAHONEY. So that the supplemental water users were not represented in any of these actions which you described in behalf of the Helena Valley project.

Mr. ROSSITER. Not in initiating. Some of the supplemental water users became involved as this thing progressed and as the district was formed and as the confines of the district were laid out because of the fact that there were some lands that had no water at all and were lands that would be picked up by a drainage system which is encompassed in the Bureau's plan. When they were drained, they would then be in position to be formed and with good quality land.

There are one or two in the district that was finally formed who are in that classification. They have supplemental water on certain lands, and part of the lands that they have no water on came into the area of the district. So there was a dual condition there, but that was very small.

Senator O'MAHONEY. In order to clarify the relationship of the lands involved here, let me ask you, Would a geographical boundary,

including all of the full water lands, include lands of the supplemental users?

Mr. ROSSITER. No. The geographical boundary of the district as finally formed went around the supplemental water users and did not take in their lands on which they had water rights.

Senator O'MAHONEY. They were not included, then?

Mr. ROSSITER. That is right. They were not included in the formation of this district.

Senator O'MAHONEY. Although when you say the boundary went around them, what is the picture you wish to convey?

Mr. ROSSITER. The boundaries of the irrigation district were set out so that they did not include the lands of the supplemental water users where they already had water.

Senator O'MAHONEY. The lands of the supplemental water users were excluded from the district that was formed?

Mr. ROSSITER. With the exception of these ones I mentioned, one or two, who had lands separated from the ones that they had rights on. The district did take those in.

Senator O'MAHONEY. As you see from your point of view, were the owners of the supplemental water lands affected by the creation of the district?

Mr. ROSSITER. They were not. We knew that they had decreed water rights on these creeks. There was some question whether that was sufficient, but that was for them to determine whether it took effect and cut their water down. They thought it was sufficient. Therefore, they would not join with us in forming the district and entering into a contract with the Government to repay.

Senator O'MAHONEY. Are you of the opinion that the contract which was made imposes no obligation on the owners of these other tracts?

Mr. ROSSITER. The contract as submitted to us had no reference whatever to the supplemental water users.

Senator O'MAHONEY. You say that the contract was submitted to you. When was it submitted to you and by whom?

Mr. ROSSITER. It first came out in November 1953, so that we generally knew what the contract was.

Senator O'MAHONEY. Where did it come from?

Mr. ROSSITER. It came from the Bureau of Reclamation.

Senator O'MAHONEY. Was it drafted in the Bureau of Reclamation?

Mr. ROSSITER. It was drafted either in Great Falls or Washington. I don't know which.

Senator O'MAHONEY. What I want to know is whether it was drafted by your people or by the Bureau.

Mr. ROSSITER. It was drafted by the Bureau of Reclamation.

Senator O'MAHONEY. Was it satisfactory to you?

Mr. ROSSITER. It was when it was first proposed, and then in July 1955 after the district had been formed by the court, it was presented to the commissioners of the district, as formed, for their approval as to form and was agreed upon. We were then informed at that time it would be submitted to the Commissioner in Washington.

Senator O'MAHONEY. When you say it was submitted to the commissioners of the district, whom do you mean?

Mr. ROSSITER. They were the commissioners that were appointed by the court after the irrigation district was formed, as required by law.

Senator O'MAHONEY. Who were they?

Mr. ROSSITER. Myself, Mr. Baucus, Al Hrella, Henry Hibbard, and the court appointed Mr. Olson, who for reasons of his own declined to act.

Senator O'MAHONEY. In committee print No. 1, on page 23, at the top of the page, I find a list of names of persons attached to exhibit Q, which is a summary of the negotiations leading to developments and construction of Helena Valley unit of the Missouri River Basin project, and the formation of Helena Valley district. It names there John J. Baucus, H. S. Hibbard, Albert Hiller, commissioners, and then is added the attesting signature of H. Allen Shumate, secretary. Your name is not on that.

Mr. ROSSITER. That is right, because of the urgency of getting it out, I was out of town when it was mailed. The original had signed signatures, and my name was not on there.

Senator O'MAHONEY. Were all three of these names, excluding the name of the secretary, the names of the commissioners appointed by the court, excluding yours?

Mr. ROSSITER. That is right. I would like to amend the print in that Albert Hiller is misspelled. That is H-r-e-l-l-a.

Senator O'MAHONEY. Let me ask you to turn to page 4 of the committee print. There you will find the statements in the estimate submitted to the Committee on Appropriations by the Bureau of the Budget from which Mr. Lineweaver read at the opening of this session. I will call your attention to the second paragraph which follows after the total unit costs set forth as \$11,989,000. It reads as follows:

A draft of a 40-year repayment contract with a 5-year development period was approved by the Commissioner (meaning the Commissioner of Reclamation, Mr. Dexheimer) on November 5, 1954, for use in the formation of an irrigation district. The contract provides for repayment of \$832,000 of construction costs from full supply lands assigned for irrigation on a 40-year period. An additional contract may be considered to provide a water supply for 4,623 acres needing supplemental water.

Disregarding the last sentence and having in mind solely the draft of the 40-year repayment contract with the 5-year development period, which was approved by Commissioner Dexheimer on November 5, 1954, is that or is it not the contract that you and your associates, as commissioners of the local irrigation district, the Helena Valley district, also approved?

Mr. ROSSITER. That is the contract that was presented to us and under which we operated and was the final one submitted to us after the district was formed and we were appointed.

Senator O'MAHONEY. Was it acceptable to you?

Mr. ROSSITER. It was acceptable to us.

Senator O'MAHONEY. Is it not acceptable to you?

Mr. ROSSITER. It is not acceptable now. When they presented it in July again, after the district was formed, they put some minor additions onto it, such as race discrimination and things of that kind, which we agreed to. Then, in the final draft they added to it the thing that is the crux of the whole matter, wherein the Commissioner—

Senator O'MAHONEY. Where are you reading from the committee print?

Mr. ROSSITER. On page 22, under August 19, 1955, subparagraph 3 (a), modification of article 17 by adding the lines:

The commencement of construction of any works identified in this contract is contingent upon the conclusion of such further contractual arrangements as may be determined by the Secretary to be necessary and satisfactory for the disposition and employment of water in addition to the district supply which is contemplated will be made available by the unit works.

That was the amendment which they offered in their final contract which we as commissioners refused to agree to because it was a change from what we had been operating under from the very inception of negotiations and no intimation was given to us of any such thing until that was sprung on us.

Senator O'MAHONEY. Do I understand that was conveyed to you in August 1955?

Mr. ROSSITER. In August of 1955.

Senator O'MAHONEY. And that language which you have just read was not contained in the contract approved by the Commissioner of Reclamation on November 5, 1954?

Mr. ROSSITER. It was not.

Senator O'MAHONEY. It was not before the Committee on Appropriations when the committee acted in the early part of this year?

Mr. ROSSITER. It was not. It was never broached that I can find until in August 1955 when they presented it to us in the final draft.

Senator O'MAHONEY. It is evident from this, I will say to the representatives of the Commissioner and the Interior Department, that this change in the contract from its terms when submitted to the Appropriations Committee by the Bureau of the Budget at the time the estimate was made after Congress had adjourned and after the appropriation had been made.

#### STATEMENT OF FLOYD E. DOMINY

Mr. DOMINY. Mr. Chairman, the contract, of course, was never submitted to the Congress. There was nothing submitted to the Congress except a statement concerning a 40-year repayment contract with a 5-year development period.

Senator O'MAHONEY. Pardon me just a minute. I must try to harmonize what you have just said with the statement I read from the justification which was submitted to the Appropriations Committees of the House and Senate before the hearing in May 1955, set forth on pages 3 and 4 of the committee print. The sentence which I read to Mr. Rossiter I now read to you from page 4:

A draft of a 40-year repayment contract with a 5-year development period was approved by the Commissioner (meaning the Commissioner of Reclamation) on November 5, 1954, for use in the formation of an irrigation district.

You don't modify that sentence, do you?

Mr. DOMINY. No, sir; not at all. I wish to point out that the change made in the contract does not in itself affect the contract with the Helena Valley Irrigation District at all. The repayment obligation and all remain the same. The only reason for the addition of that sentence was to make clear in the contract with the Helena Valley

Irrigation District that it was now the position of the Department that the requirements imposed by Congress, and the understandings reached with Congress in the process of two hearings—1955 supplemental and 1956 regular appropriation hearing—in the judgment of the Department we are not in a position to commit the Federal Government to proceed with the construction of the Helena Valley unit with only this repayment document in hand. That was the only reason for the addition of that language. The language in and of itself has no bearing on the repayment arrangements with this district, sir.

Senator O'MAHONEY. If it has no bearing on the relations with this district, why is there any difficulty in proceeding with the arrangements with the district?

Mr. DOMINY. There is no difficulty in proceeding with the completion of the contract with the district. The problem arises, however, because this district does not embrace all of the lands to be served by the Bureau's Helena Valley unit, which has been presented to the budget and to the Congress—

Senator O'MAHONEY. My attention is called to a letter dated July 27, 1955, addressed to Senator Mansfield, which appears on page 8 of the committee print, the last sentence in the paragraph beginning with the words, "We understand," which reads as follows:

Following approval and execution of a satisfactory form of repayment contract, we will be in a position to proceed with construction of the unit.

This is a sentence taken from the letter of Commissioner Dexheimer to Senator Mansfield, dated July 27, 1955. Did that letter of Mr. Dexheimer indicate any intention on the part of the Bureau to vary its policy?

Mr. DOMINY. No, sir. That letter did not go into this problem. As a matter of fact, the problem was under active review immediately following the letter of July 27, both in the Solicitor's office and in the Department. There were many of us who had believed for a long while that the association made up of the supplemental landowners was already of such form that it would be possible for the Government to deal with that association in a second contract.

At about this time, soon after this letter was signed, the decision was reached, however, that because this association did not have the power to assess and levy taxes, it was not an organization that we would be authorized to deal with under reclamation law.

Senator O'MAHONEY. That decision was made after the justification had been submitted to the Appropriations Committee; was it not?

Mr. DOMINY. The justification as submitted to the Appropriations Committee, Senator O'Mahoney, deals only with the contract then in process for 12,553 acres. We did not go into the details except to point out in the sentence which you read a moment ago that a second contract may be necessary. That was the decision we were concerned about at the moment. Following the hearings the firm decision was reached on the basis of our review of the record that additional repayment coverage was a requirement.

Immediately upon that firm decision being arrived at, the Montana delegation and the district were so advised.

Senator O'MAHONEY. When the justification was submitted, Mr. Dominy, the repayment contract had been approved.

Mr. DOMINY. For 12,553 acres.

Senator O'MAHONEY. And that approval was on November 5, 1954?

Mr. DOMINY. It was approved by the Commissioner as a preliminary draft for organizational purposes at that time, yes. In other words, it did not have final consideration in the Department of Interior, nor did it have secretarial approval as to form. Contracts are never submitted to the Secretary for formal approval until after they have been negotiated in full with an irrigation district, and approval obtained on that draft by formal resolution of the district board.

Senator O'MAHONEY. Of course, it does say a draft of a 40-year repayment contract with a 5-year development period was approved by the Commissioner on November 5, 1954, for use in the formation of an irrigation district.

Mr. DOMINY. That is right, sir.

Senator O'MAHONEY. Then it recites what the contract provides, and then adds this other sentence:

that an additional contract may be considered to provide a water supply.

Do you know whether any testimony was given to either of the Appropriations Committees that this was merely a preliminary draft, and that, though the justification said it was approved by the Commissioner, the Interior Department wanted the committee to understand that it was approved only tentatively?

Mr. DOMINY. No, sir. As I said before, we have not changed the form of that contract except to add a clarifying statement to the effect that that contract does not cover the entire repayment arrangement for the Helena Valley unit, as had been presented and justified to the Congress.

To answer your question specifically, the Helena Valley unit repayment was discussed this year in both the House and Senate appropriation hearings. There is quoted here in the committee print prepared for use in this conference the excerpts from the House hearings. There was also testimony—and I am at a loss to understand why it was not included in the committee print—before the Senate Appropriations Committee, in which Senator Hayden asked a question on this point, and to which I replied, and Senator Ellender asked a question on this point, to which I replied.

Senator O'MAHONEY. That language will be included if you will provide it. We will see that we get it.

Mr. LINEWEAVER. Here is the language.

Mr. DOMINY. Yes. This is the testimony before the Senate committee to which I referred. But the point I want to make clear, Mr. Chairman, is that both committees in the House and in the Senate understood that this contract was with only part of the acres to be served by the Helena Valley unit, that this contract would return only 7 percent of the cost of the project, whereas in our original testimony in 1955, we made clear that while we agreed with Mr. Rossiter, and the Montana farmers, that they could not pay the 30 percent on which the Budget Bureau's approval of our request was predicated we felt that repayment arrangements could be arrived at so that the Government would be assured in 40 years of a 12 percent return of the cost allocated to irrigation. So this year we made clear in our testi-

mony that the contract under discussion here would return only 7 percent, and that additional arrangements would be necessary to secure the additional 5 percent.

Senator O'MAHONEY. Where did you contemplate that the additional 5 percent would come from?

Mr. DOMINY. From the supplemental lands that are to be served from the Helena Valley unit.

Senator O'MAHONEY. Suppose the supplemental lands which were not included in the district are not served?

Mr. DOMINY. In that event, sir, it is our judgment on the basis of the record now in hand that we cannot start construction.

Senator O'MAHONEY. Is it not a fact that it was not until after the contract had been approved by the Commissioner and the farmers represented by Mr. Rossiter and those who read this original justification were entitled to believe that the Bureau was prepared to go forward with the construction?

Mr. DOMINY. It may well be that they arrived at that conclusion.

Senator O'MAHONEY. It is my understanding that after Mr. Dexheimer had written his letter of July 27, 1955, to Senator Mansfield containing the sentence:

Following approval and execution of a satisfactory form of repayment contract, we will be in a position to proceed with construction of the unit—

there was no action by the Department looking toward the inclusion of the language included in the notice of August 19, almost a month later.

(The letter referred to is as follows:)

#### LETTER TO SENATOR MANSFIELD

DEPARTMENT OF THE INTERIOR,  
BUREAU OF RECLAMATION,  
Washington, D. C., July 27, 1955.

HON. MIKE MANSFIELD,  
United States Senate,  
Washington, D. C.

MY DEAR SENATOR MANSFIELD: We are pleased to respond to your letter of July 12 regarding the proposed Helena Valley unit, Missouri River Basin project, concerning which you received a letter from Mr. W. A. Rossiter of Helena, Mont.

A draft of water service and repayment contract proposed with the Helena Valley Irrigation District, to which Mr. Rossiter makes reference, currently is being reviewed by us. Preliminary review of the draft contract indicates that a few minor adjustments in contract language will be necessary. We anticipate that these changes, which are now under consideration with our regional director's office at Billings, Mont., can be made promptly so that the contract may be submitted in the near future to the Secretary for approval as to form.

We understand that the basic terms and conditions of the draft contract are acceptable to the commissioners of the Helena Valley Irrigation District. We believe that the final draft which we have in mind will be acceptable also to the commissioners. Following approval and execution of a satisfactory form of repayment contract, we will be in a position to proceed with construction of the unit.

Plans prepared for the Helena Valley unit encompass the delivery also of supplemental water to the existing irrigation development in the valley not within the irrigation district. Consideration is being given by the water users and the Bureau to appropriate arrangements which may be made for service of water to those lands.

If you desire further information on this matter, we shall be pleased to respond to your further inquiry. In accordance with your request, we are returning the letter from Mr. Rossiter.

Sincerely yours,

W. A. DEXHEIMER, *Commissioner.*

Mr. DOMINY. Yes, sir. As I say, the problem received very active consideration immediately following the July 27 letter and the conclusion reached as I have outlined.

As you are aware, we have referred the question to the Appropriations Committees of both the House and Senate, and if our interpretation of the understanding is in error, we certainly would be pleased to proceed promptly with the construction of the Helena Valley unit upon execution of the pending repayment contract with the 12,533-acre district.

Senator O'MAHONEY. If this contract were understood, as Mr. Rossiter understands it, namely, as a binding agreement between the Government and this Helena Valley Water District created in the court, then the Bureau would be ready to proceed with the construction of the project, and this construction would not include the lands which would require supplemental water.

Mr. DOMINY. Yes, sir. The capacity for the supplemental lands in the tunnel and in the main canals, regulating reservoir etc., would be included.

Senator O'MAHONEY. They would not be affected by the contract or by the construction, and they could go on as they now operate.

Mr. DOMINY. That is right, sir, but the Government would have an investment in a unit designed to serve 17,631 acres with a contract with only 12,553 acres.

Senator O'MAHONEY. We are to understand, therefore, that it is your position that you would rather not build the project at all than carry out the contract that was approved on November 5, 1954.

Mr. DOMINY. No, sir, that is not our position. We presented a plan to the Congress through the Bureau of the Budget for a 17,631-acre Helena Valley unit. In the process of getting the appropriations for that unit, it is our understanding that the Congress said you shall have repayment coverage for 12 percent approximately of the total costs allocated to irrigation before you proceed with construction. Admittedly that cannot be found as definite as I have just stated it. Nevertheless, our analysis of the total record, sir, leads us to that conclusion. But as I have said, if we are in error, and the Appropriation Committees advise us that we are in error, we will proceed to construct the Helena Valley unit as we have described it, and will place therein the extra capacity in the hope that the supplemental lands will ultimately take water and that the Government will receive those additional revenues beyond that contracted for with the Helena Valley District.

Senator O'MAHONEY. I think that is a very clear statement, Mr. Dominy. Are you speaking with the authority of the Bureau?

Mr. DOMINY. I believe, sir, I am speaking with the authority of the Bureau and the Department of Interior. Mr. Frye is here from the Assistant Secretary's Office.

Senator O'MAHONEY. I don't want to embarrass anybody, of course, but owing to the nature of conditions, I wanted to get this hearing so that the representatives who had already arrived could go forward.

#### STATEMENT OF EDWARD D. FRYE

Mr. Frye, do you feel that this is the correct point of view of the Department?

Mr. FRYE. I do, sir, entirely.

### ADDITIONAL STATEMENT OF G. W. LINEWEAVER

Mr. LINEWEAVER. Mr. Chairman, I would like to have inserted in the record the excerpt of the testimony before the Senate Appropriations Committee to which Mr. Dominy referred.

Senator O'MAHONEY. This is the testimony before the Senate committee which was not printed in the committee print?

Mr. LINEWEAVER. Yes, sir. I'm sorry it did not come to our attention until after the material had gone to the Government Printing Office.

Senator O'MAHONEY. It will be made a part of the record at this point.

(The document is as follows:)

EXCERPT FROM HEARINGS BEFORE SENATE APPROPRIATIONS SUBCOMMITTEE ON PUBLIC WORKS APPROPRIATION BILL (H. R. 6766) FISCAL YEAR 1956, MAY 31, 1955, FOLLOWING INTERIOR-RECLAMATION JUSTIFICATION THAT APPEARS ON PAGES 3, 4, AND 5, OF COMMITTEE PRINT

Chairman HAYDEN. How about the Helena Valley unit in Montana? There is a proposal in the budget that no part of that appropriation be used to initiate construction of the Helena Valley unit in Montana until a repayment contract has been executed.

Are you having any trouble in getting a contract?

Mr. DOMINY. We have not finished the organization of the irrigation district as yet, Mr. Chairman.

In Montana just last week, the State officials held the required hearing under Montana law to review the petitions for the formation of a district. It is a little complicated, in that part of the lands to be served are dryland at the moment, and have never been under irrigation. Additional areas have had some irrigation in the past, an inadequate supply, and would be provided with a supplemental supply under the Helena unit. There is some problem of getting those 2 groups together and in 1 organization.

Chairman HAYDEN. Well, in the meantime, you are not going to spend any money until they do?

Mr. DOMINY. That is right; the law is specific and the limitation is specific, and we are not authorized to proceed until that district is formed and a satisfactory contract completed.

Chairman HAYDEN. All you can do is hold out to them that if they do come to an accord, there is some money available to carry on the work?

Mr. DOMINY. That is right, sir.

Senator ELLENDER. Are we to understand, then, that none of this money is going to be spent until the Government is assured of recovering it all if it does spend it?

Mr. DOMINY. That is right. The repayment contract in this case, as I mentioned a moment ago for Heart River, would only recover a modest proportion from the water users. The balance would come from power revenues but we will not start the work until there is a contract.

Senator ELLENDER. Is this entire sum to be spent for irrigation? I am talking about the Helena Valley unit now. There is no power involved in that; is there?

Mr. DOMINY. No, sir; but it is part of the overall Missouri Basin plan and power revenues would be assigned to help pay out this particular unit.

Senator ELLENDER. You mean pay out under what conditions?

Mr. DOMINY. The total cost of this unit is a Federal investment of \$680 per acre, of which we expect to get back under our repayment contract \$88 per acre, and the balance of \$592 per acre, as given on page 69 of the justification, would be recovered from the overall power revenues of the Missouri Basin.

Senator ELLENDER. With interest?

Mr. DOMINY. The power portion of the Missouri Basin allocation is repaid with interest. Any subsidy of the irrigation allocation paid by power is without interest.

Senator ELLENDER. That is 40 years; is it not?

Mr. DOMINY. Yes; it would be a 40-year repayment contract.

Senator O'MAHONEY. Now, Mr. Rossiter, I have been questioning you and not permitting you to tell your story as you have intended to tell it, so you may proceed.

Mr. ROSSITER. In answer to Mr. Dominy, I would like to go into that phase of it; that is, as to the Bureau's position.

Going back to the first meeting, and the discussion that was had, and knowing the background of the supplemental water users, there was considerable discussion and we took the position right then, as I have stated before, that if the supplemental water users had to be tied down to a written contract—and I distinctly remember making the statement to the Bureau's representative—we might as well forget it. We would go into a lot of work and spend a lot of effort on the matter, and we could not put it over, because I didn't think the supplemental water users could be sold on it. Before we proceeded, we wanted that question out of the way.

I don't know what went on back and forth between the Department, but before we went ahead with this district, we were informed that we would proceed on the theory that if an irrigation district was formed for the full supply land water that construction of the unit would be gone ahead with. The original understanding was that the difference between what we would pay and what the Government expected to recover, this 12 percent, would come from the sale of water to the supplemental water users. It was all understood and pretty well agreed that they undoubtedly would have to have water in dry years, and that they would buy it and it would be sold to them on a sale-of-water basis.

The original understanding was that the irrigation district or the proponents of the irrigation district would take over that cost and would assume that cost.

Later on, when the matter went through the Bureau and finally came down, we were informed that because of regulations or legal entanglements with the Bureau and its operation that the irrigation district could not serve as the fiscal agent of the Government. Therefore, the irrigation district would assume the cost of operation and maintenance of the full supply—17,000 acres, costs of operating the system they proposed to build for the full supply—would be borne by the district as formed. That the Bureau of Reclamation would then take over the sale of water for the recovery of the difference of the construction cost to be repaid. The difference between what the district would pay and what they wanted, would come from the sale of water in gross. In other words, the Government was to take the gross amount of the sale of water and apply it.

Senator O'MAHONEY. What you are saying now is set forth in your summary statement which appears on page 21 of the committee print.

Mr. ROSSITER. Yes, sir.

Senator O'MAHONEY. I must compliment you on the accuracy with which you have summarized the language in the paragraph on page 21.

Let me summarize to see if I can understand what the picture is both from the point of view of yourself and of the Bureau of Reclamation.

Understanding as I do that the Bureau had planned a water system adequate to take care of 17,000 acres, which would include the lands which were within the district as organized in the State court, and would not include the lands which need only supplemental water, the

Helena Valley District was and is willing to undertake the responsibility itself to sell water from the 17,000-acre plant to the supplemental landowners so that you have no objection—that is to say the district has no objection—to the full construction of the 17,000-acre plant because you are confident that, as the court seemed to be confident, the owners of the supplemental land will eventually find it necessary to obtain this additional water, and it is your contemplation, Mr. Rossiter, that the district on selling this water will make adequate return to the Bureau of Reclamation.

Mr. ROSSITER. That was the original understanding on which we would have gone forward at the time. I am not in a position to say that they would agree to that now after the Government has changed and says it will take it over. If their position is correct, in other words, as a fiscal matter the irrigation district cannot be a fiscal agent of the Government; they can't do it. I am not in position to say that the district would assume that now. We want to go ahead on the basis which they changed it to. We will pay for the operation and maintenance costs and the Government will sell the water in any kind of agreement they want to make with the supplemental water users, and they will apply that in gross to their construction. They don't have to take anything out of it for operation and maintenance. We assume that.

Senator O'MAHONEY. Then my understanding is that because you have been advised by the Bureau of Reclamation that an irrigation district organized under the laws of the State of Montana cannot undertake to collect charges which were bound to go into the Treasury of the United States, you would have no objection to the Department selling that water itself and making such proper disposition of it as the law requires.

Mr. ROSSITER. That is right.

Senator O'MAHONEY. But at the same time, that leaves unsettled the question of whether or not those landowners who have land which has been described as the supplemental water land will in fact want to use that water.

Mr. ROSSITER. That is right.

Senator O'MAHONEY. But you testify, do you not, that the judge in the Montana court was of the opinion that the supplemental water would be necessary for the proper cultivation of the land of these persons who are not in the district?

Mr. ROSSITER. The testimony before the judge by Bureau representatives was that their study of water possibilities in the Helena Valley was that the supplemental water users for the land that they had only had an assured supply of 47 percent. So the conclusion was that in any kind of inadequate moisture year, the supplemental water users in order to do a good job would want to buy water. They would need it, and would want to buy it, and that the sale was there.

Senator O'MAHONEY. That was the judgment of the Bureau.

Mr. ROSSITER. That was the judgment of the Bureau and so testified. It was from that testimony that the judge drew his conclusion.

Senator O'MAHONEY. Is that your understanding, Mr. Dominy?

Mr. DOMINY. Yes. I don't disagree with that at all.

Senator O'MAHONEY. In other words, it is agreed that in the court representatives of the Bureau testified that these so-called supple-

mental lands now have only a 47 percent supply of the water needed to provide adequate cultivation.

Mr. DOMINY. That is our judgment.

Senator O'MAHONEY. The Bureau feels that they will eventually have to use this water anyway?

Mr. DOMINY. We feel that it will be highly advantageous to them in their farming operations to acquire supplemental water.

Senator O'MAHONEY. But inasmuch as they were not included in the district, and inasmuch as the contract of November 5, 1954, approved by the Commissioner, was understood by the members of the irrigation district as being the contract—I am not going to make this a question, but as a declaratory statement—those facts seem to lay the basis for the thought that the Bureau is obligated in all the circumstances to proceed with the construction of the project as it was understood by these water users when their district was formed, and when the Commissioner approved on November 5, 1954, the contract.

Mr. Lineweaver, do you have anything else?

Mr. LINEWEAVER. Yes, I think, for the record, Mr. Chairman, some reference should be made with respect to the suggestion of the city of Helena possibly becoming a customer for some of the water that was originally intended to be held for the supplemental water lands.

Mr. ROSSITER. The city of Helena has been short of water on a number of occasions. They have reached the limit of expansion of the present system. So they have to turn to some other source for their supply. We felt and we went into this when we started it, because we thought it would make a better project, all the way around—the same as we are perfectly willing to admit with the Bureau that if we could get the supplemental water users tied down to a guaranteed amount, it would make a better project—

Senator O'MAHONEY. Is there any evidence that the city would want to buy this water?

Mr. ROSSITER. The city has engaged the services of an engineering firm out of Denver who have gone into that point. They are going to make a report to the city. It is my understanding—I don't know, because I was not on the inside—that they have concluded that the only place that the city can turn to with any degree of economy, is to this system. If the system is constructed as contemplated, the city can receive any amount of water for any foreseeable expansion from this system. They are now waiting for the Bureau to submit to them what the costs will be. I understand that is pretty well agreed upon. The only thing left is that the engineer in Denver is supposed to approve it. It had to receive approval of the chief engineer in Denver before that amount was to be submitted to the city.

I have talked to 2 or 3 of the Commissioners who say they are very much interested in it, and if the plan is economically feasible, and the amount that the Bureau submits can be handled, that they are very much interested.

My own personal opinion is that just like the sale of water to the supplemental water users, eventually the city is going to take this water out of this plant.

Senator O'MAHONEY. Mr. Herrin, Mr. Olson, and Mr. Helberg, will you come forward please?

Mr. LINEWEAVER. Before they come forward, I would like to close this one point.

In Secretary Aandahl's letter to Senator Hayden, this statement was made:

The preliminary thinking is that the city of Helena may pay with interest as much as \$942,000 to apply on the cost of construction of the Helena Valley unit.

I ask Mr. Dominy, that \$942,000 would satisfy the 12 percent; is that right?

Mr. DOMINY. Yes. I would like to make one other statement. Senator O'Mahoney. We have proceeded with the preliminary work on designs and estimating of the detailed engineering so that there has, as of now, been no delay toward getting this project into construction, if it is proper to proceed, and we get that word. The first contracts would not be awarded under our plan—in other words, we would not have the specifications ready and the engineering completed—until in December and January. So there will have been no delay on the construction of the Helena Valley unit if the replies to our letter to the Appropriations Committees indicate that we have misinterpreted the record.

Senator O'MAHONEY. Do I understand that the Bureau is proceeding with these preliminary plans?

Mr. DOMINY. That is right. We will have everything ready to award the contracts on schedule if this problem is clarified and the proposed Helena Valley District contract is executed.

Senator O'MAHONEY. This time would have been necessary in any event.

Mr. DOMINY. That is right, sir.

Senator O'MAHONEY. In other words, had there been no question of this kind at all, you would not yet be ready to proceed with the construction.

Mr. DOMINY. No, sir. We could not have physically completed the engineering and advanced the detailed specifications to the point of awarding earlier than the middle of December or the early part of January in any event.

Senator O'MAHONEY. Mr. Frye, do you wish to add anything at this point?

Mr. FRYE. Not a thing.

Senator O'MAHONEY. Have I overlooked anything, sir?

Mr. FRYE. I think the Department's record is perfectly clear, sir.

Mr. O'MAHONEY. Mr. Herrin, will you speak for the group?

Mr. HERRIN. On part of it I would like them to speak for themselves, sir.

Senator O'MAHONEY. Will you take the lead?

Mr. HERRIN. Yes, sir.

Senator O'MAHONEY. Very well. Let me first ask each of you to give your full names and addresses to the reporter so that they may appear in the record.

Mr. HERRIN. Gordon Herrin, Route 1, Helena Valley, Mont.

Mr. HELBERG. Harry Helberg, Route 1, Helena, Mont.

Mr. OLSON. Albert Olson, Route 1, Helena, Mont.

Senator O'MAHONEY. Now proceed.

**STATEMENT OF GORDON T. HERRIN, HELENA, MONT.**

**Mr. HERRIN.** We are here representing the people or farmers who objected to the formation or being included in the district when it was formed by the district court in Helena. We also represent a great many of the supplemental users of the Helena Valley unit.

**Senator O'MAHONEY.** Then there are two groups.

**Mr. HERRIN.** There are two groups.

**Senator O'MAHONEY.** Those who appeared and objected to being included.

**Mr. HERRIN.** That is right.

**Senator O'MAHONEY.** Those who did not appear or make objection, but who are supplemental users.

**Mr. HERRIN.** That is correct.

**Senator O'MAHONEY.** Or likely to be.

**Mr. HERRIN.** That is correct.

**Senator O'MAHONEY.** When you say supplemental users, you really mean they don't have sufficient water now?

**Mr. HERRIN.** No, I don't, sir.

**Senator O'MAHONEY.** You don't mean that?

**Mr. HERRIN.** No, they are the people declared supplemental users by the Reclamation Service.

We feel that there are several things that should be called to this committee's attention. First, to the formation of this district. The original district was brought about by several individuals who had every right to form a district, going about selling this district to the farmers. However, while they went around selling the district, they used a definite plan report of the Bureau of Reclamation for the project which called for a 17,631-acre project, and many other statements which I will try to bring out to this committee, and consequently people signed on this basis.

After the court hearings proceeded, they have formed a district of some 13,000 acres, and have not retold the story of what the district actually was formed on. If I can make myself clear, during these proceedings this book was placed in evidence as a part of the district. While being placed in evidence, the repayment portion of the book was removed and never procured or brought into evidence.

**Senator O'MAHONEY.** Did you appear in the court?

**Mr. HERRIN.** No, sir. I was there at all the hearings, I might say.

**Senator O'MAHONEY.** Did you make any representations to the court?

**Mr. HERRIN.** Mr. Helberg and Mr. Olson were both represented at the court.

**Senator O'MAHONEY.** I was trying to find out whether you testified in the court hearing.

**Mr. HERRIN.** No.

**Senator O'MAHONEY.** Why not?

**Mr. HERRIN.** I was not asked. It was to be the full supply users that were actually forming the district. If you understand me, Senator, they were trying to form a district of thirteen-thousand-some acres. Yet in the original signing for each of the people, they signed on this proposition of 17,631 acres. That was the thought the size

of the district would be when they got the original signatures. Then somewhere along the line when they realized—and why they realized I might say I do not know—that the supplemental users are not interested, being a supplemental user, I was never contacted or asked if I wanted any supplemental water—

Senator O'MAHONEY. Let me interrupt you here. I find that time is running on. Suppose we take a recess until 2 o'clock.

(Thereupon at 12:55 p. m., a recess was taken until 2 p. m., the same day.)

#### AFTER RECESS

Senator O'MAHONEY. Mr. Herrin, are you ready to proceed?

#### STATEMENT OF GORDON T. HERRIN, HELENA, MONT.—Resumed

Mr. HERRIN. Yes, sir.

Mr. LINEWEAVER. Mr. Chairman, I suggested to Mr. Herrin and these gentlemen yesterday that they prepare a statement and then summarize orally with their statement going into the record as they have prepared it. In order to save time, if they would summarize their statement, it would be appreciated.

Senator O'MAHONEY. I want you to have your time so that you may set forth your case for the committee. So proceed, Mr. Herrin.

Mr. HERRIN. Thank you. I don't think I did before noon tell you my situation in the Helena Valley. I own 240 acres of irrigated ground in Helena Valley. I have lived there all my life. I was born there in 1918. I feel that I am capable of telling some of the conditions that have existed over that period.

Also my two associates here have also been associated in the Helena Valley all of their lives, which I think is important that the committee understand.

There are several points that we find in the definite plan report of the Bureau of Reclamation that have been altered up to date, and to our knowledge the people that live within the area have not been properly exposed to. If you would care to, I will bring those out, or if you would rather, I will file them, in my report.

Senator O'MAHONEY. I want you to be satisfied with your presentation. What you said and what you write will be before the committee, but I want you to be sure that you are stating your case as you want to state it.

Mr. HERRIN. As a supplemental user, in their report we find that they are recommending border dikes to irrigate 65 percent of the area. That is on page 26.

A group of farmers that we represent surely agree with this, and are using such at present. Our dikes were designed by the Soil Conservation Service. But we find that it takes 200 miner's inches to irrigate 10 acres and we have to use that for 24 hours in order to do it. With the use of these dikes this is the same as 1 acre-foot per acre.

We farmers know that to raise our alfalfa hay, and I might mention due to our season, we can only get 2 crops of hay in the season, have to irrigate 5 times during a normal season, which would amount to 5 acre-feet for alfalfa hay ground each year, and also small grains would require 4 irrigations per crop or 4 acre-feet. On a normal

year we have to water our potato crop 6 to 8 times which amounts to 6 to 8 acre-feet per season.

I have this type of ranch where I raise small grains, potatoes, and alfalfa hay. My water is sufficient to carry on this type of a program. So I don't feel I should be a supplemental user. However, I do feel that the overall canal that is designed to deliver 2.2 acre-feet to the farmers is insufficient to do the job.

Another thing that I think the committee should know is that the farmers we represent own only family size farms of about three to four hundred acres. This is their entire holding. I also think that the committee should know at the same time 4 people who want the proposed unit own land or are part of companies who own land totaling well over 200,000 acres. We feel that reclamation projects are designed for family size farmers.

Senator O'MAHONEY. How many of those individuals are there?

Mr. HERRIN. There are 4 individuals, and their total acreage is well over 200,000.

Senator O'MAHONEY. Not in this area.

Mr. HERRIN. Not in this unit. Going a little further, Senator, we feel that reclamation projects are designed to help family sized farmers, not large landowners, to improve portions of their large holdings. I might dwell on that just a little bit.

I happen to be a committeeman for the FHA in the Helena unit. It is our instructions to keep our loans that we O. K. there under the family size units. I understand in the definite plan of the report the FHA is considered one of the loaning agencies or the Government loaning agency that would help to finance these farmers once they are established.

We find that the definite plan report farmers pay a varied rate according to their land classification, yet they were led to believe that the cost would be \$5.40 per acre. At this time I would like to refer to page 37, if I may, of the definite plan report down toward the bottom of the page:

Payment capacity per acre by land classes by the farm budget method with delivery of full water recovery based on long-term project applies cost relationship for prices paid and received estimated as follows:

Class I, \$9.55; class II, \$7.16; class III, \$4.29. The weighted average is \$6.21.

It is my feeling that the people are not informed that if I have class I ground I will pay more than the man that has class II. This group feels that every man should know what his cost will be per acre so he can know whether he can pay these water bills or not.

Earlier today in testimony it was said that the Montana Power Co. has pumped in the Helena Valley some 30 years. I, having lived in the Helena Valley that length of time, know what happened. They pumped there at a rate of \$1.75 per acre-foot. The ranches they were pumping to eventually become owned by the Montana Power Co. due to the fact that they could not pay their water bills. I will grant anybody at that time it was a low-price period, but I also, being in the farming business right now, find that the ratio between cost of production and price received is very low, or net profit is nearly the same for both periods. I feel that should be considered definitely.

The report states on page 11 that the county's financial situation is very good. I am not quoting from the report. If you would like me to, I would.

Senator O'MAHONEY. It is not necessary.

Mr. HERRIN. And that the level of living of the farm families in this area is in the upper 10 percent of all Montana counties. Is it any wonder that these farmers do not wish to burden themselves with an irrigation project that is not economically sound? I refer you to page 54 of the plan, which is the justification of this irrigation system:

*Economic justification.*—By using the assumptions and criteria set forth below, the Helena Valley unit is not justified when comparing only primary benefits with the estimated costs. However, when the secondary and general benefits (indirect and public), as measured by the Bureau of Reclamation procedures, are combined with the primary benefits, the total benefits exceed the estimated cost.

That is according to the Bureau of Reclamation. I don't feel that our valley should be subject to an unsound economic practice by a Government agency as far as we farmers are concerned. Why, for secondary reasons, should we be subject to taxation that we can't pay?

Senator O'MAHONEY. Of course, that is not the case as described there. This is apparently a project in which the repayment from the farmers is only a portion of the repayment which the Government receives. At least a portion of this comes back from power revenues.

Mr. HERRIN. I think in this economic justification that is taken into consideration.

Senator O'MAHONEY. That is what it said there. I didn't interpret that as meaning that, considering the power revenue and other beneficial results, the project was uneconomic. If the Bureau of Reclamation had made such a finding, the Secretary could not have made such a recommendation as he did make to the Congress for an appropriation.

Mr. HERRIN. However, it says on page 55, when secondary general benefits, indirect and public, are considered, as those expected to occur indirectly from irrigation development.

Senator O'MAHONEY. That is a matter of interpretation.

Mr. HARRIS. We felt that meant that the benefits would be derived—the secondary benefits wouldn't be the power. The power is already there.

Senator O'MAHONEY. Let me see the document, please.

Mr. HERRIN. Yes, sir.

Senator O'MAHONEY. This is copy No. 44, United States Department of Interior, Bureau of Reclamation, Definite Plan Report, volume 1, General Plan, Helena Valley Unit, Montana, Helena, Great Falls Division, Missouri River Basin Project, Region 6, Upper Missouri District, Great Falls, Mont.

Mr. DOMINY, you are familiar with this document?

Mr. DOMINY. Yes, sir.

Senator O'MAHONEY. Do you know what the meaning of the language just read by Mr. Herrin is from the point of view of the Bureau of Reclamation?

Mr. DOMINY. Yes. The intent of that statement is to point out that if the increased benefits to the agricultural lands alone are taken into account, the benefits would not be sufficient to offset the approximately \$12 million cost of the project. But in addition to the direct benefits to the lands benefited, there are the corollary regional, State, and Federal enhancements from the increase in productivity that would come about through the increased water supply for this area. That is the intent of that statement; to point out that when these indirect and corollary benefits, in addition to the direct benefits from the land, are

taken into account, then the project is considered feasible. I believe the benefit ratio shown in the report is 1.37 to 1, so it is more than 100 percent on the benefit ratio; it is more than unity. Therefore, the Department did recommend this as one of the Missouri Basin units.

Senator O'MAHONEY. Measured by the standards of the Bureau of Reclamation, this is a feasible project.

Mr. DOMINY. Yes, sir.

Mr. HERRIN. May I ask a question? Wasn't that based on 17,631 acres?

Mr. DOMINY. Yes. The Helena Valley unit, which we have described to Congress, and which we propose to build, is premised on 17,631 acres.

Mr. HERRIN. Not 13,000, sir.

Mr. DOMINY. That is right, sir.

Mr. HERRIN. We find that under present plans the construction cost would be satisfied to about 7 percent in 40 years by the district. We find three alternative plans in the back of the definite plan report that are above 13 percent. Also, the Bureau admits that they are more feasible in the Helena area.

I would like to refer you to plan 3 in the back of the book. There it says that this proposed development plan would rehabilitate the existing pumping systems at Lake Helena without expanding the area now served; an irrigable area of 5,067 acres would be served with full supply of water. Pumping power would be furnished by Canyon Ferry powerplant.

#### REJECTION OF ALTERNATIVE PLAN NO. 3

This alternative plan has the best benefit ratio of any of the plans considered for the Helena Valley unit. It was rejected for the following reasons: It would be a status quo development. It would develop only 30 percent of the potential land resources. It would be difficult to meet operation and maintenance costs during unfavorable years. The repayment rate of class III land is less than required for the annual operation and maintenance. Exclusion of class III acreage would reduce the project 15 percent. This might result in excluding the remaining acreage because of the inability to pay the increased operation and maintenance costs which would result.

It is our thought here that this plan would supply the people that are now asking and wanting you to push through the Canyon Ferry unit plan. Not only would it do that but the people that wish to be excluded, who were included due to the district court's decision, could be allowed out.

Senator O'MAHONEY. How many such people are there?

Mr. HERRIN. There are approximately 5,000 acres that would like out.

Senator O'MAHONEY. Is that the total?

Mr. HERRIN. That is the total. How we arrived at that is as follows: There again is where we are kind of at a loss, Senator, because that is when we start thinking of the 13,008 acres, rather than the 17,631. There has been a very loose tie between those two figures. When they switch one from the other, as I tried to mention this morning, there seems to have been no going back over and explaining to the

people the change. They signed under the 17,631, many of them, and then when they switched to 13,008, there was no explanation.

Senator O'MAHONEY. What is your recommendation to the Bureau and to the Congress? What do you want?

Mr. HERRIN. We recommend that the alternate plan No. 3 be accepted and put into effect. There is enough money appropriated to put that total plan into effect.

Senator O'MAHONEY. Then are we to understand that it is your desire to have a program that would benefit some 5,000 acres plus, and which therefore would disregard wholly some 11,000 acres plus?

Mr. HERRIN. No. I don't feel that is right, Senator. If they represent these people, if then we can get 5,000 acres of the 13,000, and some acres that they propose for the district, and some 6,000 acres of that district wish to be eliminated or left out, then I say that a great percentage of the people that want water could be included.

Senator O'MAHONEY. Could be included in what?

Mr. HERRIN. In this program here. They would be included. The 5,067 acres which would be served by rehabilitating the present pumping system are 100 percent people that actually wanted this district. They are included in the 60 percent of the 13,000.

Senator O'MAHONEY. Were any representations to this effect made to the court?

Mr. HERRIN. May I make this statement as to that for the record? The decision of the court was made on one thing and one thing alone: Would this water benefit the land?

Senator O'MAHONEY. You don't answer my question. Were any representations to the effect of your statements made to the court?

Mr. HERRIN. These things that I am saying were rejected in every case by the judge due to the fact that it did not include whether it was a benefit to the ground or not.

Senator O'MAHONEY. Were they presented to the court?

Mr. HERRIN. Yes, sir.

Senator O'MAHONEY. By whom?

Mr. HERRIN. By the different lawyers. Mr. Swamberg as an example.

Senator O'MAHONEY. Who was he representing?

Mr. HERRIN. He was the lawyer representing the farmers who wished to be excluded from the district.

Senator O'MAHONEY. So the farmers who wished to be excluded were represented before the court?

Mr. HERRIN. Absolutely.

Senator O'MAHONEY. I take it that your position is that you reject and ask the Bureau of Reclamation to abandon the 17,000-acre program—the facilities sufficient to cover 17,000 acres plus—even though some 4,600 acres are presently excluded, and you want to substitute for that program a program that would supply water not from the new project but from the Canyon Ferry project; is that right?

Mr. HERRIN. No; from the Lake Helena pumping system as it now is.

Senator O'MAHONEY. The Lake Helena pumping system, if I understand it correctly, is now operated by the State conservation board.

Mr. HERRIN. Yes, sir.

Senator O'MAHONEY. You want the Bureau of Reclamation to take that over?

Mr. HERRIN. I don't say that I want the Bureau to take it over. I say that I think those farmers are entitled to the water. We are not here trying to stop those farmers from having water. Under plan 3, which is the Bureau's plan 3, they would receive water.

Senator O'MAHONEY. Was any appeal taken from Judge Fall's decision?

Mr. HERRIN. No appeal was taken from it for the reason that the attorney thought it would be of no avail in Montana, because they feel that it has to be beneficial to the ground.

Senator O'MAHONEY. What was the date of that decision?

Mr. LINEWEAVER. June 28.

Senator O'MAHONEY. Do you agree that the date of the decision was June 28?

Mr. HERRIN. Yes; we do agree.

Senator O'MAHONEY. Do you know when the appropriation bill was passed?

Mr. HERRIN. No; I don't.

Senator O'MAHONEY. What was the date of that?

Mr. WOODRUFF. The President signed the bill on July 15. It must have passed the Senate 10 days earlier.

Senator O'MAHONEY. Was any representation made to the committee?

Mr. HERRIN. Not that I know of.

Senator O'MAHONEY. Was any representation made to the Bureau?

Mr. HERRIN. Not that I know of.

Senator O'MAHONEY. Are you recommending that Congress should repeal this action?

Mr. HERRIN. I am recommending that this committee recommend that this whole system be rel looked into by an unbiased individual. I think you will find that our findings are correct. We are representing farmers that have been there 50 and 60 years. I think this investigation will bear out what I have said as to what they can produce and what they can do and also the ultimate outcome.

Senator O'MAHONEY. Have you made any representations to the State authorities?

Mr. HERRIN. No; I have not. This appeared in the Helena paper 3 days after Judge Fall's decision:

Six thousand acres in one block of choice land in the heart of Helena Valley is well irrigated with decreed water rights supplemented by wells. Crops normally raised on this land include 4,000 bushels of grain, 4,000 tons of hay, 26,000 sacks of potatoes, 1,000 tons of beets, and will support 3,000 head of cattle. This is very productive ground, ideal for diversification. This tract has been pooled and all ground adjoining. Land for sale includes old established and well improved ranches in the valley. Modern homes, television and telephone with superior schools, located from 2 to 8 miles from Helena. This land has never been advertised for sale previous to this time. In the heart of the Rockies with abundance of wildlife and fishing. For more information write Post Office Box 4341, Helena, Mont.

Senator O'MAHONEY. Who wrote that?

Mr. HERRIN. That was gotten together by the group that we are representing. They feel that if our neighbors are to be forced into such a program that we no longer care to farm under that kind of a condition.

I don't think that this committee realizes how serious this proposition is to individuals. I think it definitely should be brought out,

and I think Mr. Helberg here will bring that out. At this time I would like to put in the committee's evidence a letter that was written to the editor of the Montana Farmer, a Montana paper——

Senator O'MAHONEY. By whom?

Mr. HERRIN. By myself. The letter was O. K.'d by the group we are representing.

Senator O'MAHONEY. It may be received.

Mr. HERRIN. We are just farmers, Senator. We don't know what the procedures are. That is why we are here. That is how to go about it.

Senator O'MAHONEY. You are entitled to be here, and the committee has to make a record of what you say.

Mr. HERRIN. I appreciate the time to present our case. I do think that you probably wonder in part why the lack of interest until such a late date. I will be honest with you. We didn't realize that so many things could happen and so many of our individual rights be infringed upon so rapidly that we were a little asleep.

Senator O'MAHONEY. Tell me how your individual rights are infringed.

Mr. HERRIN. May I read the letter I have written?

Senator O'MAHONEY. Certainly.

Mr. HERRIN (reading):

THE EDITOR, MONTANA FARMER-STOCKMAN,

*Great Falls, Mont.*

DEAR SIR: Are the American farmers losing their individual rights they so cherish?

I'm taking time to write this letter right in the middle of haying and summer work because what I see happening to my neighbors scares me.

Not long ago one of my nearest neighbors came to me and said that a Bureau of Reclamation representative had been to see him and asked him to sign up for an irrigation district. My neighbor told him he had all the water he wanted and didn't care to be in the district. The Bureau representative informed him he would be in whether he wanted to sign or not. This seemed so ridiculous that he laughed. To think of a Government agency being able to tell a man, who owned his own ranch, that he would do as the Bureau of Reclamation said or lose his ranch. We both thought this talk was Russian.

Since this time several farmers grouped together and hired an attorney to see if they could be excluded from the district. It seemed to me a terrible thing that farmers should have to go to court to keep the Government (a government of the people, by the people, and for the people to protect the individual's rights) from forcing him to do something with his ranch that he didn't want to do, and in some cases could not do.

During the courtroom proceedings we found the Bureau representatives doing everything they could to force these people into the district. (I am fortunate—my land is not to be included in the irrigation district, but since I was intensely interested in the welfare of my neighbors, I attended the hearing whenever possible.) They evaded the truth and, in many cases, withheld evidence. A Government agency, designed for the good of all the people, was putting itself on one side of an issue, rather than presenting the true facts. I hoped I was dreaming. This sounded like a government of the few.

A report or survey, in book form, of facts, which is made on all reclamation projects, who produced in evidence at the request of the defendants, but upon inspection it was found to have several pages had been removed. These were never produced in evidence, though the defense lawyer requested it. Do we have Government agencies trying to withhold facts? Do such agencies have something to hide?

In some instances this district is forcing farmers to sell their ranches, which they have farmed all their lives. To explain this, let me tell the facts of one neighbor's plight. His entire ranch is in the district, but his ranch is a wild hay and lowland pasture operation. It is very similar to the Big Hole Basin

operation, which any rancher knows is very profitable. Now when this district is put in operation, his entire place will be drained and he will be forced to plow and level this ground for a new type of farming. Anyone who has worked this type of ground knows that it will take from 3 to 5 years to break up and get this ground in condition to produce.

During this time he will have lost his yearly income and yet have the terrific expense of working this ground. There are a very few farm operators in Montana that could stand all outgo and no income for 1 year alone, but surely not for 3. I am sure there is no bank that would extend credit on such a risk. Hence, he is forced to sell (but who will buy a ranch with such a burden facing him).

I think any fair-minded person can see that the individual farmer is in danger of losing his rights and independence. I hope your paper will investigate such Government activities and make the true facts available to all farmers who read this paper. Any further help I can give, I'll give gladly.

July 4, Independence Day, again is here. Let's all take time to recall its true meaning and value.

Sincerely yours,

GORDON T. HERRIN.

Senator O'MAHONEY. Well, you heard the testimony of Mr. Rossiter this morning that the commissioners of the district, which was approved by the court, have no desire whatsoever to have the 4,600-plus acres included in the district. Is that right or wrong?

Mr. HERRIN. That is correct.

Senator O'MAHONEY. Is that your understanding of the situation?

Mr. HERRIN. That is correct.

Senator O'MAHONEY. Well, if these 4,600 acres are excluded from the district, do you wish the committee to understand that they would nevertheless be penalized in some other way?

Mr. HERRIN. The people in the supplemental area would, if they are excluded from the district, very possibly not have any great amount of bearing, only to this part, Senator: If an irrigation project that is put in is unsound and places are improved, and yet they can't stand the burden of water, and they go back on the tax roll, that isn't going to help the other individuals that also live in the area.

Senator O'MAHONEY. Let us take it step by step. If I understood you, you said, a little while ago, that you would not be injured.

Mr. HERRIN. I said I would not be included in the district.

Senator O'MAHONEY. Well, would you be injured?

Mr. HERRIN. Yes, sir; definitely.

Senator O'MAHONEY. How?

Mr. HERRIN. I think in the economic report that you find there, there will be some 2,700 more beef cattle raised in this unit. There will be some 63,000 more dozen eggs, and several other items. Of these items, the Bureau of Reclamation's opinion is that the milk and egg production will be consumed in the city of Helena, and I have a unit now that I am raising these very things on, and if they become more abundant—and there is certainly a surplus of them all now—I might mention at this time, being president of the local farm bureau in our area for the years 1953 and 1954—I can appreciate the consequences. For the year 1954 I spent most of the time trying to do away with the surplus milk in the Helena area. I spent much time in that area trying to do something about their surplus problem. And yet they claim there will be a terrific amount of more milk, and that will be consumed in the local area. That is infringing on a market. In other words, it will create an oversupply on a market which I have built my ranch economy around. If I no longer can

sell my eggs for 30 or 40 cents a dozen, and I have to drop to 20 cents, there is no profit in it.

Senator O'MAHONEY. Well, if the situation for which you are contending is secure, then it means that the water which neighbors of yours now desire on the 12,000 acres will not get that water.

Mr. HERRIN. That is right.

Senator O'MAHONEY. So you want to narrow the area of irrigation and reclamation in your vicinity?

Mr. HERRIN. No.

Senator O'MAHONEY. You don't want it expanded.

Mr. HERRIN. No; I didn't say that. I will say this, that we have no objection to either alternate plan 2 or alternate plan 1, which are other plans that they have.

Senator O'MAHONEY. Well, would they not by increasing the water supply, increase the production too?

Mr. HERRIN. To a certain extent, yes.

Senator O'MAHONEY. Well, if they did increase the production, would they not to that extent bring about the condition you have just condemned?

Mr. HERRIN. To a smaller degree, that is right; which I am not objecting to. I am not afraid of competition. Don't get me wrong. But I do feel that a man who has developed his ranch—many of these ranchers I am speaking of have supplemental waters. Their supplemental waters were not sufficient. So they drilled wells at an expense to them.

But they went to that expense knowing what the price range, approximate price range, in their area was. This project will change that price range considerably.

Senator O'MAHONEY. Have you had any engineer go over these matters for you?

Mr. HERRIN. No; I haven't.

Senator O'MAHONEY. You have no engineering report on this?

Mr. HERRIN. No.

Senator O'MAHONEY. Do you challenge the engineering conclusions of the Bureau?

Mr. HERRIN. No; we don't challenge them. We think their plans are fair as far as they go. But we don't think that it is good for the people and good for our area to install a unit that even to their own feeling is not economically sound.

Senator O'MAHONEY. What is produced on this area now which would be included in the plan as approved by the Congress?

Mr. HERRIN. How do you mean—

Senator O'MAHONEY. The area which would receive water under the program as appropriated for by the Congress, the 12,000 acres.

Mr. HERRIN. The 12,000 acres would raise mainly potatoes and beets as a cash crop. I would say that would be their cash crop—row crops, also small grains and hay.

Senator O'MAHONEY. What do they raise now?

Mr. HERRIN. They raise potatoes and beets, also small grains and hay.

Senator O'MAHONEY. Without water?

Mr. HERRIN. No. I want to say this. I heard testimony here this morning. I understand there are only two of the people that are

included in the district that own supplemental water. I would like to correct that somewhat, and I probably won't have them all, but I can give you the names or tell you the number. We have at least 10 that have supplemental water that also have ground included in the district.

Senator O'MAHONEY. Did you consult Mr. Aldrich, of the Bureau of Reclamation, at any time?

Mr. HERRIN. Yes; we did.

Senator O'MAHONEY. Did you give him the information you are giving us now?

Mr. HERRIN. Yes; we did.

Senator O'MAHONEY. What was his position?

Mr. HERRIN. I might say it was rather vague to me, in the fact that we just couldn't seem to pin him down to an exact figure at any time.

Senator O'MAHONEY. Do you wish the committee to understand, as you said in that letter that was written to one of the papers, that officials of the Bureau—employees of the Bureau, I should say, rather—were trying to force farmowners in this area to do something they didn't want to do?

Mr. HERRIN. Senator, I would like to say at this time that I have written a letter to Mr. Dexheimer and retracted, as far as he is concerned, because I feel that Mr. Dexheimer—Commissioner Dexheimer—is trying to correct this situation that I feel was gotten into on the State or local level, and I think that Mr. Dexheimer is honestly trying, and I certainly, as I told Mr. Dexheimer in my letter, apologize to him as Commissioner. But I do think that he should—and I put that in the letter—investigate.

(The letter referred to is as follows:)

HELENA, MONT., August 26, 1955.

MR. W. A. DEXHEIMER,

*Commissioner, Bureau of Reclamation, Washington, D. C.*

DEAR SIR: I read an article in the Helena, Mont., newspaper stating you were demanding the true repayment plan for the Helena Valley irrigation project, and my respect for the Bureau of Reclamation program was restored.

I realize you do not know what has been going on up to date in respect to this project.

The letter, a copy of which I am enclosing, will give you some idea of what tactics the Bureau in Montana is using. I now realize that you don't authorize such.

Please understand that no group or member of a group is trying to stop the irrigation district for those who want it. All we are interested in is allowing farmers to make their own choice as to their own business or type of business and allowing those who choose to be excluded from the district. We don't feel it is in keeping with our American way of life and Government to have a Government agency able to break and destroy an individual's livelihood.

I wish to take this opportunity to apologize to you, for I realize the underhanded policies practiced in Montana are not your ideas.

I sincerely hope you will find time to investigate these tactics and practices.

Very truly yours,

GORDON T. HERRIN.

Senator O'MAHONEY. Have you made complaint against any individual?

Mr. HERRIN. We have made complaint as to the way the whole unit has been handled; yes.

Senator O'MAHONEY. But I say: Against any individual?

Mr. HERRIN. No.

Senator O'MAHONEY. Then do you wish to retract now the statement that some officials or employees of the Reclamation Bureau sought to force landowners to do something against their will?

Mr. HERRIN. No; I don't care to retract that statement.

Senator O'MAHONEY. Do you make it specific with respect to any individual?

Mr. HERRIN. No; I don't.

Senator O'MAHONEY. Well, why do you choose to make it a general statement and not a specific statement?

Mr. HERRIN. Because the Bureau of Reclamation at the trial in Helena had people there—several people—I wouldn't know who they were; I wouldn't want to say who they were. I think if you asked for the complete brief on the case of that trial, you will see what I mean.

Senator O'MAHONEY. Well, you mean the hearing before Judge Fall?

Mr. HERRIN. That is correct.

Senator O'MAHONEY. Of course, you are making a rather serious charge here.

Mr. HERRIN. That is right.

Senator O'MAHONEY. You are making the charge that representatives of the Bureau of Reclamation, appearing in court before a district judge, misrepresented the situation.

Mr. HERRIN. No; I am saying they avoided—and I think that is very clear to this committee. If I would put this in evidence here, this book of the Bureau's, and take out a certain number of pages, would you not say that I was trying to keep some of the evidence away from them?

Senator O'MAHONEY. Not necessarily. It may not have been relevant. I don't know. But that mere fact in itself, that some pages were not put in, is not at all conclusive that there was misrepresentation, or that that was done deliberately.

Mr. HERRIN. Well, I might mention that the pages that were removed were the repayment plan.

Senator O'MAHONEY. You had an attorney?

Mr. HERRIN. That is correct. And he asked them to deliver them, and they didn't.

Senator O'MAHONEY. Did the judge hear the request?

Mr. HERRIN. Yes, sir.

Senator O'MAHONEY. And the judge did not compel the matter?

Mr. HERRIN. No, sir.

Senator O'MAHONEY. Do you not think an assumption is justified, then, that the judge felt that they were not relevant? Of course, I do not have the issues that were before the court before me now.

Mr. HERRIN. We understand that. And that is the case of life, that you go with the decisions of your officials and your judges. We realize that. But we do want to put with this committee the thought that all the facts were not presented. And when you form a district and tell people that 17,000 acres will be included, when you sign a person up, and then later in the proceedings change down to 13,000 acres, and don't re-sign those people, we feel that that is misrepresentation.

Senator O'MAHONEY. Well, certainly you knew that you were not being included.

Mr. HERRIN. We did not know who was being included.

Senator O'MAHONEY. Well, you yourself knew that you were not being included.

Mr. HERRIN. No; I didn't know more than my neighbors did.

Senator O'MAHONEY. Do you know now?

Mr. HERRIN. I know that I am not being included. But to what extent, I do not know.

Senator O'MAHONEY. Well, I cannot see how you can have any doubt about that, in view of the statements; unless it be on the assumption that you believe that the project here approved by the Bureau of Reclamation and by the Congress is a project which is basically unsound and infeasible.

Mr. HERRIN. No. I don't think you quite get my idea, Senator. If my 2 neighbors, here, were forced into this district of 13,800 acres against their wills by the judgment of the court, I see no reason why I couldn't be forced into a supplemental contract under the same—

Senator O'MAHONEY. Were your neighbors forced into this?

Mr. HERRIN. Absolutely. Absolutely.

Senator O'MAHONEY. Are you familiar with the Montana law creating these districts?

Mr. HERRIN. Only to the extent that it was used at this trial that if they could get 60 percent of the signers in an area they would be allowed to form a district.

Senator O'MAHONEY. Well, you are challenging the action of the District Court of Montana?

Mr. HERRIN. No; no; I am not. I am challenging that the district court did not know the complete facts.

Senator O'MAHONEY. But you did not appeal?

Mr. HERRIN. No.

Senator O'MAHONEY. And you had a lawyer?

Mr. HERRIN. That is right.

Senator O'MAHONEY. All right, sir. Have you anything else to say?

Mr. HERRIN. No. I would like, though, if I may, to have my two associates to have a chance to speak.

#### STATEMENT OF HARRY HELBERG, HELENA, MONT.

Mr. HELBERG. Senator O'Mahoney and members of the Senate Interior Committee, I would like at this time to express our appreciation for having the opportunity to appear before a committee of this nature, a committee of this kind, to present a few of the facts pertaining to the Helena Valley Irrigation District as they affect some of the landowners in that area.

I am not going into a very lengthy speech, here. I am going to keep it down just as brief as I can.

Mr. Herrin, Mr. Olson, and myself are representing a number of ranchers and farmers in the Helena Valley that own land in the subirrigated area and also farmers that have water rights.

Senator O'MAHONEY. When you speak of the subirrigated area, what do you mean?

Mr. HELBERG. That is the land that the Bureau calls seeped land. And they anticipate draining this land and then selling the landowner water.

Senator O'MAHONEY. Is it seeped land?

Mr. HELBERG. It is subirrigated land. I myself have lived in the Helena Valley about 40 years. During those 40 years I have worked on my folks' ranch, for neighboring ranchers in the Helena Valley, and so forth, until 1930, when I acquired my own outfit. I went out for myself in 1930. I went ranching for myself, and since that time I have owned and operated my own ranch and am still operating a 630-acre ranch.

During the time that the discussions or this development plan for the irrigation part of this Canyon Ferry project was shaping up, we didn't have any idea—now, when I say “we,” that is myself and the ranchers that I represent that are in the subirrigated area—that this land was going to be drained to the extent that we would be forced to buy water from the Bureau of Reclamation.

So we didn't think too much about this until a short time ago; in fact, less than a year ago. I don't know just the exact length of time. We then discovered that the Bureau of Reclamation intended to drain this subirrigated land, against our will, to the extent that we had to buy water from the Bureau to raise a crop on this land.

Senator O'MAHONEY. How did you learn that?

Mr. HELBERG. They contacted us and told us that that was what was going to happen to us.

Senator O'MAHONEY. Have you any written statement from any of them?

Mr. HELBERG. No; I haven't a written statement.

Senator O'MAHONEY. Have you a report from an engineer?

Mr. HELBERG. No, sir. That was handed down by the judge's decision at the time of the hearing.

Senator O'MAHONEY. Did the judge's decision say anything about draining your land?

Mr. HELBERG. Yes, sir. He did.

Senator O'MAHONEY. I haven't read the judge's decision yet. It is here, of course.

Mr. HELBERG. What I would like to explain on that subirrigated land: At the present time it does produce a pretty fair quality of hay, somewhere in the neighborhood of three-quarters of a ton, to a ton. The pasture lands that are subirrigated will handle from one and a half to two head per acre, which is all that you can get out of irrigated pastures.

But the Bureau of Reclamation, upon putting this district in, or forming this district in the Helena Valley, maintained that they had to have the subirrigated land included in order to justify the formation of the district.

There is close to 5,000 acres of irrigable land in this area. I don't know just the exact amount, but it is somewhere in that vicinity.

If this project goes in, when it goes in, the Bureau of Reclamation will drain this land. Then the big responsibility of developing this land falls upon the operators' or the owners' shoulders. The development of that seeped irrigated ground, which is nothing more or less than just plain subirrigated land—

Senator O'MAHONEY. What is the source of the water?

Mr. HELBERG. Underground water.

Senator O'MAHONEY. If I understand you correctly, you have a farm which is presently subirrigated, and you are satisfied with that farm. You do not want any more water. You are satisfied with the

water you get from the underground source of supply. You do not want to have your land included in the district.

Mr. HELBERG. That is right.

Senator O'MAHONEY. It is not included in the district; am I right?

Mr. HELBERG. Yes; it is.

Senator O'MAHONEY. Oh, it is?

Mr. HELBERG. Yes; it is.

Senator O'MAHONEY. It was included in the district as formed by Judge Fall's decision?

Mr. HELBERG. That is right, sir.

Senator O'MAHONEY. Well, being included in the district, your ranch, you understand, will be drained.

Mr. HELBERG. That is right, sir.

Senator O'MAHONEY. Under the plan of the Bureau of Reclamation. And then you will be required to buy water from the new supply.

Mr. HELBERG. That is right, sir.

Senator O'MAHONEY. For use on the land.

Mr. DOMINY, do you understand that to be the situation?

Mr. DOMINY. Yes. The definite plan, Senator O'Mahoney, speaks of approximately 8,000 acres of so-called seeped or subirrigated lands presently being farmed, and makes the observation that some 4,400 acres of the 8,000 is, in the Bureau's judgment, capable of higher use through a drainage program and application of a surface supply of water under the Helena Valley plan.

Senator O'MAHONEY. It is capable of a higher use?

Mr. DOMINY. That is the Bureau's judgment, that by draining it and making it a part of the project, it would increase its productivity over its present state.

I understood Mr. Helberg to say that he doubts that that is true.

Is that the intent of your statement, Mr. Helberg?

Senator O'MAHONEY. No; the intent of his statement, as I understand it, is that he is satisfied with the situation as it is.

Mr. DOMINY. He mentioned that—

Senator O'MAHONEY. And he does not want to change the use of his land, even to the higher use which the Bureau thinks it could be put to.

Mr. DOMINY. The acreage quoted is 8,000 acres of the seeped and subirrigated land, and it is estimated that 4,488 acres of that can be improved.

Senator O'MAHONEY. Anything else, Mr. Helberg?

Mr. HELBERG. Yes, Senator. After this land was drained by the Bureau of Reclamation, as I started to say, the cost of the developing of this subirrigated ground falls on our shoulders. When I say "ours," I mean the farmers and ranchers that I represent that are in the subirrigated area. They will all be affected similarly to myself. Their land is similar to mine.

The cost of converting this land is tremendous. We are not in a position at this time to make a statement as to what it will cost, but it will go way beyond the cost that the Bureau of Reclamation says it will cost for diversion of this land to productivity, to farm ground.

Also, during the time that we are trying to develop this land, which will take from 3 to 5 years, we will not be able to raise a crop, very much of a crop at least, if anything, during the time that we are developing this ground. The ground has to be plowed and replowed,

disked, harrowed, leveled, sod-rotted, which will take a long time, from 3 to 5 years as nearly as we can estimate it. And I am saying these things from the standpoint that I have lived in that area for about 40 years. That is what I am basing my judgment on.

So the cost is going to be tremendous. The minute that this project is approved or as soon as this project goes into effect and the Bureau drains my ground, I am broke, along with several other ranchers that own land in this subirrigated area. And, in fact, all of the 4,800 acres are going to be under it—these ranchers will be broke. They cannot stand the pressure.

While draining that land, the 4,800 acres, there will also be affected the remaining 8,000 acres. So consequently, the remaining acres over the 4,800 will be practically ruined while developing the other, and it will also ruin the farmer that owns the ground.

Then we turn around and buy water from the Bureau of Reclamation to raise a crop on this land, providing that this land can be drained and can be farmed successfully at a profit. I am not doubting the statement of the Bureau of Reclamation or the engineers when they say it could be. I am not saying it can't be. I am not saying that it can be, either.

Senator O'MAHONEY. But you are saying that you do not want it done to your land.

Mr. HELBERG. That is exactly what we are trying to express. And we presented that same kind of a case at the hearing in Helena. And we were definitely not considered in any way.

Senator O'MAHONEY. How long did the hearing last?

Mr. HELBERG. Six days, if I remember right. We presented very good testimony, but the judge saw fit to make the decision the way he did, and so we are within the boundaries of this Helena Valley irrigation project, against our will.

Senator O'MAHONEY. You have summarized the case to your satisfaction, as you have presented it, or as it was presented to the court?

Mr. HELBERG. I was at the court.

Senator O'MAHONEY. I mean: Have you summarized the situation here, to us?

Mr. HELBERG. Pretty much; yes.

Senator O'MAHONEY. How many people feel as you do?

Mr. HELBERG. There are approximately 12 to 15 ranchers. I don't know exactly how many there are.

Senator O'MAHONEY. Why don't you know?

Mr. HELBERG. I have not got that report with me.

Senator O'MAHONEY. Well, how many people are you authorized to speak for? For how many people are you authorized to speak?

Mr. HELBERG. All the people that own land within the subirrigated area, except one whose land is advertised for sale.

Senator O'MAHONEY. How were you authorized by them to speak? Did they give you written authority?

Mr. HELBERG. We haven't the authority with us, in writing, I might say that I am chairman of this group of people in the Helena Valley that are within the subirrigated area.

Senator O'MAHONEY. Well, I was just asking you if they had given you any written authority.

Mr. HELBERG. No; no written authority. As I say, I am chairman of this group. When it came out in the Helena paper that a hearing

of this kind was to be held in Washington, these people came to me, and also Mr. Olson and Mr. Herrin, and asked us if we would not go to Washington, D. C., and try to get to present the facts before that committee.

Senator O'MAHONEY. You say there were 12 to 15 such persons? How many acres?

Mr. HELBERG. Well, they have, according to the Bureau of Reclamation records, 4,800 acres that will be susceptible to irrigation. They own around 8,000 acres.

Senator O'MAHONEY. What I am trying to find out now is: How many people, how many farmers, and how much land do you three gentlemen speak for, which is and are within the district created by the court? I am not talking of those outside of the district.

Mr. HELBERG. That is right.

Senator O'MAHONEY. You tell me, for example, that you and your land are within the district.

Mr. HELBERG. That is right.

Senator O'MAHONEY. Well, how many others are there in the same position as you? You see, Mr. Herrin is not in the district.

Mr. HELBERG. That is right.

Senator O'MAHONEY. So how many are within the district, and how many acres are within the district?

Mr. HELBERG. There are 4,800 acres within the district.

Senator O'MAHONEY. Well, how about this 4,600 acres which are not in the district?

Mr. HELBERG. Mr. Olson and Mr. Herrin are here representing them, and also myself, as far as that is concerned.

Senator O'MAHONEY. But you are not one of that crowd.

Mr. HELBERG. I am not one of that crowd.

Senator O'MAHONEY. I am trying to divide this into two categories, the number of acres which are not in the district, and the number of farmers, and then the number of acres that are in the district, and the number of farmers, both of whom are dissatisfied with the plan.

Mr. HELBERG. That is right, sir.

Senator O'MAHONEY. Now, when you speak of 12 or 15 farmers and 4,800 acres, are you speaking of 12 to 15 farmers who are in the same position as you are?

Mr. HELBERG. That is right, sir.

Senator O'MAHONEY. And who have 4,800 acres, approximately?

Mr. HELBERG. That is right.

Senator O'MAHONEY. And these are altogether different from those represented by Mr. Herrin?

Mr. HELBERG. That is right.

Senator O'MAHONEY. And Mr. Olson belongs to your classification?

Mr. HELBERG. He belongs to both. Because he is affected both ways.

Senator O'MAHONEY. I see. Your land is within and without?

Mr. OLSON. Yes, sir.

Senator O'MAHONEY. O. K.

Have you made your statement, Mr. Helberg?

Mr. HELBERG. Concluding what I have to say, taking this sub-irrigated area into consideration, that is, the farmers within this area, that would not care to be within the project, and also taking into consideration the farmers classed as supplemental water users, I

would say at this time that for a \$12 million project that is to be used, or for the \$12 million that it will cost to put this Helena Valley project to work, there will only be actual benefit to the lands that are under the present pumping plant in the Helena Valley now, which is at the present time being operated by the Montana State Water Conservation Board; due to the fact that the subirrigated lands have adequate water. In fact, what I am trying to say is that their lands are just the way they want them, or they wouldn't own them. They want those lands just that way.

The farmers that own decreed water rights have no reason to be in the project. They have water enough. There are times, I will say, when they are a little short and have been a little short. In past years they have dug and developed their own wells to make up for what water shortages most of them have.

So, upon my conclusion, I would like to recommend, along with Mr. Herrin, that alternative plan No. 3 would be a plan more suitable for the Helena Valley area, due to the fact that that plan could be expanded any way that the engineers so decided, to take in and encompass practically all the lands that at this time would like to have water from the Bureau of Reclamation as proposed for the Helena Valley area.

Senator O'MAHONEY. Well, what have you to say about the status of landowners who are in neither of the two classifications you have mentioned; that is to say, they are not owners of subirrigated lands, and they are not owners of lands which are satisfactory as they are to the owners, but are the owners of lands which want a new water supply which would be provided by this project as designed by the Bureau? What have you to say about them? Should they go without?

Mr. HELBERG. Definitely not.

Senator O'MAHONEY. What can we do for them?

Mr. HELBERG. This alternative plan No. 3 could very nicely take care of those people, with a very small percentage of cost, compared to the \$12 million project to cover the whole area.

Senator O'MAHONEY. How much would it cost?

Mr. HELBERG. I again will have to refer to the definite plan report that the Bureau of Reclamation made up. Somewhere in the neighborhood of \$1,500,000 could restore the original pumping plant.

Senator O'MAHONEY. I thought Mr. Herrin testified that enough money had already been appropriated to do this, which is about \$250,000.

Mr. HERRIN. No; \$3,250,000.

Senator O'MAHONEY. Oh, I misunderstood.

The \$3 million which has been appropriated?

Mr. HELBERG. Yes, Senator; that would be very sufficient.

Now, de are not here to tell any Government agency——

Senator O'MAHONEY. Of course, the Bureau of Reclamation turned that plan down.

Mr. HELBERG. Yes; they did. But they also made the statement that it was the best plan. Of course, that is something that we cannot understand.

Senator O'MAHONEY. Well, Mr. Dominy and Mr. Frye, I think you are on the spot right now. You have got to say something for the record.

Mr. DOMINY. Our report speaks for itself, that it is the best and most economic plan to serve the existing area and to rehabilitate the existing area. And we point out that it has the failing that it would not bring in the additional lands and give the broader benefit to this immediate area and to the State and to the region.

Senator O'MAHONEY. And what would be the cost per acre?

Mr. DOMINY. I don't know that this has it broken down per acre. But the cost is given at \$1,235,000.

Mr. LINEWEAVER. That is without the expansion.

Mr. DOMINY. A total Federal expense of \$2,035,000. Excuse me.

Senator O'MAHONEY. Would it be economically feasible?

Mr. DOMINY. Yes, sir. It has a higher benefit-cost ratio than the Helena Valley unit that we did recommend for construction. However, we do point out that in our analysis we are not certain of the class III lands included in that smaller area, and should it develop that the class III lands could not support the payment rate on which this financial analysis is predicated, then the resulting operation and maintenance costs to the class I and II lands would be prohibitive.

We make that observation, which may change the feasibility of that plan—we don't know.

Senator O'MAHONEY. Anything more, Mr. Helberg?

Mr. HELBERG. I believe, Senator, that that is about all I have to say. Thank you.

Senator O'MAHONEY. Mr. Olson?

Mr. OLSON. Senator, I think they have covered pretty nearly all there is to say, but I am coming out for the people whom we represent that have both land in and out of said district. Because I have had two kinds of land. One ranch has enough water, and the other had too much, until I put drains in it. And I have four drains in my place, so I have it regulated right so that I can farm the place the way I want to. It is wild hay meadow. And the good grasses are coming back in, a better grade of grass than I have ever had before. And I think I can farm the whole place without any water.

Now they want to make me buy water and break up that land, which is an awful expense, to break it and level it. And when they do, they are going to put in a new canal, so that I have to buy water to put it on that land. That isn't profitable to me, and I don't think it is profitable to the Government.

Senator O'MAHONEY. Did you testify before the court?

Mr. OLSON. Yes; I did.

Senator O'MAHONEY. Did you make the same argument which was made here?

Mr. OLSON. Yes; I did.

Senator O'MAHONEY. Did you show the same condition of your land?

Mr. OLSON. Well, just about.

Senator O'MAHONEY. Do you have a copy of the decision?

Mr. LINEWEAVER. Yes, sir, of Judge Fall's order of June 28, 1955 and his comments when he concluded the hearings?

Senator O'MAHONEY. You had better put that in the record, Mr. Lineweaver.

(The material referred to follows:)

LETTER FROM JUDGE FALL

HON. JAMES E. MURRAY,

*Senate Office Building, Washington 25, D. C.*

MY DEAR SENATOR MURRAY: This is in reply to your letter of September 12, 1955.

At the conclusion of the hearing before me in the district court I made a few ex cathedra remarks from the bench and enclose a record of what I then said. I am not sure that this will be particularly helpful except as reflecting my belief that the representations made by the Bureau of Reclamation were accepted by me at full face value. This was the intent of my observations as appears on page 2.

I also enclose herewith a copy of the order forming the district. It does not reflect anything that goes to the matter now raised but may be of help to you. In any event, the district was formed, essentially, as requested by the Bureau of Reclamation.

This is written in haste that it may get to you before the 20th. Thank you again for your deep interest in this matter.

Sincerely yours,

VICTOR H. FALL,  
*Courthouse, Helena, Mont.*

---

STATEMENT BY JUDGE FALL

The COURT. This has been a very long case. I think we have made good progress. This court has attempted to let everyone who had any say have his say, and I hope his full say.

As has already been indicated throughout this trial, I am not unfamiliar with farm life. I was born and reared on a farm and I am personally cognizant of the fact that there is no group of people who are as fiercely independent as people who live on farms. They have a thought that is peculiarly a part of farm life, that theirs is the independent life. I think possibly that may have something to do with some of the situations which have arisen here. I want you to know that I am thinking about that. But it is one of the principles of American culture that we proceed on a proposition that the majority rule. We proceed upon that proposition insofar as it does not conflict with established rights which are of paramount importance; and by that I mean that formation of irrigation districts after all are set up on the principle of the most good to the most people. They are not wholly dissimilar to the formation of districts for paving streets, shall we say. You pave a street through the city and there is bound to be somebody along that street who is not going to like it at all, but they have to pay for their share. It just has to be that way.

According to the independent feeling, a person who finds himself with property surrounded by other property where the majority of his neighbors want to do something different is not an altogether dissimilar situation to a person who had 40 acres of good farmland and a whole city had grown up around it. The taxes go up until he can't farm. His farm is confiscated until he can't farm and has to sell because of conditions that are beyond his control.

I am not prepared to rule on this case at this time. I want to do some investigation myself. I just want you people to know, litigants and counsel alike, that I think all witnesses here have shown a remarkable degree of candor in giving their testimony. I think these objectors have told their story with a frankness that is very commendable in expressing why they think they should not be in this district; and their opinions are entitled to and will receive all the respect from this bench.

There may be some thought in the minds of some people that the representatives of the Bureau of Reclamation are primed to shove something down their throats. I don't think that is true. I am never one to believe that just because a person works for the Government he is out to saddle something on the backs of the public. I think the Government often performs a very fine function in undertaking works that the public themselves or the individuals cannot do for themselves. I am thinking of REA and some of these reclamation projects. Not every reclamation project has been completely successful. But the point I am making is just because reclamation officials and

their employees have come out here does not mean they are trying to saddle something on you just to get something done. I think they are honest in their efforts.

I am going to look into this matter further. The thing of it is that if the majority of the people in the Helena Valley pursuant to the law in the State want to establish an irrigation district and this record supports their petition, the district will be for them. What goes into the district will depend upon certain facts. The law says certain land shall be excluded. It becomes my particular job to decide what is to be excluded and included. It is up to me to decide whether your particular holdings of you protestants, whether I am entitled under the evidence here to exclude your land. You protestants want all your land excluded. I will do the best job I can, based on the testimony here. You may rest in that regard. I will undertake to do it and dispose of this case as soon as I can.

(The court's order and decree of June 28, 1955, is as follows:)

#### ORDER OF DISTRICT COURT, HELENA, MONT.

IN THE DISTRICT COURT OF THE FIRST JUDICIAL DISTRICT OF THE STATE OF MONTANA, IN AND FOR THE COUNTY OF LEWIS & CLARK

NO. 24952

IN THE MATTER OF THE FORMATION OF THE HELENA VALLEY IRRIGATION DISTRICT

FINDINGS OF FACT AND CONCLUSIONS OF LAW, AND ORDER AND DECREE ESTABLISHING  
HELENA VALLEY IRRIGATION DISTRICT

This matter came on regularly for hearing before the above-entitled Court, sitting without a jury on the 26th day of May 1955, in the Courtroom of said Court, at the Courthouse at Helena, in Lewis & Clark County, Montana; Petitioners appearing through, and being represented by, their counsel of record, Small & Herron of Helena, Montana; and certain Objectors making their appearance at said time, both in person and by their counsel of record; The Objectors R. B. Downs and Ida H. Downs appeared by their counsel Paul W., David R., and J. Miller Smith, Jr.; and the Objectors Harry Helberg, Albert Olson, M. G. Donaldson, Perry Stanfill, Mrs. John Hurni, Ted Liebsch, Leonard Frank, Henry Meyer, Theo Smith, Mabel Smith and Hugh D. Smith, Mrs. Massena Helberg, Richard Kelly, and Matilda Kelly, Ed Lamb, and Henry A. Lamb, Albert L. Olson and Carl Olson, John Hurni, C. R. Merritt, Jed Stanfill, Pete Gross and Frank Powell, all appearing by and through their counsel of record, Swanberg and Swanberg, of Great Falls, Montana; and the following-named Objectors, to-wit: Carl Schiller, as successor in interest to property formerly owned by R. M. or Robert Mills, and Thomas Evans, appearing in person, and in their own behalf and without counsel; and thereupon, and it appearing that said matter was properly before the Court (and ready for hearing), and upon motion of counsel for Petitioners, the default of all persons not appearing at said time in this matter was duly entered in the premises, by the Court, for their failure to appear or enter their appearance or any appearance herein within the time as provided by law or at all, and after due service of notice and process upon them in this matter, in the manner as required by law, and by the Order of this Court;

Witnesses were then sworn and testified on behalf of the petitioners; and said matter continued from time to time, and for a period of several days, and after all of the evidence presented by petitioners had been heard, and after said petitioners had rested; and thereupon witnesses were duly sworn testified on behalf of the various Objectors, both collectively and individually; and each and all of said Objectors having been granted full opportunity to present his, or her, objections herein, and any competent evidence in support of such objections; and after which the said Objectors rested their case; and rebuttal testimony was thereupon introduced by and on behalf of the Petitioners herein; and said hearing having as aforesaid been continued, from day to day and time to time, by order of the Court and agreement of counsel duly entered in the record herein; and the hearing of all evidence in said matter having been finally concluded on the 3rd day of June 1955; and at said time the Court ordered and directed that counsel for Petitioners, and counsel for Objectors, should have twenty (20) days from and after the date thereof, in which to file briefs or memorandums of argu-

ment and authorities upon said matter, and that upon and after the expiration of such period for the presentation or filing of such briefs or memorandums said matter should be considered fully and finally submitted to the Court, and by the Court then taken under advisement and consideration; and the counsel on behalf of both sides having thereafter submitted such briefs and memorandums to the Court herein; and the Court thereupon having taken the matter under advisement, and having fully considered said matter, and being now duly and fully advised in the premises, now adopts and enters the following findings of fact and conclusions of law, to wit:

#### FINDINGS OF FACT

##### I

That the lands embraced within the boundaries of the proposed Helena Valley Irrigation District lie wholly within the County of Lewis and Clark, State of Montana, in which said County the hearing of this matter on said petition was held, in the manner as specified by law.

##### II

That legal notice of the hearing upon the petition for the formation of the Helena Valley Irrigation District was duly and regularly given, as required by law, and as appears from the record herein, by the publication of a notice of such hearing (together with a copy of the petition herein) in a newspaper in said Lewis and Clark County, wherein the lands of said proposed irrigation district lie; Such publication having been made in the April 14th and April 21st, 1955 publications of the Independent Record, a daily newspaper, published and circulated in the City of Helena, County of Lewis and Clark, State of Montana, the same being a newspaper of general circulation printed and published as aforesaid in said Lewis and Clark County, Montana.

And it further appearing from the proof herein, that each and all of said publications of notice were made in regular issues of said newspapers and not in any supplement thereof, and it further appearing to the Court from the affidavits and Certificate of the Clerk of the above-entitled Court, that in addition to said publications, notice was also given of said hearing by the Clerk of said Court, by mailing a copy of said petition and of said notice of the time and place of the hearing of this matter, to each person who was a nonresident of Lewis and Clark County, in which said proposed district lies; said copies of petition and the notice of time and place of hearing having been duly mailed by said Clerk by depositing the same in the Post Office at Helena, Montana, within three days after the first publication of said notice as aforesaid; and said copies of said petition and notice having been mailed as first class mail with postage prepaid, and addressed to the last known addresses of each respective nonresident owner of lands within said proposed district as stated in said petition; and all of which was done according to law and the order of this Court, fixing the time and place of hearing on said petition and directing that notice thereof be given, and said notice setting and designating the time and place fixed by said Court, when and where the hearing on said petition and of this matter would be had.

##### III

That except, as in these Findings, otherwise specifically found and not set forth, all of the allegations, matters or things, contained and set forth in the said completed petition herein, are true and correct, and amply sustained by competent evidence adduced at the hearing of this matter.

##### IV

That said petition praying for the formation of the Helena Valley Irrigation District, was filed in the above-entitled Court on the 11th day of April, 1955; and that as more fully appears from the said petition there is a gross acreage of 20,631.52 acres of land within the boundaries of said proposed irrigation district and as prayed for in said petition; and that on said 11th day of April 1955, when said petition was filed herein, there were 160 record owners of land within the boundaries of said proposed district; that more than sixty percent (60%) of the owners of land within the proposed boundaries of said proposed district, and said owners being on said 11th day of April 1955, the owners of more than 60%

of all the lands embraced within the boundaries of said district, signed the petition or petitions herein for the creation and establishment of said irrigation district; and prior to the filing of the same in this Court.

## V

That of the total acreage within the boundaries of the proposed irrigation district as prayed for in said petition herein, 12,533 acres thereof are susceptible to irrigation and that the signers of said petition herein were, on the 11th day of April, 1955, the owners of more than sixty percent (60%) of said acreage therein susceptible to irrigation.

## VI

That through inadvertence and mistake, and as a result of typographical errors, there were certain errors in the description of lands set forth in Exhibit "A" attached to the "Complete Petition" filed herein, as follows, to-wit:

The SE $\frac{1}{4}$ NW $\frac{1}{4}$  of Sec. 5, Twp. 10 N. Rge. 3 W., was erroneously described as the SE $\frac{1}{4}$ NE $\frac{1}{4}$  of Sec. 5, Twp. 10 N. Rge. 3 W.; and

The NE $\frac{1}{4}$ NE $\frac{1}{4}$  of Sec. 31, Twp. 11, N. Rge. 3 W., was erroneously described as NE $\frac{1}{4}$ NW $\frac{1}{4}$  Sec. 31, Twp. 11 N. Rge. 3 W.

That such errors did not result in any detriment or prejudice to any person, and does not affect the right to the inclusion of said lands within said district as hereinafter specified; and in conformity therewith, said Exhibit "A" attached to said "Complete Petition" herein shall be considered (as of the date of filing thereof), as amended, to set forth the correct description of said lands as hereinabove designated.

## VII

The Court finds that certain of the said lands lying within the proposed boundaries of said district, and as set forth in the petition herein, will not be benefited, at the present time, to a sufficient extent to warrant their inclusion within said district, and that it is not at present feasible, or practicable, to attempt to include such lands within said district; and the same should therefore be excluded from the same and the Court accordingly herein excludes such lands; the same consisting of the following; to-wit:

Lands of Richard Kelley, consisting of the following:

N $\frac{1}{2}$  of NW $\frac{1}{4}$  and NW $\frac{1}{4}$ NE $\frac{1}{4}$  of Sec. 9; and NE $\frac{1}{4}$  of NE $\frac{1}{4}$ , and 11 acres of land in SE $\frac{1}{4}$  of NE $\frac{1}{4}$  of Sec. 8, all in Twp. 10 N. Rge. 3 W. (comprising 171 acres of land).

Lands of R. B. Downs, consisting of the following:

A 9 acre tract of land situate in the SE $\frac{1}{4}$  of NE $\frac{1}{4}$  of Sec. 8, Twp. 10 N. Rge. 3 W.

Lands of Gilbert Merritt, consisting of the following:

SE $\frac{1}{4}$  of the NE $\frac{1}{4}$  and E $\frac{1}{2}$  of SE $\frac{1}{4}$  and E $\frac{1}{2}$ E $\frac{1}{2}$ NW $\frac{1}{4}$ SE $\frac{1}{4}$ , all in Sec. 31 Twp. 11, N. Rge. 2 W. (comprising about 130 acres).

Lands of Hugh D., Theo E., and Mable Smith, consisting of the following:

The E $\frac{1}{2}$  of SW $\frac{1}{4}$  Sec. 35, Twp. 11, N. Rge. 2 W. (comprising approximately 70 acres of land).

Lands of Harry Amundson, consisting of the following:

About 10 acres situated in E $\frac{1}{2}$  of SW $\frac{1}{4}$ , Sec. 35, Twp. 11, N. Rge. 2 W.

The foregoing are all that are to be excluded from the lands described in Exhibit "A" attached to said "Complete Petition" herein; and except for such specific exclusions, all of the remainder of said lands described in said Exhibit "A" and, as hereinafter specifically described and set forth, are to be included in, and as a part of, said District as hereinafter created and established.

## VIII

That the lands hereinafter described, in the Order and Decree made and given and entered by the Court herein, and based upon these findings of fact and conclusions of law, and included within the boundaries of said proposed irrigation district, as now determined by this Order and Decree, consisting of all of the lands described and set forth within the proposed district within the petition filed herein, save and except for the lands that have been specifically excluded therefrom as hereinabove set forth, are all susceptible to irrigation from the same general source and will all be benefited by drainage and/or

irrigation, in the manner and form and to the same general extent as alleged and set forth in the petition herein.

#### IX

That there are 20,242 acres of land within the boundaries of the district as herein established; and that of said acreage 12,533 acres are susceptible to irrigation from the same general source, and will all be benefited by irrigation; That there are 157 recorded owners of land within the boundaries within the said district, as herein established as of April 11, 1955, and that 106 of said record owners of land within the boundaries of said district as established herein have signed said petition or petitions to form said district; and that the said 106 owners are the owners of 13,336 acres of land in said district; and that said owners constitute and are, more than 60% of the record owners of land in said district; and are the owners of more than 60% of the lands lying within said district as herein established. That the said 106 owners of lands in said district, who have signed said petition are the owners of 8,250 acres of irrigable land, and that the number of acres of irrigable land owned by the signers of said petition constitute and are, more than 60% of the total acreage susceptible to irrigation within the boundaries of said proposed district.

#### X

That each and all of the acts necessary have been done and accomplished herein by the Petitioners, in order to vest this Court with jurisdiction to form the proposed irrigation district; and the Court specifically finds that it did have and acquire such jurisdiction on the 11th day of April 1955, when said petition was filed, and said Order fixing time and place for the hearing of said matter was given; and that it did have jurisdiction to hear and determine the issues herein, and to form an irrigation district, at all times from the 11th day of April 1955, the time of filing said petitions until the 26th day of May 1955, the time of said hearing, and that said jurisdiction has continued at all times since April 11, 1955, and up to and until the date of the signing of this Order and Decree by the Court.

#### XI

That under the proposal for the formation of the District, as set forth and requested by the petitions herein, it is understood and contemplated that lands hereby included within said district shall not be taxable thereunder unless such lands included within said district, which require drainage, can, in fact, be drained.

#### XII

That the name proposed by the petition, and hereby approved by the Court, for said District is the "Helena Valley Irrigation District."

#### XIII

That a correct general description of the lands to be included in said District is as hereinafter set forth in the Court's "Order and Decree", and as designated upon the map (marked Exhibit "1") attached to, and by this reference made a part of, these findings and conclusions and said Order and Decree.

WHEREFORE, the Court makes its conclusions of law, as follows:

#### I

That this Court has jurisdiction, at the present time, to make an Order or Decree establishing the Helena Valley Irrigation District, and to make all other orders and include all things required therein by law, and such as may be incidental or necessary therefor, in conformity with the laws of Montana and such case made and provided.

#### II

That except as in these findings or conclusions otherwise specifically set forth the objections to the formation of said District, and the requests for exclusion of lands therefrom, should be, and are hereby, refused and denied.

## ORDER AND DECREE

WHEREFORE, it is ordered, adjudged, and decreed, and this does Order, Adjudge, and Decree:

1. That each and all of the foregoing findings of fact are true, and that the prayer of said Petition for the formation of said Helena Valley Irrigation District should be allowed, and for the inclusion therein of the lands hereinafter described, and for the fixing of the boundaries of said district to include said lands.

2. That said Helena Valley Irrigation District be, and the same is, hereby created and established, and the same is declared, ordered, and adjudged hereby to be a public corporation, for the promotion of the public welfare; and that the lands included herein shall constitute all taxable and assessable property of said District for the purpose of the statutes authorizing the creation of the same, and in the manner as by the statutes of Montana and in such case made and provided.

3. That the lands to be included in said District, and included therein by this Order and Decree, are described as follows, to wit:

## EXHIBIT "A"

## LEGAL DESCRIPTION—HELENA VALLEY IRRIGATION DISTRICT

SW $\frac{1}{4}$ , Sec. 1; Lots 2, 3, 4, S $\frac{1}{2}$ NE $\frac{1}{4}$ , S $\frac{1}{2}$ NW $\frac{1}{4}$ , S $\frac{1}{2}$ , Sec. 2; Sec. 3; Lot 1, E $\frac{1}{2}$  Lot 2, SE $\frac{1}{4}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ SW $\frac{1}{4}$ NE $\frac{1}{4}$ , N $\frac{1}{2}$ SE $\frac{1}{4}$ , SE $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 6; Sec. 7; W $\frac{1}{2}$ W $\frac{1}{2}$ , Sec. 8; NE $\frac{1}{4}$ , Sec. 10; N $\frac{1}{2}$ , SE $\frac{1}{4}$ , Sec. 11; W $\frac{1}{2}$ , SW $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 12; W $\frac{1}{2}$ NE $\frac{1}{4}$ , NW $\frac{1}{4}$ , NE $\frac{1}{4}$ SW $\frac{1}{4}$ , W $\frac{1}{2}$ SE $\frac{1}{4}$ , Sec. 13; W $\frac{1}{2}$ , W $\frac{1}{2}$ SE $\frac{1}{4}$ , Sec. 17; E $\frac{1}{2}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ , Sec. 18; All in Township 10 N., Range 2 W., M. P. M.

Lots 2, 3, SE $\frac{1}{4}$ NW $\frac{1}{4}$ , Sec. 2; Lot 1, SE $\frac{1}{2}$ NE $\frac{1}{4}$ , SE $\frac{1}{4}$ NW $\frac{1}{4}$ , N $\frac{1}{2}$ NE $\frac{1}{4}$ SW $\frac{1}{4}$ , N $\frac{1}{2}$ NW $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 4; SE $\frac{1}{4}$ NW $\frac{1}{4}$ , Sec. 4; Lots 1, 2, SE $\frac{1}{4}$ NE $\frac{1}{4}$ , SE $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 5; Lot 1, S $\frac{1}{2}$ SE $\frac{1}{4}$ , Sec. 7; S $\frac{1}{2}$ SE $\frac{1}{4}$ NE $\frac{1}{4}$ , NE $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 8; SW $\frac{1}{4}$ NE $\frac{1}{4}$  excepting 2 acres in SE Corner, S $\frac{1}{2}$ NW $\frac{1}{4}$ , SW $\frac{1}{4}$ , S $\frac{1}{2}$ SE $\frac{1}{4}$ , N $\frac{1}{2}$ SE $\frac{1}{4}$  excepting 25.80 acres in the NE part, Sec. 9; SW $\frac{1}{4}$ SW $\frac{1}{4}$ , Sec. 15; Tracts recorded in the name of J. Lloyd Keyes consisting of 17.65 acres in West portion, NW $\frac{1}{4}$ SW $\frac{1}{4}$ , Sec. 15 and 4.01 acres, Sec. 15 and Sec. 16, described as follows: Commencing at the Government quarter section corner between Sections 15 and 16 running thence west 12.04 chains to a point: Thence North 74.5° East 14.90 chains to a post; Thence South 32°30' East 5.40 chains to a post; Thence West 5.58 chains to the place of beginning; SW $\frac{1}{4}$ NE $\frac{1}{4}$ , W $\frac{1}{2}$ , NE $\frac{1}{4}$ SE $\frac{1}{4}$ , Plats 1-16 inclusive, plats 18, 19, 25, 26, 32, 33 in SE $\frac{1}{4}$ , Sec. 16; N $\frac{1}{2}$ NE $\frac{1}{4}$ , Sec. 17; NW $\frac{1}{4}$ NW $\frac{1}{4}$ , Sec. 22; All in Township 10 N., Range 3 W., M. P. M.

The E $\frac{1}{2}$ E $\frac{1}{2}$ SW $\frac{1}{4}$ , approximately 12 acres above elevation 3638 feet SW $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 18; approximately 15 acres above elevations 3638 feet in E $\frac{1}{2}$ NE $\frac{1}{4}$ NW $\frac{1}{4}$  and W $\frac{1}{2}$ NW $\frac{1}{4}$ NE $\frac{1}{4}$ , W $\frac{1}{2}$ SE $\frac{1}{4}$ , Sec. 19; NW $\frac{1}{4}$ NE $\frac{1}{4}$ , S $\frac{1}{2}$ NE $\frac{1}{4}$ , NW $\frac{1}{4}$ , N $\frac{1}{2}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ , Sec. 20; SW $\frac{1}{4}$ , Sec. 21; NE $\frac{1}{4}$ NE $\frac{1}{4}$ , W $\frac{1}{2}$ NE $\frac{1}{4}$ , W $\frac{1}{2}$ , W $\frac{1}{2}$ SE $\frac{1}{4}$ , Sec. 27; N $\frac{1}{2}$ N $\frac{1}{2}$ , Sec. 28; N $\frac{1}{2}$ NE $\frac{1}{4}$ , SE $\frac{1}{4}$ NE $\frac{1}{4}$ , Lots 3, 4, SE $\frac{1}{4}$ SW $\frac{1}{4}$ , E $\frac{1}{2}$ SE $\frac{1}{4}$ , Sec. 30; NE $\frac{1}{4}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ NW $\frac{1}{4}$ , Sec. 31; NE $\frac{1}{4}$ , Sec. 33; Sec. 34; W $\frac{1}{2}$ SW $\frac{1}{4}$ , Sec. 35; All in Township 11 N., Range 2 W., M. P. M.

The NW $\frac{1}{4}$ NE $\frac{1}{4}$ , S $\frac{1}{2}$ NE $\frac{1}{4}$ , N $\frac{1}{2}$ SE $\frac{1}{4}$ , NW $\frac{1}{4}$ , N $\frac{1}{4}$ SW $\frac{1}{4}$ , approximately 52.0 acres S $\frac{1}{2}$ SW $\frac{1}{4}$ , above elevation 3638 feet, Sec. 13; N $\frac{1}{2}$ , approximately 12 acres above elevation 3638 feet SE $\frac{1}{4}$ SE $\frac{1}{4}$ , N $\frac{1}{2}$ SE $\frac{1}{4}$ , SW $\frac{1}{4}$ SE $\frac{1}{4}$ , SW $\frac{1}{4}$ , Sec. 14; N $\frac{1}{2}$ , N $\frac{1}{2}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ , Sec. 15; N $\frac{1}{2}$ , SW $\frac{1}{4}$ , N $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 16; Sec. 17; SE $\frac{1}{4}$ , Sec. 18; Sec. 19; Sec. 20; S $\frac{1}{2}$ NW $\frac{1}{4}$ , SW $\frac{1}{4}$ , W $\frac{1}{2}$ SE $\frac{1}{4}$ , SE $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 21; NW $\frac{1}{4}$ NE $\frac{1}{4}$ , NE $\frac{1}{4}$ NW $\frac{1}{4}$ , W $\frac{1}{2}$ W $\frac{1}{4}$ , Sec. 22; S $\frac{1}{2}$ , Sec. 25; S $\frac{1}{2}$ SE $\frac{1}{4}$ , SE $\frac{1}{4}$  Sec. 26; SW $\frac{1}{4}$ NE $\frac{1}{4}$ , W $\frac{1}{2}$ NW $\frac{1}{4}$ , SE $\frac{1}{4}$ NW $\frac{1}{4}$ , SW $\frac{1}{4}$ , W $\frac{1}{2}$ SE $\frac{1}{4}$ , SE $\frac{1}{4}$ SE $\frac{1}{4}$ , Sec. 27; Sections 28, 29, and 30; North 40 acres of tract recorded in name of T. G. Davidson and Edna M. Davidson comprising NE $\frac{1}{4}$ NE $\frac{1}{4}$  and E $\frac{1}{2}$ NW $\frac{1}{4}$ NE $\frac{1}{4}$ , lots 1 and 3, Sec. 31; N $\frac{1}{2}$ , N $\frac{1}{2}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ , Sec. 32; Sections 33, 34, and 35; E $\frac{1}{2}$ NE $\frac{1}{4}$ , Sec. 36; All in Township 11 N., Range 3 W., M. P. M.

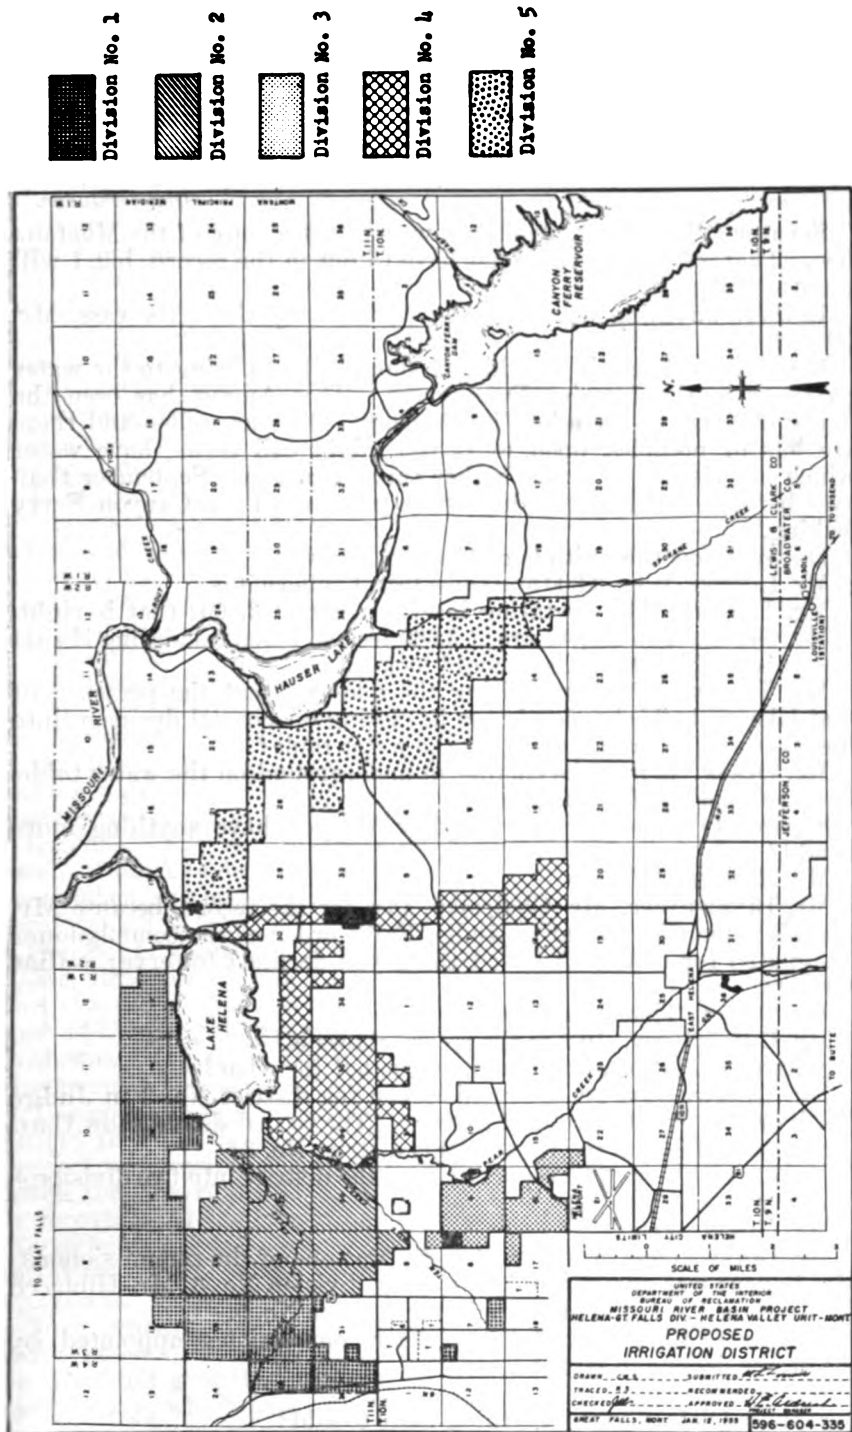

The E $\frac{1}{2}$ , Sec. 25; E $\frac{1}{2}$ , Sec. 36; All in Township 11 N., Range 4 W., M. P. M.

4. That said Helena Valley Irrigation District shall be divided into five sections, or divisions, as set forth and designated upon that certain map, or plat, of said District, marked as "Exhibit 2," hereto attached, and by reference made a part hereof.

5. There are hereby appointed as commissioners for the Helena Valley Irrigation District, the following persons who shall serve until such time as their

successors are duly elected and qualify as provided by the laws of the State of Montana, to wit:

Division No. 1: W. A. Rossiter

Division No. 2: John Baucus

Division No. 3: Albert L. Olson

Division No. 4: Henry Hibbard

Division No. 5: Al Hrella

Dated this 28th day of June 1955.

VICTOR H. FALL,  
*District Judge.*

Senator O'MAHONEY. And then we will get a copy of the Montana law. That, of course, you don't have to put in the record, but I will want to look at it.

Is there anything new that you want to say about the case, Mr. Olson?

Mr. OLSON. There is one thing I should like to bring to the water board or to the Interior Department. This August has been the driest August we have had in 43 years. But our wells—and there are lots of potholes, open wells you might call them—have water which has risen 5 or 6 feet higher this August and September than ever before. I think it is due to the pressure of the Canyon Ferry leaking.

Do you know the altitude of Canyon Ferry?

Mr. LINEWEAVER. 3,800 and some feet, I believe it is.

Mr. DOMINY. The operating level is right at 3,800; that is right.

Mr. OLSON. You see, we are at 3,660 feet, so I was wondering if that wasn't something that they should look into.

Mr. DOMINY. You are raising the question that the presence of that lake at the higher level may be closing off normal drainage into the river and otherwise affecting the water table?

Mr. OLSON. It must be coming in underground on the water table. I was wondering if it was possible.

Senator O'MAHONEY. Mr. Rossiter, do you have anything more to add?

Mr. ROSSITER. Yes.

Mr. LINEWEAVER. Mr. Chairman, just for the record, because Mr. Olson's name will appear in Judge Fall's order as the commissioner designated for district No. 3: I think you declined to serve; is that correct?

Mr. OLSON. That is correct.

Mr. LINEWEAVER. Just so the record shows it.

Senator O'MAHONEY. He was designated for what?

Mr. LINEWEAVER. As a commissioner for district No. 3 in Judge Fall's order. But he declined to serve. The record should show that.

Senator O'MAHONEY. What is this district No. 3?

Mr. LINEWEAVER. The report divided the district into five divisions, I believe.

Mr. OLSON. Yes.

Mr. LINEWEAVER. And Mr. Rossiter was one of the commissioners; Mr. Baucus was another, Mr. Olson for division No. 3, Mr. Hibbard for division No. 4, and Mr. Hrella for division No. 5.

Senator O'MAHONEY. Did any other commissioner appointed by the decree decline to serve?

Mr. OLSON. No.

Senator O'MAHONEY. Anything more to add?

Mr. OLSON. No; I think that is all.

Senator O'MAHONEY. Well, thank you very much, gentlemen. I hope you feel you have been given ample opportunity to submit your case.

Mr. HELBERG. We do.

Senator O'MAHONEY. Mr. Rossiter?

Mr. ROSSITER. I feel that there have been statements made here which can't pass, from our position. I think they were made under a misapprehension. I can't conceive that within all the facts they were intended to be as they have been put into the record.

The Bureau of Reclamation people were brought into this hearing before the court as witnesses for the proponents of the irrigation district, for the formation of the irrigation district. They were brought in to testify as to the feasibility of the project. They at no time during that court proceeding answered any questions or volunteered any information that wasn't brought out either by the attorney for the petitioners on direct examination or on cross-examination by the objectors' attorney.

It is true the people of the Bureau were in the courtroom. They were consulted by the petitioners, by our attorney, and questions were asked, and they were requested for information to be brought out, and to render assistance in that regard.

I think that is what Mr. Herrin objected to, and I can see no conclusion that can be drawn from that that they were in any way trying to mislead anybody or to force anybody into anything. They testified on the basis of the questions they were asked.

Senator O'MAHONEY. What about the elision of several pages from this document?

Mr. ROSSITER. The document that was introduced in the court did have several pages missing. Now, just where they were taken out—there were only 3 or 4 of those documents in the hands of anybody. I had one. And it is my recollection that it was my copy that was used. I don't remember taking the pages out. The pages may have been taken out because of information that somebody wanted, and they wanted to take them out. But that was brought out in court.

Senator O'MAHONEY. It was known to the court?

Mr. ROSSITER. It was known to the court that they were missing, and the pages that were deleted were pages which pertained to the cost of the project, the overall cost of the project, as to the amount that was going to be returned, in other words, the recovery to the Government to pay for this project.

The court from the bench said that that was of no interest to the court; that the Bureau of Reclamation had determined that the project was feasible and that he had no intention of going into how much the Government was going to spend, or as to what they were to recover; that the formation of the district didn't call for that, and the defendants' or objectors' attorney was told what it was, and he could see the pages, and have another one with the pages in it if he wanted it.

Now, whether he actually did go any further to check on them, I don't know. But they were available for him. In other words, if we wouldn't give them to him, he was told that the State engineer had a copy, which had to be furnished in this project. There was.

nothing in the pages to mislead anybody. And while it might give somebody a chance to give a false impression, it was there explained and there for anybody to see. So there can be no misleading as to that.

Now, as to these statements made of lack of knowledge, there were any number of public hearings held on this project.

When it first came up in connection with the advance \$250, a meeting was held in the valley, where the thing was explained, and there was a possibility of the project being able to go ahead. Mr. Herrin's father was there. I don't remember whether Mr. Herrin was there. I remember his father was there and was opposed to it to start with.

After it was explained, he made the statement that he thought it was a good thing. And the matter of expenses for sending me to Washington was brought up, and he offered to pay \$10 toward my expenses. Now, whether he did or not, I don't know. I don't remember now. It is immaterial.

There were a number of other meetings, public meetings, held, where these gentlemen were present, where the situation was explained.

Now, particularly as to this question of the seeped lands or the lands which they call subirrigated and we call seeped, because the water comes up and stands on top of the land and then goes down. That was brought up and a meeting held in the chamber of commerce, when these gentlemen were there and presented their case, and I was there, and that whole question was threshed out. And it was explained how the formation of an irrigation district worked: That if 60 percent of the people want the thing, the same as any other improvement district, the law provided that the balance would be brought in.

Now, I haven't the figures with me, and I am quoting from memory, but they won't be far off. I think there were 168 landowners involved in this thing. Of that amount we actually had signed up on petitions something like 106 to 110. The balance, with the exception of 13 of them, neither objected to the formation of the district nor signed the petitions. Some of those were people who were away. Some of them were people who were disinterested to the extent that they said, "If the district comes, okay; if it doesn't come, that is all right. We just don't want to sign the petition."

We had better than 65 percent of the landowners actually on the petition. The ones who were not interested ran it up to somewhere around 87 percent, actually, that took no action at all. There were 13, as I recall, who hired an attorney and signed the petition in objection. Two of those the Court let out. Or three of them, rather. One of them was an acreage of about 7 acres, and one of them about 60 acres, that they let out, and the other one in the same general neighborhood.

These men were on the stand and testified fully to the court as to their objection and their land, and everything else, and the court, in rendering his decision, took that into consideration and determined that their land was within the category of the statute for providing an irrigation district; that the land would be benefited and should be brought within the district.

Now, as to any kind of a project of this kind, certainly it has dislocations. I have never seen any project that was ever started, that it

just fit into everyone's plan. But the statutes of Montana provide for the formation of a district, and if the proof is there the dislocations are overcome and some of them have to join. The statute was strictly adhered to, and everything fell in line all the way down.

Senator O'MAHONEY. Have there been any withdrawals since the order of the court?

Mr. ROSSITER. There have been no withdrawals. And, just as my personal opinion, I am sure we could go back and get the same number of people if not more on the petitions tomorrow if we wanted to get them signed up.

There is that one group where there were dislocations. And I want to correct one other statement—that they represent all the people who have the seeped land. That isn't true. There are two large land-owners in there that are in the same category as they are that did sign the petition and are one of the petitioners for formation of the district. They had no water rights on their land. Their land after being drained becomes some of the best land in the valley under the Bureau's classification. They did petition in.

One other group that is in this category and who were one of the objectors, bought their land after they knew that an irrigation district was about to be formed and that that land would be included. The statement of one of them when I questioned him about it was very frank, he didn't testify the same in court as he did to me, but his statement was that he knew that the irrigation district was going to be formed but he didn't think the people were damn fools enough to go for it, so he was going to buy the land anyway. That was his reaction.

So if these people misunderstood—I am not saying they are not here telling their understanding of it, but if they misunderstood, it wasn't because they didn't have opportunity to learn and find out. Mr. Herrin's father called the Bureau of Reclamation 2 days before the court convened on this case to determine whether he was in or whether he was out; and he was definitely told that he was not involved in the project at all.

There is one other point I wish to make, and that is as to the statement made by Mr. Herrin that he was not consulted or asked about signing up the contract. The answer to that is that that part of it, at the time this irrigation district was being formed, as far as we were concerned, was not anything that we were involved in. That is just the point we are here to make today, that we were not involved and did not have to worry about supplemental water users. The Bureau of Reclamation had not projected any figures as to what the cost would be to them. We had nothing to do with them. So there was no reason, in the formation of this district, and for the construction of this project, for us to go to the individual supplemental water users and say, "Will you sign a contract? Here is the contract. Here is what it will cost you. Are you willing to go in on it?" That was an extraneous matter which we were not involved with, and therefore we didn't go into it.

Senator O'MAHONEY. Are there some people who owned land within the district as approved by the court, who objected to being within the district?

Mr. ROSSITER. Mr. Olson is one who is in that category. He has one piece of land, or one part of land, in which he has decreed rights and

irrigation rights. On another piece, which is separated from his land, he has no water right on it and it is seeped land.

Now, I know that particular piece of land, because I was going to buy it before Mr. Olson bought it. And I walked over the thing thoroughly. It was hummock land, and water was standing on it in the lower end of it, and part way up, 6 to 8 inches deep. That is land that was included in the district because the Bureau's investigation showed that properly drained and put into cultivation it would come into this No. I classification, which is the highest classification in the valley.

There is one other point that I wish to make, Senator. When they start talking from this plan here, it is true that when there was this preliminary investigation there was this question as to cost and that the overall average cost was something like \$6.71. We were apprised of that, and when we started out on this we told the Bureau that we couldn't stand that kind of a cost; that No. I lands couldn't pay the price that they had projected, nor II, nor III. And we started out, as the resolutions will show, and said we felt that the cost that the lands could support was \$5.25 an acre.

The negotiations ended up that the overall cost was \$5.40. In other words, the people in the district had to finally concede another 15 cents; because the amount the Bureau finally came up with that they had to have was \$5.40.

Now, those original figures were not presented to the people, because we wouldn't agree to it. We said it wasn't a matter of agreeing. We said it wasn't feasible.

Senator O'MAHONEY. How much acreage is within the district, as defined by the court, the owners of which would rather not be in the district?

Mr. ROSSITER. As the report said, there are 4,600 of all the lands that are seeped that could be in the district. Now, of that amount, of the ones who objected, the amount of lands actually in the district is somewhere around 2,800 to 3,000. The 4,600 acres, that is what the Bureau said, in the whole area was lands that were susceptible to drainage.

Part of that drainage land is on lands that were willing to come into the district. Part of it is a number of acres or—

Senator O'MAHONEY. You testified this morning, as I understood you, that there were about 4,600 acres of land not included in the district.

Mr. ROSSITER. The 4,600 acres is land which we call supplemental water lands, and by that we mean lands that need additional water.

Senator O'MAHONEY. It is not within the district?

Mr. ROSSITER. That is right. They are not within the district at all.

Senator O'MAHONEY. Well, I am not talking about that. I am talking about: How much land is in the district the owners of which do not want to be in the district?

Mr. ROSSITER. My best recollection is that that is between 2,800 and 3,000 acres.

Senator O'MAHONEY. But 60 percent of the land owned in the district has signed up?

Mr. ROSSITER. Better than 60 percent. Right around 64.8.

Senator O'MAHONEY. And that is a firm figure?

Mr. ROSSITER. That is a firm figure; yes.

Senator O'MAHONEY. And none of it has been altered?

Mr. ROSSITER. None of it has been altered. And in addition to that is this vast percentage of those who did not protest, but they did not sign the petition.

Senator O'MAHONEY. And the 60 percent of the land is in conformity with the Montana statute?

Mr. ROSSITER. That is right. The statute provides you have to have 60 percent of the land and 60 percent of the landowners.

Senator O'MAHONEY. Is that similar to the city-improvement district in Montana?

Mr. ROSSITER. Yes. The city-improvement district. Now, as a little sidelight on that method, right at the time we were forming this district, a weed district was started, which these gentlemen were very much in favor of—in fact, they were the sparkplugs in back of it—which operates exactly the same. You get a certain percentage signed up, and you get a weed district, and the rest over that number come in.

Senator O'MAHONEY. They come in whether they like it or not?

Mr. ROSSITER. Whether they like it or don't like it.

#### ADDITIONAL STATEMENT OF GOODRICH W. LINEWEAVER

Mr. LINEWEAVER. Senator Murray of Montana just asked over the phone that he would like to have a question answered. I think some of the people out there have asked him about it.

On page 22, Mr. Dominy and Mr. Frye, the modification of article 17 which was proposed to the district, article 17 of the contract, is the committee to understand that this amendment will not be insisted upon should the replies of the chairmen of the Appropriations Committees be affirmatively to the last paragraph of Governor Aandahl's letter to Senator Hayden and Chairman Cannon?

Mr. DOMINY. As I have stated here today, Mr. Chairman, if we receive advice from the congressional committees that in their judgment the requirements imposed by Congress concerning repayment prior to the start of construction on the Helena Valley unit are now satisfied, or would be satisfied, with the final consummation and execution of the proposed contract with the 12,553-acre district, then it would be of no consequence whether this language were or were not to be in the contract.

Mr. LINEWEAVER. That answers the question, but it would be of some consequence to the district, as I understand it, if this modification of article 17 was insisted upon.

Mr. DOMINY. Well, as I say, I don't know why it would be of any consequence to anyone. This was merely a necessary precaution, in our judgment, to make certain that in signing this contract we were not leaving the impression that that, in and of itself, was sufficient to obligate the Secretary of Interior to start the project.

Senator O'MAHONEY. Mr. Dominy, the point as I see it is this, that this modification of article No. 17 to which the Commissioners have objected and which is set forth on page 22 toward the bottom of the page in paragraph numbered 3, namely:

The commencement of construction of any works identified in this contract is contingent upon the conclusion of such further contractual arrangements as may be deemed by the Secretary to be necessary—

and so forth. Now, if the commencement of construction is contingent upon something, and that language is in the contract, then the Bureau has an out.

Now, I understand you to say that you understand the meaning of Secretary Aandahl's letter is that if the chairmen of the committees are of the opinion that the repayment of \$800,000-plus is all that was intended, then this added sentence is meaningless. You don't need it.

Mr. DOMINY. There I am saying "as deemed by the Secretary to be necessary" in my judgment will have been complied with, and whether or not this statement is in the contract will in and of itself have no bearing at that point, whether we start construction now or not. So it would seem to me to be meaningless.

Mr. ROSSITER. It leaves you open, though, to the position that you could put restrictions on in some other manner.

Senator O'MAHONEY. That contract has not been signed?

Mr. DOMINY. No, sir. No contract has been signed. I would like to have that very clear. And I think it would be well to have it in the record, that as I understand Montana law, now that the district has been formed, there is another opportunity for the people within that district to appear in behalf of their position, if they still oppose, at the time the repayment contract is confirmed.

Mr. ROSSITER. No; there may have been some misleading statements made on that, and I wish to correct that now. They don't have a chance to again go back into the fact whether they are in the district or not.

Mr. DOMINY. No. That is right.

Mr. ROSSITER. We have to go back and go through the same procedure to get the 60 percent of the people, 60 percent of the landowners to authorize the Commissioners to sign this contract. So that they have another chance to object. They can't get themselves out of the district.

Mr. DOMINY. I didn't want to leave the impression that they could get themselves out of the district.

Mr. LINEWEAVER. Let's cut the wobbling around, now. Is it the contention that the situation is that if the chairmen of the Appropriation Committees hold that the Department has correctly interpreted the intent of Congress, you would require an additional contract?

Mr. DOMINY. That is right.

Senator O'MAHONEY. I do not think there has been any wobbling around, Mr. Lineweaver. I think the testimony of the witness has been pretty clear on that.

Mr. LINEWEAVER. Perhaps, it's me that's wobbling around. If the opinion of the chairmen of the Appropriations Committees should be otherwise, the construction would start when the contract is signed.

Mr. FRYE. That is what the Secretary has said.

Mr. LINEWEAVER. I just wanted to clear that up.

Senator O'MAHONEY. And Mr. Rossiter has also said that when a repayment contract is signed, before it becomes effective, it must be cleared again in the court, and the court must hold that the 60 percent required by Montana law is still behind the contract.

Mr. ROSSITER. That is right, sir.

## FURTHER STATEMENT OF MESSERS. OLSON, HELBERG AND HERRIN

Mr. Olson, Mr. Helberg, and Mr. Herrin asked that the following closing statement be placed in the record:

We feel that the joint committee should acquire the complete transcript of the court proceedings held in Helena about June 1, 1955. This transcript would verify our above statements as to the stand the Bureau of Reclamation took at said proceedings.

The Bureau stated that the alternate plan 3 was rejected partially due to the fact that they were not sure of the No. 3 ground under this plan. This No. 3 ground is included in the present proposed district; also many like No. 3 acres. We cannot see why the No. 3 ground is any better under the present plan.

The committee should know that many farmers who thought they were not affected by the proposed project did back and try to help this project become a reality, because they wanted these farmers who needed water to have it. But when they realized that it was hurting and, in some cases, destroying farmers' livelihood who had been farming in this valley all their lives, they withdrew their support and immediately tried to stop this injustice.

We three would like to thank the Honorable Senator O'Mahoney for the wonderful way he has received us and our problem.

Mr. Rising subsequently advised Governor Aronson's telegram and the resolution of the State water board covered the State's position.

Senator O'MAHONEY. I am very grateful to all of you who have appeared. I am sorry to have taken up so much time, but you can only blame yourselves.

(Whereupon, at 4:20 p. m., the hearing was closed.)

# DOMESTIC TIN PRODUCTION

TUESDAY, NOVEMBER 1, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON MINERALS, MATERIALS, AND FUELS OF THE  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Nome, Alaska.*

The subcommittee met at 10 a. m., in the courtroom of the United States district court, second division, Federal Building, Nome, Alaska, on November 1, 1955, with Senator W. Kerr Scott presiding.

Mr. Robert W. Redwine of the professional staff of the committee was also present and participated in the examination of witnesses.

Senator SCOTT. The meeting will come to order. This hearing has been called for the purpose of hearing testimony in respect to Senate bill 2648, which has as its purpose the promotion and development of a tin-producing industry in the continental United States and its Territories. The bill reads:

[S. 2648, 84th Cong., 1st sess.]

## AMENDMENT

(IN THE NATURE OF A SUBSTITUTE)

Intended to be proposed by Mr. Scott to the bill (S. 2648) to encourage the discovery, development, and production of tin in the United States, its Territories, and possessions, viz: Strike out all after the enacting clause and insert in lieu thereof the following:

That the Domestic Minerals Program Extension Act of 1953 (67 Stat. 417), as amended, is amended by adding the following new sections:

"Sec. 5. In order to encourage the discovery, development, and production of domestic tin, the Administrator of the General Services Administration is hereby authorized and directed to establish a domestic tin purchase program, under such rules and regulations as may be promulgated by it.

"Sec. 6. Within ninety days from the effective date of this Act, the Administrator of the General Services Administration shall designate one or more delivery points within the continental United States, to include Seattle, Washington, for the purpose of accepting delivery of not more than ten thousand long tons of metallic tin in concentrates, or for a period of not more than ten years from the effective date of this Act, whichever may be the sooner, produced in the United States, its Territories, or possessions.

"Sec. 7. There is hereby established a base price of \$1.35 per pound, c. i. f. delivery point, for metallic tin in concentrates produced from lode mining operations, and a base price of \$1.20 per pound, c. i. f. delivery point, for metallic tin in concentrates produced from placer mining operations, delivered under the provisions of this Act. Such deliveries shall be subject to freight and smelter charges, together with such premiums and penalties as provided in the rules and regulations to be established. The net purchase price shall be determined by assay at time of delivery. This section is not intended and shall not be construed to limit or restrict the Administrator of the General Services Administration from increasing the price paid for metallic tin in concentrates delivered hereunder."

Senator SCOTT. That purpose is stated in the bill, and I quote:

To encourage the discovery, development, and production of domestic tin— followed by certain definite directives addressed to the executive branch of the Government.

Several important factors are interwoven in this question of a domestic tin-producing industry, including those of national security and self-sufficiency in one of the most strategic of all minerals and metals, the unemployment problem, and the matter of maintaining a stable economy in Alaska.

To act intelligently the Congress needs documented evidence touching on all facets of the problem. It is hoped that such evidence will be forthcoming here today.

The first witness will be Mr. Ralph Lomen, who has been asked by the subcommittee to present, for its benefit, an overall picture of the various interlocking problems, and suggestions for solving them.

Mr. Lomen, for the sake of the record, will you state your full name and business connections, and proceed with your testimony, and after that I will ask Mr. Robert Redwine to take over from that point.

#### **STATEMENT OF RALPH LOMEN, ON BEHALF OF THE TIN COMMITTEE OF THE ALASKA MINERS ASSOCIATION**

Mr. LOMEN. I would like to present for the record a brief of previous committee reports pertaining to this matter. It is a summary of committee reports which I think is of the greatest importance.

Mr. REDWINE. Mr. Chairman, I will ask the reporter to include this brief in the last part of the transcript.

Mr. LOMEN. Mr. Chairman and gentlemen of the committee, my name is Ralph Lomen and I appear here on behalf of the tin committee of the Alaska Miners Association, of which I am the chairman, and on behalf of the people of Nome where I have resided for the past 52 years.

Senate bill 2648 and its companion bill in the House, introduced by our Hon. Bob Bartlett, Delegate from Alaska, are the most important bills now pending in Congress so far as the second division of Alaska is concerned, and in my humble opinion far greater than statehood. Statehood without a developed natural economy could not function, and is merely a code of procedure for the conduct of society. The development of industry is essential to our very existence unless we are to be supported by a beneficent government.

In previous hearings held before the subcommittee of the Interior Committee of the House on the companion bill to S. 2648, the Governor of Alaska and the commissioner of labor testified that western Alaska is a distress area and currently drawing a disproportionate share from the employment security and welfare funds. If S. 2648 is passed by the Congress and becomes a law it will go far toward correcting this situation. It is abhorrent to consider welfare as a substitute for honest toil and, to those who would prefer it, I say that it is immoral.

Some of us who have devoted our lives and fortunes to the development of Alaska, and particularly the Seward Peninsula, find it embarrassing that we have not done better, but we have been blinded by gold, the king of metals, over the centuries. There was a time when

the peoples of the world fell under the hypnotic power of gold and it was such as these who stampeded from all quarters of the globe to found the town of Nome and develop this section of Alaska. In their quest for gold they made the first discoveries of tin at the western extremity of the American continent. Men of the same type later discovered platinum and developed the greatest source of that metal known on our continent, both more or less by accident. Two wars have eliminated the hardy prospector, without whom there can be no mineral development in this or any land.

The Seward Peninsula contains an area of a thousand square miles which has been declared the most highly mineralized on the American continent. In this area tin, of all metals except for gold, has been the most prevalent, and is to be found on numerous creeks as placer and as lode on its four most conspicuous promontories. More recently tin has been found in the Death Valley area, far removed from the so-called tin field, in quantity sufficient to justify further exploration. Traces of tin are common on most of the creeks of the Seward Peninsula, but for the present we are concerned with those prospects or occurrences considered to be of commercial value.

Such tin mining as we have had has been sporadic and confined to those periods when the market price appeared attractive. It is obvious that a market which has fluctuated from 27 cents per pound to \$2.04 is a dangerous place for investment, but in spite of the difficulties and price fluctuations the Seward Peninsula has contributed more than \$3 million in tin to the Nation's wealth. The motor-vessel *Coastal Rambler*, which sailed from here only a few days ago, carried approximately \$150,000 worth, and earlier in the season carried a cargo of even greater value. I will not dwell on the production statistics as you are to hear from representatives of the United States Bureau of Mines and the commissioner of mines for Alaska, both of whom have all of the official statistics and are more conversant than I.

If this was a subject of local interest only we would not be justified in appealing to the Congress. Its importance is national. Of all metals, tin is one of the oldest known and the rarest of the so-called base metals; one for which there is no substitute. An adequate and dependable supply is an absolute essential to our ever-expanding economy and to our national security. We here in Nome represent the only known source of tin on the American continent except for a smaller zone close to Fairbanks which remains undeveloped or unexplored. A few tons have been produced as a byproduct in North Carolina and the Dakotas, but otherwise the only known source of domestic tin is in Alaska.

The wise precaution of stockpiling tin and other strategic minerals is the result of the crucial position which we have occupied for two wars. The Congress has been farseeing in its support of that legislation and the program is under the constant scrutiny of the Office of Defense Mobilization. The alertness of ODM and the importance of tin is emphasized by the fact that the stockpile requirements have been upped seven times, or more, since the program was inaugurated.

A further evidence of the importance of tin is the fact that a special world conference was held in Geneva nearly 2 years ago for the purpose of stabilizing the tin industry. The conference was attended by all of the tin-producing nations of the world and most of the consumers, the United States being listed only among the latter. The

purpose of the conference was to establish stability in the industry and the conclusions and recommendations of the conference were subject to a vote of the participating nations. I am not in touch, but understand that, as of a month ago, the acceptance of the recommendations was assured and the Tin Council, to meet in London, will establish a world price within the range of 80 cents to \$1.10 per pound. A stockpile will be the method of control. The United States declined to vote, as a consuming nation, but afforded its blessing and stated that our own stockpile would not be used to control the world market price.

S. 2648 is an incentive bill to encourage prospecting for, and the ultimate development of, tin mines which may be discovered. Under the Office of Defense Minerals Exploration, there is now provision for prospecting with Federal aid but there is no law which contemplates Government participation in the mining or development of mines acquired under the Exploration Act; nor does S. 2648 contemplate such action.

The United States Tin Corp. is an exception to the above, having had assistance in both phases of its operation. The DMPA provided funds for equipment and production. Presently that mine is under the direction of General Services and its affairs probably will be liquidated. I am sure that GSA will testify before your committee.

The Alaska Tin Corp., during the seasons of 1953 and 1954, did exploratory work on Ear Mountain under a DMEA program and established a deposit of low grade tin on three creeks. It also established a low grade lode deposit containing both tin and copper. Neither of these prospects could be economically operated at present but they establish a known reserve which might conceivably be important at some future time.

The Zenda Gold Mining Co. also operated under a DMEA loan and established a reserve of approximately 4 million pounds of metallic tin at Cape Creek, the average metallic tin content exceeding 4 pounds per cubic yard in the pay zone. In spite of this rich deposit they have been unable to finance the operation due to the lack of a stabilized price.

The Northern Tin Co., operating on Buck Creek, has had the most successful operation on the Seward Peninsula. Mr. Ramstad has testified before the House committee as to his experiences in marketing his product and stated that they would permit their mine to lay dormant until assured of stability of price for their product.

The Office of Defense Mobilization has made an adverse report on the Bartlett bill now pending in the House and will probably do the same when S. 2648 is further considered. Members of the administration have likewise testified that there is no necessity for this type of legislation and have minimized our estimates of known reserves. It is likely that we are not viewing the matter from the same premise as we do not have advantage of the restricted information prepared by them but which is available to you in executive session.

This legislation goes beyond the scope of its strategic importance or it would be presumptuous for us to inject our opinions. The views of the administration do not consider the economy, welfare, or tax aspects. These matters do, however, concern the Congress.

While in Washington I have frequently heard the expression, "we have tin running out of our ears". As a matter of strategic im-

portance, that may be true under a short-range program but I find it difficult to reconcile that statement with the fact that we are still purchasing tin from foreign countries to feed a smelter at Texas City.

Regardless of the quantities of tin in the stockpile it must be considered as an emergency program only which does not, in any way, provide security beyond the moment. Assuming that we had need to draw on the stockpile for our national defense, it is conceivable that the stockpile may be inadequate for the duration of a war without any consideration for the further demands of an extended period of rehabilitation. If a war should occur, which God forbid, we would probably see destroyed the very sources of tin from which we have derived our present stocks and upon which our national industries are now dependent. Our present sources of tin will surely be denied us in any world conflict.

Lacking a dependable source of tin it seems to me most reasonable and timely to investigate our domestic sources. Within the continental United States, South Dakota is the only potential source so far as I know.

It would appear highly desirable to determine the tin potential of Alaska, not only for the immediate present but for posterity. Unless this is done we shall remain a have-not Nation. Under any program it will require years to ascertain the extent of our tin fields and to raise the necessary capital for their development, but the scope of S. 2648 should be sufficient to prove, or disprove, whether our fields are sufficient to provide a generous portion of our requirements. The present consumption of tin in the United States is approximately 60,000 long tons per year, from a world production of 165,000 tons, so we do not claim that this or any other legislation will make us independent of foreign sources but we should establish our position in this respect.

Incentive programs for tungsten, mercury, chrome, manganese, and other strategic minerals have been highly successful and serve as a precedent to justify the passage of this act.

The Hon. Douglas McKay, Secretary of the Interior, appearing before the American Mining Congress in its session at Las Vegas on October 10, outlined the administration's mineral policy. Quoting from his speech he said, among other things:

We must look deeper if we are to find new commercial deposits. You know, too, that most of our high-grade ores have been depleted and that we have to learn increasingly to handle economically the submarginal ones.

There's a real job to be done by the Government and by industry.

That we have a job to do is evidenced by our growing dependence upon imports. No longer can we fight a war or sustain an industrial economy without the aid of materials from foreign sources. For tin, chromium, nickel, manganese, bauxite, we are heavily dependent on imports.

The bill now before your committee is consistent with the above policy calling for cooperation between industry and Government. The Government is very liberal in its assistance for the purpose of prospecting but that is of little importance unless the program is extended to make it possible for industry, at its own expense and risk, to develop and mine the properties proven.

S. 2648 provides the incentive that will attract capital for this development and mining.

S. 2648 is not a subsidy at the expense of the taxpayer. The productivity of a successful mining operation, in wages and taxes, will more than offset any cost to the Government anticipated in this bill. Further, unless the private investment produces tin the measure will cost the Government nothing.

All that is involved in the bill is the differential between the world market price and the guaranteed floor price which can be more than offset by advances on the open market.

The only question which remains is whether it is advisable for the Government to determine the possibility of a domestic source of tin or to remain in perpetuity dependent upon the whim or friendship of those nations which today can, as they may please, supply or deny us this essential item in our economy.

Twice, in two wars, we have found that they could not, or would not, supply us with tin. If we cannot protect ourselves in time of peace it is very doubtful that we can in time of war. It must be remembered that the 38th parallel in Korea was because of the tungsten mines.

Someday we may compromise a war because of the essentiality of tin and our inability to get it.

It should be ascertained now whether we are to be eternally dependent upon foreign sources for our supply of tin or whether it is obtainable within our own borders.

The production of \$3 million worth of any product should be ample proof that the product exists and, that being true, it is worthy of serious consideration.

The Alaska Miners Association appeals for serious consideration of this measure.

Senator SCOTT. Mr. Redwine, I will ask you to give your name and connections for the record so those present may know your connection.

Mr. REDWINE. I am Robert W. Redwine and I am with the professional staff of the Senate Interior Committee, with special assignment on matters dealing with minerals and metals.

Mr. LOMEN, what is the present world market price for tin? Do you have those figures available?

Mr. LOMEN. I am about 2 months out of date but I hope it is still approximately a dollar. So far as I can recall, since last May the price of tin has advanced from 10 to 12 cents. The last I heard it was 98 $\frac{3}{4}$  cents per pound, but that is not current.

Mr. REDWINE. I want to call your attention, Mr. Lomen, to the fact that our chairman has submitted to the Congress an amendment to S. 2648. The original S. 2648 called for a support price of \$1.25 per pound for all types of tin domestically produced. Now the amendment calls for \$1.35 a pound for concentrates produced from lode mining operations and \$1.20 base price for concentrates from placer mining. Do you think that those two prices are realistic in respect to production in Alaska?

Mr. LOMEN. I will answer that this way, Mr. Redwine. In the hearings held in May, the original bill providing for \$1.25 was discussed by the witnesses and by the professional staff of the House committee. It was later suggested by counsel of the House committee that there should be a differential between placer and lode because of the extreme importance of lode in the first place and, in the second place, to develop a lode mine requires an expenditure of usually several millions of dollars whereas several hundred thousands of dollars would

open up a very good placer operation. Because of that differential in required investment, it was agreed by all parties concerned at the time that this spread would be very realistic and could be justified by the facts. The witnesses as well as the professional staff determined this price and I think it is ultimately fair that there should be a differential because of the investment.

Mr. REDWINE. In other words, in your opinion the differential is fair and realistic.

Mr. LOMEN. Absolutely.

Mr. REDWINE. Well then, let's go to this: Do you think that \$1.20 and \$1.35 are sufficient incentive to get some tin mined in Alaska beyond what is being mined now?

Mr. LOMEN. Unless our national economy is changed a great deal in the next 18 or 24 months, that price is attractive and carries sufficient incentive. There is greater incentive for some of the other strategic minerals. However, we would be very happy, those of us who are concerned, if this price was established and at the present time, unless the economy changes, it is ample incentive and I can assure you that I know of more than 1 operation—I know of 1 that would be in operation next year, in 1956. I know a second operation that would endeavor to organize and be in operation before the close of 1956 under this act.

Mr. REDWINE. What if this act does not become law? Will those two operations that you were speaking of materialize?

Mr. LOMEN. One has made ample profit to liquidate and the other would become bankrupt, of the two I refer to now. Neither one would produce any demand for labor on the Seward Peninsula unless this bill is passed.

Mr. REDWINE. It's your view then, representing through your official capacity in the Domestic Tin Producers Association—I believe that is the name of the organization—

Mr. LOMEN. Alaska Miner's Association and then the Domestic Tin Producers Association, I have testified in behalf of both. If I wore 2 hats last night, in Washington I wore 4—

Mr. REDWINE. And the viewpoint of the people in the industry that they do not want the Government to mine these tin properties; they are not asking for any loans?

Mr. LOMEN. They prefer not to have Government participation with a control as far away as Washington. It is too difficult to secure the proper authority and I might add further that in my testimony today I spoke of a mine that is in distress which is under the control of GSA. Under this bill with the price of \$1.35 I am absolutely confident that that mine will open and furnish employment to more than 100 native people of the Seward Peninsula, and it will probably open up in 1956 under private ownership if this bill passes, and the Government will be bailed out.

Mr. REDWINE. Are you referring to the United States Tin Corp. operating at Lost River?

Mr. LOMEN. I am sir.

Mr. REDWINE. The only Government assistance they have had has been exploratory work.

Mr. LOMEN. No. They have had DMEA and DMPA. The latter is nonexistent today and the responsibility of DMPA was transferred to, I believe, General Services.

Mr. REDWINE. Reading here from a recent newspaper, I see—a part of this year they have closed down—but this year as long as they were operating they had a payroll of around \$25,000 a month. What does that do to the economy of that area?

Mr. LOMEN. Well, I don't like to confess how small our area is but \$25,000 a month on the payroll is the difference between living well and living on tomcod and seal oil for a great many people.

Mr. REDWINE. The chairman and I, also, are not too familiar with some of the items of food up here. Will you tell us what tomcod is?

Mr. LOMEN. Tomcod is a fish found in very generous quantities in our rivers here and it is not bad eating; but seal oil, unless it is kept fresh, is not very good to dip the fish in. Seal oil is very wholesome for those who like it. To get back to the importance of the \$25,000 a month payroll, the town of Teller is about 25 miles away from Lost River. That town has been, I might say, practically supported by that payroll; the Eskimo village of Wales, Alaska, has been supported by that payroll. I know of no other substantial income that either of those places has. Teller, at one time, was a supply point for gold mining in the Kougarak area which is back in the peninsula. Gold mining is dormant today. I wonder if Mr. Jackson is going to appear before you because I think he is going to give some testimony that will show you what has happened to gold mining and if he does not appear, I am in a position to testify to it.

Mr. REDWINE. We have asked Mr. Jackson to appear and I think he will be here a little later this morning. I believe we have some witnesses from the welfare people who will come a little later also.

Mr. REDWINE. The population of the second division I believe runs around 15,000 people?

Mr. LOMEN. Northwestern Alaska, yes. Embraced within the second division, we have a population of less than 15,000.

Mr. REDWINE. What is the breakdown?

Mr. LOMEN. In western and northwestern Alaska we believe we have at the present time a population of 15,000 of which 12,000 are native people.

Mr. REDWINE. About how is that broken down between Indians and Eskimos?

Mr. LOMEN. We have no Indians in this section. They are confined to the southeastern and some along the Yukon. The Eskimo people are coastal people. Then we have the Aleuts in the Aleutian chain.

Mr. REDWINE. Now you are not including in that 15,000 the military personnel?

Mr. LOMEN. No—of which we have very little now in this district.

Mr. REDWINE. Reading testimony you have given before other committees, Mr. Lomen, I note that you have, in the 50 years you have been in this area, been a rather large employer of native people.

Mr. LOMEN. Well, when the Lomen Reindeer Corp. existed we had five-hundred-and-some-odd W-2 forms in 1 year and we were then the largest employers of Eskimo labor in the world.

Mr. REDWINE. What kind of workers are they?

Mr. LOMEN. Up to the limit of their capacity, very good. Last week we had 109, I believe it was, on our payroll of Eskimo labor and we employ in longshoring here almost entirely Eskimo labor, except for key positions. They are good workers but with the high wages of the

contractors and some others, it is very difficult for us to secure the best laborers. The best natives want permanent employment and our business is very spasmodic. We discharge the cargoes of vessels that come in here and we only have 3 or 4 commercial vessels a year. Consequently we cannot maintain a large crew such as a lode mine or placer mine would do, granting continuous employment.

Mr. REDWINE. Now in the area of Potato Mountain and Lost River and so forth, is it possible to carry on a mining operation for 12 months a year?

Mr. LOMEN. Lost River has done so successfully—and there are four promontories of importance on the Seward Peninsula under this bill.

Brooks Mountain where the Lost River tin mine is located—or the United States Tin Corp.—is the most promising. At Cape Mountain, tin has been found in lode; likewise at Potato Mountain and at Ear Mountain. Now those four promontories are conspicuous and naturally were the first to attract the attention of prospectors. I don't doubt at all but what lode deposits will be discovered in many places where perhaps today they are buried, and the development of placer mines will reveal a lode mine such as has occurred in the West on many booms. Placer gold mines developed many of the good mines of the West. The same will be true here I think, and lode mining can operate here continuously for 12 months of the year. Therefore it is of much greater importance to develop the lode than the placer.

Mr. REDWINE. I would like this point to be brought out very emphatically: As far as you see it, enactment of this proposed legislation would not cost the Government anything unless you tin people produce tin, would it?

Mr. LOMEN. It would cost the Government nothing. Private capital makes an investment and develops the production of tin. If the market price fluctuates favorably, then perhaps it is conceivable that it would cost the Government nothing—

Mr. REDWINE. Then enactment of this legislation would bring about the investment of private capital?

Mr. LOMEN. I know it will.

Mr. REDWINE. Mr. Chairman, as you know, we have several witnesses here who are more familiar with the unemployment situation and welfare demands than Mr. Lomen is, and I think we will bring that out from those witnesses. I have no further questions for you at this time, Mr. Lomen, but I certainly want you to stay because I feel that we may have some more questions for you a little later.

Mr. LOMEN. Well, I intend to. I hold a 100-percent record so far as tin hearings. I have attended all of them.

Mr. REDWINE. I wonder if we could hear from Dr. Langsam. Is he present?

Mr. LOMEN. In a town of monopolies, he has a monopoly on the medical practice. I will telephone him.

Mr. REDWINE. That is all right. He sent word that he would like to be heard for some reason early this morning. I wonder if Miss Mary Jolley is here?

**STATEMENT OF MISS MARY E. JOLLEY, DISTRICT REPRESENTATIVE OF THE ALASKA DEPARTMENT OF PUBLIC WELFARE, SECOND DIVISION**

Mr. REDWINE. Would you please give your name and official title and so forth?

Miss JOLLEY. I am Mary Elizabeth Jolley and I am the district representative of the Alaska Department of Public Welfare, second division.

Mr. REDWINE. Is it Miss or Mrs.?

Miss JOLLEY. Miss.

Mr. REDWINE. We would like to know just what the welfare situation is in the area; how many on the rolls and so forth and so on.

Miss JOLLEY. The welfare picture in Alaska is a little bit different than the welfare picture in the States in that we divide the responsibility for some of the assistance programs with the Alaska Native Service. I cover the second division, which extends from Barrow to Hooper Bay. We have 52 villages and we know about these villages through our agents. We have local lay people who correspond with us about the situations there. We try to cover them once a year, but we don't always get there.

Old-age assistance, aid to the blind, and aid to dependent children are pretty much the same as they are in the States, because they are federally participated programs, but general assistance is not the same as it is in the States. We don't have aid to the chronically disabled. Our agency helps families through general assistance where the head of the household is nonnative.

Mr. REDWINE. Where the head of the household is nonnative?

Miss JOLLEY. Yes. We have no one in this category at the present time in the second division. The Alaska Native Service is responsible for general assistance to all families where the head of the household is native—and they do have some. Mr. Jenkins can speak to you about that. We have approximately 375 aid to dependent children cases at the present time.

Mr. REDWINE. How many?

Miss JOLLEY. 375. I can give you statistics if you like. How many copies would you want?

Mr. REDWINE. Will you give us about three, please? We would like you to go over these statements if you will.

Miss JOLLEY. We have about 375 aid-to-dependent-children cases, of which over half of them are on the rolls because of tuberculosis. This means that one or both parents are in the hospital because of tuberculosis, or are at home waiting to go to the hospital because of tuberculosis. This doesn't include the children who are on the rolls because one of the parents is dead because of tuberculosis.

We have about 350 old-age-assistance cases in this Division and we have approximately 20 aid-to-the-blind cases and no general assistance cases. As far as employment is concerned, your general assistance case load is one that usually contains employable people—the heads of the household who are out of work—but as you can see, this doesn't qualify me to speak too well about the degree of unemployment. In aid-to-dependent-children families, however, or where an old-age-assistance person is living with their son or daughter we repeatedly, in going over the reports of the villages, we repeatedly find 2 or 3

adults in the family who have listed as their employment "native pursuits". This means hunting or fishing and no cash income in the family and we have a system for calculating income which includes resources in kind and our biggest source of income in the Second Division is fish and game.

Mr. REDWINE. And that is food that they, themselves, eat?

Miss JOLLEY. Yes.

Mr. REDWINE. And that is included in the total income figure?

Miss JOLLEY. Yes.

Mr. REDWINE. What is the per capita income, including the hunting and fishing—what is the average per capita income, Miss Jolley?

Miss JOLLEY. I don't think I can give you a figure on that. I don't know. It is low.

Mr. REDWINE. Who could give us the figure, could you say. Do you suppose Mr. Benson could, the Commissioner of Labor?

Miss JOLLEY. He could give you the average cash income but nobody could give you the average per capita fish and game income.

Mr. REDWINE. Well, what kind of formula do you use?

Miss JOLLEY. Well, we ask our agent from Wales, say, or Shishmaref, to check whether the family gets one fourth of their income from fish and meat, from native sources, or whether they get a half or three-fourths or all of it, and the same thing for vegetables and that sort of thing, and the same thing for clothing. For instance, if they make their own clothing out of skin and they get a half or quarter of their income from native sources, we take this half or quarter and put cash value on it and turn it into the amount of money we allow them for food. If you have a family of 4 people, the allowance per adult for food would be \$42.00—or if you got one-fourth of your meat from native sources—

Mr. REDWINE. \$42.00? Over what period?

Miss JOLLEY. Per month.

Mr. REDWINE. That is for an adult?

Miss JOLLEY. Yes, an adult in a family of four. It varies according to the size of the family.

Mr. REDWINE. But what about the children? What is your allowance for food per child?

Miss JOLLEY. It depends upon the age of the child. A child up to 6 is \$24.00 a month for food. Then you have a corresponding chart in which, if one-fourth of their produce and meat is produced by themselves, you substitute \$7.00, and if it is one-half, then a different figure is used.

Mr. REDWINE. Well, what determines the amount that they produce themselves—laziness, lack of game and fish in the area in which they live, or what?

Miss JOLLEY. I think the same thing that determines how much we get for ourselves—how much we want to work and how available it is, and how hard it is, and how much incentive we have. Different areas have more reliance on native produce than others. In Nome, of course, we have very little if any. On Diomedes and King Islands, for instance, they get a great deal of theirs locally. In the Quiguk-Alakanuk-Hooper Bay area, down there the people are less adapted to agriculture and they live off the land much more than they do up here. I haven't had an opportunity to visit all the villages. I go

mostly on what I find in our correspondence and records from the agents.

Mr. REDWINE. In the funds that are administered by you, what is the average monthly allowance?

Miss JOLLEY. I can tell you what we spent last month.

Mr. REDWINE. Do you have the corresponding figure for the same month of last year?

Miss JOLLEY. Yes. For the month of September we spent \$21,390 on old-age assistance; we spent \$1,422 on aid to the blind; we spent \$33,520 on aid to dependent children. That is much less than is needed because there was a 10 percent cut on all our finances because of inadequate appropriations by the legislature and everybody automatically gets a 10 percent cut. On general assistance we spent nothing. We administer the juvenile code and child welfare programs too, which are in a separate category. For the equivalent month in 1954 we spent \$19,513 on old-age assistance; \$750 on aid to the blind; \$23,680 for aid to dependent children. In our program—we have not had a local officer for too long. The program was administered out of Juneau for awhile; then out of Fairbanks. We haven't had a full staff. Right now I am the only social worker in the Second Division. We are staffed by two people but the other person left.

Mr. REDWINE. Well, how extensive is this lay personnel?

Miss JOLLEY. Well, it varies. Some of them are very good and some of them are—well, they can't even read and write too well. They write interesting letters and interesting reports. We have 52 agents and 2 of them we don't visit—King Island and Diomedes—but the other 50 we try to cover. A village may have—well Kotzebue is a pretty good sized town and we have extensive work for an agent there. Another place may only have 10 or 12 people. We have some cases like Lost River where they are all moving away now.

Mr. REDWINE. Let me ask you this: disregarding entirely the Par-ran report or that kind of thing, what is your personal opinion as to the cause for the high incidence of tuberculosis among the natives?

Miss JOLLEY. It has an awful lot to do with diet. I am not qualified to speak medically but the change from the native diet of tom-cod and seal oil to our diet shows up in the children's teeth and lots of other ways. They take our bleached sugar and bleached flour and all the bad things about our diet and give up some of the good ones about theirs, and I think they suffer from it.

Mr. REDWINE. In other words, you think it is not altogether a shortage of food?

Miss JOLLEY. It's an educational process too.

Mr. REDWINE. It's becoming accustomed to changes in food?

Miss JOLLEY. No. In the change they pick up the bad things about our diet and don't pick up some of the good ones. You can't get very many carrots up here.

Mr. REDWINE. Mr. Chairman, do you have any questions you would like to ask Miss Jolley.

Senator SCOTT. I don't believe so except that I would like to ask—I don't want to take the time this morning—but on the question of tuberculosis—we have found in the States, in my State there has been an effort made in both livestock and humans to detect it and to prevent

it. I think we have made some progress although not nearly as much as we should have.

Miss JOLLEY. The strides we have made in this area in the last 6 months are almost amazing. People used to wait 2 years to go to the sanitarium and now they go sometimes in a matter of weeks instead of years. The active cases that are floating around are all known and we are getting them hospitalized and where we get some of these kids and feed them adequately and they get enough rest and they can live in a place where there aren't 14 to 18 people to a couple of rooms, it makes them more resistant, and I think we are making big progress and I think it is well on the way to being licked.

Senator SCOTT. You make an effort here to predetermine tuberculosis in the area?

Miss JOLLEY. The Health Department has a very active program.

Senator SCOTT. And the people are responding to it?

Miss JOLLEY. They haven't as yet gotten to the point where they force people to go to the hospital because there haven't been the beds available, but we can use all the beds they give us.

Senator SCOTT. Of course, in all such things we know we never have perfection in this world—we probably shouldn't have or we'd have nothing to work for if we did.

Miss JOLLEY. It's amazing to see the number of families with orphan kids, or kids with one parent, who have lost a parent with tuberculosis. I have never seen anything like it in my life in terms of numbers; 6 and 7 kids to a family and "Ma" goes to the hospital and "Pa" is already in the hospital and they have anywhere from 6 to 10 kids.

Senator SCOTT. Such cases as typhoid—do you have that in typhoid inoculation?

Miss JOLLEY. Probably Dr. Langsam or Miss McDonald could tell you more about this. I think they have inoculated for typhoid around here but I don't know enough about it. I haven't run into it since I have been here. I have just been here since the first of August.

Senator SCOTT. What about smallpox?

Miss JOLLEY. I don't know—I am not qualified to speak about it.

Mr. REDWINE. What about the hospital program for tuberculosis? Tell us about it; where the hospitals are and so forth.

Miss JOLLEY. Well, my big problem right now is that they are hospitalizing all these patients in the States and they get homesick for Alaska and worry about what their wives are doing at home while they are off at the hospital. I have got stacks of letters like that on my desk from social workers down at Laurel Beach and all those hospitals around Seattle about what is going on at home and who is doing what about this and how are the kids. If they live out at Quiguk, sometimes it takes me a month to get a letter from Quiguk or a month to get a letter one way. I can't tell them exactly what is going on at home. The Alaska Native Service transferred its hospitals to the United States Public Health Service you know, the first of July, and they care for tuberculosis patients at Mt. Edgecumbe and Anchorage and some in Kotzebue and I think some in that hospital over around Bethel.

However, their biggest tuberculosis program is at Mt. Edgecumbe and Anchorage; but an awful lot of native people are going to hospitals in the States for tuberculosis.

mostly on what I find in our correspondence and records from the agents.

Mr. REDWINE. In the funds that are administered by you, what is the average monthly allowance?

Miss JOLLEY. I can tell you what we spent last month.

Mr. REDWINE. Do you have the corresponding figure for the same month of last year?

Miss JOLLEY. Yes. For the month of September we spent \$21,390 on old-age assistance; we spent \$1,422 on aid to the blind; we spent \$33,520 on aid to dependent children. That is much less than is needed because there was a 10 percent cut on all our finances because of inadequate appropriations by the legislature and everybody automatically gets a 10 percent cut. On general assistance we spent nothing. We administer the juvenile code and child welfare programs too, which are in a separate category. For the equivalent month in 1954 we spent \$19,513 on old-age assistance; \$750 on aid to the blind; \$23,680 for aid to dependent children. In our program—we have not had a local officer for too long. The program was administered out of Juneau for awhile; then out of Fairbanks. We haven't had a full staff. Right now I am the only social worker in the Second Division. We are staffed by two people but the other person left.

Mr. REDWINE. Well, how extensive is this lay personnel?

Miss JOLLEY. Well, it varies. Some of them are very good and some of them are—well, they can't even read and write too well. They write interesting letters and interesting reports. We have 52 agents and 2 of them we don't visit—King Island and Diomedé—but the other 50 we try to cover. A village may have—well Kotzebue is a pretty good sized town and we have extensive work for an agent there. Another place may only have 10 or 12 people. We have some cases like Lost River where they are all moving away now.

Mr. REDWINE. Let me ask you this: disregarding entirely the Par-ran report or that kind of thing, what is your personal opinion as to the cause for the high incidence of tuberculosis among the natives?

Miss JOLLEY. It has an awful lot to do with diet. I am not qualified to speak medically but the change from the native diet of tom-cod and seal oil to our diet shows up in the children's teeth and lots of other ways. They take our bleached sugar and bleached flour and all the bad things about our diet and give up some of the good ones about theirs, and I think they suffer from it.

Mr. REDWINE. In other words, you think it is not altogether a shortage of food?

Miss JOLLEY. It's an educational process too.

Mr. REDWINE. It's becoming accustomed to changes in food?

Miss JOLLEY. No. In the change they pick up the bad things about our diet and don't pick up some of the good ones. You can't get very many carrots up here.

Mr. REDWINE. Mr. Chairman, do you have any questions you would like to ask Miss Jolley.

Senator SCOTT. I don't believe so except that I would like to ask—I don't want to take the time this morning—but on the question of tuberculosis—we have found in the States, in my State there has been an effort made in both livestock and humans to detect it and to prevent

it. I think we have made some progress although not nearly as much as we should have.

Miss JOLLEY. The strides we have made in this area in the last 6 months are almost amazing. People used to wait 2 years to go to the sanitarium and now they go sometimes in a matter of weeks instead of years. The active cases that are floating around are all known and we are getting them hospitalized and where we get some of these kids and feed them adequately and they get enough rest and they can live in a place where there aren't 14 to 18 people to a couple of rooms, it makes them more resistant, and I think we are making big progress and I think it is well on the way to being licked.

Senator SCOTT. You make an effort here to predetermine tuberculosis in the area?

Miss JOLLEY. The Health Department has a very active program.

Senator SCOTT. And the people are responding to it?

Miss JOLLEY. They haven't as yet gotten to the point where they force people to go to the hospital because there haven't been the beds available, but we can use all the beds they give us.

Senator SCOTT. Of course, in all such things we know we never have perfection in this world—we probably shouldn't have or we'd have nothing to work for if we did.

Miss JOLLEY. It's amazing to see the number of families with orphan kids, or kids with one parent, who have lost a parent with tuberculosis. I have never seen anything like it in my life in terms of numbers; 6 and 7 kids to a family and "Ma" goes to the hospital and "Pa" is already in the hospital and they have anywhere from 6 to 10 kids.

Senator SCOTT. Such cases as typhoid—do you have that in typhoid inoculation?

Miss JOLLEY. Probably Dr. Langsam or Miss McDonald could tell you more about this. I think they have inoculated for typhoid around here but I don't know enough about it. I haven't run into it since I have been here. I have just been here since the first of August.

Senator SCOTT. What about smallpox?

Miss JOLLEY. I don't know—I am not qualified to speak about it.

Mr. REDWINE. What about the hospital program for tuberculosis? Tell us about it; where the hospitals are and so forth.

Miss JOLLEY. Well, my big problem right now is that they are hospitalizing all these patients in the States and they get homesick for Alaska and worry about what their wives are doing at home while they are off at the hospital. I have got stacks of letters like that on my desk from social workers down at Laurel Beach and all those hospitals around Seattle about what is going on at home and who is doing what about this and how are the kids. If they live out at Quiguk, sometimes it takes me a month to get a letter from Quiguk or a month to get a letter one way. I can't tell them exactly what is going on at home. The Alaska Native Service transferred its hospitals to the United States Public Health Service you know, the first of July, and they care for tuberculosis patients at Mt. Edgecumbe and Anchorage and some in Kotzebue and I think some in that hospital over around Bethel.

However, their biggest tuberculosis program is at Mt. Edgecumbe and Anchorage; but an awful lot of native people are going to hospitals in the States for tuberculosis.

**Mr. REDWINE.** What agency pays those bills?

**Miss JOLLEY.** Well, the Alaska Native Service pays and I think the United States Public Health Service has some sort of an arrangement. I don't know exactly how it works, but the Territory doesn't pay for them. They pay for non-natives who are hospitalized in some sort of combination—at Seward—with the Methodist Church, but there is never any problem in getting in a hospital for a non-native person.

**Mr. REDWINE.** Do you have anything in particular that you would like to bring out, Miss Jolley, that we haven't covered?

**Miss JOLLEY.** The only thing I think about is our need for employment. It is more than just a need for jobs although that need is certainly rampant. The amount of wages a man makes in terms of what it costs to live here, and the differential between the two, has something to do with how valuable the job is to the person.

**Mr. REDWINE.** What is the average wage a native gets, would you say?

**Miss JOLLEY.** About \$1.25 an hour is the minimum wage in the Territory. In mining—a fellow who works in the mining field makes \$1.57 an hour. They work 9 hours a day for 7 days a week during the months they are working. That is the lowest paid labor. Their take-home pay averages around \$400 a month. They generally have an opportunity to buy their groceries through the company which helps a lot and they get by pretty well even with 9 kids.

**Mr. REDWINE.** What is the average family size?

**Miss JOLLEY.** Five to nine—and I have seen lots of women from 35 to 45 years of age who have had from 17 to 25 children. That is not only in this part of Alaska; that is also true with the Quiguk Indians themselves. Actually, the birth rate was less than the death rate up until about 2 years ago, so you can see how many of them were dying.

**Mr. REDWINE.** What is the child mortality rate?

**Miss JOLLEY.** I don't know what it is in his area.

**Senator SCOTT.** Is there a tendency for a person up here who is what we will call "well-employed," to save any money for a rainy day, as we express it—although I haven't seen any rainy days up here.

**Miss JOLLEY.** Well, that is one of the problems in terms of the adequacy of the wage in terms of the cost of living. Somebody has to teach these people how to handle money too. There is a cooperative type of sharing among the Eskimo people—for instance, a kid comes in and you buy him a pair of shoes. He comes in the next day and he hasn't any shoes and you say "where are your shoes?" and he says "my brother had to go to work." There is no feeling that these are "my" shoes and he can't wear them. They are "our shoes"—and you can't manage money too well if you share it with too many people and your relatives all move in to eat off of you—and it is rude to tell them to leave. So they come down and they say "Miss Jolley, so-and-so, he came from the village and he is living with me and he is eating up all my food. I can't tell him to leave. You tell him to go home." At first I wouldn't do that but I do now. It works better.

**Mr. REDWINE.** Does that mean then that you have to put him on the rolls? After he goes home?

**Miss JOLLEY.** No; not unless he fits into one of our categories—blind, or a child, or over 65. Otherwise, Mr. Jenkins, inherits him, and

they don't have a social worker. They have never had a social worker for the second division.

Mr. REDWINE. Does your office do any cooperative reporting or anything on unemployment insurance?

Miss JOLLEY. There is no employment office in the second division. There is no place to file for unemployment compensation. You have to write to Juneau to get your unemployment compensation—as near as I can tell. I haven't been able to find out what you do and there just isn't anything here. We are sort of off—with the government down in Juneau. They maybe come up to see us and maybe they don't and Juneau is, of course, controlled from Washington and we are all sort of removed. We don't have any figures on unemployment compensation.

Mr. REDWINE. Thank you, Miss Jolley, very much.

Mr. REDWINE. Mr. Sandvik, for the record will you give us your name and official title and so forth.

**STATEMENT OF PETER O. SANDVIK, MINING ENGINEER AND  
ASSAYER FOR THE TERRITORIAL DEPARTMENT OF MINES, NOME,  
ALASKA**

Mr. SANDVIK. My name is Peter O. Sandvik. I am a mining engineer and assayer for the Territorial Department of Mines here at Nome.

Mr. REDWINE. Do you have a prepared statement, Mr. Sandvik?

Mr. SANDVIK. Yes. I have a statement partially prepared by Mr. Phil R. Holdsworth, Commissioner of Mines, and partially prepared by myself, which I will present to you. This production has been primarily from placer deposits at Cape Creek and Goodman Creek on Potato Mountain and at Buck Creek on Potato Mountain, and also there has been some production at Lost River.

Mr. REDWINE. While you are up there, sir, will you point out to the chairman where Nome is on the map in relationship to the areas you have just pointed out.

(Mr. Sandvik then points out the tin production areas referred to.)

Mr. REDWINE. About what is the distance in air miles?

Mr. SANDVIK. It is somewhere around 90 to 100 miles. I am not sure of that distance.

Mr. REDWINE. What are the climatic conditions up there in respect to what they are here?

Mr. SANDVIK. The climatic conditions here are much less severe than they are up there. In that area there is a terrific amount of wind, compared to here. It is constantly windy. The United States is now paying 96¼ cents per pound of tin as of last week and to insure the domestic production of tin and to show how the tariff-based subsidy could benefit domestic tin, let me illustrate.

The 10,000-ton figure has been chosen as a possible goal for domestic tin production, an average yearly production of 1,000 tons over the 10-year period. This may or may not be possible, but assume it is. This is against a present annual consumption of 55,000 tons—more than 50 times the hoped-for domestic production under the program. The major part of our tin, then, must continue to come from imports until greater discoveries are made and developed.

An import tariff of 1 cent per pound on tin would yield 50 cents per pound to apply as a subsidy to domestic production, giving a total of nearly \$1.50 per pound at the present market price of tin.

Assuming that most of the 1,000 tons would be produced in this area, we would have about \$3 million per year in added direct income for the area as well as the considerable indirect benefit that would result. And, of course, tin is not the only metal that would be discovered. If there were an incentive, prospectors would be in the field again, and a host of other minerals as well as tin would be found—among them tungsten, copper, bismuth, mercury, uranium, and others, since there are known occurrences of all of these here. Therefore, a tin program of the nature of either the direct floor price program or the tariff-based subsidy program could be a basis for rebirth of the mining industry in this region.

Under either plan there is no money paid out until metal is produced and, therefore, the Government receives something for its money. Also, all producers benefit at the same rate. In the case of DMEA, assistance is granted only after approval. The money is then loaned out and is paid back only if and when production results. In many instances, there is never any metal produced and, therefore, no payment on the loan. This has been the case with many DMEA loans in Alaska.

It seems to me that a program of either type is far superior to anything else that has been proposed or tried to date to stimulate the production of this strategic metal, tin, in this one area under the United States Flag which has a potential to produce it.

(The following portion of Mr. Sandvik's statement was prepared by Mr. Holdsworth.)

Alaska has the only tin producing potential under the American Flag. From 1903 to date, 2,000 short tons of tin have been produced in the Cape Nome district. The United States is now consuming about 55,000 tons of tin annually, and is purchasing 20,000 tons annually in a low-grade concentrate from Bolivia. This imported product is treated at the Texas City tin smelter at a considerable cost to the Government.

The present market price of tin is not sufficient to warrant either the installation of processing equipment at known deposits or the exploration of other potential areas. To insure domestic production of this metal, some long-range program must be adopted by the Congress, which will offer the necessary incentives to justify exploration, development, and production by private industry.

DMEA has not been the answer in the case of tin. The only other type of incentive is price support. This can be offered in several ways with varying effects on the taxpayer's pocket.

Senate bill 2648 of the 84th Congress (H. R. 7145) covers one type of incentive. This bill asks that a price of \$1.35 per pound for domestic tin produced from lode deposits and \$1.20 per pound for domestic tin produced from placer deposits be established over a 10-year period, or until 10,000 long tons of tin be produced, whichever comes first. Under such a plan, only the difference between the market price and the floor price would be paid by the Government and this only if metal is produced. Domestic tin operations cannot produce this quantity from present known reserves, which means that substantial additional reserves will have to be prospected for and developed by private capital.

Another type of incentive which might be offered is a subsidy price, derived from import tariffs, to be paid to domestic mineral producers. This would reduce Government income, but would not be a charge to the taxpayer. Such a plan for tin, based on the tonnage ratio of imports to domestic production, would have practically no effect on the metal price to consumers, but at the same time would provide a very satisfactory price for the domestic producer. This type of plan is being considered for recommendation by the 11 Western States, applicable to all metals, to alleviate the problems of the domestic mining industry.

Mr. SANDVIK. There wouldn't be a thousand pounds the first year, of course, but supposedly over a 10-year period it would average out around a thousand pounds a year. This may or may not be possible. This tariff subsidy is something that came up in recent meetings of the mining industry in the States and I hadn't considered it or even heard of it until recently. However, it is just another program that could possibly bring about some tin mining in this area. Either way would help.

Mr. REDWINE. Do you know whether the Western Governors' Conference has taken that up in their meetings in Sacramento this month?

Mr. SANDVIK. I believe it is to be taken up; yes.

Mr. REDWINE. It is your judgment then and the judgment of your agency that an incentive plan or tariff that would have a minimum floor of \$1.20 in the case of placer, and \$1.35 for lode, would bring about some activity in tin mining in Alaska?

Mr. SANDVIK. Yes; and not only in tin. It is the other benefits that would be derived as well—tungsten, copper, bismuth, uranium; all these associated in this area with the other metals. There is a wide variety of mineral occurrences here.

Mr. REDWINE. In other words, among the things that are needed in the area is a greater exploration for all of the minerals.

Mr. SANDVIK. Yes. Yes—with prospectors in the field. There is no one in the field now except in very spotty cases.

Mr. REDWINE. Senator, do you have any questions—anything that you would like to ask?

Senator SCOTT. No. Not at present.

Mr. REDWINE. Mr. Sandvik, can you tell us what the Government is having to pay for Bolivia tin, this low-grade tin that is coming in?

Mr. SANDVIK. I believe it comes in at the market price of 96¼ cents.

Mr. REDWINE. Even though it is low-grade?

Mr. SANDVIK. Yes.

Mr. REDWINE. What about the difficulty of smelting it? I understand it is very difficult to smelt?

Mr. SANDVIK. That is right. It does not compare at all in grade to Alaska tin. I don't know what the average percentage of tin concentrates received from Bolivia is. However, it is much more difficult to handle than is our Alaska tin.

Mr. REDWINE. By the way, what has been the history of the richness of the concentrates shipped out of Alaska?

Mr. SANDVIK. I don't have an exact figure but I believe they run around 70 percent.

Mr. REDWINE. And that is high?

Mr. SANDVIK. Yes. That is about as high as you can get. The tin mineral concentrate is 79.6 percent tin. That is the highest percent-

age you can get for concentrate. The pure mineral is just under 80 percent tin.

Mr. REDWINE. Mr. Lomen, I wonder if you would step up here for a minute. You are more familiar with the technical angles of this matter under discussion than either the chairman or myself. I wonder if there is anything that occurs to you that this gentleman could bring out that we should ask him about.

Mr. LOMEN. One point, Mr. Redwine, I visited the Texas City smelter and spent an afternoon with Mr. ter Braake. Mr. ter Braake is the superintendent of the smelter. He told me of the difficulty in handling the low-grade ore from Bolivia which requires leaching. The Government built the smelter at a cost of \$13½ million. He told me that he could build a smelter of similar capacity, if he had only high-grade Alaskan concentrates to handle, at a cost not to exceed \$3 million. So the other \$10 million represents the difficulty of leaching the Bolivian ore and the processing of it. He has received tin from all over the world and was selected for the purpose of conducting that smelter because of his superior knowledge.

I thought it would be very well to inject here the comparative cost of the smelters because of the superiority of the Alaskan concentrates against the Bolivian.

Mr. REDWINE. Well, let me ask this: I would like both of you to answer it. Do you think there are sufficient known deposits of tin in Alaska to justify a \$3 million investment for a smelter in Alaska or Seattle or some stateside port?

Mr. LOMEN. I don't quite follow you.

Mr. REDWINE. Are the reserves—the known reserves—

Mr. LOMEN. The reserves? Now I can answer your question. The known reserves are not sufficient to justify an investment of \$3 million of private capital nor do we anticipate any such investment until we know more about the potential but \$3 million has already been invested in one lode mine and having such investment, they could operate at \$1.35 a pound at a profit with ore, as I understand it, that would approximate 1-percent tin. The placer operations would require perhaps an investment of a quarter million dollars which is more than the Ramstads invested in the Northern Tin Co. which has been the most successful operation of recent years. Their investment approximates \$175,000. To operate on Goat Creek with an efficient operation would require an investment of approximately \$300,000 to \$350,000 and the ore in sight now, under this bill—the tin site at Cape Creek now would justify an investment of about a half million dollars.

Mr. REDWINE. As a matter of getting it into the record, will you tell us where the tin smelters are located. Where they are located at the present time—worldwide?

Mr. SANDVIK. Well, of course you have the Texas City smelter. I believe there is still a smelter at Singapore—you can probably answer that better than I can, Mr. Lomen.

Mr. LOMEN. There is 1 in Holland, 2 in Japan, 1 in Brazil. The Brazilian smelter—I don't know from where they get their source but it has never been employed. The only smelters we are familiar with are the Holland and Singapore smelters—other than our own national smelter at Texas City.

Mr. REDWINE. Well, a good many years ago did they not ship a cargo of Alaskan tin concentrates—weren't they sent to Singapore?

**Mr. LOMEN.** Many of them have been sent to Singapore and one was sent to a detinning plant in San Francisco some years ago. They had a carload and that detinning plant processed the carload for metallic tin.

**Mr. REDWINE.** Well, just for the sake of the record, in that detinning process you have to have some raw concentrates to mix with it; do you not?

**Mr. LOMEN.** I am not familiar with the processes of a detinning plant; whether they require a concentrate or whether they depend upon scrap steel that comes with the pure metallic tin that is recovered.

**Mr. REDWINE.** Mr. Sandvik, is it or is it not your understanding that they need the raw concentrates?

**Mr. SANDVIK.** I am not positive of that but I believe that is right.

**Mr. LOMEN.** It may be then, that I am not well-informed on the plant in San Francisco then—what they use in connection with the tin—because it was necessary to have a concentrate. I thought it was smelted as a concentrate without the necessity of having steel.

**Mr. REDWINE.** Well, I am not sure of that either but I think that is the case. Do you have anything else you would like to take up or talk about.

**Mr. SANDVIK.** No. Nothing in particular.

**Mr. REDWINE.** Thank you very much, gentlemen.

### STATEMENT OF DR. FRED LANGSAM

**Dr. LANGSAM.** I am Dr. Fred Langsam.

**Mr. REDWINE.** Dr. Langsam, will you tell us something about the health conditions up here amongst the natives.

**Dr. LANGSAM.** Well, you probably know that we have a great prevalence of tuberculosis amongst the natives. The proportion has been variously stated. One statement is that it is 11 times as common as it is amongst the white people.

**Mr. REDWINE.** Well, let's state it another way. The national average stateside, we will say, is what per thousand?

**Dr. LANGSAM.** I can't give you an exact figure now, but roughly I would say it is about 11 times as common here as it is in the States.

**Mr. REDWINE.** What is the cause for that, Doctor?

**Dr. LANGSAM.** Well, I won't take it upon myself to give the exact cause. No one has, as a matter of fact, given a definite opinion as to the reason. There are several conjectures but there is no doubt that poverty has a lot to do with it—with the prevalence. In other words, if people don't have money to eat properly and clothe themselves properly and to live in the proper amount of space with proper conveniences, there is bound to be more sickness—they are bound to have more sickness than others. This is especially true of tuberculosis.

**Mr. REDWINE.** How successful is treatment. How well do they respond—both adults and children.

**Dr. LANGSAM.** Well, treatment has become more and more successful as these new drugs and new scientific approaches to the subject are developed. Now the outlook is quite hopeful especially if the post-treatment—the rehabilitation—is adequate, and that is what is so lacking because of bad financial conditions.

Mr. REDWINE. A great deal has not been accomplished then if you get an individual cured and he has to go back into the same old environment?

Dr. LANGSAM. That is very true. Let me give an example from a group of patients that just came to my attention very recently. A young man had been to the sanitarium and had had treatment for about 2 years and came back here. He had had surgery and was cured apparently. He came back here with an allowance of \$75 a month with instructions not to work for at least six months, preferably not for a year. Of course, one can't go very far on \$75 a month here. He did have a distant relative who has a wife with active tuberculosis, and a lot of children and he had to move in with them. Well, it may sound sort of crude to say it, but it was just a waste of money taking care of the man in the first place.

Mr. REDWINE. Because the home environment remained the same—it was not changed?

Dr. LANGSAM. Yes. If we send him right back into the same atmosphere, we are not helping him at all.

Dr. REDWINE. And it is your opinion that poverty and low income are the largest contributing factors?

Dr. LANGSAM. Yes.

Mr. REDWINE. In other words, it is a very healthy climate?

Dr. LANGSAM. Well, we don't believe any more that the climate has anything to do with the prevalence or cure of tuberculosis. It used to be, as you know, popular for a person to go to Arizona where the climate was warm and dry but now we know that really does not affect the conditions as far as the cure is concerned or as far as causing it is concerned.

Senator SCOTT. Doctor, do you know whether or not you have tuberculosis among the animals.

Dr. LANGSAM. There has been found some tuberculosis among the reindeer but research here has not been so great along those lines as it has been in the States. For one reason, there aren't very many domestic cattle. It has not been found as far as I know among the fish but, as a matter of fact, we have found just recently this year the first case of bovine type of tuberculosis that has ever been discovered in Alaska so it can't be too common. It is more the human type.

Mr. REDWINE. Doctor, what is the annual cost, if you have the figure, for this division for the tuberculosis treatment—what is the cost?

Dr. LANGSAM. How much money is appropriated by the Territory?

Mr. REDWINE. Yes.

Dr. LANGSAM. I couldn't say.

Mr. REDWINE. Who could give us the figure?

Dr. LANGSAM. The Alaska Department of Health.

Mr. REDWINE. Senator, do you have anything further?

Senator SCOTT. No; I think not.

Mr. REDWINE. Thank you very much, Doctor, for appearing. We are sorry that we were as long in getting to you as we were. Mr. Lomen, has Mr. Jackson come in yet?

(Mr. Jackson had not and Mr. Mulligan is called.)

Mr. REDWINE. Mr. Mulligan will you state your name and official title.

**STATEMENT OF JOHN MULLIGAN, MINE EXPLORATION AND  
EXAMINATION ENGINEER, UNITED STATES BUREAU OF MINES,  
REGION I**

Mr. MULLIGAN. I am John Mulligan, mine exploration and examination engineer, United States Bureau of Mines, region I.

Mr. REDWINE. The chairman would like you to give us anything and everything you can on tin resources in Alaska. Now I realize, and the Senator does, that it may be sketchy in places because I believe you have had to operate on a rather small appropriation for what you have been able to determine for the Bureau. We understand that the work has been sketchy, but please give us as complete a picture as you can, but be conservative. We don't want any guesses, just what you know or have reason to believe. You go about it in your own way.

Mr. MULLIGAN. The principal known tin deposits are located in the western part of the Seward Peninsula [indicating on the map]. The deposits that have been mined are confined to the Cape Mountain, Lost River, and Potato Mountain areas. There is also some tin in the Ear Mountain area [indicating]. Traces of tin have been found throughout the entire Seward Peninsula. There is not enough information available to make an estimate of the total reserves.

Mr. REDWINE. Going back east, are your base rocks the same type of geology throughout the entire area?

Mr. MULLIGAN. The information is sketchy but the geology and mineralization are somewhat similar. Traces of tin have been found in placer concentrates from almost all parts of the Seward Peninsula. Known deposits of commercial or near commercial value are confined to the western end of the peninsula [indicating].

These deposits are similar to those found in other tin-producing areas. Many of the occurrences are comparable, and the mineral associations are similar.

Mr. REDWINE. Well, now, it is mostly placer gravels or lode, or what?

Mr. MULLIGAN. At the present time there are more known placer deposits. The only lode deposit that has produced significant amounts of tin is at Lost River.

Mr. REDWINE. How does it compare in tin values with the placer deposits? Give us a comparable figure.

Mr. MULLIGAN. The ore mined at Lost River ran about 1 percent on the average. One percent tin would be 20 pounds to the ton.

Mr. REDWINE. And mostly your placer deposits run about 4 pounds or a little better per cubic yard?

Mr. MULLIGAN. Say from 1 to 4 pounds per cubic yard and in some places a little better.

Mr. REDWINE. What does a yard of that material weigh?

Mr. MULLIGAN. Approximately 3,000 pounds.

Mr. REDWINE. In other words, you have about a 3-percent ore.

Mr. MULLIGAN. Placer deposits cannot be compared to lode deposits due to production problems. Lode mining is more costly, although placer mines can be worked only during the summer season while lode mines work the year around. Assuming a lode and a placer deposit contained equal amounts of tin, the placer would be more valuable.

Exploration to date, except in a few instances, has been very sketchy. There is not enough data to state whether the lode or placer is more valuable.

One placer deposit that is blocked out is near Cape Mountain on Cape Creek.

Mr. REDWINE. How much?

Mr. MULLIGAN. I don't have the figures with me, but it contains more than 3 million pounds.

Mr. REDWINE. That has definitely been blocked out?

Mr. MULLIGAN. It has been blocked out by drilling.

Mr. REDWINE. Will you furnish us with the figures on that, the exact figures?

Mr. MULLIGAN. Yes; they can be furnished. Placer deposits are also known to occur on the streams heading on Potato Mountain. Most of the placer tin produced has come from streams in this area, principally Grouse and Buck Creeks.

(Mr. Mulligan subsequently submitted the following letter for the record:)

UNITED STATES DEPARTMENT OF THE INTERIOR,  
BUREAU OF MINES, REGION I,  
Juneau, Alaska, November 21, 1955.

Mr. ROBERT W. REDWINE,  
*Interior Committee, Washington, D. C.*

DEAR SIR: At your request data on the known tin ore reserves in the Cape Mountain area, Seward Peninsula, Alaska, is submitted for inclusion in the report on the Federal tin purchase program hearing held in Nome, Alaska.

The Zenda Gold Mining Co. holds approximately 450 acres of placer ground on Cape Creek and its tributaries in the Cape Mountain area, Port Clarence district, Seward Peninsula, Alaska. The following is quoted from a summary of an engineering report on this property prepared by W. A. Richelsen, mining engineer and consultant, Central Building, Seattle, Wash.:

"Drilled ore reserves: The drilled ore reserves are estimated at a total of 1,004,323 cubic yards averaging 3.59 pounds, or a total of 3,605,523 pounds of tin. The minable yardage has been reduced to 853,123 cubic yards, averaging 4.08 pounds, or a total of 3,483,309 pounds of tin. Laboratory tests show that the cassiterite has very little impurities."

The above quoted figures are in substantial agreement with data in the United States Bureau of Mines files at Juneau, Alaska.

Yours truly,

JOHN J. MULLIGAN,  
*Mining Engineer, Region I, Alaska.*

Mr. REDWINE. How deep are these gravels?

Mr. MULLIGAN. They are shallow, 3 to 13 feet in depth.

Mr. REDWINE. How wide?

Mr. MULLIGAN. From 40 to 100 feet wide; they are small stream deposits.

Mr. REDWINE. It would require small dredging units to handle it?

Mr. MULLIGAN. Yes; the Ramstad operation uses small equipment.

Mr. REDWINE. Which makes your mining cost higher than if you had larger equipment?

Mr. MULLIGAN. Yes; at the present time there are no known deposits which would justify a large-scale dredging operation similar to that of the United States Smelting & Refining Co. in the Nome area.

Mr. REDWINE. In your judgment—we will take the deposit that is blocked out here, this 3 million pounds—what kind of price would the operator have to receive for his concentrates to justify mining?

Mr. MULLIGAN. I haven't worked out a mining cost for this deposit.

Presumably the Zenda Gold Mining Co. has worked that out and decided it could be mined for \$1.20. Mr. Lomen was an officer of that company and may know.

Mr. REDWINE. Yes; but he is not giving us any trade secrets as to how he is going to do it, and the Bureau might have some different ideas from Mr. Lomen. We want both sides. That is what I am trying to get at.

Mr. LOMEN. I want to correct the records. I am not an officer of that corporation nor do I own one share of stock.

Mr. MULLIGAN. You are not?

Mr. LOMEN. That is correct. I think Mr. Mulligan will be glad to correct the records that what I am stating is a fact; that I am not an officer of the corporation nor do I own any stock. Excuse me; in reading the full record it might be confusing because I testified at a previous meeting that I was vice president and director of it, but I am no longer an officer or a director, and I want to correct the records to that effect.

Mr. MULLIGAN. I have no other information on the total amount of tin on the Seward Peninsula.

Mr. REDWINE. Does the Bureau have definite information on any of the mineral resources of Alaska?

Mr. MULLIGAN. In this area?

Mr. REDWINE. Yes.

Mr. MULLIGAN. Very sketchy information.

Mr. REDWINE. Do you know how much money has been spent trying to develop that information?

Mr. MULLIGAN. I don't know.

Mr. REDWINE. How big a job would it be to develop it? After all, the Senator is on the Interior Committee that has to deal with these appropriations you know, and recommendations for appropriations.

Mr. MULLIGAN. I couldn't give you an offhand figure on something like that.

Mr. REDWINE. Senator, it is apparent from all the records available to us that the Federal Government has spent very little money in this area of Alaska, in the second division, to determine just what the mineral resources may be.

Mr. MULLIGAN. Is there anything else?

Mr. REDWINE. I would like you to furnish us with, we won't go over it now, Mr. Mulligan, but will you furnish the committee with, and send it to our Washington office, that chart that you showed me this morning for inclusion in the printed record.

Mr. MULLIGAN. Yes. I will send the chart on the production of tin from 1902 to the present.

Mr. REDWINE. And you have records of tin production going back continuously since 1902 to the present, I believe.

Mr. MULLIGAN. Yes. The first production was in 1902. Production was small but continuous since then, with the exception of the World War II years and another short period around 1921 or 1922.

Mr. REDWINE. Senator, do you have any questions you wanted to ask Mr. Mulligan.

Senator SCOTT. No, I think not.

Mr. REDWINE. Well, thank you very much, Mr. Mulligan. We appreciate your coming up here.

(The following table was subsequently received for the record:)

*Recorded tin production from Seward Peninsula, Alaska (subject to minor revisions)*

Year	Short tons (tin)	Value <sup>1</sup>	Average United States price per pound	Year	Short tons (tin)	Value <sup>1</sup>	Average United States price per pound

(Mr. Granville Jackson is called.)

## STATEMENT OF GRANVILLE R. JACKSON, PRESIDENT OF THE MINERS & MERCHANTS BANK OF ALASKA

Mr. REDWINE. Will you tell us, please, your name and business connections for the sake of the record.

Mr. JACKSON. My name is Granville R. Jackson and I am president of the Miners & Merchants Bank of Alaska.

Mr. REDWINE. The Senator would like to hear you discuss the past economic history of this area, the present economic conditions, with the thought in mind of leading up to what would be the effect upon the economy of the area if this proposed legislation, with which I believe you are familiar, were enacted; what the effect could be expected to be. That is a three-way deal so if you will take it up that way—

Mr. JACKSON. Well, I haven't had an opportunity to go into it. Of course, the economy of our section of Alaska is principally gold mining; practically all of it placer gold mined with gold dredges and hydraulic and some hand work, shoveling it, etc. In 1940 and 1941 our bank handled \$2 million each year.

Mr. REDWINE. Let me interrupt at that point, Mr. Jackson; there is only one bank here, your bank, at the present time, I believe.

Mr. JACKSON. That is right.

Mr. REDWINE. Has that been the case throughout the years?

Mr. JACKSON. At one time—we have had altogether 4 banks, but 3 at a time, and it finally dwindled down to 1. Did you want to know about it in the early days? In the spring of 1906, I think it was, there were three banks here and each bank had a million dollars in gold when the boats arrived in June. That was done by winter drifting, working on the third beach line out here. Of course they produced a lot more in the summer. I don't have those figures. I do have the figures from 1940 on what we have handled, but we don't handle all the gold. The Smelting Co., the United States Smelting, Refining & Mining Co. handle their own and they handled in 1940 and 1941. I imagine, 2 to 3 times what we handled. At that time there were 16 dredges working and it simmered down to different figures, less than a million dollars every year since until this year. There are only 2 dredges working now and we have only handled \$70,000 worth of gold. That isn't all of the gold that has been produced in this section. One or two people have shipped their own and it doesn't include that of the United States Smelting, Refining & Mining Co.

Mr. REDWINE. Would you read the figures for your bank, sir.

Mr. JACKSON. Well, I will just give you round figures. In 1940 it was \$2,110,000; 1941, \$2,032,000; 1942, \$905,000; 1943, \$349,000; 1944, \$273,000; 1945, \$233,000; 1946, \$520,000; 1947, \$795,000; 1948, \$624,000; 1949, \$731,000; 1950, \$557,000; 1951, \$401,000; 1952, \$296,000; 1953, \$347,000; 1954, \$318,000; 1955, or so far this year, \$70,000.

Mr. REDWINE. During that period the price was constant at \$35 a fine ounce?

Mr. JACKSON. Yes. That is right. Well, of course, this economy here is built on gold mining. We have other minerals which, like tin, we are trying to develop, such as copper and a number of other metals but tin is the only one that anything much has been done with. Unless we have an increase in the price of gold or a depression in the States, I imagine we will drag along as long as these contracts are being let here. It is hard to get men for a reasonable wage to mine and the men would rather work for the contractors than mine so that cuts us down. We really depend in this country on what the Government spends here. That is the way I see it anyway.

Mr. REDWINE. What is in the foreseeable future for a continuation of this contracting that is going on here?

Mr. JACKSON. Well, we always think every year it is going to be over with but there are a couple of years' work ahead now on work being done for the Government under defense and I presume that maybe after that—

Mr. REDWINE. Well, you are familiar, I assume, Mr. Jackson, with the various things that have gone into tin mining in the area?

Mr. JACKSON. Yes. We have gold dredges for mining and the hydraulic method of mining tin.

Mr. REDWINE. I want to go on another angle rather than the method of mining. Is it possible for Mr. Lomen or any other group or individual that wants to go into tin mining under present conditions to obtain financing from regular commercial sources?

Mr. JACKSON. No, I don't believe so; not at the varying prices of tin.

Mr. REDWINE. Well, what would happen, in your opinion, if this bill under discussion providing for incentive prices were passed?

Mr. JACKSON. Well, I think it would bring about the development of a lot of this property.

Mr. REDWINE. You think capital would become available?

Mr. JACKSON. I do. ~~We have~~ men here, engineers, representing large concerns who would be interested, but they take out the tin in the summer when it is 91 cents, for instance, and when they get it to the smelter it is 70 cents or 75 cents, and they can't mine that way.

Mr. REDWINE. In other words, they can't get a definite future price commitment on it? They have to take the price in effect on the day of delivery, is that right?

Mr. JACKSON. That is right.

Mr. REDWINE. Do you know of any particular occurrence in this connection where a man shipped a cargo of tin out of here and what the price was on that day and what it was on the day he sold it?

Mr. JACKSON. Well, I couldn't give you exactly that but when the Ramstad brothers were mining up there on Buck Creek, they were taking out tin and I think it was around 80 cents and when they got it to Seattle, I think they held it there quite a while because it had dropped to around 70 cents and then finally they shipped it. I don't know what they sold it at but it was much lower than they anticipated. They would continue to mine if they were sure of a price.

Mr. REDWINE. If they had a stable price?

Mr. JACKSON. Yes, like our gold at \$35 a fine ounce. Then you could prospect and know what you can produce and know your cost, but you can't do that with tin if you don't know the figure.

Mr. REDWINE. Is there anything else you want to cover on the subject, Mr. Jackson.

Mr. JACKSON. No, I think not.

Mr. REDWINE. Senator?

Senator SCOTT. No.

Mr. REDWINE. Thank you very much, Mr. Jackson.

(Mr. Steffen Andersen is called.)

#### STATEMENT OF HON. STEFFEN ANDERSEN, MAYOR OF NOME, ALASKA

Mr. ANDERSEN. I am Steffen Andersen, Mayor of the city of Nome. Twenty years ago when I came to Nome, this area had 25 to 30 gold mines operating. Every one who wanted to work was busy working in these mines, both native and white. Since then, with the increased cost of operation and the pegged price of gold, these operations have dwindled until we have only one large operation, the United States Smelting, Refining and Mining Co. at Nome, and 3 or 4 small operations spread over the Seward Peninsula. We have no other industries in this area other than mining. Although this area is rich in many minerals, very little has been done to develop them. Consequently there is very little work for the people of this area. We do have a number of Government agencies at Nome which does create some work but this is not the type of employment that will support an area. We have not had the large defense spending in the second division which has aided employment in other parts of Alaska. In

fact, one top-ranking general stated we were expendable and outside the ring of defense. In view of this it would seem a very practical move to establish a base tin price so that industry can go ahead in this area. It is a known fact that there is tin that can be mined in the second division at the suggested price of \$1.20 and \$1.35 per pound. By developing the tin in this area our country would have a source of tin on American soil; it would create employment in this area and eliminate the cost of public welfare and unemployment insurance. Our people want work and an active tin industry in the second division would give them employment at no cost to the Government.

Mr. REDWINE. I think that about covers it. Mr. Mayor, I would like to ask you this: Is there anyone in Nome who could give us any figures on unemployment-insurance situations, that you know of?

Mr. ANDERSEN. I believe you would have to get that out of Juneau because the applications for unemployment do have to go to Juneau.

Mr. REDWINE. Well, how are they filed here? If a man in this division wants to file an application, how does he file it?

Mr. ANDERSEN. He applies to Juneau.

Mr. REDWINE. By mail?

Mr. ANDERSEN. Yes. By mail.

Mr. REDWINE. I presume that everyone who is entitled to it knows what the procedure is?

Mr. ANDERSEN. Yes. I believe they are quite familiar with it here. Personally speaking, I believe that it is becoming abused. People are becoming dependent upon it rather than having it as an emergency measure. They are coming to expect it. I have known cases in my own business where we have had employees who, rather than work part time, would rather get fired or laid off so they could draw unemployment compensation and that would give them more income than we could give them on a part-time basis.

Mr. REDWINE. Well, is any field checkup made as to whether they are actually employed or not?

Mr. ANDERSEN. I don't know. I don't believe so, other than when Mr. Benson comes here.

Mr. REDWINE. Well, thank you very much Mr. Andersen. I believe that is all.

(Mr. Jack Jenkins is called.)

#### **STATEMENT OF JACK JENKINS, ASSISTANT TO THE AREA DIRECTOR, ALASKA NATIVE SERVICE, BUREAU OF INDIAN AFFAIRS**

Mr. REDWINE. Will you please state your name and position, Mr. Jenkins?

Mr. JENKINS. Jack J. Jenkins, assistant to the area director, Alaska Native Service, Bureau of Indian Affairs.

Mr. REDWINE. Mr. Jenkins, first of all, before you get into anything you have prepared, will you explain to us just what the Alaska Native Service is; how it operates?

Mr. JENKINS. Sir, the Alaska Native Service is a title that is used throughout the Territory of Alaska designating the beneficiaries of the Bureau of Indian Affairs. At the present time we have 84 day schools, 2 boarding schools, that spread from southeastern Alaska to Prince Wales Cape here on the continent, plus the Barrow, Wainwright, Lay, and Meade River areas in the Arctic down into Eagle on

the Canadian border, and the schools throughout the Prince William Sound areas. We are primarily interested in the education of the native people of entire Alaska, which is one-fifth as large as the United States. We cover a coastline here that is comparative to the entire coastline of Europe. The operations are extensively heavy financially, due to the isolated areas we cover, meaning transportation, oil, food, and so forth, in our educational program. We also cover resources, stores, reindeer, arts and crafts, welfare, construction, law and order, lands, a little bit of every situation that develops from birth until death, including the punitive father acts and checking upon the legal beneficiaries and heirs after death. We are actually a government within a government. For instance, most of your local citizens reap their benefits from a democracy either through the city, county, or State local governments. The native people are, in a way of speaking, a second-class citizen with benefits strictly from the Federal Government. In the Territory of Alaska it is not isolated in that particular frame. They do enjoy, relatively speaking, the free benefits for any and all races here. For instance, when we go back into education we also have the Territorial education system plus the education system of the Federal Government, which is a duplication of services, and as soon as the Territory can and will assume the education program, we step out. For instance, in all of southeastern Alaska we have 1 day school, just 1, which is right above Haines. All other schools in southeastern Alaska are controlled by the Territory with the same books, the same method of operation, and the same followthrough that we do for these natives.

Mr. REDWINE. And the financial burden is then borne by the Territory?

Mr. JENKINS. Yes. Now, I have not prepared any talk. This is my busy season right here. To give you a little idea, today we have everybody on Diomed Island with their groceries—and I have 22 barrels of oil on the island. It looks like it might be a cold winter. We have either got to fly oil into them at a tremendous cost, or supplement or beg or steal or borrow other oil to get in there.

Mr. REDWINE. Well, let me right at that point ask you this: That is the so-called ivory-carver group; is it not?

Mr. JENKINS. That would be Diomed, King Island, Gambell, and St. Lawrence.

Mr. REDWINE. Do the inhabitants of those islands put in for unemployment-insurance benefits; during the winter months?

Mr. JENKINS. Only the people that are employed could, and there is no way for their claims to go back and forth, and they would not be eligible for benefits as the unemployment law now reads.

Mr. REDWINE. The ones who live on the islands could not, even though they come over and work here in the summertime.

Mr. JENKINS. One of the provisions of the unemployment-compensation law states that they must be available for employment.

Mr. REDWINE. If they are over on the island, then they are not available?

Mr. JENKINS. They are not available. Going back into unemployment compensation, here we have papers that we fill out, through a courtesy only, for Territorial unemployment compensation for any and all individuals who have contacted our office. It takes a tremendous followthrough with filling out papers and filing them, and refill-

ing the same papers back and forth sometimes, but we try to accommodate any and all who come through our office for unemployment benefits. It will be very low this year for employment benefits throughout our area.

MR. REDWINE. How extensive is unemployment compensation in the second division?

MR. JENKINS. In comparison to the rest of the judicial divisions of Alaska?

MR. REDWINE. Yes.

MR. JENKINS. I am sorry I cannot give you that information.

MR. REDWINE. Well, what would you say is the total unemployment load in the second division?

MR. JENKINS. That is a very broad statement right offhand. I have prepared, as of the first of the year, a village survey for my area. I cover 33 villages from Barrow down. I did not take into consideration Barrow, Wainwright, Barter Island, and Point Lay for the simple reason that Associated General Contractors has an operation in that area benefiting the native people and, actually, they are becoming taxpayers rather than tax consumers, which is our goal. I am not sure, but my figures here will show approximately 550 family and single men that are without work. Those are purely my own figures. I have nothing to substantiate this or corroborate it outside of the agreement I have with my teachers to bring back the information for a village survey.

MR. REDWINE. Now what area does that cover?

MR. JENKINS. That covers from Stebbins and St. Michael below Unalakleet up past Norton Sound—the mouth of the Yukon River right there where she comes out into Norton Sound.

MR. REDWINE. I am not familiar with the geography. How does that compare with the second division? That is the area under discussion.

MR. JENKINS. Maybe I can illustrate a little here. Let's go back to the Alaska Native Service. Our area office is located in Juneau, Alaska. The area office is the responsible agency to the Washington, D. C., agency on procurement, property, supply, and appropriations, etcetera. In the Territory we have two district offices. Nome, Alaska, is district No. 1; Bethel, Alaska, is district No. 2. We are centrally located so that we are in direct radio contact with each village we service. Nome has 33 villages. Out of that 33 we have a direct radio contact with 29. The rest of them, Wainwright, Lay, Barrow, and Barter Island, we are just lucky if we ever hear them by radio.

MR. REDWINE. Well, what is your radio contact in each village, in each individual village?

MR. JENKINS. With a teacher. We have a schoolhouse in each of the 33 villages. Some villages have more than one teacher. It is according to the population of the particular area where the school is located. For instance, in the Kotzebue area, if my memory serves me correctly, we have a total of nine teachers. I think we have nine teachers in the particular Kotzebue area right now. This is purely from memory. There are 6 in the Unalakleet area and at Koyuk we have 1 teacher.

SENATOR SCOTT. What do you consider a teacher load?

**Mr. JENKINS.** According to the standards of education, we are greatly over that figure of 24 students. Some of our classes go into 34 and 35 students.

**Senator SCOTT.** Even then, it is low compared to some of the States.

**Mr. JENKINS.** Well, you see, we have these elements that we have to contend with in the schools. It is not so much the educational program. Our teacher is hired fundamentally as an educationalist for elementary education. That looks good on a piece of paper and that is what they are hired as. Then they arrive here and they find out that they are community educationalists. Also, in each village we have a store; they are the bookkeepers and auditors. Then someone is going to have a baby and they are the midwives; they run all the terms of medicine throughout the area. For instance, if somebody gets a broken arm, they stop class and get on the radio with a call for the doctor. The call is relayed back to a doctor so that they will have the proper method of treatment. Any visitor that goes through, who wants to take a fast tour through the Territory, we are the only ones who have accommodations or a boarding home for them. They go to the teacher's and stay and the teacher feeds them. The Public Health Service, the Sanitation team, the National Guard, the Tenth Radio, the Ground Observer Corps, officials from all branches and agencies of the Government, go into our stations to stay, including the Public Health nurses. It looks good on a piece of paper—elementary educationalist.

**Mr. REDWINE.** Now that teacher with 34 kids, she has a range from the first grade through what grade?

**Mr. JENKINS.** Through the eighth.

**Mr. REDWINE.** So she is teaching really eight grades?

**Mr. JENKINS.** Yes—plus a nutrition program, in each class that we have. In some places they feed a breakfast and in some places they feed a noon lunch—a hot meal if possible. It is supplemented with native foods as conditions exist. We have teachers running communications for Alaska Communication System. For instance, if a wire comes for John Doe it is handled through the teacher's radio and the teacher's time. I have a lot of respect for our teachers and it is lucky that we are able to get the type of teachers that we have.

**Senator SCOTT.** What is your salary range for that type of individual.

**Mr. JENKINS.** All the way from a GS-7 to a GS-9 and that is for a 12-month period and not a 9-month period. They work 12 months a year. In the summertime they repair, paint, replace glass, put on new roofs, fix chimneys, and do a little bit of everything.

**Mr. REDWINE.** What is their contract period?

**Mr. JENKINS.** 12 months. For instance, if they are employed in the States, they are brought here on a 2-year contract with their way paid back. If we recruit a teacher in the Territory they receive none of the fringe benefits of being hired outside. Actually it encourages an outside hire; they can go to Michigan, for instance, and hire out again and come up here for a 2 year contract and be returned to Michigan at Government expense. There is a little discrimination against the local Alaskan people. I am sorry I have nothing to offer on any tin company. I know nothing about tin and could probably fall over it and not know what it looked like, but I do have a village survey.

Mr. REDWINE. Will you leave a copy of that with us?

Mr. JENKINS. Yes. It includes the name, age, number of dependents, past experience, etc., but I do want to bring out at this time in this hearing that the Federal Government is here to aid and assist these people in becoming taxpayers rather than tax consumers, and the prevailing wage scale throughout Alaska and throughout my history of 16 years, Alaska is the lowest paid area that I have come into contact with; that is, the Second Division is the lowest paid area that I have come into contact with. In Nome, for instance, when you go down to a basic wage of \$1.40 an hour and apply that against the high freight cost, lighterage cost and the commodity cost inside the store, you can't come out on it. There is no way in the world these people can regain their health and become full citizens and taxpayers under the conditions now existing in this area. I don't care whether it is tin mining or anything else.

Mr. REDWINE. What is the average per capita income for the Division?

Mr. JENKINS. I cannot give you that. I do have in my files for last year, information on the average earning capacity of each village. Each different village would have a different average, but we have not broken it down into an average. For instance, in Barrow all the native people who are working are putting in a full shift and drawing full standard wages that the so-called nonnatives are making.

Mr. REDWINE. Will you furnish us with, and mail it to the committee in Washington, the per capita by village. Would that be a terrible task?

Mr. JENKINS. As soon as I get rid of this boat that we have.

Mr. REDWINE. Well, I mean in the next few days. We would like to have it by the first of December if possible.

Mr. JENKINS. We will do our best to get it to you.

Mr. REDWINE. We would like to have it village by village in the Second Division.

Mr. JENKINS. All right, sir. Would you like the standard rate of pay that the Government has produced for that area?

Mr. REDWINE. Yes.

Mr. JENKINS. This fluctuates with the different areas, of course. In our Second Judicial Division or the First Division of our Native Service we have paid, for instance, a carpenter here is drawing \$3.41 an hour. That means throughout Stebbins and Barter Island and down we pay carpenters, regardless of race or creed, \$3.41 an hour.

Mr. REDWINE. Well, we saw three working at Kotzebue yesterday when we came through and under the conditions that they were having to work, building a quonset hut out there in that wind, I think they earned every cent of it.

Mr. JENKINS. To me it is vitally important. If we of the Federal Government are to keep these people happy and healthy and get them acquainted with the white man's culture, so-called, then we must assume part of the obligation of making them full citizens when it comes to wages. I have this all down. It is actually demonstrated—would you like me to give you a little of that?

Mr. REDWINE. Yes, please.

Mr. JENKINS. For instance, when we train under our setup what we call a carpenter-trainee, we pay him \$3.06 an hour while under training. For instance, a man that would be picked as a carpenter

is one who would be able to handle tools and well-qualified in the knowledge of tools, but he would still be a trainee as far as we are concerned. He wouldn't be a qualified carpenter to send out on a job with blueprints and for us to say we want this or that done. An electrician under the Government setup gets \$4.55 an hour; an electrician's helper gets \$3.22 an hour. A carpenter-foreman is \$4.45 an hour. A foreman of electricians is \$5.12 an hour and a labor foreman is \$2.85 an hour. A laborer is \$2.50 an hour. Of course, there is time and a half for overtime over 40 hours. To be honest, it would be an emergency if they worked it. We usually try to control it to 40 hours. A painter gets \$3.73; a painter's helper \$2.97. Now we have this just roughly glancing through it and that is all I have on this.

**Mr. REDWINE.** Now the total labor force, either as trained workers or as trainees, to what percentage of that labor force are you in a position to offer employment?

**Mr. JENKINS.** Our regulations are specific on it. For instance, any labor that we hire, the first labor that is hired is a native. The native comes first with our organization. If there was a Tlinget Indian who was qualified for my job in this particular area and myself being non-native, and we were both qualified right down the line, he would get the job. That is the setup in the native service. We felt that they should be given the leadership—

**Mr. REDWINE.** In actual practice does that happen?

**Mr. JENKINS.** Yes.

**Mr. REDWINE.** Has anyone been replaced—a nonnative replaced?

**Mr. JENKINS.** In my particular area?

**Mr. REDWINE.** In your area. Not your particular level, you understand, but I mean in the area that you serve. Has there ever been a case where a native replaced a nonnative worker?

**Mr. JENKINS.** Well, right off-hand I couldn't give you one but I might clarify the situation by stating that throughout our area all our teacher aides in the educational program are native people and we have several native teachers who are fully qualified teachers, handling and doing a very good job of education in their particular villages. In fact, just a short time back, we had a native man retire who received the meritorious award from the Department of the Interior for over 30 years service.

**Mr. REDWINE.** What is the attitude of industrial management toward the wage scale that the Government pays? What is their attitude?

**Mr. JENKINS.** Going back into this village survey that I gave you here, I took this personally to the Associated General Contractors, both in Anchorage and Fairbanks, for the specific purpose of showing these contractors that when they placed a bid in our particular area that they could figure that we could supply them with some laborers, some skilled laborers, some qualified laborers. For instance, going into Morrison-Knudsen, just using this as an example, we brought forth a Little Diomedé. Here is a man who is 34 years old with three children and who has experience as a painter but he does not belong to a union. He is willing to go anyplace for employment and willing to take any kind of employment. Now the first thing, the contractor comes back at me and states, "Mr. Jenkins, we would like to hire your people but when we go into hiring what assurance do we have that

these people are not contagious TB carriers?" That is easily remedied because at the present time, up to July 1, we still had medical. As you know, Public Health Service has taken it over.

It would be a simple matter for us to check on any John Doe so we could give a result of his last X-ray and sputum. There is an up-to-date sputum in the last 6 months and if it was necessary to bring it further up to date, it would be a matter of getting it into the lab which would be in Anchorage and getting it back, so we could prepare a manpower survey for any contractor throughout any area and give him the best qualified men of the area without subjecting him to tuberculosis or any other adverse situation. I don't think we can go to the contractor with the theory in mind that we have 550 people unemployed, 550 unemployed natives. I don't think he cares if we have 550 unemployed natives but I do feel that if we can show him as a business man that we can save transportation costs on, say, 1 carpenter or 10 laborers, that he can benefit and his firm can benefit by hiring local people and the community can benefit by the hiring of these people, we will bring these communities up, but it cannot be just from the Federal Government. It must be a community program, including Nome and all surrounding areas.

Mr. REDWINE. Well, the point I want to get at is: Are you, or is the Government, setting the wage scale standard and is the standard that you are setting objectionable. Is it too high or too low or what, to the private employers? What is their attitude?

Mr. JENKINS. In his particular area? I could not answer you that.

Mr. REDWINE. Well, let me ask you this: If a private employer brings a carpenter in from the States, what does he pay?

Mr. JENKINS. He pays the prevailing wage scale that we have set.

Mr. REDWINE. You set the prevailing wage scale?

Mr. JENKINS. No sir. That is handled through the Associated General Contractors and their labor unions.

Mr. REDWINE. Well, take Point Barrow, how does the prevailing wage scale up there compare with your wage?

Mr. JENKINS. That we have locally?

Mr. REDWINE. Yes.

Mr. JENKINS. Well, there is no comparison whatsoever. At Point Barrow they pay the prevailing wage scale that is set for it. If a man is an electrician, he draws electrician's wages plus time and a half for overtime. For instance, in rough figures, I would say that \$1.50 in Nome is what they call a prevailing wage scale. There is no comparison between \$1.50 and \$4.

Mr. REDWINE. But the prevailing wage scale would be \$1.50.

Mr. JENKINS. Locally.

Mr. REDWINE. I am trying to pin point it to a local situation.

Mr. JENKINS. I see your point and I am trying to give you an honest answer. For instance, it is my understanding that the longshoring here is \$1.40 an hour. To give you a specific example of that, the contractor is offering \$3 an hour plus time and a half for all over 40 hours. Now the worker that is making \$3 and some cents an hour plus time and a half for over 40 hours, if he is living here and his family is here, is spending money here. He is paying the same price for a case of milk that my native man who is working 40 hours at \$1.40 is paying. You are making him definitely a second-class citizen as long

as he is drawing \$1.40 while the man next to him is working the same machine and drawing \$3. Basically it costs him just as much to live. He has just as much pride in his family. He wants to be on his own and he wants his children home when they go to school.

Fundamentally he is the same as you and I inside and he is thinking of the future for his family. In a way of speaking, this Territory was formed by the way it was settled. Your First Judicial District was formed with the salmon and canning industries. Those people down there have had a hundred years of the so-called white man's culture. The Second Judicial Division for over 50 years has been in contact with the white man and there are exceptions to the rule. Some of them take their welfare check and drink it up. Well, they do that in New York City too. It doesn't matter what the race is. You are going to have exceptions. But if we keep these children healthy, warm, and educated, maybe in a little time we will have full benefits for all concerned. I do believe I might clarify myself here. I don't say every native man in town is available for employment. You might pay him a good wage today and he might be sober tomorrow but he might be drunk tomorrow too. There is no doubt in my mind that that isn't true. At the same time, that is in every race. For any progress in civilization, there are a few who are going to drop behind. We are not going to take the exceptions; we are going to take the rule as a whole. For instance, here we already have the tin mine closed up and I have three families, who, when they returned home, were completely broke. They are big families and we immediately started in to supplement their income by feeding their children the Federal check. Now maybe we waste money by feeding the best we can. At the same time, we are saving money if we have to bring them up to Teller, for instance, and fly them in here, put them in a hospital at so much per day.

Mr. REDWINE. What is the overall cost of your hospital program?

Mr. JENKINS. Like I explained before, sir, the fiscal year of July 1—

Mr. REDWINE. Well, last year, what was it?

Mr. JENKINS. We got \$6½ million appropriated to handle the hospitals in Alaska. This year the Public Health Service got \$10 million, and I don't begrudge them the appropriation because we were 3,000 beds short at the end of the fiscal year last year for those with tuberculosis and contagious diseases.

Mr. REDWINE. What did you have the year before, do you recall?

Mr. JENKINS. It would be only a guess. I can't remember. I can give you a breakdown for everything but hospitalization on the appropriations for this year for the native service.

Mr. REDWINE. Well, are you going to be able to leave all those papers with us, Mr. Jenkins?

Mr. JENKINS. Whatever you so desire.

Mr. REDWINE. Well, a copy of everything you think we might be interested in, we would like to have for further study.

Mr. JENKINS. I assure you that there is nothing on this about tin.

Mr. REDWINE. Tin is only part of the problem up here. Let me ask you another question. Diverting from the hospitals, your agency also handles timber sales does it not?

Mr. JENKINS. Under our lands and realty officer the timber sales that have been existing in southeastern, in reference to the Japanese sale of timber and others?

Mr. REDWINE. Just the overall picture. I am not trying to pinpoint anything at all.

Mr. JENKINS. Under our present setup, under the Indian laws, these people have sort of a restricted deed to this land. It is under the supervision of the Federal Government and can be assigned and sold and delivered to an outsider only upon recommendation of the Bureau of Indian Affairs. This gives the individual landowners the protection of exploitation of their land. We have tried to protect their interests.

Mr. REDWINE. Like a trusteeship?

Mr. JENKINS. Yes. That is correct. And it works that way on a little bit of everything that they have in southeastern. Of course you realize that Juneau being in southeastern, they have a little bit more help than we have here. We have one district office here and we still do not have a welfare worker. For instance, if we have a welfare case, it is usually an emergency when it comes in. They don't come in and say "I've got \$20 and it will last me until next Wednesday." They come in that morning and say "I am out of oil." So if it is cold, we must stop right then and get oil to protect the minor children or the ill or the aged and it stresses a little more on welfare. Up until this year we have been able to supplement on any welfare cases that the Public Welfare has, like the Old-Age Assistance or Aid to Dependent Children. We have had a dividing line down through the so-called marginal cases where we assume our part and they assume theirs. This year we are without funds and are not supplementing on any of Public Welfare's program. I know that the Public Welfare lady has just herself here. She is short a worker. We are short a welfare worker and we are without sufficient help in this area to do a justifiable job. The elements of nature are so severe; for instance, like today we have people on an island without oil. We don't intend that to happen but there is 75 miles of ice between the island and the boat and there is no way we can get in.

Mr. REDWINE. Winter came earlier than you expected?

Mr. JENKINS. No. We got tied up a little bit on the Barrow discharge. There was more ice there this year than ever before in the history of that particular area.

Mr. REDWINE. We appreciate your coming in, Mr. Jenkins. We know you are busy and now you get back and take care of that oil problem. Thank you so much for coming in.

Mr. JENKINS. We have our office right down the hall and we will be glad to furnish any further information that you need. I will get this ready and bring what I can for you.

Mr. REDWINE. Thank you, Mr. Jenkins. Senator, do you have anything further?

Senator SCOTT. No. I think not.

Mr. REDWINE. Mr. Lomen, whom do we have next on the list? Is there anyone present who would like to testify?

Mr. LOMEN. I think we should call upon Mr. Walsh.

Mr. REDWINE. Is there anyone else who would like to appear?

Senator SCOTT. If you have any statements you would like to make, we would like to have them.

(Mr. Walsh is called.)

### STATEMENT OF M. J. WALSH, NOME, ALASKA

Mr. WALSH. I have been a resident of this Nome area for the last 50 years. I didn't expect to be called today and I have nothing prepared. I will, however, be glad to answer any questions. I have been engaged in prospecting and mining for gold during my entire stay here in this area. As you know, gold mining is a rather sick industry at this time, especially here at Nome. In 1934, the gold was raised from \$20.67 an ounce to \$35 an ounce and there was a brief revival in placer gold mining. We don't have any lode mining developed here yet and this Seward Peninsula profited a great deal by the advance in the price of gold at that time.

As you know, gold was discovered in Nome in 1898 and it was worked by the only known method at that time—hand mining; and on the creeks and open cuts, bench ground, drift mining. Other areas too deep didn't have hydraulic mining. The cream, as we call it, of the rich placers was mined out by underground mining for the first 10 years or more. Then hydraulic mining took its place and we were able to handle much larger quantities at a lower cost and they brought water down from the mountains for more than 40 miles which has developed a great placer gold hydraulic area here. Later when dredging came into force, this peninsula supported—I think there were some 20 dredges on this peninsula, especially after gold advanced in 1934. Now you might say when you look around and see that there are only two large dredges working in this area, that the area is probably worked out. That is not the case. There are still large, very large, gold deposits here in this area. They are not of as high a grade of gold as originally, of course, but had the economy not changed from that of 1934 or, we will say, of 1939, to what it is at the present day, we would still have probably 20 dredges working in this area. When I say "this area", I mean that Nome is a hub, a distributing point, for the area for a radius of probably 200 miles. Ground that could be profitably operated in 1934 up until, say, 1939, cannot be mined at all now because the cost of operating has increased by 100 percent in that period of years and the price of gold remains the same so that is your answer.

The economy of this area has always depended upon gold mining and is still to a great extent dependent upon it and unless the economy changes or unless the cost of production is lowered or the price of gold raised, neither of which is very likely to happen, then gold mining will diminish more and more and only the very rich areas can be mined. In gold mining we refer to marginal ground which is ground that, while not rich, has pockets or salvages which could be operated by large dredges such as the corporation has now out here, which handle 10,000 yards a day. They can handle ground at a very low cost. Nevertheless that cost has increased due to the inflation in the cost of materials and the cost of labor, of course, but more so the cost of materials and shipping. So if another industry is not developed here; if the other metals that you spoke of this morning, the tin and bismuth and other things, if they are not developed here, the economy of Nome is going to suffer very much.

Mr. REDWINE. Well, Mr. Walsh, the prospector is really the bird dog that finds mineral deposits, isn't he?

Mr. WALSH. I was a bird dog for a long time.

Mr. REDWINE. Do you think if we were able to set a stable price for tin that would have the effect of getting the old-time prospector back out into the field? There are not many of them left. Do you think that they would find a lot more tin and other kinds of metals?

Mr. WALSH. In answering that question, you say the old-time prospector isn't around any more—you would soon find that they would get around if the incentive was there. In other words a man going out and prospecting for one of those metals with a fluctuating price, as you refer to tin, if he knew that there was a set or stable price he would, not alone for himself but he would represent others in the field, go in the field and prospect as he always did.

Mr. REDWINE. Senator, that is what happened in the case of uranium, sir. We didn't think we had any uranium when we found all of a sudden that we needed it and had a use for it. Then the prospector went out and, of course, he used the modern devices such as the Geiger counter, and found it. Now they say we have it running out of our ears.

Thank you very much Mr. Walsh. I wonder if we might speak with Mr. Mulligan again for a moment.

(Mr. Mulligan is recalled.)

Mr. Mulligan, don't you think that it would be very helpful to the future discovery of resources of the area, if the prospector was out in the field?

Mr. MULLIGAN. That is the only way to really cover the field.

Mr. REDWINE. Despite all of our new scientific instruments and all of that, the basis of discovery and activity is still really the old-time prospector?

Mr. MULLIGAN. Yes; the prospector, and the company to go ahead and develop what he finds. That is the basis of finding any mineral deposits.

Mr. REDWINE. Thank you, Mr. Mulligan. I think that pretty much outlines the situation here, Mr. Chairman. Mr. Lomen, unless you have something further to offer I am going to suggest to the chairman that he adjourn the meeting.

Mr. LOMEN. I would say the missing links here are those which will be picked up in Fairbanks. There you will have Territorial issues and you will have detailed information. I am sorry that we couldn't bring out today witnesses who had complete information. We could go on for hours discussing the things that have been broached here but I don't think it would accomplish anything important for your purpose.

Senator SCOTT. Does anyone here have anything else to contribute to this hearing? We would like everybody to be heard.

Mr. LOMEN. Senator, we have one man in the room who has devoted his entire life to gold mining and he might have a question or two that Mr. Redwine might like to develop and I refer to Mr. Ben Gillette.

Mr. GILLETTE. I have been interested to hear everything that has gone on here but I think the witnesses have covered it very thoroughly; these people that have been called upon here, especially Mr. Walsh, whose résumé of what happened here in this country, covered it. I don't think I can add anything to it.

Senator SCOTT. If there is nothing further, then, this hearing will stand adjourned.

(Following is the brief, previously referred to, for inclusion in the record.)

#### A BRIEF IN SUPPORT OF H. R. 7145

To encourage the discovery, development, and production of tin in the United States, its Territories and possessions

#### 1. SECURITY

##### *Senate Preparedness Subcommittee Report, Resolution 18, tin 1951*

"Tin is more vital to our way of life than most people realize, either in peacetime or in wartime. It is essential for the packing, transportation, and preservation of a substantial portion of our food supply. It is essential for keeping the wheels of industry and transportation turning. \* \* \* While under the pressure of necessity during World War II the amount of tin in these essential uses was decreased but no complete substitutes have been developed for most of them. And thus we are still dependent upon tin for both our civilian needs and our preparations for defense."

##### *Minerals, Materials, and Fuels Economic Subcommittee Report No. 1627, July 9, 1954 (Senate)*

"The testimony before the committee is alarming: To a very dangerous extent, the vital security of this Nation is in serious jeopardy. We are dependent for many of our essential raw materials on sources in far-off countries, many under the control of possible fickle allies or timid neutrals, some veritably under the guns of our potential enemies. And what is perhaps a more devastating conclusion of this committee is that none of this vulnerability need exist. Long overdue corrective measures should be undertaken at once. \* \* \* It is vital to our domestic welfare, economy, and security that maximum economic production be maintained, first, within our own borders, and, second, in the Western Hemisphere."

#### 2. STOCKPILE

##### *Committees on Armed Services and Banking and Currency, Report No. 215, 84th Congress (Senate)*

"As recently as March 21, 1955, the stockpile goals of tin, both long term and minimum, were revised. The revision was upward, and, as of March 23, ODM's figures showed that the Government had on hand and on order a quantity of tin in excess of the minimum objective, but several thousand tons below the long-term objective. Thus, even to complete the long-term stockpile goal, it is necessary for the smelter to continue operations beyond June 30, 1955, or purchases of refined tin will have to be made on the commercial market. Moreover, it should be noted that the tin stockpile objectives have been revised seven times since the first goal was set on November 20, 1944. The number of these changes must be borne in mind in determining whether the stockpile at any given time represents the kind of tin security this Nation and the free world require."

##### *Committee on Interior and Insular Affairs, Report No. 359, 84th Congress (Senate)*

"Dealing with the contention of the Office of Defense Mobilization as expressed in various hearings that the stockpile objectives of some minerals have been nearly met, or that there is enough on hand to fight a war, it may be noted that ODM is operating within a fixed formula and appears to be bound thereby. Some elements of the formula are arbitrary, some are matters of judgment, and all may be considered variable according to opinion. All depend upon a complex number of factors. The objective might well be greater than as now fixed. That the basic stockpile formula is not sacrosanct is evidenced by the fact that stockpile objectives have changed from time to time and there are minimums as well as long-term (maximum) objectives. Either the formula itself must have been modified or opinions or informed guesses must have altered the quantities comprising the components of the formula."

## 3. POLICY

*Public Law 206, 83d Congress, chapter 339, H. R. 2824*

"Declaration of policy: Section 2. It is hereby recognized that the continued dependence on overseas sources of supply for strategic or critical minerals and metals during period of threatening world conflict or of political instability within those nations controlling the sources of supply of such materials gravely endangers the present and future economy and security of the United States. It is therefore declared to be the policy of the Congress that each department and agency of the Federal Government charged with responsibilities concerning the discovery, development, production, and acquisition of strategic or critical minerals and metals shall undertake to decrease further and to eliminate where possible the dependency of the United States on overseas sources of supply of each such material."

*Report of the Cabinet Committee on Minerals Policy, November 30, 1954*

"Mines of the future must be planned today \* \* \* not a decade hence. The Committee believes that the Government has an obligation to assure that the mineral resources of the Nation be developed, conserved, and utilized in the best possible manner over the longest possible period in order to enhance its security and commerce. Development of mineral resources is, of course, primarily a function of private enterprise. The Government must, however, continue to assist in many ways. The Committee believes that the search for new sources of mineral wealth within the United States needs to be pressed more vigorously. Evidence obtained through geologic investigations suggests that abundant mineral wealth awaits discovery."

## 4. WELFARE

*House Subcommittee on Mines and Mining, 84th Congress, May 20, 1955*

(Statement by the Hon. B. Frank Heintzleman, Governor of Alaska:)

"The Alaska Legislature in recent session passed two memorials addressed to Congress and Federal agencies urging that ore-purchasing depots for strategic minerals be set up in Alaska and that an assured market at a living price be established for domestic tin. I heartily concur in this action by the legislature and again wish to point out the importance of such measures to the welfare of the local people, especially Eskimos and Indians who live in the undeveloped northwest section of Alaska. Unless we can find some source of livelihood to replace the dwindled gold-mining industry and arrange to take over as the military defense projects there are completed, the Federal Government will have a continuing public welfare program on its hands more costly than this proposed program which we are advocating to encourage mining in the second division of Alaska."

(Statement by Mr. Henry A. Benson, Commissioner of Labor:)

"I know nothing about tin. I do know about the people who live in this area and, as the Governor pointed out, this particular area has been classed as a distress area for the reason that the people have had no opportunity for employment other than what has been imposed by direct Government grants. The major economy, if you can call it an economy, in that area is welfare payments, and it is our feeling that the program which has been outlined by these people who are ready and willing to make substantial investments in tin operations, granted some opportunity for stability, will provide employment for approximately 2,000 people of the 15,000 people that Governor Heintzleman mentioned. \* \* \* We think that a tin industry there will solve 75 percent of the [welfare] problem."

## 5. SPENDING

*Mining World July 1955*

"WASHINGTON, D. C. \* \* \* The office of Defense Mobilization has revealed that the Government now has on hand metals and minerals valued at \$800 million in its long-term stockpiling program. Total goal was set at \$3,100 million. By June 3, 1956, it is expected that 62 minimum objectives of the 76 materials now being stockpiled will be 75 percent or more completed."

It has been noted above under "stockpile" that the long-term objectives for tin have not been met by several thousand tons. H. R. 7145 calls for the purchase of 10,000 long tons of metallic tin. Experts will testify that domestic tin operations cannot produce this quantity from the present known reserves. That is exactly the point of this bill. If the price established by this bill is to be taken advantage of by domestic producers, it will mean that substantial addition reserves of

domestic tin will have been prospected for and developed by private capital. This bill may properly be described as an "incentive" bill. Under the price set forth in H. R. 7145, it is possible for the appropriate agencies of the Government to expend some \$28 million over a long period of years in the purchase of domestic tin. It may be pointed out, however, that the actual cost to the Government would only be the difference between current world market price at the time of sale and the stabilized price called for in this bill; and even more importantly that if no tin is produced under this program, the cost to the Government would be nothing.

## CONCLUSION

*Minerals, Materials, and Fuels Economic Subcommittee Report No. 1627—July 9, 1954, Senate*

"Congress generally has been more farsighted than the Government in matters of this kind and, when the nature of the stockpile objective formula is considered, though the Office of Defense Mobilization may consider itself to be bound by that formula and perhaps must act accordingly, the Congress is not so bound and the committee believes Congress has the final responsibility of charting and setting a more reasonable domestic mining policy in the interests of the national defense and the national economy. There is little question but that under a proper, long-range, congressional directed policy the United States can become self-sufficient in the production of these metals which are indispensable in time of war."

(By direction of the Chairman the following is made a part of the record:)

STATEMENT FILED BY CARL S. GLAVINOVICH, MANAGER, NOME DEPARTMENT  
UNITED STATES SMELTING REFINING AND MINING COMPANY

Historically, the first successful mining in the Seward Peninsula resulted from the discovery of placer gold deposits in the council district in the spring of 1898.

Since the original discovery of gold and the consequent development and operation of deposits, the basic economy of the Seward peninsula, and in large part that of the second judicial division, has been mining.

Tin was first discovered in 1903 in the Cape Prince of Wales—York District. Development and active operation have been intermittent. Production and possible future potential have already been stressed in previous testimony, therefore a repetition of figures is not deemed necessary in this statement.

With the advent of World War II, living and operating costs rose to an all time high in this area. Since the war, the already high and continuing upward trend of both costs have resulted in a steady decline in mining until presently the industry is of relatively minor importance in the economy. It is readily understood that the increased costs of operation cannot be passed long in the sale price of the industry's products. Any further appreciable added costs to operation without a commensurate return to the producer, will hasten the complete shutdown of the industry, whether large or small operations.

It may be well to emphasize at this time some of the varied factors which contribute heavily to the decline of mining and with which—excepting an increased and stabilized price for metals from this area—the industry cannot compete.

(1) Water-borne transportation rates to this area are the highest in the world. For example, the freight and lighterage rate on mining machinery is approximately \$40 per ton. On foodstuffs the rate ranges between \$50 and \$60 per ton.

(2) The base hourly wages paid by the industry are lower than those prevailing in defense construction and other operations of the government. A typical comparison follows:

	Base hourly rate, labor	Base hourly rate, top- skilled
Mining—Nome area	\$1.57	\$2.17
Alaska road commission	2.88	3.72
Civilian-military installations	2.81	4.81
Defense construction-contractors	3.30	4.40

The present major economy of this area, disregarding certain Government defense expenditures which are only transitory stop gaps, is welfare payments in one form or another to the larger segment of the population. Of the 15,000 people resident in the second division, approximately 2,500 make up the available labor force. A large percentage of this number are unable to find gainful employment under the existing economic climate, with the net result that some sort of welfare program is essential. A relatively small number find year round employment, the balance obtain seasonal work only, usually ranging from 3 to 7 months. This means a possible bare annual existence without many of the creature comforts which we now deem so essential.

Unless some incentive is furnished tending toward the encouragement of exploration and development in our mineralized areas, the already large public welfare problem will become a still greater burden. We are not proud of this condition. To offset this dole in some measure, the following suggestions are made:

(1) The construction of trunk and access roads to mineralized areas. This would materially reduce transportation costs from supply centers to active operations and may assist in the re-opening of some operations which have closed down.

(2) The application of some form of the point 4 program toward development of this and other impoverished sections of our Territory. The American citizen, permanently a resident of this area, is equally if not more deserving of benefits to be derived as compared to populations of foreign nations.

(3) Federal income tax: The 25 percent cost of living allowance be applied to all permanent residents. Federal employees only enjoy this relief. They are usually salaried and have year round employment.

I shall be glad to answer any questions or supply more detailed information on the economy of this area to the best of my ability.

(Whereupon at 12:30 p. m., Tuesday, November 1, 1955, the hearing was adjourned.)

domestic tin will have been prospected for and developed by private capital. This bill may properly be described as an "incentive" bill. Under the price set forth in H. R. 7145, it is possible for the appropriate agencies of the Government to expend some \$28 million over a long period of years in the purchase of domestic tin. It may be pointed out, however, that the actual cost to the Government would only be the difference between current world market price at the time of sale and the stabilized price called for in this bill; and even more importantly that if no tin is produced under this program, the cost to the Government would be nothing.

#### CONCLUSION

*Minerals, Materials, and Fuels Economic Subcommittee Report No. 1627—July 9, 1954, Senate*

"Congress generally has been more farsighted than the Government in matters of this kind and, when the nature of the stockpile objective formula is considered, though the Office of Defense Mobilization may consider itself to be bound by that formula and perhaps must act accordingly, the Congress is not so bound and the committee believes Congress has the final responsibility of charting and setting a more reasonable domestic mining policy in the interests of the national defense and the national economy. There is little question but that under a proper, long-range, congressional directed policy the United States can become self-sufficient in the production of these metals which are indispensable in time of war."

(By direction of the Chairman the following is made a part of the record:)

#### STATEMENT FILED BY CARL S. GLAVINOVICH, MANAGER, NOME DEPARTMENT UNITED STATES SMELTING REFINING AND MINING COMPANY

Historically, the first successful mining in the Seward Peninsula resulted from the discovery of placer gold deposits in the council district in the spring of 1898.

Since the original discovery of gold and the consequent development and operation of deposits, the basic economy of the Seward peninsula, and in large part that of the second judicial division, has been mining.

Tin was first discovered in 1903 in the Cape Prince of Wales—York District. Development and active operation have been intermittent. Production and possible future potential have already been stressed in previous testimony, therefore a repetition of figures is not deemed necessary in this statement.

With the advent of World War II, living and operating costs rose to an all time high in this area. Since the war, the already high and continuing upward trend of both costs have resulted in a steady decline in mining until presently the industry is of relatively minor importance in the economy. It is readily understood that the increased costs of operation cannot be passed long in the sale price of the industry's products. Any further appreciable added costs to operation without a commensurate return to the producer, will hasten the complete shutdown of the industry, whether large or small operations.

It may be well to emphasize at this time some of the varied factors which contribute heavily to the decline of mining and with which—excepting an increased and stabilized price for metals from this area—the industry cannot compete.

(1) Water-borne transportation rates to this area are the highest in the world. For example, the freight and lighterage rate on mining machinery is approximately \$40 per ton. On foodstuffs the rate ranges between \$50 and \$60 per ton.

(2) The base hourly wages paid by the industry are lower than those prevailing in defense construction and other operations of the government. A typical comparison follows:

	Base hourly rate, labor	Base hourly rate, top- skilled
Mining—Nome area.....	\$1. 57	\$2. 17
Alaska road commission.....	2. 88	3. 72
Civilian-military installations.....	2. 81	4. 81
Defense construction-contractors.....	3. 30	4. 40

The present major economy of this area, disregarding certain Government defense expenditures which are only transitory stop gaps, is welfare payments in one form or another to the larger segment of the population. Of the 15,000 people resident in the second division, approximately 2,500 make up the available labor force. A large percentage of this number are unable to find gainful employment under the existing economic climate, with the net result that some sort of welfare program is essential. A relatively small number find year round employment, the balance obtain seasonal work only, usually ranging from 3 to 7 months. This means a possible bare annual existence without many of the creature comforts which we now deem so essential.

Unless some incentive is furnished tending toward the encouragement of exploration and development in our mineralized areas, the already large public welfare problem will become a still greater burden. We are not proud of this condition. To offset this dole in some measure, the following suggestions are made:

(1) The construction of trunk and access roads to mineralized areas. This would materially reduce transportation costs from supply centers to active operations and may assist in the re-opening of some operations which have closed down.

(2) The application of some form of the point 4 program toward development of this and other impoverished sections of our Territory. The American citizen, permanently a resident of this area, is equally if not more deserving of benefits to be derived as compared to populations of foreign nations.

(3) Federal income tax: The 25 percent cost of living allowance be applied to all permanent residents. Federal employees only enjoy this relief. They are usually salaried and have year round employment.

I shall be glad to answer any questions or supply more detailed information on the economy of this area to the best of my ability.

(Whereupon at 12:30 p. m., Tuesday, November 1, 1955, the hearing was adjourned.)

# DOMESTIC TIN PRODUCTION

---

FRIDAY, NOVEMBER 4, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON MINERALS, MATERIALS, AND FUEL OF THE  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Fairbanks, Alaska.*

The subcommittee met, pursuant to call, at 10 a. m., November 4, 1955, in the Northward Building, Fairbanks, Alaska, with Senator W. Kerr Scott presiding.

Mr. Robert W. Redwine of the professional staff of the committee was also present and participated in the examination of witnesses.

Senator Scott. This hearing has been called for the purpose of hearing testimony in respect to S. 2648, which has as its purpose the promotion and development of a tin-producing industry in the continental United States, its territories and possessions.

That purpose is stated in the bill and I quote: "In order to encourage the discovery, development, and production of domestic tin," followed by certain definite directives addressed to the executive branch of the Government.

Several important factors are interwoven in this question of a domestic tin-producing industry, including those of national security and self-sufficiency in one of the most strategic of all minerals, the unemployment problem and the matter of maintaining a stable economy in Alaska.

To act intelligently, the Congress needs documented evidence touching on all facets of the problem. It is hoped that such evidence will be forthcoming here today which will supplement testimony previously offered in Nome and in Washington.

We are privileged to have with us today Alaska's own Delegate Bartlett; and, Bob, I am going to ask you to participate in conducting this hearing. You have introduced, on the House side of the Congress, companion legislation to S. 2648, and your personal knowledge of the problems here involved, will be invaluable in presentation of the testimony which we can expect today. Your presence is appreciated, and, quite properly, you will lead off the testimony. Please proceed.

## STATEMENT OF HON. E. L. BARTLETT, DELEGATE FROM THE TERRITORY OF ALASKA

Delegate BARTLETT. Thank you very much, Senator Scott. At the outset I want to say, on behalf of everyone interested in mining in Alaska, that we are sincerely grateful to you and the members of your staff for coming to Alaska in this season of the year so that we

could inform you, first hand, of the situation so that S. 2648 may be considered early in the forthcoming session of Congress.

It has been your idea and my idea of introducing companion bills in the Senate and in the House; that they offer possibility for the development of the tin industry, particularly in Alaska.

We have been told by competent witnesses that it is improbable existing or foreseeable tin price will make it possible for a substantial Alaska tin industry to be developed. By payment of a fixed and sure price, as set forth in your bill, there will be an opportunity to demonstrate that substantial reserves of placer and lode tin may be discovered, particularly on the Seward Peninsula. The advantages of the formula set forth in your bill, Chairman Scott, are twofold.

In the first instance, Government will not be required to pay anything at all unless tin is produced. In the second, there is specific provision that the effective date of the formula's application will not be for more than 10 years from the time the law takes effect or until 10,000 tons of tin have been delivered, whichever comes sooner. The mining men who have previously testified on this subject have stated they are convinced that by the end of a decade substantial knowledge will have been acquired as to the amount of tin in Alaska. They have expressed confidence that with the relatively small amount of financial help which the bill would provide, the industry could be firmly established.

Another factor of importance to you as a member of the Senate Interior and Insular Affairs Committee which has jurisdiction over so many matters pertaining to the territories, is the depressed economic situation in the area where it is hoped tin mining may be launched on an impressive scale. Gold mining used to be of major consequence throughout the Seward Peninsula region and is still first in respect to value of mineral production and to number of men employed. Nevertheless, gold mining has been greatly curtailed with the price remaining constant and production costs mounting ever upward. For 3 years now the nearby Bristol Bay region has been declared a disaster area by the President and it has been necessary to send food and other supplies there. This situation has reacted to the disadvantage of many Eskimos who formerly travelled down to Bristol Bay from the Arctic Coast to work in the canneries. If they cannot have gainful employment, they will become a burden on the taxpayers. So anything that can be done within the boundaries of common sense to promote a tin mining industry will have the subsidiary but important results of putting people to work. These Eskimos are anxious to work. They want to work. They greatly prefer to make their own way than to have Government doles conferred upon them.

When the House subcommittee on mines and mining was considering my bill, H. R. 7749, earlier this year, Government witnesses testified against it. They suggested that there is enough tin in stockpiles to last through any crisis. I submit to you that this is only conjecture. The situation in Southeast Asia has deteriorated ever since then and there is no way for any person in this country to say categorically that we shall be supplied indefinitely with tin from Malaya. If we are able to develop within our own borders tin reserves sufficient to meet even part of our requirements then we shall have made a distinct contribution to national security. So far as I am aware, the Seward

Peninsula is the only place on the North American continent under the American flag where there is a possibility that tin may be mined in sufficient amount to make us partially self-sufficient in the supply of this vital metal.

I hope, Chairman Scott, that when the Congress reconvenes in January prompt and favorable action will be taken on the similar bills which are pending before the Senate and House Committee on Interior and Insular Affairs.

I thank you very much for coming to Alaska so late in the year to hold hearings here in Fairbanks and in Nome on the proposed tin legislation.

Mr. REDWINE. Delegate Bartlett, I have one or two questions I am sure the chairman would like to get answers to; we had intended asking Governor Heintzleman these questions but have been informed that due to his having to make a speech at 10 o'clock he cannot be at this place. We would like to have an answer to these questions and hope you can answer them.

Delegate BARTLETT. I hope I can.

Mr. REDWINE. First, is the area you spoke of as a disaster area—does that prevail at the present time?

Delegate BARTLETT. Yes, sir, it is now a disaster area by presidential proclamation. The salmon pack in Alaska in 1955 was the smallest in almost 50 years. Historically Bristol Bay has been the richest and most productive source of red salmon. The pack has gone down year by year until it now may be most difficult to rehabilitate the fish run. This sad state of affairs has occurred under Federal administration. Alaska is a Territory. It remains the responsibility of the Federal Government. If some of the unemployment slack can be taken up in such a constructive manner as is proposed by your tin bill, Chairman Scott, I say that it is justified entirely aside from the benefits which would accrue to the Nation as the result of enlarging our source of domestic tin.

In reference to what you said about Governor Heintzleman's inability to appear at this time, I should like the record to show that he appeared before the House committee in Washington and testified in favor of the corresponding House bill.

Mr. REDWINE. The Governor has informed the Senator that he will file a written statement in favor of this bill as he is unable to appear here and testify.

The next question: I believe the Alaska Legislature filed two memorials in Congress asking for legislation of this type.

Delegate BARTLETT. That is correct. The legislature was concerned with the economic status of the citizens in that area of Alaska. The legislature was rightfully concerned also about the mining industry. Mr. Crawford, vice president of the United States Smelting, Refining & Mining Co. in charge of Alaska operations, is in the room now and can testify much more expertly than I as to the sad state of gold mining and the need wherever and whenever possible to encourage other type of mining. The legislature felt it would be helpful if anything can be done to bring about more tin production, or production of any other metal.

(The statement of Governor Heintzleman subsequently filed and with covering letter follows:)

UNITED STATES DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE TERRITORIES,  
December 2, 1955.

HON. W. KERR SCOTT,  
*Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR SCOTT: In line with my expressed desire during your recent hearing in Fairbanks on tin, I am submitting the attached statement by me, that can be added to the testimony on the problems confronting present and potential tin producers in the Territory.

Sincerely yours,

B. FRANK HEINTZLEMAN,  
*Governor of Alaska.*

STATEMENT OF HON. B. FRANK HEINTZLEMAN, GOVERNOR OF ALASKA

An assured supply of tin is vital to the industrial economy of the United States, but only a fraction of our annual requirements of approximately 55,000 tons of tin are produced under the American flag. The only place where tin has been found in any quantity in United States territory is in northwestern Alaska, which has produced approximately 2,000 tons of tin during the past half century. The total tin resources of that area are not known. It is very improbable that they are sufficient to supply the entire United States demand, but if fully developed, they could supply a substantially larger portion of the demand than they are today.

At the same time, development of Alaska's tin deposits would be of tremendous economic benefit to the northwestern part of the Territory, where mining is almost the sole productive industry. This has for some time been somewhat of a hard-ship area because of its dwindling gold-mining industry.

Senate bill 2648 of the 84th Congress (H. R. 7145) would provide an incentive to develop the tin resources of northwestern Alaska. This bill would establish a price of \$1.35 per pound for domestic tin produced from lodes and \$1.20 per pound for domestic tin produced from placer deposits. Northwestern Alaska has both types of tin deposits. The proposed price-support program would remain in effect for 10 years or until 10,000 long tons of tin were produced, whichever occurs first. The Government, under this plan, would pay only the difference between the market price of tin and the floor price provided by the bill, and these payments would be made only after the tin had been produced. This plan, I believe, would result in an immediate effort by the mining industry to prospect and develop additional reserves of tin and this development would be financed by private capital. This would be beneficial to the Nation by increasing our domestic supply of this important metal and beneficial to Alaska by providing additional industry in an area of present economic distress.

MR. REDWINE. Delegate Bartlett, we have had testimony heretofore in Washington, also in Nome, at which time it was shown that 15 percent to 25 percent of this Nation's tin supply comes from Bolivia; are you familiar with the fact that during several months of World War II 85 percent of our ships seeking passage through the Caribbean were sunk by enemy subs?

DELEGATE BARTLETT. Yes, we all recall that the mortality rate was terrific at that time, an occasional ship got through—there could be a repetition in another war. I am more concerned at the moment with the probability that in the next war our tin supply from Malaya might be cut off—that's the area I think should concern us particularly, and due to that fact we should build up our domestic supply of this metal that is necessary in peacetime and wartime.

MR. REDWINE. Delegate Bartlett, you are on home grounds here, you know all of the gentlemen that are going to appear as witnesses and I am sure that the chairman will appreciate it if you will call them

in the order they should testify and take over as assistant chairman at this time.

Delegate BARTLETT. That is very fine of you. I am going to call them, not to establish a priority, but simply in the order they are seated at the table. I think every one of them has useful information to give.

Senator SCOTT. Each has a case in his own rights?

Delegate BARTLETT. Yes, each has a case in his own right.

I would first like to introduce to you, Dean Beistline of the School of Mines of the University of Alaska.

Mr. REDWINE. Will you please state your name and full title for the record purposes?

### **STATEMENT OF EARL H. BEISTLINE, DEAN OF THE SCHOOL OF MINES AT THE UNIVERSITY OF ALASKA**

Mr. BEISTLINE. Yes, sir; if I might explain first that I am Earl H. Beistline, dean of the School of Mines at the University of Alaska, and I am appearing here today, with your permission, to present a statement prepared under the direction of Dr. Ernest N. Patty, president of the University of Alaska.

Mr. REDWINE. Would you like to read it?

Mr. BEISTLINE. Yes, I would—

Delegate BARTLETT. Before you do that is it not correct for me to say that President Patty, who is an old-time miner himself and formerly was dean of the School of Mines, had intended to appear here in person but he was called to Anchorage to dedicate the new high school?

Mr. BEISTLINE. Yes, he was called to Anchorage to dedicate the new high school and is unable to appear here in person—he sends his regrets.

(Mr. Beistline then read the following statement:)

Mr. Chairman, I am Ernest N. Patty, president of the University of Alaska. By profession I am a mining engineer and have spent much of my adult life in Alaska as manager of mining operations and in consulting work which has taken me into most of the mining districts of the Territory.

Nature has been very bountiful in supplying the crust of the North American Continent with mineral resources. The one metal that was withheld is tin. Almost as an afterthought, some tin mineralization was deposited in the north-west corner of the continent in what we call the western end of the Seward Peninsula, in northern Alaska. The total production of tin in the United States is in the neighborhood of \$2 million, and fully 95 percent of this total production has come from Alaska.

Tin is a vital industrial metal with a variety of uses, but its chief use is for food containers and as a bearing metal. We cannot get along without it. In normal times we are supplied from richer deposits in the Malay states, Bolivia, and some other countries; but the chief deposits are located in areas where Communist control is quite a menace and in wartime we could be shut off from our foreign source of supply. I understand that our stockpile of tin would suffice for about 1 year.

Our Alaskan tin deposits occur in two forms: placer deposits and lode deposits. The placer deposits and their reserves are pretty well known. The extent and value of our lode deposits are not yet determined. We would have to be very optimistic to assume that they could be developed to the point where they could begin to supply us in wartime. There is some exciting geology around these deposits and you never know until you get started probing around underground what you are going to uncover. The unexpected in mineral discoveries has fooled our best geologists and engineers, for history is replete with examples of limited mineral exposures which have developed into big and important ore-bodies when explored.

Under the present price of tin it is not possible to get risk capital to fully explore the known deposits because the known grade of ore will not yield a profit under present prices. The operators believe they can attract venture capital and get the necessary exploration if they can be guaranteed for a few years a price of \$1.25 to \$1.35 per pound of tin.

It seems to me just good, common sense, when you balance all equations, to give them this incentive. If they produce the metal it can go into the national stockpile to form good insurance for our country. While they are doing this there is the geologic gamble that they may make some important new discoveries and this would enrich our Nation. If they don't, the loss to the Government will be very slight. If they don't produce the tin, the Government pays nothing.

There is one more factor. These tin mines employ mostly Eskimo labor. If there isn't some place where they can find employment, they are going to be on welfare and this is going to cost the Government money. I am old-fashioned enough to want to see the Government spend some money in an attempt to create honest employment in this isolated area. I feel that welfare money destroys the character of our people and should be avoided if possible.

Mr. REDWINE. Dean Beistline, for the sake of the record——

Mr. BEISTLINE. Yes, sir.

Mr. REDWINE. Will you explain what is meant by the words tin is a "bearing" metal?

Mr. BEISTLINE. In the production of bearings for machinery; that tin is used in the manufacture of bearings.

Mr. REDWINE. All bearings do contain a certain amount of tin?

Mr. BEISTLINE. For the most part, yes.

Mr. REDWINE. In other words, you can't have modern machinery without bearings?

Mr. BEISTLINE. Yes.

Mr. REDWINE. And you need tin in most of them?

Mr. BEISTLINE. I would say "Yes."

Senator SCOTT. You didn't mention the source of supply from Africa; what do you know about that?

Mr. REDWINE. Mr. Holdsworth, you have some statistics, I believe, that you can probably bring before us as to where our supplies come from, don't you?

Mr. HOLDSWORTH. No; I don't have that.

Mr. REDWINE. Senator Scott, I think what we can do, unless you want an answer to that testified to now, is that we can include it in the record later on.

Senator SCOTT. All right. I don't believe we'd object to tying our little mine in Lincolnton, N. C., to the record.

Mr. REDWINE. Senator, in answer to your question about world production: several months ago it was testified to by Mr. Wiley F. McKinnon, Director, Office of Tin, Federal Facilities Corporation, that Malaya produces about 58,000 tons per year; Bolivia produces from 34 percent to 32 percent of the production. We get about 25 percent of our supply from Bolivia and about 60 percent from the Malayan area. We get some from Thailand and a little bit from Indochina; and, I believe, as Delegate Bartlett mentioned a while ago, that it has been testified time and time again by the military before congressional committees that in this atomic age we probably won't have to worry about subs sinking ships—the sources themselves will be atomized.

Delegate Bartlett, do you want to ask Dean Beistline any questions?

Delegate BARTLETT. I am going to ask Dean Beistline if the School of Mines ever investigated the tin potential on the Seward Peninsula?

Mr. BEISTLINE. No, we haven't investigated it in such a way that it would be useful here.

Delegate BARTLETT. Is it your understanding that the Geological Survey has conducted extensive examinations or that only preliminary work has been done by the Geological Survey?

Mr. BEISTLINE. I am not familiar with the exact work that has been done by the Geological Survey, Delegate Bartlett; however, I think the statement can be made that the underground work that is and has taken place on the Seward Peninsula has to me shown more evidence—and as the evidence becomes known, in our belief, we do have a big operation; but I think there should be additional evidence.

Delegate BARTLETT. My recollection of the Geological Survey's research on Seward Peninsula is that they felt the reserves were not large but it is necessary to add the qualification that witnesses stated no considerable amount of investigations have been made. I have talked much in Washington with Mr. Clifford Smith, Jr., concerning Seward Peninsula tin potentials. Mr. Smith is now with the Atomic Energy Commission in Washington. He formerly had interests in tin property on the Peninsula and for all I know may have them yet. In any case, as a mining engineer it is his professional opinion that the entire area has a huge tin potential.

Mr. REDWINE. Delegate Bartlett, in amplifying what you have just said about the Geological Survey, the record formerly made in the House hearings gives testimony on that and at this time I will read the following from that record:

Mr. BARTLETT. I would like to ask Dr. Reed, Mr. Chairman, what the views of Geological Survey are as to the tin potential in Alaska, with special reference to Seward Peninsula area.

Mr. REED. The first statement that we would have to make in answer to that question, Mr. Bartlett, is that we do not know the size of the tin potential of the Territory of Alaska. We do have some information on that subject. As has already been brought out in the testimony this afternoon, tin occurs in Alaska both in placers and in lodes. The resources of tin in terms of available data might aggregate for the whole Territory at the present time between six and eight thousand tons. Of that, let us say, 6,000 tons—and remember that is perhaps a minimum—probably 4,000 would be on the Seward Peninsula, which is the general region that has been emphasized this afternoon. Of that on the Seward Peninsula perhaps two-thirds would be in the lode at Lost River, the United States tin property, and the rest in placers such as that talked about by Mr. Lomen and Mr. Ramstad. Let me emphasize, however, that the final extent is unknown to anyone at the present time.

Mr. BARTLETT. Is that calculation based upon a thorough exploration or minimum exploration? Has much been done by the Government or by private industry in seeking to determine the overall amount of tin which might be found there?

Mr. REED. This is a relative sort of thing, Mr. Bartlett. Some detailed work has been done in a few places. Taking an overall view of the tin resources of the Territory, a most inadequate job has been done up to the present time.

Delegate BARTLETT. Dean, is it your professional opinion that this area is worthy of further examination, and second, do you believe the bill now being considered will be helpful in developing the tin industry around here?

Mr. BEISTLINE. Delegate Bartlett, in answer to your first question: I do believe additional prospecting should be done in the area, tin being the major consideration here today. Now, would you repeat—

Delegate BARTLETT. I think I should rephrase my second question and ask you if you would agree with me that in my opinion if this bill were enacted into law it would be a magnanimous help?

Mr. BEISTLINE. I certainly agree with you. I think an increase in price is going to have some effect on that area; I think the very history of the Alaska mining industry indicates that \* \* \* Southeastern Alaska had a lot of quartz mines but the mining men moved on into the interior because of the incentive offered.

Delegate BARTLETT. Is it not true that Alaska miners are penalized when they are required to accept the prices for tin because the production prices are so much higher?

Mr. BEISTLINE. Yes, that's true—it's one way of looking at it. We have higher operating costs and the high freight rates and all—tin is a bulky metal compared to gold.

Mr. REDWINE. Does this not also enter into it? You have such a short operating season the return on capital investment is penalized because of the short operating season?

Delegate BARTLETT. That would be true—lode mines would be somewhat different.

Mr. REDWINE. This is a technical question: In an area where there is lode mining what is the water supply?

Mr. BEISTLINE. I'm not sure—I think Mr. Holdsworth can give you more on that point.

Delegate BARTLETT. The next witness is Phil Holdsworth, Territorial Commissioner of Mines.

#### **STATEMENT OF PHIL HOLDSWORTH, TERRITORIAL COMMISSIONER OF MINES OF ALASKA**

Mr. HOLDSWORTH. Mr. Chairman, and Delegate Bartlett, to avoid repetition, the information I have here (indicating a paper) was presented during the hearing at Nome, and it might be better if I answer specific questions.

Delegate BARTLETT. Do you have a written statement, Phil?

Mr. HOLDSWORTH. Yes, I have a written statement, and I believe the representative at Nome presented it.

Delegate BARTLETT. Let me see it a moment. (Mr. Bartlett was handed the paper). There is one question here: I see in your concluding paragraph in your statement at Nome you mention another type of incentive—that is a subsidy price derived from import tariffs to be paid to domestic mineral producers.

Mr. HOLDSWORTH. That type of incentive has been discussed by the Western Governor's Mining Council and it was thoroughly discussed at Sacramento 7 or 8 months ago—it is similar to what is known as the San Francisco wool plan. Let's take tin for example, up here. We use 55,000 tons of tin a year in the United States. In the course of that you might say  $\frac{1}{2}$  of 1 percent would be an Alaskan product. Under our present scale if we would impose a  $\frac{1}{4}$ -cent import duty on tin imported and prorate that money against tons of tin produced domestically you can see how much you could pay to local producers without any money out of the taxpayer's pocket.

Delegate BARTLETT. You would give them practically all of the money that comes in?

Mr. HOLDSWORTH. It could be prorated.

Mr. REDWINE. On  $\frac{1}{2}$  cent per pound on 55,000 tons, what would that figure out?

Mr. HOLDSWORTH. Well, I haven't figured it out—

Mr. REDWINE. In other words, how much money would be available?

Mr. HOLDSWORTH. I would say at  $\frac{1}{2}$  cent per pound—

Mr. REDWINE. I would just like to see how much subsidy would be available for the domestic tin producers under such plan.

Mr. HOLDSWORTH. It would be equivalent to—

Delegate BARTLETT. Mr. Holdsworth, is there a tariff now on tin, and if so, in what amount?

Mr. HOLDSWORTH. I believe there is no tariff on tin \* \* \*

Mr. REDWINE. I believe there is at the instigation of the State of South Dakota; I believe that was put on several years ago. I believe it is still on—I am not sure though.

Delegate BARTLETT. That's my recollection, too—I believe there's something on that in the House hearings. We can check on that later. Did you calculate how much it would come to? How much did we produce in Alaska last year?

Mr. HOLDSWORTH. One hundred and sixty tons, I believe, sir.

Delegate BARTLETT. If we produce 200 tons how much would they receive under the so-called San Francisco plan?

Mr. HOLDSWORTH. Well, that's one-half of 1 percent—\$50 per pound.

Delegate BARTLETT. I have no further questions.

Mr. REDWINE. Mr. Holdsworth, since we've been here we've heard of some tin downriver from Fairbanks; how does that look?

Mr. HOLDSWORTH. I believe you're kind of previous—I might clarify that—there should be a discussion made between the various agencies operating in the Territory \* \* \* Delegate Bartlett mentioned the amount of work done by the Geological Survey; the work done by the Geological Survey generally is comprised of topographic and geologic mapping whereas actual operations are first done by the U. S. Bureau of Mines and later \* \* \* we have a very small amount of funds \* \* \* we go in. That's one reason we don't know as much as we should about the reserves. When you ask about tin in this area I think the Federal Bureau of Mines can furnish that information. Sometimes that information is not available soon after it is collected and some of it is not public information.

Delegate BARTLETT. Phil, are you referring to the placer deposit at Manley Hot Springs?

Mr. HOLDSWORTH. Yes.

Delegate BARTLETT. Has your department done anything there?

Mr. HOLDSWORTH. Our department has done nothing other than some work to ascertain the geophysical—

Delegate BARTLETT. How about the Bureau of Mines?

Mr. HOLDSWORTH. The Bureau of Mines has done considerable work.

Delegate BARTLETT. What have their findings been, in essence?

Mr. HOLDSWORTH. Well, their findings—let's take one stream for example—there's 4 million pounds of tin.

Mr. REDWINE. Running about 4 pounds to a yard?

Mr. HOLDSWORTH. Yes.

Delegate BARTLETT. Is that a large deposit?

Mr. HOLDSWORTH. Yes.

Mr. REDWINE. How much loss in treatment is involved?

Mr. HOLDSWORTH. As a rule the recovery is high, about 90 percent.

Mr. REDWINE. What area is that?

Mr. HOLDSWORTH. That's Cape Creek.

Mr. REDWINE. Where is Cape Creek in relation to Potato Mountain?

Mr. HOLDSWORTH. It's south and a little west. What we would like to find out is more about that one known potential and there are three other streams in the same general area that also have potential and an incentive such as this bill offers would, of course, promote exploration.

Delegate BARTLETT. How has the prospecting been done on one stream?

Mr. HOLDSWORTH. That's under the DMEA program.

Mr. REDWINE. As a personal opinion, what do you think about the tin potential over there?

Mr. HOLDSWORTH. I personally feel there is quite a potential and it's going to take exploration to prove it—but it won't come about without some incentive.

Mr. REDWINE. You do believe it will come about by reason of enactment of this bill.

Mr. HOLDSWORTH. I do.

Mr. REDWINE. What drilling has been done up there then, has been the result of private industry going in and doing it and submitting a report to DMEA and DMEA helping do the exploration, is that not true?

Mr. HOLDSWORTH. Yes, that's true.

Mr. REDWINE. And enactment of this bill perhaps would give private industry the incentive to go in and try to develop a tin-producing industry. They would put their money up and get matching funds from DMEA for exploration work; would that be, or not be, the result of this bill, in your opinion?

Mr. HOLDSWORTH. I know it would take the cost of exploration off of DMEA and private industry would do it. The only load on the Government then would be payment for the metal.

Mr. REDWINE. This then would really, according to you, Mr. Holdsworth, be a money-saving project for the Federal Government. One other question, and I am not pointing to any particular company, Mr. Holdsworth, we're not here for that. I would like you to answer a question about the water situation up there; what is the water situation in that area, Mr. Holdsworth?

Mr. HOLDSWORTH. Well, in that area—an example of developing a suitable water supply, it cost roughly \$150,000 to merely put in a pumping installation to deliver water for the Lost River mine and they do have a steady flow of water except for a slack period early in February through late March. They did develop a satisfactory water supply. One other thing that should be mentioned is that the continued development of any ground will in time produce underground sources of water. At Lost River it was developed 250 feet below the surface; that was with diamond drilling.

Delegate BARTLETT. How expensive is diamond drilling?

Mr. HOLDSWORTH. That was for ore, not for water.

Mr. REDWINE. That's all I have, Mr. Bartlett. Thank you very much, Mr. Holdsworth.

Delegate BARTLETT. Jim, do you have anything?

Mr. CRAWFORD. No, I don't.

Delegate BARTLETT. All?

Mr. ANDERSON. Yes.

Delegate BARTLETT. The next witness will be Al Anderson, director of the Alaska Resources Development Board.

### STATEMENT OF AL ANDERSON, DIRECTOR OF THE ALASKA RESOURCES DEVELOPMENT BOARD

Mr. ANDERSON. Senator Scott and Delegate Bartlett, I should like to state that I feel there is no tin mining possible on the Seward Peninsula under the present price scale of 96 cents a pound. It is not possible for producers to operate or for them to complete necessary exploration. Mr. Bartlett asked about the cost of drilling—the information from the United States Bureau of Mines is that it costs \$10 to \$12 a foot; that gives you some idea of the difficulties mining people have encountered. The amount of money involved in the subsidy itself is relatively small at the present price of tin. Tin is 96 cents a pound and this legislation provides the price of \$1.20 to \$1.35 a pound—the amount of money involved is very small. The total production of tin in that area in 1954, according to information I have, amounted to 327,919 pounds. The payroll for the one operating mine in the area, which operated on a year-round basis, amounted to \$347,839.59. Until that payroll was established up there there was nothing for those people to do. The one lode tin mine furnished daily employment for 365 days a year for 56 men. These 56 men were Eskimos who ordinarily have no other source of employment. There are about 15,000 people there, and in winter there is nothing whatsoever for them to do. Perhaps this bill might provide the incentive to send private companies into the field to discover new deposits and they might also uncover additional metals. That's one opportunity for that area to have some employment other than in the summertime.

Mr. REDWINE. In the Nome hearings it was brought out that the families, the size of the families, in that area are rather large by comparison to what we recognize as big families Stateside. Of the 15,000 in the area you refer to—that's the second division, I believe?

Mr. ANDERSON. Yes.

Mr. REDWINE. Is it true that about 12,000 of the 15,000 are native; that is approximately?

Mr. ANDERSON. Yes.

Mr. REDWINE. Of that 12,000 how many would you say are employable as labor—taking into consideration the large families?

Mr. ANDERSON. Of the 12,000 I would say that perhaps 20 percent.

Mr. REDWINE. Looking over some earlier testimony given in Washington I see that someone says that they believe that if a going tin industry could be developed in that area it would probably give employment to 2,000 individuals. You used 56 in your testimony—that's in the mine operation itself?

Mr. ANDERSON. Yes, that's correct.

Mr. REDWINE. Assuming you have mines operating and employment given to others that would multiply several times?

Mr. ANDERSON. Yes.

Mr. REDWINE. Let's put it this way: If year-round employment were provided for 500 individuals in that area what would it do to the overall economy in the second division; in your opinion?

Mr. ANDERSON. Of course it would be one of the most wonderful things that could happen if you could have 500 people working in the wintertime where there are none now.

Senator SCOTT. Will protection be given; will those people be given work rather than a white man, or not?

Delegate BARTLETT. Mr. Chairman, in that connection I think Mr. Crawford of the United States Smelting, Refining, and Mining Company, can answer that. I should like him to comment on employment of the Eskimo by his company at Nome.

Mr. CRAWFORD. If my memory is correct I understood Mr. Anderson to say there is no employment on the Seward Peninsula during the winter.

Mr. ANDERSON. No employment in the lode mines.

Mr. CRAWFORD. That is correct; we employ Eskimos—about 240 men during the mining season, 75 percent of them are Eskimos and about 50 or 60 of them continue working through the winter on thaw drilling. Recently we curtailed our thaw drilling program but ordinarily some work during the winter as far as the weather will permit.

Delegate BARTLETT. What has been your experience with them as workmen?

Mr. CRAWFORD. Generally satisfactory. They have certain natural adeptness at picking up operations of mechanical equipment. In certain work I think they are every bit as well qualified as a white man.

Senator SCOTT. Could women be considered as a source of labor in this field? The reason I ask that is that in the textile industry—I don't know what the percentage is, but we employ women in that. That's far removed from your situation here, but looking toward that—in other words, is a woman capable of filling in somewhere?

Mr. CRAWFORD. I don't know anywhere in that particular line of work.

Senator SCOTT. I was just asking for information because I know in other parts of the world they use women quite a bit.

Mr. REDWINE. Mr. Crawford, what happens when the season closes and these men are laid off until next spring—do they go on unemployment compensation?

Mr. CRAWFORD. The ones that apply are entitled to it.

Mr. REDWINE. What is the average amount an individual receives per week in unemployment compensation?

Mr. CRAWFORD. It would depend, of course, on his dependency allowance to some extent. I couldn't say.

Mr. REDWINE. Could you give a rough idea?

Mr. CRAWFORD. It would range from \$35 to \$70.

Mr. ANDERSON. That would be \$35 to \$70 per week.

Mr. CRAWFORD. For 26 weeks.

Mr. REDWINE. Does 26 weeks cover the period of unemployment; do they have as much as 26 weeks of unemployment? In other words, what is the length of your mining season?

Mr. CRAWFORD. The mining season on Seward Peninsula is about 6 months.

Mr. REDWINE. Then about half of the time they are on the payroll and half the time off?

Mr. CRAWFORD. The major portion of the payroll is off about 6 months.

Senator SCOTT. It has been called to my attention that those on relief rolls would rather have those checks and do no work at all than to do work when available; is there some truth to that?

Mr. CRAWFORD. I think it is true in certain industries.

Mr. REDWINE. I'd like to direct a question to Mr. Anderson. Mr. Anderson, have you any figures—we have asked several places before and have been unable to obtain them—as to what the average per capita income, not including the compensation check, of the native population is; both for the Territory and the second division?

Mr. ANDERSON. No; we do not have that.

Mr. REDWINE. Who would have that figure?

Mr. ANDERSON. The only figure available is the average weekly earnings by class of workers.

Mr. REDWINE. Do you have that in printed form?

Mr. ANDERSON. I have one copy of it, and I could make it available to your committee.

Mr. REDWINE. Will you do that and have the copies mailed to Washington?

Mr. ANDERSON. Yes; I will.

Delegate BARTLETT. Is it broken down by races?

Mr. ANDERSON. No; it's never broken down by races.

(The following material was subsequently supplied:)

ALASKA RESOURCE DEVELOPMENT BOARD,  
Juneau, Alaska, November 30, 1955.

Mr. ROBERT W. REDWINE,  
Senate Office Building,  
Washington, D. C.

DEAR MR. REDWINE: Pursuant to the committee's request in Fairbanks for additional data on Alaska, I am enclosing certain information which I hope will be of value to Senator Scott and his colleagues in considering Senate bill 2648.

The following was extracted from a statement submitted to Senator Magnuson's Committee on Interstate and Foreign Commerce:

"Alaska has a total area of 586,400 square miles, and in it live about 208,000 people, 49,000 of whom are in the armed services. Of the 159,000 civilians in Alaska, between 30,000 and 35,000 are Eskimos, Indians, and Aleuts. The people of Alaska produced from their raw materials in 1954 products valued at approximately \$117 million. Fishery products were valued at \$77,879,446; minerals at \$24,328,000; raw furs, exclusive of fur seals, at \$1,440,706; timber products at \$10,158,830; and agricultural products at \$2,877,925.

"Alaskans' principal source of income is derived from these raw materials, from military construction payrolls, other Government activities, sales and service industries, and transportation which supports both Government activity and private industry.

"The total estimated labor force in Alaska in 1954 amounted to about 56,500 people, and of these 15,000 were civil-service employees. In employment covered by employment-security laws in 1954, 28.2 percent worked in the construction industry; 5.3 percent in the mining industry; 17 percent in manufacturing; 14.3 percent in transportation, communication and utilities; 33.3 percent in retail, wholesale, and service industries; and all others 1.9 percent.

"The unfortunate and inescapable facts are that the mining industry, the construction industry, and the fishing industry are unable to provide work for their employees on a full-time basis. The mining and construction industries operate from 5 to 8 months out of the year, and most of the fishing industry operates only during spring and summer months and is highly seasonal within the various fishing districts of Alaska.

"Total taxes collected in Alaska by the Federal Government amounted to about \$50 million, and an estimated additional \$25 million was collected in Federal taxes outside of the Territory. Alaskans paid approximately \$45 million in Federal incomes taxes. Alaskans paid approximately \$15 million toward the support of their own Territorial Government. This means that Alaskans

paid a total of about \$90 million toward the support of the Federal Government and the Territorial government. On a per capita basis, Alaskans paid \$75.59 each toward the support of Territorial government. On this per capita basis there were only 17 States which had a higher tax rate than Alaska. However, ordinary per capita tax figures do not correctly reflect the impact of taxes on Alaskans, because of the fact that about 23½ percent of Alaska's population is military. Military personnel are exempt from the payment of Alaska's income tax, which is the Territory's principal source of revenue. Other Territorial taxes which military personnel pay are incidental because in most cases a substantial amount of their purchases are made from military exchanges and commissaries.

"These tax figures are cited so that you will appreciate that Alaskans are not shirking their responsibilities as taxpayers."

Since these figures were compiled, the United States Bureau of Mines has released revised figures on Alaska's mineral production for the years 1953 and 1954. These figures are attached. From it you will note that the mineral production on the Seward Peninsula in 1953 amounted to \$1,703,526 and dropped to \$1,447,480 in 1954. United States Bureau of Mines records show that tin produced in Alaska for 1953 was 49 tons, valued at \$105,917, and that tin produced in 1954 amounted to 199 tons, valued at \$409,953.

Official figures supplied by the Bureau of Census in 1950 indicate that the population of the second judicial division was 12,272 people. Of these 2,342 were of the Caucasian race and the remainder of approximately 10,000 were mainly Eskimos and Indians. Economic figures compiled by the Bureau of Census in 1950 show that the income of nonwhites in all of Alaska was distributed in the following categories:

*Income of nonwhite persons 14 years old and over, rural, 1950*

<i>Income level</i>	<i>Rural nonwhite</i>
Persons 14 years old and over.....	19,798
Persons with no income.....	5,666
Persons with income.....	12,048
Less than \$500.....	4,497
\$500 to \$999.....	3,080
\$1,000 to \$1,999.....	2,372
\$2,000 to \$2,999.....	987
\$3,000 to \$3,999.....	565
\$4,000 to \$4,999.....	249
\$5,000 to \$5,999.....	146
\$6,000 to \$6,999.....	72
\$7,000 to \$9,999.....	38
\$10,000 and over.....	42
Income not reported.....	2,044
Median income for persons with income.....	\$748

It appears to us these figures forcibly demonstrate the deplorable economic plight of our nonwhite residents in rural areas.

About 30 percent of the native inhabitants of Alaska reside in the second judicial division, and a substantial portion of these natives reside on the Seward Peninsula. Until the advent of the defense early warning line, these native inhabitants were solely dependent upon trapping, mining, and fishing for their livelihood. It is true that, with the construction of new radar installations in Arctic Alaska, some employment has been furnished these people, but a great number of them are still without means of support and are dependent upon health and welfare programs of the Territory, the Alaska Native Service, and the employment-security fund to supplement their meager earnings in order for them to exist.

The total value of furs shipped from the Seward Peninsula amounted to \$12,748. This coupled with the gross value of minerals produced in the area, amounts to a gross income for the area of about \$1,460,228.

From these bleak statistics, I believe that it is evident that the residents of the second division and the Seward Peninsula desperately need some kind of economic assistance so that an industry can be started in the area. We feel that Senate bill 2648 would at least provide some basis for the establishment of industry in the second division.

Officials of the Territorial Department of Mines and other Government agencies have already submitted to this committee information on the strategic role that

tin plays in the United States and that the United States is now wholly dependent upon imports of this critical metal from areas of little political stability which are remote from the United States.

Senate bill 2648 provides that the General Service Administration will purchase tin at one or more delivery points within the continental United States, including Seattle, Wash., at a price of \$1.25 per pound for metallic tin produced from placer deposits and \$1.35 per pound for metallic tin produced from lode deposits. This program shall be effective until such time as the Government of the United States has purchased 10,000 tons of metallic tin.

With the current price of tin at approximately 96 cents per pound, this would mean that the United States Government would be required to subsidize tin producers in the amount of 29 and 39 cents per pound respectively. It appears to us that this is a relatively small price for the Government of the United States to pay in order to give the tin producers of the Seward Peninsula and northern Alaska an opportunity to establish an industry which could give some employment to those who desperately need it.

The only lode tin producer in the area has been closed down because the current price of tin will not support their operation. This shutdown has occurred despite the fact that promising new showings of ore were uncovered this summer. The only placer producer in the area has stated that the present price precludes their operation. Other placer deposits which are substantial cannot be financed without assurances of a higher and a stable price. We believe that the assistance provided for in Senate bill 2648 is sufficient to support a profitable operation of the lode deposits in the Lost River area and that the price of \$1.25 per pound for placer tin is sufficient to assure the operation and development of this type of stream bed deposit.

Sincerely,

AL ANDERSON,  
*Executive Director.*

MR. REDWINE. Mr. Crawford, is there any unionization in the native labor force in your work?

MR. CRAWFORD. Not at Nome; we employ about 100 in Fairbanks and they are represented by the union here.

MR. REDWINE. But not in the Nome area?

MR. CRAWFORD. No.

MR. REDWINE. What is the difference, if any, in the wages between the Fairbanks and Nome areas?

MR. CRAWFORD. It is slightly lower at Nome in certain classifications, but more or less uniform in skilled lines. They work longer hours in Nome, and of course earnings are larger.

MR. REDWINE. Delegate Bartlett, in the Territory do you have a Territorial minimum wage, or do you use the Federal minimum?

DELEGATE BARTLETT. There is a Territorial minimum wage, too.

MR. REDWINE. What is it?

DELEGATE BARTLETT. It was elevated to \$1.25 from \$1.00.

MR. ANDERSON. To set the record straight—we didn't have a Territorial minimum wage act until this year.

DELEGATE BARTLETT. This is the first year.

MR. REDWINE. Does it apply on all types of labor, including agriculture?

MR. CRAWFORD. I don't think it applies to agricultural workers; I'm not sure.

MR. REDWINE. Are agricultural and forestry workers classed together in the Territory?

MR. ANDERSON. No.

MR. REDWINE. Is forestry work unionized?

MR. ANDERSON. No; it is not.

MR. REDWINE. That's all I have, Mr. Chairman.

DELEGATE BARTLETT. Mr. Anderson, how does mining stand now in Alaska, is it number 1, 2, 3, what is it?

Mr. ANDERSON. Well, the largest producer of natural resources is the fishing industry. Our mining industry is still second but it's way below what it should be. We produced from our mineral resources approximately \$24 million last year; of that \$8 million was coal and another \$8 million gold.

Mr. REDWINE. I wonder if it would not be useful to Senator Scott if Mr. Anderson will furnish for the committee at a later date a list showing the value of the different products in dollar value.

Senator SCOTT. Yes; it would be.

Mr. ANDERSON. I would be very happy to:

Mr. REDWINE. I would like to suggest he furnish that information and accompany it with a brief as to why this proposed legislation should or should not be enacted.

Mr. ANDERSON. Let the record be clear that there's no doubt in my mind why it should not be enacted.

Mr. REDWINE. Is there anyone else who would like to offer something? We've had a very fine discussion here this morning.

The CHAIRMAN. We'd like to hear from anyone.

Mr. LOMEN. I'd like to know if Mr. Mulligan would like to add anything?

(Mr. Ralph Lomen and Mr. John Mulligan were seated in the audience at the hearing).

Mr. REDWINE. Mr. Mulligan, have you anything you'd like to say?

Mr. MULLIGAN. I doubt if there's anything we could add.

Mr. REDWINE. I would like to ask one further question; I would like to address this to Dean Beistline and Mr. Holdsworth. I would like to have a little discussion on the part that the oldtime prospector might play in finding additional tin and other minerals in the Territory if such legislation as proposed under this bill was enacted.

Dean BEISTLINE. As to my opinion on the subject I believe very definitely when an incentive is offered you're going to get prospectors in the field—I can't say how many or what they will find, but it's going to draw people back into the hills again if they can see a chance of making a small stake. The more incentives that are offered the better it will be for the mineral industry and more discoveries should be made. The more men there are in the field the more the chance of locating mineral deposits. I don't mean though that everything should be provided by the Government, but as far as mining is concerned that's the way Alaska came into being.

Mr. HOLDSWORTH. To answer your question about oldtime prospectors, I think our experience this year points out that prospecting presently being done is not by oldtime prospectors, it is by qualified men—let's say more qualified than the oldtimers. It's being done now by either local groups of businessmen or an established mining company.

Incentive to get these men out increased the activities this year on uranium and with the present price of copper and other strategic minerals such as chromium—

Mr. REDWINE. I have heard recently in Las Vegas that the uranium people are concerned—

Mr. HOLDSWORTH. That's true, industry is very much concerned because of the lack of policy by the AEC on the purchase of uranium. That goes back to the same thing we've been referring to—the mining

industry gets definite doldrums because of the lack of a long-range program.

Mr. REDWINE. There is still a place for the oldtime prospector, is there not?

Mr. HOLDSWORTH. Yes.

Mr. REDWINE. Mr. Crawford, do you agree with that evaluation of oldtime prospectors in the discovery of mineral deposits?

Mr. CRAWFORD. Yes, I think that history shows that a lot of ore has been found by the prospectors that worked in the hills and made the discoveries.

Mr. REDWINE. Isn't that about the cheapest way for the Government to bring about the discovery of these additional deposits of mineral resources?

Mr. CRAWFORD. I don't know about that for sure, but I would say that an incentive—I would agree with Mr. Beistline and Mr. Holdsworth—an incentive will take prospectors out in the field and there is a better chance of finding new mineral deposits and developing new possibilities.

Mr. REDWINE. Mr. Chairman, I don't have anything further.

The CHAIRMAN. Isn't this true: I think history proves that as you find new minerals, a mineral now considered of no value if combined with different alloys would be of value. Isn't it true that some minerals we now think nothing of could be of value?

Mr. HOLDSWORTH. That is true. Some of the difficulty is that we don't have records of some of these apparently worthless minerals that have been seen. We don't have cooperation on turning the information over to us on some of these minerals they feel are not worth much today—but in the future they might be.

Mr. REDWINE. Mr. Anderson, can you think of anything that is being proposed now in the way of developing the resources of Alaska, in the way of legislation, that has more value to Alaska than this particular legislation?

Mr. ANDERSON. No; there is nothing that is in the form of legislation, however, there are proposals—requests to the Bureau of the Budget to make money available to the United States Geological Survey and Bureau of Mines and requests for more road moneys, but at the present time this is the only specific bill I am aware of that benefits individuals and offers incentive for the mining industry.

Mr. HOLDSWORTH. You might put in H. R. 7055.

Delegate BARTLETT. That's a good bill; what is it?

Mr. HOLDSWORTH. On tidelands.

Mr. REDWINE. You might make a brief explanation for the benefit of Senator Scott.

Mr. HOLDSWORTH. Well, as conditions stand in the Territory today if the pulp industry or mining companies acquire tidelands it takes special action in Congress.

Mr. REDWINE. Looking at the calendar, Senator Scott, for the last session I think the people in the Territory kept Delegate Bartlett rather busy submitting individual bills along that line. I think our committee considered several on the Senate side.

The CHAIRMAN. Considered many.

Delegate BARTLETT. I want to offer a postscript to what Mr. Holdsworth has said. We have a situation here where many major oil companies are greatly interested in prospecting for oil in the Territory. They have acquired leases under the act of 1920 on tidelands that are held for administration by the future State of Alaska. The oil companies are absolutely foreclosed from searching for oil in the tideland areas. Mr. Holdsworth spoke of the necessity of having special bills in Congress to acquire tidelands—I had a bill this year on a timber company near Wrangell for 45 acres of tideland and it would be the same thing as far as time if they asked for 100,000 acres—all we're trying to do on that is bring the same status as the coast States have under the Submerged Lands Act of 1953.

Mr. REDWINE. Senator, I don't have anything else.

Senator SCOTT. Has anyone else anything?

Mr. ANDERSON. We want to thank you officially, Senator, you and your staff for coming here.

Senator SCOTT. We are happy to come—but as you know, we are a long way from Haw River, N. C., up here.

Mr. ANDERSON. We are delighted to have you, it shows the interest of Congress in us and it looks well for Alaska.

(The hearing adjourned at 11:40 a. m.)

(By direction of the chairman the following is made a part of the record:)

TABLE 1.—*Mineral production in Alaska, 1953-54*<sup>1</sup>

Mineral	1953		1954	
	Short tons (unless otherwise stated)	Value	Short tons (unless otherwise stated)	Value
<b>Metals:</b>				
Chromite.....gross weight.....			2,953	\$208,257
Copper (recoverable content of ores, etc.).....			<sup>2</sup> 4	2,435
Gold (recoverable content of ores, etc.).....				
.....troy ounces.....	253,783	\$8,882,405	248,511	8,697,885
Lead (recoverable content of ores, etc.).....	9	2,240		
Mercury.....76-pound flasks.....	40	7,721	1,046	276,552
Silver (recoverable content of ores, etc.).....				
.....troy ounces.....	35,387	32,027	33,697	30,497
Tin (content of ore and concentrate).....long tons.....	49	105,917	199	409,953
<b>Nonmetallic minerals (except fuels):</b>				
Sand and gravel.....	7,689,014	5,079,681	6,639,638	6,301,939
Stone.....	47,086	169,711	283,734	465,423
Mineral fuels: Coal (bituminous).....	861,471	8,451,542	<sup>3</sup> 667,153	<sup>3</sup> 8,339,412
Undistributed: Clay (1954), gem stones, platinum-group metals (1953-54), tungsten (1953).....		1,520,782		1,576,380
<b>Total.....</b>		24,252,000		<sup>3</sup> 26,309,000

<sup>1</sup> Production as measured by mine shipments or mine sales (including consumption by producers), except that fuels and mercury are strictly production.

<sup>2</sup> Includes 3,265 pounds of copper recovered from ore shipped from an inactive mine in 1954. Ore was mined in years before 1954.

<sup>3</sup> Preliminary and subject to revision.

TABLE 2.—*Value of mineral production in Alaska, 1953-54, by regions*

Region	1953	1954	Commodities produced in 1954 in order of value
Aleutian Islands.....	(1)	-----	None.
Bering Sea.....	(1)	-----	Do.
Bristol Bay.....	\$965	\$6,717	Mercury, sand and gravel.
Cook Inlet-Susitna.....	4,415,008	6,266,440	Sand and gravel, coal, gold, stone, clay, copper, silver.
Copper River.....	336,045	548,182	Sand and gravel, gold, silver.
Kenai Peninsula.....	(1)	437,062	Sand and gravel, chromite, gold, silver.
Kodiak Island.....	(1)	(1)	Stone, sand and gravel.
Kuskokwim River.....	2,316,047	2,552,029	Platinum-group metals, gold, mercury, silver.
Northern Alaska.....	(1)	(1)	Coal.
Northwestern Alaska.....	\$39,660	67,683	Gold, gem-stones, silver.
Seward Peninsula.....	1,703,526	1,447,480	Gold, tin, sand and gravel, silver.
Southeastern Alaska.....	578,462	663,306	Sand and gravel, stone, gold, copper, silver.
Yukon River.....	14,099,608	14,087,036	Gold, coal, sand and gravel, stone, silver.
Undistributed <sup>1</sup> .....	762,705	232,798	
Total.....	24,252,000	26,309,000	Gold, coal, sand and gravel, platinum-group metals, stone, tin, mercury, chromite, silver, gem stones, clay, copper.

<sup>1</sup> Included with "Undistributed" to avoid disclosure of individual output.<sup>2</sup> Value of gem stones included with "Undistributed."<sup>3</sup> Includes values from regions which must be concealed for particular years (indicated in appropriate column by footnote references 1 and 2).

## EMPLOYMENT STATISTICS

TABLE B.—Average weekly earnings in covered employment in Alaska by industry, 1940-54

Industry	1940	1941	1942	1943	1944	1945	1946	1947	1948	1949	1950	1951	1952	1953	1954
Total, all.....	\$35.51	\$42.63	\$48.11	\$59.33	\$81.62	\$66.60	\$57.88	\$77.32	\$84.33	\$89.11	\$92.01	\$109.54	\$120.16	\$120.70	\$120.94

## THE AL SARENA CASE

---

FRIDAY, NOVEMBER 25, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON LEGISLATIVE OVERSIGHT FUNCTION  
OF THE SENATE COMMITTEE ON INTERIOR AND  
INSULAR AFFAIRS;  
HOUSE OF REPRESENTATIVES,  
SUBCOMMITTEE ON PUBLIC WORKS AND RESOURCES  
OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS,  
*Portland, Oreg.*

The subcommittees met at 2:30 p. m., in the Department of Interior Building, Hon. W. Kerr Scott (chairman of the Senate subcommittee) presiding.

Present: Senators W. Kerr Scott, North Carolina; Richard L. Neuberger, Oregon;

Representatives Earl Chudoff, Pennsylvania, and Clare E. Hoffman, Michigan.

Also present: Representative Harris Ellsworth, Oregon.

Also present: William H. Coburn, chief counsel; Robert W. Redwine, counsel (Senate subcommittee); Arthur Perlman, staff director; James A. Lanigan, counsel; Robert E. Wolf, consultant; and Helen M. Boyer, minority staff member (House subcommittee).

Senator Scott. The subcommittees will come to order.

We will now go into another matter that is not specifically a "timber sales policy problem."

Rather, it involves the question, or questions, of how certain agencies are following the intent of the Congress, the letter and spirit of the laws of the land and the democratic processes that are demanded by the Constitution of the United States in respect to our forests and mineral resources.

The transcript of the hearing held by this joint committee in Roseburg, Oreg., on November 17, 1955, discloses that certain segments of the Department of Interior are in a hassle with an aged, disabled veteran over his rights under the mining laws of the United States Government.

There appears to be a concerted effort to hustle him off his three mining claims based on the allegation that the claims are not mineral in character.

In sharp contrast to this case, I am mindful of a considerable amount of talk in the past 18 months concerning what is known as the Al Sarena mining claims located in Jackson County, Oreg.

There are many Government records involving the Al Sarena mining claims and their background and their value, or lack of value, as mineral lands that have been cloaked in obscurity and covered with the dust of more than fifteen years.

The Congress needs to know, and the people of America are entitled to know what the facts are in connection with this case which was finally decided at the highest level of the Department of Interior.

This Senate subcommittee, and this House Subcommittee of the Government Operations Committee, and the Congress, would be derelict in its duty if it did not seek to determine the truth or falsity of the charges that have been made that, as a result of high level interference in the Department of Interior, weasel-word legal opinions and questionable mineral sampling and assaying practices have been substituted for the dedicated judgment and experience of men trained in the art of determining which lands are, or are not, eligible for patent under the mineral laws of the land.

It is either true, or untrue, that the lands of the 15 Al Sarena disputed claims are mineral in character or just a site for a timber mining operation. It is the purpose of this inquiry to seek the answer to this question, and the one of just why and how the unprecedented step was taken of bypassing the Forest Service and the Bureau of Land Management to accomplish what was accomplished.

Because of the serious nature of this inquiry, going, as it does, into the very fountain springs of the question of government by laws or government by influence and special privilege, all witnesses will be sworn before testifying.

In the interest of saving time and avoiding confusion, I am also asking that all members of both subcommittees refrain from asking any witness any question until after the staff has completed its questioning of each witness.

I am directing Mr. Redwine and Mr. Coburn to initiate the questioning, to be followed by Mr. Lanigan, after which I will call upon each member of the committees, in turn, to propound such inquiries as each may desire.

Please proceed, Mr. Redwine.

MR. REDWINE. Will the following witnesses please come forward: Mr. Rice, Mr. Hattan, Mr. Leavengood, Mr. Sanborn, Mr. Wood, Mr. Kansky, Mr. Ashe, and Mr. Appling.

Senator SCOTT. Congressman Hoffman, will you swear these gentlemen in, please?

Representative HOFFMAN. All at once?

Senator SCOTT. Yes, sir.

Representative HOFFMAN. Please stand. Hold up your right hand. Do you and each of you solemnly swear that the testimony which you are about to give before this committee will be the truth, the whole truth, and nothing but the truth, so help you God?

MR. RICE. I do.

MR. HATTAN. I do.

MR. LEAVENGOOD. I do.

MR. SANBORN. I do.

MR. WOOD. I do.

MR. KANSKY. I do.

MR. ASHE. I do.

MR. APPLING. I do.

MR. REDWINE. Mr. Rice, will you please take the stand, and the other gentlemen find places.

Representative HOFFMAN. I want to put on the record my objection to the witnesses sitting in the room, each hearing the testimony of the other. Apparently their story is about the same transaction or same event, and that is the request that is customary in a court proceeding.

Senator SCOTT. This is not strictly a court proceeding and there is nothing in the rules to prevent it, as I understand it.

Representative HOFFMAN. I understand it is not a court proceeding, but a great deal will depend upon the accuracy of the testimony, and each witness has been sworn and should be required to give his own individual recollection, except as some witness wishes an attorney present.

Senator SCOTT. This is a public hearing.

Representative HOFFMAN. So is a court trial.

Mr. REDWINE. Mr. Chairman, I think at this time that the record should show that all these witnesses who have been asked to appear this afternoon have given no information to the staff or committee. Any communication that has been had with them, either orally or in writing, was in response to specific questions asked them.

#### TESTIMONY OF PIERCE M. RICE, MANAGER, OREGON LAND OFFICE

(The witness was previously duly sworn.)

Mr. REDWINE. Mr. Rice, will you state your full name?

Representative HOFFMAN. The record should also show, Mr. Chairman, that some of these witnesses have appeared at prior hearings.

Mr. REDWINE. Will you state your full name and official position, sir?

Mr. RICE. My name is Pierce M. Rice. I am Manager of the Oregon Land Office.

Mr. REDWINE. How long have you held that position, Mr. Rice?

Mr. RICE. I have held that position approximately 3 years, from 1949 to 1952, at which time I became area adjudicator, and served in that capacity for approximately 2 years, and recently reassumed the duties of the manager of the land office upon the resignation of the recent manager.

Mr. REDWINE. Are you familiar with a document entitled: Mineral Entry Oregon 0665, Contest No. 38, Al Sarena Mines, Inc.?

Mr. RICE. I am.

Mr. REDWINE. Were you the hearing officer in that case?

Mr. RICE. I was.

Mr. REDWINE. Do you have a copy of the transcript with you, Mr. Rice?

Mr. RICE. I do.

Mr. REDWINE. Will you tell the committee the chronological order and what happened so that that matter came before you for a hearing?

Mr. RICE. An application was filed for a mineral patent by the Al Sarena Mines, Inc., involving 23 lode mining claims within the Rogue River National Forest.

Representative HOFFMAN. Pardon me, Mr. Chairman. I would like to have a copy of any statement that these gentlemen have furnished the committee, any questions that the committee counsel has asked, so that I may intelligently, if possible, examine the witness.

Mr. REDWINE. None of them has made any statement that I know of.

Representative HOFFMAN. If I understood you a few moments ago, you said that the information you have came in response to questions that you asked them.

Mr. REDWINE. Yes.

Representative HOFFMAN. Counsel has a statement of the issues here, and at least some information as to the issues involved, and I say that fairness demands that the minority member of the House committee, which is a part of the joint committee, is entitled to those records so that he knows what is going on.

Mr. REDWINE. The information that I have, Mr. Chairman, is a copy of the official transcript of the hearing held before this hearing officer.

Representative HOFFMAN. What I am asking for is the information on which you are now conducting the hearing, questions you have previously asked of these witnesses, memoranda from them. As a member of the subcommittee, I think I am entitled to know what the records are of a member of the staff.

Mr. REDWINE. There has been no such record made, Mr. Chairman.

Representative HOFFMAN. You said that the information had come from replies to questions which had been propounded by the staff. Why all this secrecy?

Mr. Chairman, as one seeking the facts, sitting here to judge what the facts are and to assist in writing a report, why am I not entitled to know what the issues are or what the claim is? Even a defendant before the court is entitled to a copy of the indictment.

Senator SCOTT. I think, Congressman Hoffman, that as the two staff counsel here will ask these questions, and they are all new to me and new to you and new to the Senator here as well, that we will all be in the same boat, and if you will just listen——

Representative HOFFMAN. Maybe you and I will but the staff knows what it is doing and are rehashing here an issue that was decided here at the polls at least a year or more ago, and the only remedy they can get here is through the FBI and the Department of Justice. There is no legislation that the Congress can enact that would correct this situation.

Mr. COBURN. At the request of Senator Murray of the full Senate Interior and Insular Affairs Committee made 6 months ago——

Representative HOFFMAN. Is it in writing?

Mr. COBURN. Yes.

Representative HOFFMAN. May I have a copy?

Mr. COBURN. I do not carry copies of Senator Murray's communications with me.

Representative HOFFMAN. As long as it is officially to the committee.

Mr. COBURN. It was from Senator Murray, chairman of the full committee, not this committee.

Representative HOFFMAN. Senator Murray, as chairman of the full committee, issued a statement about what these issues were that has no relation to this case. This is something dragged in afterwards.

Mr. COBURN. Could I finish my statement as to what he asked for? He asked the Department of the Interior for the full file on the Al Sarena case. That full file was submitted to Senator Murray as chairman of the Interior Committee by a special messenger, a lawyer from

the Department, who sat there every day while Mr. Redwine and I went through those records. We examined the records. We obtained photostatic copies and if the Congressman wants that full file, I think we could furnish it to him when we get back to Washington.

Mr. REDWINE. Proceed.

Mr. RICE. In view of the fact that these claims are located in a national forest and are governed by the Code of Federal Regulations 43 C. F. R. 205 providing that such copies of applications for mining claims shall be forwarded to the Forest Service, a copy of the application in the present case was forwarded to the Forest Service. The application was thereafter processed by the Land Office in the usual manner, requiring documentary evidence of title to the lands, a publication for the required period as required by law, the payment of the purchase moneys and other requirements, leading up to the issuance of a final mineral certificate as a basis for the issuance of a patent.

During the processing of this case in the Land Office, the Land Office received from the regional office of the Forest Service a protest, a protest which stated, in effect, that the approval and issuance of the entry and the issuance of the patent was to be withheld pending a field examination by the Forest Service to determine the validity of the claims in compliance with the requirements of the mining law.

Mr. REDWINE. Mr. Rice, was that the usual procedure?

Mr. RICE. That was the usual procedure.

Thereafter, the Forest Service made a field examination and submitted a report.

On that occasion, the Forest Service requested a representative of the Bureau of Land Management to assist the Forest Service in conducting a joint examination of these claims.

The Mineral Examiner of the Bureau of Land Management, in company with examiners for the Forest Service, conducted such a joint investigation, and submitted a report which became the basis for charges against 15 of the 23 mining claims embraced in the application.

Those charges were that a valid discovery of minerals as required by law had not been made on either of the 15 claims in question.

Mr. REDWINE. Mr. Rice, just what does that mean, that a valid discovery has not been made? Do you mean that there was something technically wrong, or the land was not sufficiently mineralized, or what? What was that based on?

Mr. RICE. That was one of the charges that the lands were non-mineral in character and that the applicant had not expended the sum of at least \$500 on or for the benefit of each claim as required by law, such as to entitle the company to a patent.

Mr. REDWINE. Did that last reason go to all 15 claims?

Mr. RICE. That last charge was involved, I believe, in 5 of the 15 claims only. The charge as to the non-mineral character of the land and that valid discoveries of mineral had not been made, applied to all 15 claims, protested by the Forest Service.

In response to your question as to what constitutes a valid discovery, the courts and the Department have issued many and varied definitions as to what constitutes a valid discovery. I believe that in the case reported in 252 United States, in the decision of that court in the case of Cameron against the United States the court very well, it seems to me, summed up a proper definition, which, as I recall, was to effect that a valid discovery of mineral was such a discovery of

minerals contemplated by the mining law, the Act of 1872, and in such quantities and quality as would warrant an ordinary prudent person in the further expenditure of capital and labor in the development of the claim as a paying mine.

Another definition has been described to the effect as to whether or not it would be paying would depend upon whether the expenses incident to the extraction and marketing of the mineral would not exceed the cost of production.

Mr. REDWINE. Mr. Rice, is there anything either required by law or in practice that the amount of money that a person has spent on a mining claim prior to application for patent will determine whether or not it is mineral in character?

Mr. RICE. Oh, no. It has no relevancy whatever as to the amount of expenditures made.

Mr. REDWINE. Is that a relevant matter to present to a hearing officer in a contest of this kind?

Mr. RICE. Not under a charge as to the validity of the claim.

Mr. REDWINE. That is what I mean.

Mr. RICE. No, sir.

Mr. REDWINE. Go ahead, please.

Mr. RICE. Charges growing out of this joint examination were served on the Al Sarena Mines, Inc. The Al Sarena Mines, Inc., filed an answer and requested a hearing. The hearing was arranged and due notice was served on the parties in interest including the Forest Service, the Al Sarena Co., and other parties.

On the date of the time of the hearing the United States, through the Forest Service, was represented by counsel, and the Al Sarena Mines was likewise represented by counsel at this hearing.

Mr. REDWINE. Let me interrupt you at that point, Mr. Rice.

That was just an automatic procedural matter?

Mr. RICE. That is right.

Mr. REDWINE. No appeal was made to anybody for a hearing in Washington, or pressure put on anybody to get a hearing? The Forest Service filed a protest against the granting of the patents and it was automatic that a hearing should be held before a field officer?

Mr. RICE. Charges served and an answer filed requesting a hearing. If they did not respond to the notice of the charges, then under the governing regulations, the charges are taken as admitted and no hearing is required, but they have the privilege of filing an answer and requesting a hearing. That they did in this case. They requested a hearing and that hearing was granted.

Mr. REDWINE. Go ahead.

Mr. RICE. At the time of the hearing, I opened the proceedings by reading the protest filed and the charges preferred and the answer filed. At that time, Mr. MacMahon, special counsel for the contestee, the Al Sarena Mines, demanded a ruling upon various motions that he had filed, various motions and I believe a demurrer that he had filed preliminary to these proceedings, and he asked for a ruling on these motions, and they were presented and argued and a ruling was had on each at that time. The demurrer was overruled and the motions were dismissed and reasons and citations of authority were cited for that action.

Mr. REDWINE. At that time did the Al Sarena Co. and counsel leave the hearing without presenting evidence?

Mr. RICE. Not at that particular time. At the conclusion of the ruling on the demurrer and the motions, the counsel for the Forest Service asked for permission to proceed with the hearing. At that point, the counsel for the contestee—

Representative HOFFMAN. Mr. Chairman, may I interrupt?

This morning I was told that the hearings were not being taped. Now I discover that they are being taped. I would like to know whether they are being officially taped or whether they are not.

Representative CHUDOFF. They were not being taped this morning.

Representative HOFFMAN. I do not like this secrecy business. I have no objection to a recording—have so stated.

Representative CHUDOFF. Mr. Hoffman, we did have a mike here.

Representative HOFFMAN. We did have a recorder at the Chairman's right. I just came from the other room and the hearings are being taped. I do not think it is fair not to let us know whether a recording is being made.

Senator SCOTT. I have no knowledge of it.

Representative CHUDOFF. I know that the tape microphone thing which was on yesterday was not on this morning.

Representative HOFFMAN. If you follow the wires you will see that it is being taped.

Senator NEUBERGER. It is a public hearing. I do not know if it is being taped or if so who is taping it.

Representative HOFFMAN. Who is taping it and for what purpose? I am in favor of recordings and TV at these hearings. You are having the witnesses sworn. At none of the other hearings were they sworn except one witness.

Senator SCOTT. Has anyone in the Interior Department asked that these recordings be made?

Representative HOFFMAN. I just went out and asked the operator if he was taping it, and he said he was.

Representative CHUDOFF. Mr. Chairman, I just checked, and I found that a radio station is not taping this which they had done in our previous hearings but some Government agency is taping it without permission and without a request. Now, I do not know who it is, but I understand Paul Ewing of the Bureau of Land Management, whoever he might be, without asking permission of this committee, is taping these hearings. Now, I do not know why, but I feel that with all due respect to the committee, he certainly should have asked permission. We had given permission to the radio station.

Representative HOFFMAN. I do not care what they do so long as I know what is going on.

Mr. Chairman and Senator, our House rules provided for one thing but it is none of my business what the Senate does nor am I critical. I just wish to know what is being done.

Representative CHUDOFF. Mr. Chairman, I have no objection to anybody taping anything, but when the radio station wanted to tape it, they came and asked my permission, and I asked the committee's permission and said without objection they could tape it.

This Government agency now comes in without permission and tapes this. I think that is in violation of the law even if we agree to it.

Representative HOFFMAN. I am in favor of recording, but I want to know about it.

Senator SCOTT. Mr. Ewing, for whom is this being recorded?

Mr. EWING. It is being taped for check-back here if we need it.

Senator SCOTT. If who needs it?

Mr. EWING. The Department, if we want to check back on anything that was said.

Representative CHUDOFF. Now, Mr. Chairman, let me say this to you. I feel this way, Mr. Chairman: that I have no objection if the testimony is taped here for the purpose of public information and sent out over the air, but if this agency, without permission, is going to take that testimony in a back room and then use it for their own purposes, I do not think they have the right to do it under pretext of saying "in case we want to check back." We have an official reporter if we want to check back.

Representative HOFFMAN. You do not want the Department to take an accurate record of what happens?

Representative CHUDOFF. They can get it from us.

Representative HOFFMAN. If they get it from us its accuracy depends on the stenographer's ability.

Senator NEUBERGER. You were the one who made the protest.

Senator SCOTT. Let us have order.

Representative CHUDOFF. Mr. Chairman, do you not think the Department could have asked permission to take this?

Mr. EWING. Mr. Chudoff, the members of your staff have known this since Monday.

Representative CHUDOFF. The only request I had was from a radio station. That is the only one I gave permission to tape. You had no permission.

Senator SCOTT. I never did approve or think well of this business of tapping telephones to get conversations in Washington or anywhere else. I do not think that is morally right, and I do not know who told you. If you want to tell us who told you to tape this, all right. You can still tape it as far as I am concerned and let it go but who told you?

Mr. EWING. Nobody told me, sir. I ordered our boys do it so that we could have a record if we needed it.

Representative CHUDOFF. What is your position with the Department of Interior?

Mr. EWING. I am Special Assistant to the Administrator of Bonneville Power Administration. I am also regional information officer for the Department of Interior.

Representative CHUDOFF. You are with the Bonneville Power Administration. Why have you followed this committee around for the last week?

Mr. EWING. I have told you that I am regional information officer for the Department of Interior.

Representative CHUDOFF. Do you not think it was your duty to request from the chairman of this committee the right to tape this?

Mr. EWING. Not necessarily. You were not concerned about taping it for playing over the radio.

Representative CHUDOFF. You can play it all you want over the air, but I do not want you to play it back in a room and bring in these people and browbeat them.

Representative HOFFMAN. He has no intention of browbeating anybody.

Representative CHUDOFF. I think this is the same as tapping a telephone conversation without the consent of the person who is on the telephone.

Mr. EWING. I repeat, Mr. Chudoff, that members of your committee have been going in and out of this back room since Monday and have known this tape was being made.

Representative CHUDOFF. I think it is reprehensible, Mr. Ewing, and you ought to be ashamed of yourself for taping it without permission.

Mr. REDWINE. Would you read Mr. Rice's last comment?

(Record read.)

Mr. REDWINE. Mr. Rice, now that we have had that interruption, would you proceed and be as brief as possible in getting the story over to the committee as to what happened?

Mr. RICE. At that time, the counsel for contestee demanded the right to be heard on appeal from my rulings on the motion and demurrer. I cited the Federal Code of Regulations and the rules of practice governing the case under consideration which provided that in the event that motions are overruled the case shall proceed in the usual manner for the taking of testimony.

The counsel for the contestee, the Al Sarena Mines, then stated that he had been back in Washington, D. C., that he had an express agreement with the then Solicitor of the Department of the Interior to the effect that the Federal Code of Regulations and the rules of practice prescribed by the Department would not govern in this particular case.

I asked counsel if he had any evidence of this alleged agreement, and he informed me that he did not, that it was an oral agreement that he had with Mr. Mastin White, the then Solicitor. I informed the counsel for the contestee that I could not accept his representation because I had not been informed officially of the substitution of the rules as obtain in court for those prescribed by the Secretary of the Interior governing the proceedings in this case.

Mr. COBURN. Could I interrupt you there?

Was that understanding that he said he had with Mr. White ever substantiated at a later date?

Mr. RICE. It was not.

Mr. COBURN. In other words, it was proven to have been a false statement?

Mr. RICE. Mastin White repudiated the alleged agreement that he contended that he had with the Solicitor to the effect that he would be entitled to be heard on the appeal over a ruling of the motions before proceeding to try the case on its merits.

Mr. REDWINE. In that connection, in furtherance of that, may I ask you to identify this document I now hand you?

Mr. RICE. That is a decision, January 6, 1954.

Mr. REDWINE. In the Al Sarena case?

Mr. RICE. In the case of the United States against the Al Sarena Mines, Inc., by the Solicitor of the Department of the Interior.

Senator SCOTT. That may be received.

(The document referred to is as follows:)

UNITED STATES V. AL SARENA MINES, INC.

A-26248 DECIDED JANUARY 6, 1954

Mining Locations—Application for Patent—Jurisdiction of Department

This Department may entertain a protest filed by the Department of Agriculture and thereafter institute adversary proceedings against the validity of mining claims at any time prior to the issuance of patents covering such claims.

When an applicant for a mineral patent, after proper notice and full opportunity to be heard, withdraws from a hearing held to determine the validity of its claims without putting in its evidence, it is proper for the manager to proceed with the hearing and to base his decision on the evidence submitted against the claims.

When an applicant for a mineral patent charges that it submitted evidence at a hearing which does not appear in the transcript of the hearing and when the manager admits that a complete transcript at the hearing was not obtained because of the conduct of the applicant's counsel, this Department will not undertake to render a final opinion on a record admittedly incomplete.

When the evidence which the appellant claims is not included in the transcript consists largely of the reports of an assay and where it is admitted that the transcript of the hearing is not complete in that respect, then in order to prevent the very substantial delay necessarily occasioned by a remand of the proceedings, appellants are permitted under supervision of employees of this Department, to take new samples and submit new assay reports for the record in place of those alleged to have been omitted from the original transcript.

It appearing from all of the evidence including new assay reports of samples taken jointly by the appellants and the Bureau of Mines that a sufficient mineralization of appellants' claims is established to justify a prudent man in the further development of the property and the other requirements of the statute having been complied with, patent to the appellants should issue.

---

UNITED STATES DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington 25, D. C., January 6, 1954.

A-26248

UNITED STATES V. AL SARENA MINES, INC.

Oregon 0665 Mineral Contest No. 38

Mineral entry held for cancellation in part

Remanded

APPEAL FROM THE BUREAU OF LAND MANAGEMENT

Al Sarena Mines, Inc., has appealed to the Secretary of the Interior from a decision of the Assistant Director of the Bureau of Land Management dated April 27, 1951, holding for cancellation mineral entry Oregon 0665 in so far as that entry embraces 15 lode mining claims situated within the Rogue River National Forest in Oregon.

I

On October 4, 1948, Al Sarena Mines, Inc., applied for mineral patents covering 23 lode mining claims situated in secs. 20, 21, 28, 29, and 30, T. 31 S., R. 2 E., W. M., Oregon. Thereafter, in accordance with the provisions of 30 U. S. C., 1946 ed., sec. 29, notice that application had been made to patent the claims was published. No adverse claims were made during the period of publication and, thereafter, the purchase price was paid. On April 6, 1949, a Final Certificate of Mineral Entry was issued to the applicant. The certificate recited that upon presentation of the certificate to the Director of the Bureau of Land Management "together with \* \* \* the proofs required by law, a patent shall issue \* \* \* if all then be found regular." The certificate contained the added statement that

"Patent will be withheld by the Bureau of Land Management pending a report by the Regional Administrator, Region I, upon the bona fides of the claims."

On April 13, 1950, a protest against the validity of 15 of the 23 claims was filed with the land office by the Regional Forester, North Pacific Region, Department of Agriculture. The protest included a request that the 15 claims be declared null and void and that the application for patents on the 15 claims be rejected. On April 25, 1950, adversary proceedings were instituted by the United States against the validity of the 15 claims involved in this proceeding and embraced in the entry of Al Sarena Mines, Inc. The notice of the contest, which was addressed to "Al Sarena Mines, Inc.," set forth the charges that the land involved in the 15 claims listed in the notice is nonmineral in character, that minerals have not been found on any of the claims in sufficient quantities to constitute a valid discovery, and that, as to five of the claims, the requisite expenditure of \$500 in improvements and development had not been made.

On May 22, 1950, Al Sarena Mines, Inc., filed an answer to the charges, embodying what it designated as demurrers and a motion to dismiss.

A hearing was set for September 13, 1950, before the manager of the land office at Portland, Oregon. At the appointed time, representatives of the contestee appeared with counsel and the Department of Agriculture was represented by counsel. The contestee demanded at the outset of the hearing that its demurrers be acted upon before proceeding with the hearing on the merits of the case. The manager thereupon ruled on the demurrers as motions and denied them. The contestee then noted an appeal to the Solicitor of the Department. Contestee and its counsel then withdrew from the hearing.

Before the contestee departed, counsel for the Department of Agriculture stated that the intention of that Department was not to have the claims declared null and void but only that the application for patents be denied.

After the departure of the contestee and its counsel, counsel for the Department of Agriculture introduced its evidence relating to the validity of the claims.

On December 14, 1950, the manager sustained the protest and canceled the mineral entry with respect to the 15 claims. On April 27, 1951, the Assistant Director of the Bureau of Land Management affirmed the decision of the manager, stating that his decision did not invalidate the claims and that the claimant could retain possession of the claims for the purpose of continuing its efforts to make valid discoveries.

On appeal, Al Sarena Mines, Inc., makes 18 assignments of error. Briefly stated its contentions are: first, that it was entitled to a patent prior to the filing of the protest and therefore that this Department had no authority to entertain the protest; and, second, that there were certain irregularities in the protest and in the manner in which the hearing was conducted.

## II

The appellant's first contention is that it had acquired equitable title to the claims by reason of its payment of the purchase price, the submission of its proofs, the acceptance of those proofs by the local land office, the issuance to it of a final certificate, and the fact that no adverse claim had been made during the period of publication, and therefore that this Department had no jurisdiction to entertain the protest of the Department of Agriculture.

The contention is untenable. The power of this Department to supervise and control the sale and disposition of the public domain, including mineral lands, has long been recognized. *Knight v. United States Land Association*, 142 U. S. 161 (1891). Its jurisdiction to inquire into the extent and validity of rights to public land claimed against the Government does not cease until the legal title to the land has passed. *Michigan Land and Lumber Co. v. Rust*, 168 U. S. 589, 593 (1897). "A mining location which has not gone to patent is of no higher quality and no more immune from attack and investigation than are unpatented claims under the homestead and kindred laws." *Cameron et al. v. United States*, 252 U. S. 450, 460 (1920). As the Supreme Court said in the *Cameron* case, " \* \* \* the land department has no power to strike down any claim arbitrarily, but so long as the legal title remains in the Government it does have power, after proper notice and upon adequate hearing, to determine whether the claim is valid and, if it be found invalid, to declare it null and void."

Thus, there must be a determination by this Department, the tribunal in which jurisdiction is vested under the public land laws, that the requisites of the mining laws have been fulfilled. *Cf. Cosmos Exploration Company v. Gray Eagle Oil Company*, 190 U. S. 301, 312 (1903). Among the requisites to obtain a patent to

a lode mining claim is the discovery of "valuable mineral deposits" "within the limits of the claim located" (30 U. S. C., 1946 ed., secs. 22 and 23). In determining whether mineral deposits discovered on public lands are "valuable" the test to be applied is whether they are "such as would justify a person of ordinary prudence in the further expenditure of his time and means in an effort to develop a paying mine." *Cameron et al. v. United States*, *supra*, 252 U. S. at p. 459.

The fact that the protest by the Department of Agriculture was not filed until after the expiration of the 60 days of publication of the application for patent does not deprive this Department of jurisdiction to inquire into the merits of the patent application nor does the fact that no adverse claim was filed within that period vest equitable title in the appellant.

Section 2325 of the Revised Statutes (30 U. S. C., 1946 ed., sec. 29), after providing for the publication of the notice of application for patent, provides :

"\* \* \* If no adverse claim shall have been filed \* \* \* at the expiration of the sixty days of publication, it shall be assumed that the applicant is entitled to a patent \* \* \* and that no adverse claim exists; and thereafter no objection from third parties to the issuance of a patent shall be heard, except it be shown that the applicant has failed to comply with the terms of this chapter."

Under section 2325, third parties may object to the issuance of a mineral patent, even after the period of publication has passed, upon a showing "that the applicant has failed to comply with the terms of this chapter." If equitable title vested upon the expiration of the publication period in the absence of an adverse claim, there would be no justification for permitting third parties to show non-compliance with the law.

Section 2326 of the Revised Statutes (30 U. S. C., 1946 ed., sec. 30) provides that where an adverse claim is filed during the period of publication all proceedings shall be stayed until the controversy shall have been settled or decided by a court of competent jurisdiction or the adverse claim waived. That provision, however, has application only to claims of rival mineral claimants and has no application to adversary proceedings instituted by the Government. *Cameron et al. v. United States*, *supra*, 252 U. S. at p. 463.

The regulations of the Department relating to mineral entries within national forests (43 CFR, Part 205) require that the Department of Agriculture shall be notified of applications for patents (43 CFR 205.2) and they do not impose a mandatory time limit within which a protest against a mineral entry must be filed by the Department of Agriculture. In fact, the regulations provide that a protest on behalf of that Department may be initiated against any claim, mineral or nonmineral, embracing lands within a national forest "at any time prior to patent" (43 CFR 205.6).

The fact that the appellant had paid the purchase price, submitted its proofs, and received a final certificate does not detract from this Department's authority to inquire into the merits of the claims. Unless there has been a discovery of valuable minerals within the limits of the claims, there have been no valid locations and the claims cannot go to patent.

The payment of the purchase price and the submission of proofs are but two of the requisites of the mining laws and although the possession of a final certificate has been regarded by some courts as vesting equitable title in the holder thereof, nevertheless the courts recognize the authority of this Department to cancel such a certificate if it be shown that there has not been a compliance with the requirements of the law. *United States v. Record Oil Company, et al.*, 242 Fed. 746 (D. C., Calif., 1917); *El Paso Brick Company v. McKnight*, 233 U. S. 250 (1914). Even after a judgment of a court in a proceeding by an adverse claimant under section 2326 of the Revised Statutes on the question of the right of possession, this Department may pass upon the sufficiency of the proofs to ascertain the character of the land and to determine whether the conditions of the mining laws have been complied with. See *Lane v. Cameron*, 45 App. D. C. 404 (1916). The cases cited by the appellant are not to the contrary. They deal with the right of possession as between rival mineral claimants and not with the question of title as between the Government and an applicant for a mineral patent. As between the Government and such an applicant, equitable title does not pass until the applicant has done everything which, under the law, is required of him to secure the legal title. *Teller v. United States*, 113 Fed. 273, 280 (8th Cir., 1901).

The final certificate issued to Al Sarena Mines, Inc., certainly does not imply that equitable title passes therewith. It recites on its face that patents will issue upon the presentation of the proofs required by law and it contains the additional statement that the patents will be withheld pending a report on the bona

fides of the claims. This latter statement is in accordance with the requirements of the departmental regulations that the Department of Agriculture must be notified of applications for patents to mineral leads within national forests and with the recognized authority of this Department to inquire into the question whether equitable title has vested. *Cf. Brown v. Hitchcock*, 173 U. S. 473, 476 (1899).

Thus, all that can be claimed by the appellant through the possession of the final certificate is that patents will be issued if all is found proper, i. e., if full compliance with the mining law is shown.

It is apparent therefore that until this Department had determined that all the requirements of the law had been met, it had ample authority to entertain the protest of the Department of Agriculture and to order adversary proceedings against the validity of the claims.

### III

Turning now to the assignments of error respecting the protest and the conduct of the hearing to determine the validity of the claims, for the most part, they appear to be immaterial and without substance.

It is asserted that the protest was fatally defective because it was directed against the "Al Sarena Mining Company" and not "Al Sarena Mines, Inc.," was undated, and was not under oath.

The misnaming of the appellant in the protest was cured by the notice of contest addressed to the appellant under its proper name. The appellant responded to the notice, and it was not misled or harmed in any way by the slight error made by the Department of Agriculture in naming the locator. *Cf. Cole v. Ralph*, 252 U. S. 286, 293 (1920).

As to the other two alleged irregularities in the protest, it is sufficient to say that the regulations of the Department do not require such protests to be dated and they specifically provide that they need not be under oath. 43 CFR 205.6.

Of the numerous irregularities in the conduct of the hearing alleged by the appellant, only a few require mentioning.

The first of these is that the manager erred in conducting the hearing in accordance with the regulations of the Department as embodied in Title 43 of the Code of Federal Regulations instead of under the "rules of evidence and the rules of practice and procedure as obtain in Federal and State courts" as allegedly agreed upon between the appellant and the former Solicitor of the Department. The former Solicitor of the Department has denied that any such agreement was made.

The second charge to be mentioned is that the manager erred in continuing the hearing after the appellant had noted its appeal from the rulings on the demurrer, and that all the testimony offered by the Department of Agriculture after the appellant had withdrawn from the hearing is inadmissible and may not be considered.

This contention is based upon the assertion that the Federal Rules of Civil Procedure were applicable to the hearing and that under those rules evidence on the merits of a case cannot be received during the pendency of an appeal from a ruling on demurrers filed in the proceeding. The Federal Rules of Civil Procedure were not applicable to the hearing and the rules of practice of the Department (43 CFR, Part 221) do not provide for any such procedure. The purpose of the hearing under the Department's rules of practice is to give both parties full opportunity to present their evidence and if a claimant chooses to withdraw from the hearing without submitting his evidence or subjecting the Government witnesses to cross-examination, he must bear the consequences.

The appellant's claim that this Department refused to give the appellant a bill of particulars is without foundation. The notice of contest set out explicitly the charges brought against the claimant.

Nor was the appellant harmed in any way by the fact that the manager permitted the Department of Agriculture to change its plea that the claims be declared null and void to one that the application for patent be denied.

The contest was initiated to determine the validity of the claims. All that this Department was seeking to do was to obtain sufficient information upon which to base a determination of the validity of the claims. Any charges made by the Department of Agriculture had to be proved to be substantiated, and the purpose of the hearing was to give the appellant a full opportunity to overcome these charges and to sustain its claim to a right to receive the patents. The appellant, having had full opportunity to participate in the hearing, chose to withdraw therefrom without submitting its evidence. The manager was, in such

circumstance, fully justified in permitting the contestee to submit its evidence against the validity of the claims, and thereafter to base his decision on the testimony adduced at the hearing.

## IV

However, after the present appeal reached the Department for consideration, representatives of the appellant were accorded an opportunity to present an oral argument to the then Solicitor. Following that oral argument, representatives of the appellant were permitted to examine the transcript of the hearing in the Office of the Solicitor. Subsequently, the Solicitor received a letter dated June 23, 1951, from the appellant's Secretary-Treasurer in which the assertion is made that at the hearing there was read by the appellant into the record

"\* \* \* a wealth of legal prima facie evidence, which evidence was received therefor without objection, but which evidence could not be found in the record by an inspection thereof."

The Manager admits that a complete transcript of the proceedings was not made up to the point where the appellant and its counsel withdrew. He attributes the failure of the reporter to get a complete transcript to the boisterous conduct and the rapid and incoherent manner in which the counsel for the appellant proceeded.<sup>1</sup>

Neither the Manager nor the reporter are to be censured if the conduct of counsel for the appellant was such that it was impossible to get a complete transcript. On the other hand, it is not the wish of this Department to penalize any claimant for the conduct of his counsel.

However, the reports of assays of samples of the various claims were not included in the file when it reached this office, and although copies thereof were later supplied, owing to the insistence of appellant that it had been greatly prejudiced by this and many other omissions in the formal record and because of the confusion resulting, it was determined to require new assays to be submitted. Pursuant thereto by agreement between the claimant and this office, new samples were extracted from outcrops on each of the claims by a joint group consisting of a competent and registered mining engineer representing the appellant and a team of employees of the Bureau of Mines representing the Government. This group visited the property, inspected all the claims and took samples from all of the claims which were carefully retained in their possession during the five days required to crush the samples and prepare them for shipment, and thereafter, under the control of this joint group, the samples were shipped to an acceptable laboratory for analysis. The resulting assay reports submitted and now on file show that the samples contained silver and gold of sufficient value to justify a person of ordinary prudence in further expending his time and money in an effort to develop a paying mine.

A report of the mineral examiner of the Department made in 1949 contained this statement:

"The indications are that the central mass is all mineralized to some extent, and if the prospective parallel shear and mineralized zones should prove to be extensive in length and depth, the possibilities are good that the whole mass could be developed, mined and milled at a profit by low-cost, large-scale mining methods. The topography is such that any one of three methods might be employed, i. e., glory holing, shrinkage system and open pit mining. \* \* \*"

The examiner further discusses the costs under these various methods, and the costs estimated by him of mining and milling the material of the claims are well below the lowest of the assay reports of value. This would seem to confirm that by careful and prudent operation the appellants may continue to develop the property with reasonable hope of success. The assays, therefore, showing mineralization in paying quantities on all of the claims, and the cadastral engineer on September 27, 1948, having certified that more than \$500 has been expended in development and improvements on each claim, the requirements of the statute would seem to be met.

While it may not be of legal significance, it should be noted that all of the persons, including Government employees, who have inspected this property, report that these appellants have quite obviously spent amounts estimated from \$150,000 to \$200,000 over a long period of years in the operation of the works, tunnels, removal of overburden, installation of a mill, etc., and this fact alone would seem to indicate that at least the appellants are themselves convinced of a future profitable development of the property. It might also be noted that

<sup>1</sup> See the Manager's letter of October 2, 1950, to the Director.

the amounts already expended by the appellants are estimated to be two or three times the value of such timber as is located on the premises, which would seem to negative the suggestion which appears in the record that the appellants are more interested in the timber than in the mine.

The entire matter has had the most careful examination by this Department from all available sources, including the securing of new and independent assays of the claims under the Department's immediate supervision, and it seems that the statutory requirements have been complied with.

Therefore, pursuant to the authority delegated to the Solicitor by the Secretary of the Interior (sec. 23, Order No. 2509, as revised; 17 F. R. 6794), the case is remanded to the Bureau of Land Management with instructions to process the application for patent.

(Signed) CLARENCE A. DAVIS,  
*Solicitor.*

Mr. REDWINE. I call your attention to this section in his decision. Will you read that paragraph there, please?

Mr. RICE (reading):

The first of these is that the manager erred in conducting the hearing in accordance with the regulations of the Department as embodied in title 43 of the Code of Federal Regulations instead of under the "rules of evidence and the rules of practice and procedure as obtain in Federal and State courts" as allegedly agreed upon between the appellant and the former Solicitor of the Department. The former Solicitor of the Department has denied that any such agreement was made.

Mr. REDWINE. That is in the present Solicitor's decision in this matter?

Mr. RICE. That is correct.

Mr. REDWINE. Proceed.

Mr. RICE. I informed the counsel for the contestee that I had not been advised officially of the alleged agreement and that, in view of the fact that it was very unusual, that if there was such an agreement I was not prepared to accept his interpretation of the agreement.

Mr. COBURN. In your experience, had there ever been such an agreement?

Mr. RICE. Not to my knowledge. The counsel for the contestee then stated that he would not participate in the proceedings, that he would offer no evidence, that he would not interrogate any of the witnesses, that he would not cross-examine the Government witnesses, and that he would offer no evidence orally, documentary or otherwise, at this hearing. He stated that the hearing officer was guilty of insubordination and refusing to honor an agreement that he had with the Solicitor, and that he would not be present or bound in any manner by the proceedings had, and that the only thing that he would be bound by was the agreement he had with the Solicitor.

With that statement, why, he advised his client to not attend the proceedings, and they departed.

Mr. REDWINE. Just prior to that, you did offer to recess the hearing and communicate with your superiors to find out whether there had been such an agreement as Mr. MacMahon had alleged there was?

Mr. RICE. That is correct.

Mr. REDWINE. And he said, "Go on but do it at your own peril"?

Mr. RICE. In view of the fact that he insisted that there was such an agreement.

Senator SCOTT. At that point, what did he mean by "do it at your own peril"?

Mr. RICE. That was Mr. MacMahon's language. I suppose the inference I drew from it was that any proceedings had would be a nullity

and that he would go to the Secretary of the Interior and demand the right to be heard on the appeal from the adverse rulings on his motions in accordance with the alleged agreement.

Senator SCOTT. That is not in my language what "peril" means, but it is all right. Go ahead.

Mr. RICE. I then suggested that with his consent that I would adjourn the proceedings temporarily and communicate with my superiors to verify this alleged agreement.

He refused, and stated that it would be time consuming and otherwise unnecessary.

Mr. REDWINE. I would like to read into the record at this point from the certified copy of the transcript of that hearing. Counsel for the contestee answered:

No, sir. We will let it go as it is and find it out in Washington. I think that my word is good and that he will tell you that it is good, and that you will ascertain from him that I have told you nothing but the truth.

The "he" he is referring to is obviously Mr. Mastin White, because that was the name under discussion.

Mr. RICE. After he departed, the counsel for the Forest Service then asked for permission to offer its evidence.

Mr. REDWINE. Then you proceeded to hear evidence as offered by the Forest Service?

Mr. RICE. Yes, sir.

Mr. REDWINE. You heard testimony by Mr. Leavengood, Mr. Hattan, and Mr. Sanborn. I will not ask you to recount that. They are here and will speak for themselves.

You had known all these three men for some time?

Mr. RICE. I had known Mr. Hattan for a good many years. I was not so well acquainted with some of the other witnesses.

Mr. REDWINE. Did Mr. Hattan appear in other matters of this same kind before you?

Mr. RICE. Yes.

Mr. REDWINE. Had his judgment in such matters ever been questioned?

Mr. RICE. Not to my knowledge.

Mr. REDWINE. You heard their testimony and the matter was closed. You gave your decision in the matter?

Mr. RICE. At the conclusion of the testimony, the case was closed and the transcript was prepared, and in view of the personal and violent charges leveled at me by the counsel for the contestee, I prepared the case and transmitted it to the Department with a covering memorandum in which I asked the Director of the Bureau of Land Management to issue the original decision since I had been charged with being prejudiced and highhanded.

Mr. REDWINE. However, he sent it back to you?

Mr. RICE. He returned the record to me with instructions to go ahead and render a decision in the case.

Mr. REDWINE. According to what your judgement was?

Mr. RICE. Exactly.

Mr. REDWINE. With no direction as to what that decision should be?

Mr. RICE. None whatever. I rendered a decision in which I found the charges brought by the Forest Service having been sustained by

the evidence and the company was allowed 30 days within which to apply for a new trial or to appeal, and the company appealed.

Mr. REDWINE. Now, Mr. Rice, you could have decided that, however, without hearing the Government evidence, could you not?

Mr. RICE. That is right.

Mr. REDWINE. On account of the behavior of counsel and his client?

Mr. RICE. According to the rules, if counsel does not appear at a hearing or does not appear and participate in hearings or refuses to do so, then the charges may be taken as confessed, but in order to make out a prima facie case as brought by the Forest Service, the Forest Service was permitted to put its evidence in.

Mr. REDWINE. In that decision, you found, based upon the testimony of witnesses Leavengood, Hattan, and Sanborn, that these 15 claims were not sufficiently mineralized to meet the tests of the mining laws for issuance of patent.

In the five claims on which the Forest Service alleged that there had not been sufficient patent expenses, what did you find there?

Mr. RICE. I found that the evidence submitted by the Forest Service substantiated that charge as to the lack of patent expenditures on the five mining claims protested.

Mr. REDWINE. Now, Mr. Rice, when a petitioner for a patent appears and wants to get a patent, how does he show that patent expenses have been met?

Mr. RICE. In his application he describes the minerals alleged to have been discovered and it is supported by a statement as to the improvements that have been made on the claims for patent purposes. That is later supplemented by the field notes of a mineral surveyor who is employed by the mineral applicant to make the mineral survey for the lands. That mineral surveyor not only surveys the lands but in his field notes he also recites conflicts, if any, with other mining claims, and computes the errors and sets forth the improvements on the claims.

Mr. REDWINE. Now, Mr. Rice, where it comes in as in some of these pleadings and one thing and another in this, and also in the decision of the Solicitor that the cadastral engineer's certificate sets forth so and so, will you tell the committee what the cadastral engineer's certificate means?

Mr. RICE. Up to 1925, I believe, that certificate was issued by the Surveyor General. Since that time it has been issued by the Area Cadastral Engineer. That is based upon information furnished the cadastral engineer by the mineral surveyor's field notes which accompany the mineral surveyor's plat on which the mining claims are shown.

Mr. REDWINE. This mineral survey plat is a plat which is filed with the mineral survey application, a plat prepared by an engineer hired by the petitioner for a patent; is that correct?

Mr. RICE. And approved by the Area Cadastral Engineer.

Mr. REDWINE. The Area Cadastral Engineer never goes on the ground himself, does he?

Mr. RICE. Not to my knowledge.

Mr. REDWINE. Did the Forest Service offer testimony that sufficient work had not been done or did they just charge it?

Mr. RICE. They charged it and they offered evidence substantiating their charge.

Mr. REDWINE. Then the only way that that could have been controverted by the Al Sarena people would have been for them to have offered testimony, would it not?

Mr. RICE. Well, such testimony was not offered.

Mr. REDWINE. But that is the only way it could have been controverted, is it not, unless some irregular proceeding was taken subsequently?

Mr. RICE. Well, I am not aware of the extent of the supplemental investigations made, but at the time the case was before me, those charges were substantiated, in my judgment, clearly.

Mr. REDWINE. That is, the Forest Service charges?

Mr. RICE. That is right, by the testimony at that hearing.

Mr. REDWINE. Mr. Rice, later on this matter was passed on by your superior, was it not?

Mr. RICE. An appeal was taken from my decision to the Director of the Bureau of Land Management.

Mr. REDWINE. What happened to that?

Mr. RICE. The Director of Land Management rendered a decision in which he approved and affirmed the entire proceedings and the decision based thereon.

Mr. REDWINE. Then, after many, many months had rolled by, there was further action in the case?

Mr. RICE. They appealed to the Secretary of the Interior.

Mr. REDWINE. What happened there?

Mr. RICE. The Secretary of the Interior rendered a decision.

Mr. REDWINE. To what effect?

Mr. RICE. The Secretary rendered a decision——

Mr. REDWINE. Do not go into details but did it sustain your decision or overrule it?

Mr. RICE.—sustaining the Director and, in turn, the decision and proceedings had here.

Mr. REDWINE. What date was that, Mr. Rice?

Mr. RICE. The Secretary's decision?

Mr. REDWINE. Yes, sir.

Mr. RICE. There is a copy of the decision right there.

Mr. REDWINE. This does not sustain your decision, does it?

Mr. RICE. That decision there sustained the findings of the Director of the Bureau of Land Management which affirmed the proceedings and the decision rendered here in Portland but stated, in effect, that in view of the fact that there had been a misunderstanding and confusion on the part of counsel for the contestee, why, he had authorized a supplemental investigation to be made and that he was designating personnel from the Bureau of Mines and with representatives of the company to make that investigation and that, based upon that supplemental report ordered and authorized by the Secretary after the case reached the Department and concerning which neither the Director's Office nor my office knew anything about, based upon that supplemental showing, the Secretary rendered a decision in which he found that the record as supplemented, in the judgment of the Department, was sufficient evidence of the mineral character of the lands, mineral discovery, and that the required patent expenditures had been made. He therefore returned the record to the Director of the Bureau of Land Management for the issuance of the patent.

Mr. REDWINE. Mr. Chairman, we will suggest that you put this document in the record in a few minutes.

What was the date of that?

Mr. RICE. January 6, 1954.

Mr. REDWINE. Prior to that time, you say that without the Bureau of Land Management and Forest Service knowing anything about it, the Secretary ordered a supplementary investigation?

Mr. RICE. I could not state that because I am not aware of any communications had by the Department of Interior with other agencies, particularly with the Director or the Forest Service, none to my knowledge.

Mr. REDWINE. Mr. Rice, you say you have known Mr. Hattan and his work for a long time.

Mr. RICE. Yes, sir.

Mr. REDWINE. I am going to ask you to look on page 6 of the Secretary's decision of January 6, 1954, and tell this committee if you can as to this indented language quoting a report made in 1949 by Mineral Examiner Hattan, whether that has any bearing on the matter that was before you, and up for review by the Solicitor.

Representative HOFFMAN. May the excerpt be read so I know what it is?

Mr. REDWINE. Congressman, I believe I have an extra copy of it.

Mr. RICE. In this connection, I would like to make this statement: that this document here represents the judgment of the Department and it is supreme, as far as I am concerned as the subordinate official of the Department, and I do not feel——

Mr. REDWINE. I am not asking you to question it, Mr. Rice. I am asking you to tell me whether that was in the record that was before you, if that 1949 report of Examiner Hattan was in the record before you when the matter was being heard by you.

Representative HOFFMAN. Again, may I ask counsel, will you mark what you are reading from and asking him to look at?

Mr. REDWINE. Yes, sir.

Mr. RICE. That statement appearing on page 14 of the Solicitor's opinion states that "A report of the mineral examiner of the Department made in 1949 contained this statement"——

Do you want me to read the statement?

Mr. REDWINE. Yes, sir, read the statement.

Mr. RICE (reading):

The indications are that the central mass is all mineralized to some extent, and if the prospective parallel shear and mineralized zones should prove to be extensive in length and depth, the possibilities are good that the whole mass could be developed, mined and milled at a profit by low-cost large-scale mining methods. The topography is such that any 1 of 3 methods might be employed. I. e., glory holing, shrinkage system and open pit mining. \* \* \*

Mr. REDWINE. Was that report before you?

Mr. RICE. The report was before me but I did not consider that report.

Mr. REDWINE. Why?

Mr. RICE. Because it is not evidence. That statement is based upon a field examination which was made the basis for the charges brought, and as a result of the charges brought testimony was taken, and based upon Mr. Hattan's testimony together with that of others, I based my decision and not upon the field report because the field report——

**Mr. REDWINE.** If that field report had been offered by the Government as evidence before you, what would you have ruled?

**Mr. RICE.** That is was inadmissible. That is the confidential field report by a field examiner and it may be a proper basis for charges to be formulated concerning which testimony may be developed, but it is not, in my opinion, proper evidence for evaluation and consideration in connection with a decision rendered by me.

**Mr. REDWINE.** Mr. Rice, did you ever have any knowledge, official or otherwise, that the backdoor supplemental investigation was being made in the matter until such time as the order came through to go ahead and issue the patent?

**Representative HOFFMAN.** Now, Mr. Chairman, I object to that question, if I heard it right. Was not the word "backdoor" in there?

**Mr. REDWINE.** Yes, sir.

**Representative HOFFMAN.** Why, I have no objection to supplemental, but why an investigation made by Government officials should be characterized as a "backdoor investigation," I cannot understand.

**Senator SCOTT.** I might say at that point that we are having backdoor testimony taken there that I knew nothing about and I agreed with you that it was all right. If he wants to use the term "backdoor," it is all right with me.

**Representative HOFFMAN.** May I ask him to describe what he means by "backdoor" before the question is answered?

**Senator SCOTT.** Just call him up later. Let the examination proceed.

**Mr. REDWINE.** Read the question, please.

(Question read)

**Mr. RICE.** No, I am not familiar with any backdoor or any other similar term procedure involved in this case.

**Mr. REDWINE.** Let me ask you, did you have any knowledge, official or otherwise, Mr. Rice, that there was any kind of supplemental investigation going on, that some other agency of the Government had been called in to examine these mining claims?

**Mr. RICE.** I heard informally—incidentally, not officially but informally—that one of the reasons why the case had not been protested, why a decision had not as yet been rendered by the Department, was that the Department was exercising its discretionary authority, and developing what it considered such additional evidence as was required and proper for the Department to render a decision and that was the reason for the delay in rendering a decision.

**Mr. REDWINE.** Have you ever known of another case where another Government agency was called in to gather supplemental information in a mining claim contest involving two governmental agencies?

**Mr. RICE.** Well, it is my understanding that the Secretary of the Interior has authority.

**Mr. REDWINE.** We are not going into what his authority is but have you ever heard of another case like this one as it finally turned out?

**Mr. RICE.** Well, I am not aware of any case which I have ever handled that reached this point. However, there have been cases that have gone up on appeal from my decisions involving irrigation districts and reclamation projects and cases of that kind in which the Secretary of the Interior communicated with the Bureau of Reclamation and which was under the Department of the Interior for verification and for supplemental reports, and in going to the Bureau of Mines in this case, I see nothing irregular or improper in doing so.

Mr. REDWINE. I am not saying that it was improper. I was merely asking if, in your experience, you had ever known it to have happened before.

Mr. RICE. Not in a mineral case that I recall. I would like to make one statement, if I may.

Mr. REDWINE. Surely.

Mr. RICE. At the time of this hearing, owing to the more or less belligerent attitude in which counsel for the contestee proceeded in this case in the preliminary proceedings, in fairness to the Al Sarena Mines as represented by the McDonald brothers, I think it is only proper that I should make the statement that the McDonald brothers were most cooperative at all times and that I requested their counsel, in fact I urged their counsel to submit his evidence, which they apparently had come prepared to submit at this hearing, and that the company was prevented from doing so by reason of the unusual conduct on the part of their counsel.

Senator SCOTT. Do you have any questions, Mr. Coburn?

Mr. COBURN. Mr. Chairman, I have one question.

At any time was there any question raised about Mr. MacMahon's qualifications or standing as an attorney?

Mr. RICE. No, sir.

Mr. COBURN. That is all.

Mr. RICE. He entered his appearance as special counsel and under part 1 of the Federal Code of Regulations he may be accepted upon his representation for appearance.

Senator SCOTT. Mr. Lanigan, do you have any questions?

Mr. LANIGAN. No.

Senator SCOTT. Mr. Chudoff, do you have any questions?

Representative CHUDOFF. No questions.

Senator SCOTT. Congressman Hoffman?

Representative HOFFMAN. Thank you, Mr. Chairman, yes.

Do you know Ford McCormick?

Mr. RICE. I met Mr. Ford McCormick this morning for the first time.

Representative HOFFMAN. And Richard Appling?

Mr. RICE. I met Mr. Richard Appling last Wednesday for the first time.

Representative CHUDOFF. Mr. Hoffman, who is Mr. Appling and who is Mr. McCormick.

Representative HOFFMAN. They were the two gentlemen who took samples of the mining property.

Representative CHUDOFF. They took them for the Bureau of Mines. Are they Federal employees?

Representative HOFFMAN. Not so far as I know. I may be mistaken.

Senator NEURERGER. Is it improper for a member of the committee to ask who the persons named are so that we may have some identification in following the questions? I have never heard the names before and wondered who they were.

Representative CHUDOFF. Mr. Chairman, I would like to ask the witness who they are.

Representative HOFFMAN. I will tell you who they are if you will permit. So far as I know, they are the two gentlemen who had something to do with the taking of samples on this mining property.

Representative CHUDOFF. Are they Government employees, or independent engineers, or what are they?

Representative HOFFMAN. They are engineers, if I understood. He says he met them last week.

Representative CHUDOFF. If he knows who they are, he ought to tell us and save a lot of time.

Who were those three gentlemen? I do not remember their names.

Senator SCOTT. Mr. Rice, will you identify them?

Mr. RICE. Mr. Appling—

Representative HOFFMAN. Richard Appling.

Mr. RICE. My information was that Mr. Appling is an engineer with the United States Bureau of Mines located in Spokane, Wash.

Representative HOFFMAN. All I wish to ask is do you know his reputation for ability and integrity and I understand you just met him. The same applies to Ford McCormick. Is he a Government employee?

Mr. RICE. Not to my knowledge.

Representative HOFFMAN. You do not know who he is or what he does?

Mr. RICE. I was just introduced to Mr. McCormick. I do not know.

Representative HOFFMAN. When this matter came before you, the attorney for the mine, and I will refer to them hereafter as the McDonalds—is that right?

Mr. RICE. Sure.

Representative HOFFMAN. He walked out on you, did he not?

Mr. RICE. Yes.

Representative HOFFMAN. So all you had before you was one side of the case.

Mr. RICE. That is correct.

Representative HOFFMAN. And you decided it as you saw it.

Mr. RICE. That is correct.

Representative HOFFMAN. I do not know how you could have done otherwise. When was this application first made?

Mr. RICE. I believe that application was initiated before I came out to Portland, probably about 1948 when the application was originally filed.

Representative HOFFMAN. What work was done on the claims, if you know?

Mr. RICE. The only work done on the claims, so far as I know, is shown by the testimony of the witnesses.

Representative HOFFMAN. The Secretary had authority and discretion, did he not, to overrule the previous decisions, if he so desired?

Mr. RICE. Yes, sir.

Representative HOFFMAN. I have no further questions.

Mr. RICE. And it is not within my province to question the judgment of the Secretary or the wisdom of the action taken by the Secretary.

Representative HOFFMAN. Yes, and he had evidence additional to what you had?

Mr. RICE. That is right.

Representative HOFFMAN. For example, he had before him this report of Mr. Hattan, who was a Government employee, was he not?

Mr. RICE. Yes, sir; he was a Government employee.

Representative HOFFMAN. Well, now, you did not have this statement on page 14 from Mr. Hattan, who is a mineral examiner, did you?

**Mr. RICE.** That report was a matter of record, but it was not considered by me.

**Representative HOFFMAN.** That is what I mean. You could not consider it as evidence.

**Mr. RICE.** That is right.

**Representative HOFFMAN.** And the Secretary could?

**Mr. RICE.** Well——

**Representative HOFFMAN.** He did, anyway, did he not?

**Mr. RICE.** It is in his decision.

**Representative HOFFMAN.** This matter of the validity of those claims and the action of the Secretary has been hashed and relashed in this area since when?

**Mr. RICE.** Well, I am not familiar with just to what extent it has been hashed and relashed in the area.

**Representative HOFFMAN.** It was a subject of discussion in a political campaign a year ago, was it not?

**Mr. RICE.** Well, I am not concerned with the political angles of this question one way or the other.

**Representative HOFFMAN.** I know you are not.

**Mr. RICE.** No, sir.

**Representative HOFFMAN.** And you did not make any decision based on any political angles?

**Mr. RICE.** None whatever.

**Representative HOFFMAN.** What I am asking is whether this issue which is brought up today before this committee is an old one which has been subject of discussion in this area.

**Representative CHUDOFF.** Mr. Chairman, before Senator Neuberger questions the witness, can I ask one question?

**Senator SCOTT.** Yes.

**Representative CHUDOFF.** Mr. Hoffman said something about Mr. McDonald, counsel for the mining company.

**Mr. RICE.** Mr. MacMahon.

**Representative CHUDOFF.** He said something about somebody walking out.

**Mr. RICE.** That is, the special counsel, Mr. MacMahon, advised his clients who were represented by the McDonald brothers to withdraw from the case and not attend the proceedings, and they departed.

**Representative CHUDOFF.** In the middle of the hearing?

**Mr. RICE.** No, before the hearing.

**Representative CHUDOFF.** You mean when it appeared that you were making certain rulings that they did not like they got up and left? Is that what you mean?

**Mr. RICE.** They demanded the right to be heard on appeal before the Secretary on the adverse rulings against the motions and pursuant to an agreement that they allegedly had with the Solicitor, and since I had not been advised of the agreement that he stated that he had with the Solicitor, and it was contrary to the Federal Code of Regulations governing this matter issued by the Department, I refused to accept his recommendation, and at that time he became belligerent and stated that he would be bound by no agreement other than that which he had with the Solicitor, and he would not attend the hearings, interrogate the witnesses, or have anything to do with the proceedings.

Representative CHUDOFF. Subsequent thereto, were you advised by your superiors that such an agreement existed?

Mr. RICE. No, sir.

Representative CHUDOFF. Did you try to determine whether it existed?

Mr. RICE. I submitted the question to the Director of the Bureau of Land Management in which that representation was repeated to the Director. The Director of the Bureau of Land Management called upon the Solicitor of the Department for an explanation and the Director was informed that no such agreement had ever been had with the counsel for the contestee.

Representative CHUDOFF. As the result of your decision an appeal was taken to the Secretary, is that right?

Mr. RICE. No, to the Director.

Representative CHUDOFF. The Director of the Bureau of Land Management. Did the group come before the Director later on and try to be heard?

Mr. RICE. I do not know.

Representative CHUDOFF. You were not there?

Mr. RICE. That was in Washington, D. C.

Representative CHUDOFF. But the Director did affirm your decision?

Mr. RICE. He did.

Representative CHUDOFF. And it was only the Secretary who overruled the decision of the Director finally?

Mr. RICE. Upon the submission of the supplemental report.

Representative CHUDOFF. On the basis of after-discovered evidence or whatever you call it.

Mr. RICE. Based on a supplemental investigation ordered by the Secretary.

Representative CHUDOFF. So that as it were the supreme authority or the Supreme Court overruled all the lower authorities in this particular case?

Mr. RICE. He did not necessarily overrule. He approved the action taken locally in the proceedings and the decision rendered as well as that of the Director in the main and then ordered a supplemental investigation, and upon the basis of the supplemental investigation, he rendered his decision.

Representative CHUDOFF. I understand what you are telling me. As a result of the subsequent supplemental investigation, did he have a new hearing or was this just an investigation given to him on which he based his decision?

Mr. RICE. I am not aware of any new hearing on the proceeding other than set forth in the Secretary's decision.

Representative CHUDOFF. So we would have to get that from some other Bureau or from the Secretary himself.

Mr. RICE. That is right.

Representative CHUDOFF. Thank you.

Representative HOFFMAN. I have more questions, Senator.

Senator SCOTT. All right.

Representative HOFFMAN. When this case came before you, you did not have all of the evidence that was presented to the Secretary when it came before him, did you?

Mr. RICE. Oh, no.

Representative HOFFMAN. All right. When it came before you, did you have the 1949 and the 1950 supplemental assay reports?

Mr. RICE. What was that?

Representative HOFFMAN. The reports.

Mr. RICE. Those assay reports that were offered in evidence as exhibits at the trial by the Forest Service.

Representative HOFFMAN. But then those were not the 1949 and 1950 records, were they?

Mr. RICE. Now you are speaking about the field report, are you?

Representative HOFFMAN. I am speaking about the supplemental ones, yes.

Mr. RICE. About the field examiner's report in 1949?

Representative HOFFMAN. Yes.

Mr. RICE. That was not evaluated or considered by me.

Representative HOFFMAN. Does the comparative value have anything to do with whether or not the patent should be issued?

Mr. RICE. Comparative value of what?

Representative HOFFMAN. Of the timber and the ore. Well, that is all, Senator.

Mr. REDWINE. Mr. Rice, I think that we got a little bit confused here a while ago in an answer that you gave to Congressman Hoffman about the Hattan report of 1949 and the consideration apparently given it by the Secretary's Office. Does the record that was made in the hearing conducted by you show that this section of the Hattan report of 1949 that was quoted in the Secretary's decision had nothing to do with the fifteen claims in dispute, that that language applied to the eight claims that were not disputed by the Forest Service?

Mr. RICE. I did not consider it.

Mr. REDWINE. You did not consider that language?

Mr. RICE. I did not consider that language.

Mr. REDWINE. I will bring that out when Mr. Hattan testifies.

That is all I have.

Mr. COBURN. Senator Neuberger advised me that he had no questions, Senator Scott.

Senator SCOTT. The next witness.

#### TESTIMONY OF ELTON M. HATTAN, LAND AND MINERALS OFFICER, OREGON

(The witness was previously duly sworn.)

Representative HOFFMAN. Mr. Chairman, could Mr. Ellsworth make his statement now?

Senator SCOTT. Not at this time.

Representative HOFFMAN. You said he could make it today.

Senator SCOTT. Today will still be in order at 12 o'clock tonight.

Representative ELLSWORTH. Mr. Chairman, I am Congressman Ellsworth. I am going home tonight and have to drive 200 miles. I do not necessarily have to go now but I would like to make my summary statement after this next witness.

Senator SCOTT. I am 3,000 miles from home and would have liked to have gone home yesterday, but I did not get to go.

Representative HOFFMAN. You promised yesterday that he could put it in, but I would suggest that you give it to the press now and give it later.

Mr. REDWINE. State your name, please.

Mr. HATTAN. Elton M. Hattan.

Mr. REDWINE. What is your position and how long have you held it?

Mr. HATTAN. I am now Land and Minerals Officer under the State Supervisor for Oregon. I have been in that position since May 1954.

Mr. REDWINE. Prior to that time?

Mr. HATTAN. I was evaluation engineer under the area administrator under the regional administrator for the old region which included the States of Oregon, Washington, and Idaho. Prior to that time I was a field examiner examining mining claims for the Branch of Field Examinations out of San Francisco, Calif. Prior to that I was in Salt Lake City, with that area for about a year, commencing my work with the Interior Department in September of 1939.

Mr. REDWINE. What has been your experience other than in Government work in the mining field, please?

Mr. HATTAN. For about 10 years, between 1919 and July of 1932, I was actively employed by various mining companies throughout the Western States, in Mexico, and in Canada. My principal work in the mines was with the Calumet & Arizona Mining Co. at Bisbee, prior to consolidation with the Phelps-Dodge Corp., and with the 85 Mining Co. at Lordsburg, New Mex., and then I left there for a period and later returned to the Calumet & Arizona Mining Co. at Bisbee and was only there a short while when I went into Mexico, where I was for a matter of 2 years.

Thereafter, leaving Mexico, I went to the Coeur d'Alene District, where I was construction engineer on the construction of the Sullivan Mining Co.'s zinc plant at Kellogg.

Thereafter I went for a period of 6 months as an architect engineer in Canada to examine and make maps of and sample and assay samples from a small mine that was being developed with the idea of construction of a hundred-ton mill.

Mr. REDWINE. Mr. Hattan, I think that everyone here will probably grant that you are well qualified and have a lot of experience.

Mr. HATTAN. Thank you, sir.

Mr. REDWINE. You have done a great deal of work in sampling and surveying and assaying of gold, lead, and zinc, and such minerals, have you not?

Mr. HATTAN. I have. Sampling has been my pet hobby, especially with Phelps-Dodge Corp. at Morenci, where I was for some 3 years.

Mr. REDWINE. I think that is enough qualification, Mr. Chairman; do you?

Senator SCOTT. It satisfies me if it does the rest of the committee.

Mr. REDWINE. Mr. Hattan, you have heard the testimony of Mr. Rice in respect to the contest filed by the Forest Service on the group of Al Sarena mining claims. In your official capacity, you took a group of samples, three groups of samples, I believe, did you not?

Mr. HATTAN. I did.

Mr. REDWINE. Will you briefly tell the committee of how those samples were taken, to whom they were submitted, what the results were, and the times at which they were taken? Make it as brief as you can, Mr. Hattan.

Mr. HATTAN. My first visit to the property was based upon a request by the regional forester, dated December 15, 1948. After making ar-

rangements, I went on the property on May 20, 1949, and was there through May 24 of that same period. I was alone; that is, I was the only mineral examiner representing Government. Mr. Aultland, the caretaker on the property, accompanied me in taking these samples. Mr. Aultland pointed out the places of discovery.

Mr. REDWINE. He is an employee of the Al Sarena mines?

Mr. HATTAN. Yes, sir.

Mr. REDWINE. And he was with you at all times and pointed out the points of discovery?

Mr. HATTAN. He was. These samples, by the way, were all taken to Annes Engineering Co.

Mr. REDWINE. Will you spell that?

Mr. HATTAN. A-n-n-e-s Engineering Co. for assay. The assay certificate was dated May 31, 1949.

Mr. REDWINE. Do you have a copy of that assay certificate with you?

Mr. HATTAN. Yes, I do have a copy here.

Mr. REDWINE. Will you submit it for inclusion in the record if the chairman so desires?

Mr. HATTAN. Yes, you may have it.

Mr. REDWINE. Will you proceed?

Mr. HATTAN. Because of the low results which were secured from the analysis reported on the assay certificate——

Mr. REDWINE. May I look at the assay sheet, please?

Do you mean by low results just "trace, trace, trace"?

Mr. HATTAN. Yes, sir.

Mr. REDWINE. One exception shows value of 14 cents to the ton of silver, and only a trace of gold. What is a trace of gold in an assay report?

Mr. HATTAN. A trace of gold as given to me by the assayer who assayed this particular set of samples was that it would be less than 17 cents per ton of gold, and the silver would be less than 14 cents per ton. It figures out that way.

Mr. REDWINE. I notice on this report, however, that they show this particular company as showing a trace of gold as being under 21 cents and a trace of silver as being under 7 cents.

Mr. HATTAN. I had forgotten.

Mr. REDWINE. In the case of silver.

Mr. HATTAN. The assay certificate itself shows what he means by a trace. I had not looked at it.

Mr. REDWINE. May this go into the record, Mr. Chairman?

Senator SCOTT. It may be received in the record.

Certificate of Assay

Bureau of Land Management

May 31, 1949

Dear Sir: The sample received from you assays as follows:

May 31, 1949

Laboratory No.	DESCRIPTION	GOLD		SILVER		Per Cent Per Cand Per Cent	
		Oz/Ton	Value/Ton	Oz/Ton	Value/Ton	Per Cent	Per Cand
879	17	trace		trace			
1927	18	trace		trace			
1928	19	trace		trace			
1929	20	trace		trace			
1930	21	trace		trace			
1931	22	trace		trace			
1932	23	trace		trace			
1933	24	trace		11	12¢		
1934							

CHARGES: \$51.00

By C. F. Anderson

Mr. HATTAN. There are several assayers who have issued certificates which I have seen and the normal amount is less than 17 cents as a trace, because they did not weigh that amount unless they take a very large sample and they do not do that except under unordinary circumstances.

Mr. REDWIN. Will you go ahead, please?

Mr. HATTAN. Because of these low results I was a little perturbed about the assays and wondered whether I had made a mistake, whether the watchman who was at the mine may have pointed out the wrong places or possibly the assayer could be in error, and consequently I wrote to Mr. H. P. McDonald, who was agent for the Al Sarena Mines Co., Inc., and made arrangement for a reexamination on July 12, 1949, and I also requested the Forest Service to allow one of their mineral examiners to come to this place, and arrangements were made by them.

Mr. REDWINE. Who was that man?

Mr. HATTAN. Mr. W. C. Sanborn, from San Francisco, came to assist me in this second examination. Then both Charles and H. P. McDonald were present.

Mr. REDWINE. They belonged to the owner group of McDonalds?

Mr. HATTAN. Yes, sir, they were the agents for the applicant. They went along with us in making our second series of samples. That was the first series for Mr. Sanborn, but the second for me.

Mr. COBURN. You say they were the agents of the corporation. Were they not also officers of the company?

Mr. HATTAN. I believe they were, but they were representing the company so far as we were concerned. They pointed out the places where the discoveries were supposed to be and we took samples in every case at places pointed out.

Mr. REDWINE. Let me interrupt. Do you mean by that that they pointed out to you the spots where the samples should be taken?

Mr. HATTAN. Yes, sir, where the alleged discovery was situated.

Mr. REDWINE. Where the alleged discovery was situated?

Mr. HATTAN. Yes.

Mr. REDWINE. Go ahead.

Representative HOFFMAN. Just a moment; Mr. Chairman, I understand the witness had started to say that they also took some from other places that the McDonalds did not point out.

Mr. HATTAN. Yes, sir, places that looked favorable to us as engineers as comparing the ground pointed out to us as to other spots and in some cases the agents pointed out one, two, or possibly three possible places of mineralization.

Mr. REDWINE. Mr. Hattan, do you have your records so segregated you could give the committee an assay report on the samples that were taken responsive to the spots pointed out by the McDonalds and the ones that you took on your own?

Mr. HATTAN. No, I have not segregated.

Mr. REDWINE. They are not segregated?

Mr. HATTAN. My notes, I am sorry to say, do not show that.

Mr. REDWINE. Go ahead, please.

Mr. HATTAN. This second set of samples that were taken were given to Mr. Sanborn, who was returning part way to San Francisco. The samples, by the way, were at all times kept in the back of our car and we transferred them to his car in the warehouse at Medford. He took

them to Redding, I believe, it is, and I will leave it to Mr. Sanborn to say what happened from there on.

**Mr. REDWINE.** Mr. Hattan, for the benefit of the committee, just what does a sample consist of? How heavy is it?

**Mr. HATTAN.** It depends upon how big a sample we originally take. In these cases, Mr. Sanborn's samples and mine were, I would judge, from 4 to 8 pounds. They were taken mostly on a canvas. We cut a channel or we picked a channel where the ground was soft enough or we used a hammer and maul where it was hard. All of the sample was put on the canvas. The larger pieces were broken and we rolled the sample and quartered it or halved it so that we had a representative sample not too heavy or cumbersome to transport or ship.

During the course of our examination of the property, we were supplied with three sample maps by the company agents and on these maps were shown the workings as they existed. These maps I do not remember by whom they were prepared. They had a large number of assay results reported in gold and silver with sample numbers before each of these results.

Based upon these maps, Mr. Sanborn and I, after consultation, decided that if we could substantiate these samples by having them checked with the assayer and if they were about the same or reasonable, we could assume that the sampling was correct insofar as we could use it for the underground development, the spots that we could not get into, the drifts we could not get into and also some of the outside places.

We found in storage the old pulps that had been stored after the sampling had been done. They were properly numbered and we could recognize where they were taken from from the assay maps.

We picked from these pulps at random three such samples and Mr. Sanborn took them with him to San Francisco along with the other samples.

After Mr. Sanborn reached San Francisco, I took two of the pulps that Annes Engineering Co. had left. In fact, they had all of the pulps and I had recovered them after they had assayed them. I kept those pulps for several years, but I sent two of those pulps by mail to Mr. Sanborn, and he took them along with the others to have them checked for accuracy by Abbot A. Hanks.

**Mr. REDWINE.** You were making a check?

**Mr. HATTAN.** That is right.

**Mr. REDWINE.** That is the usual procedure in sampling and assay work, is it not?

**Mr. HATTAN.** Very often.

**Mr. REDWINE.** Particularly where there is a dispute?

**Mr. HATTAN.** Because of all of these low samples that I got in those original analyses, I mean the results that were reported were so low that I wanted to check the Annes Engineering Co. I did not ask them whether I could or not. They might not have been happy, but I did check them and the results will show that they checked.

**Mr. COBURN.** Mr. Chairman, could I interrupt for just 1 or 2 questions?

**Senator SCOTT.** Yes.

**Mr. COBURN.** Now, the information furnished you on this map by the company showed some assay reports on the map?

Mr. HATTAN. Yes, they did. There were a large number.

Mr. COBURN. By what company were those made?

Mr. HATTAN. They were made by the company that was in operation and while the investigators that were there—I think Mr. Ford McCormick was one engineer who made a report and we saw his report.

Mr. REDWINE. These were people that were representing the company?

Mr. HATTAN. Yes, sir, they had worked for the company during the time of operation.

Mr. COBURN. You said Mr. D. Ford McCormick?

Mr. HATTAN. Yes.

Mr. COBURN. What was the assay?

Mr. HATTAN. They ran the operation.

Mr. COBURN. As I understand, your first company was A-n-n-e-s Engineering Co.

Mr. HATTAN. Yes.

Mr. COBURN. The second was Abbot A. Hanks?

Mr. HATTAN. Yes.

Mr. COBURN. The results of the Annes Co. checked out with Abbot A. Hanks?

Mr. HATTAN. I would say the Abbot A. Hanks checked the Annes Engineering because they came later.

Mr. REDWINE. We would like to have for insertion in the record the Hanks report.

Mr. HATTAN. May I say here that I did not know these were going in the record. I have put in red pencil here on the third sheet, which is my own writing, the total amount, I believe, of, for instance, number 23 here, that was our assay, what Abbot A. Hanks found, and after that, I put in red the total value of the sample as recorded on the map. I can take those off, if you wish.

Mr. REDWINE. Let me look at those. [Handed.]

In the interest of time, we will just take it as it is.

(The information referred to follows:)

## REPORT OF ASSAY

ABBOT A. HANKS, INC.,  
ASSAYERS, CHEMISTS, ENGINEERS,  
San Francisco, August 10, 1949.

Sample of: Ore.

Deposited by: United States Department of Interior, Bureau of Land Management.

Laboratory No.	Mark	Gold, per ton of 2,000 pounds		Silver, per ton of 2,000 pounds		Percentages

NOTE.—Italic denotes handwritten additions.

ABBOT A. HANKS, INC.,  
Original signed by JNO. L. MARTEL.

Mr. REDWINE. Then what happened, Mr. Hattan?

Mr. HATTAN. When these results came back?

Mr. REDWINE. Were they disappointing, too, from the standpoint of the applicant?

Mr. HATTAN. Yes, they were disappointing from his standpoint, although they were not disclosed to the applicant that I know of.

Mr. REDWINE. Well, were the results sufficiently good to have justified you making your opinion of the mineralization of the ground?

Mr. HATTAN. It justified my opinion of the ground. It confirmed it more fully and on this I prepared my report.

Mr. REDWINE. That was the report of 1949?

Mr. HATTAN. 1949, which was concurred in by Mr. Sanborn.

Mr. REDWINE. At this point, I want to break up the continuity of what you are saying.

You heard the testimony a few minutes ago in respect of January 6, 1954, in which your 1949 report was quoted. That is the paragraph that you have, Congressman Hoffman.

Mr. HATTAN. Yes, sir.

Mr. REDWINE. Does that section of your 1949 report have anything to do whatsoever with the 15 claims under dispute or does that apply to the 8 claims that were not disputed? Do you have a map that would show the area of this zone that is referred to?

Mr. HATTAN. Transmitted with my report, copy of which went to the Director, was attached a map which showed outlined in blue the central mass as I have described.

Mr. REDWINE. Well, is that central mass located on the 8 claims that were not contested or is that central mass located on the 15 claims that were contested?

Mr. HATTAN. The central mass, as outlined, takes in portions of six claims which were contested.

Mr. REDWINE. But does not touch the other nine?

Mr. HATTAN. I don't believe it does. My report of 1949 states that the central mass as outlined in blue in dotted lines—may I say something on that?

Mr. REDWINE. Certainly.

Mr. HATTAN. Under the agreement of 1915, the Forest Service, the regional forester called upon the Bureau of Land Management for examinations of mineral applications within national forests. That report, prepared by a mineral examiner of the Bureau Land Management is directed to the regional forester. As a courtesy, a copy of that report is always transmitted to the Director so that he may be advised of what we have told the regional forester concerning the mineral application. Based upon that report, the regional forester brings the charges. He either accepts the recommendation, if there is one by the mineral examiner, or he rejects it and makes his own charges. That is all.

Mr. REDWINE. Let us get on to the third examination of the property.

Mr. HATTAN. Because of the fact that the agents for the applicant submitted to me some assay certificates of samples taken after our visit to the property in July 1950, and prior, I wished to confirm, or so that I would be in a better position to accept or reject these samples for the assay results of the samples in the contest which was scheduled in September of 1950, I returned to the property on September 5 and 6, 1950, and with Mr. Aultland, who was the caretaker, went back to

several of the places from which he stated those samples submitted by the applicant's agents had been taken. This was merely to confirm or see how new samples would check out with the results that were submitted on the assay certificate.

During this visit, I took seven samples. These samples were rather large but I took them to the Bureau of Mines at Albany for analysis.

At the day of the hearing—I think that was September 13, 1950—upon request, the Bureau of Mines telephoned the results and I submitted the assay certificate or copy thereof for the record.

**Mr. REDWINE.** What did that certificate show in respect to the other two samplings that you had done?

**Mr. HATTAN.** Well, it confirmed the samplings taken by Mr. Sanborn and I and my previous samples. It did not coincide with the assay results that were sent to me on the assay certificate sent by the agents.

**Mr. REDWINE.** Mr. Hattan, on the basis of your knowledge, experience, 3 visits on the property, taking of the samples and the consideration that you have given to those 3 sets of assay reports on samples that you personally took, is it your judgment that no valid discovery has been made on those 15 claims?

**Mr. HATTAN.** Based entirely on my examination of the property, the information that I had up to my last visit—I have never been back to the property—I do not know what has taken place since my last visit, but based on the things that I saw and found, I would say there was not at that time a discovery, that a discovery had not been demonstrated within the limits of any of the 15 claims.

**Mr. REDWINE.** You say "at that time." Has anything happened since that time that you have personal knowledge of that would cause you to change your opinion?

**Mr. HATTAN.** No.

**Mr. REDWINE.** What is the usual procedure where there is any question about the validity or the integrity of a mineral sample? Do you send the whole thing to the assayer or what do you do with it? What is the procedure?

**Mr. HATTAN.** If there is a question as to the integrity of the assayer.

**Mr. REDWINE.** Not of the assayer but if there is any question about those do you quarter it and keep a part of it? What do you do, send the whole sample to the assayer? What is the usual procedure? If you do not want to answer it, that is all right.

**Mr. HATTAN.** There are 2 or 3 different ways. I didn't know whether you wanted to listen to any dissertation on it. I worked as a sampler in the Kingman Mining Co. in Kingman, Ariz., for a matter of 2 months. There I was in the sampling department.

**Representative HOFFMAN.** Mr. Chairman, I have no objection to showing what the usual course is in the department, but I do object to his going into the method some other plant employs.

**Mr. REDWINE.** I think, Mr. Chairman, we will drop the matter here.

**Representative HOFFMAN.** I have no objection to counsel stating the practice.

**Mr. REDWINE.** Is not the usual procedure, if there is any argument or dispute about it, that you have one in reserve, an umpire sample?

**Representative HOFFMAN.** I object to the word "umpire."

**Mr. REDWINE.** That is the word that is used by the craft, Congressman.

Mr. HATTAN. If I figured there was going to be a contest, a difficulty, I would take one sample and send it to my assayer for assay. I would give the other sample to the other person. He could send it to his assayer if he wanted to. The third sample I think would be kept under lock and key.

Mr. REDWINE. What is that third sample usually called?

Mr. HATTAN. It is called the umpire sample in smelter parlance.

Representative HOFFMAN. May I interrupt? I understand that is true as to the first ones, but on the subsequent ones, they would not have an umpire sample.

Mr. HATTAN. Mr. Hoffman, I am afraid I do not understand.

Mr. REDWINE. Mr. Coburn?

Mr. COBURN. How long has the Annes Engineering Co. been in business?

Mr. HATTAN. They were in Grants Pass there for about 3 or 4 years before I took the samples there and I went through their assay office. I talked to Mr. Anderson, the assayer. I was interested in the kind of equipment they had and the work that they were doing.

Mr. COBURN. What kind of reputation do they enjoy?

Mr. HATTAN. They had a good reputation.

Mr. COBURN. The same question on Abbot A Hanks.

Mr. HATTAN. Abbot A. Hanks is taken without question.

Mr. COBURN. What about the Bureau of Mines, or is that an unfair question?

Mr. HATTAN. It might be. I accepted their assay results without any question.

Mr. COBURN. That is all I have.

Representative HOFFMAN. Would you ask him about the other consultants, when they took samples?

Mr. COBURN. I do not want to ask him that.

Senator SCOTT. I want to get all the truth and information we can but let us get on with the information. We will be here too long.

Are there any further questions? Mr. Chudoff?

Representative CHUDOFF. No questions.

Senator SCOTT. Mr. Hoffman, do you have anything further?

Representative HOFFMAN. I certainly do.

Do you know Ford McCormick?

Mr. HATTAN. Yes, sir.

Representative CHUDOFF. Mr. Hoffman, will you get him identified? I have been trying to find out since we started.

Representative HOFFMAN. You will find out if you let me alone. I do not know who he is. He is a gentleman who took samples from this property.

Representative CHUDOFF. Is he from Alabama?

Representative HOFFMAN. I do not know whether he is from Alabama or Podunk.

How long have you known him?

Mr. HATTAN. I do not know the gentleman personally.

Representative HOFFMAN. Do you know his reputation?

Mr. HATTAN. He is an excellent engineer, a registered professional engineer in the State of Oregon. He has his license to practice professional engineering, I believe it is in the mining degree.

The fact of it is that when I took my examination for professional engineer in the State of Oregon, I think Mr. McCormick was on the board.

Representative HOFFMAN. One of the examiners of the board which qualified you?

Mr. HATTAN. Way back in 1920.

Representative HOFFMAN. And his reputation for integrity is good?

Mr. HATTAN. It certainly is.

Representative HOFFMAN. Do you know Richard Appling?

Mr. HATTAN. I do not.

Senator SCOTT. Are there any further questions?

Representative CHUDOFF. I would like to know, Mr. Chairman—

Representative HOFFMAN. Mr. Chairman, I had not finished.

Senator SCOTT. Let us get going.

Representative HOFFMAN. You need not worry about me "getting going."

Representative CHUDOFF. Would you please identify Mr. McCormick a little more? What did he do in this thing? I am trying to find out what are his connections with this case.

Representative HOFFMAN. All I can tell you is that he is one of the gentlemen who took further samples.

Representative CHUDOFF. He is the one that found out these ores were worth a lot of money when the other fellows said they were not.

Representative HOFFMAN. I understand that he found when he took samples that this was a valid mining claim.

Representative CHUDOFF. In spite of the fact that the others found it was not?

Representative HOFFMAN. Appling was the same.

Representative CHUDOFF. I do not know.

Representative HOFFMAN. Are Mr. Appling and Mr. McCormick going to testify? I think they should because they had something to do with the decision finally made.

Representative CHUDOFF. We will probably call them in Washington.

Representative HOFFMAN. I am waiting, Senator. I will go ahead?

Senator SCOTT. Yes.

Representative HOFFMAN. You took samples first on May 20 to 24, in 1949?

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. And the result was so low in mineral content that you took some more?

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. You were suspicious of the samples, that is, of the results that were obtained from them?

Mr. HATTAN. I was suspicious at the time, yes, sir.

Representative HOFFMAN. You did ask the Forest Service to send a man to help you?

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. That was out of abundant precaution, I assume.

Mr. HATTAN. It was.

Representative HOFFMAN. Now, how much in value had been taken from these mines at the time you took the first samples, the value in ore?

Mr. HATTAN. It was reported that a value of from \$30,000 to \$40,000 in gold had been extracted since the claims were located in 1897, up until that time from approximately four of the claims which were clear-listed for patent.

Representative HOFFMAN. Do you know how much money the people had spent in attempting to develop the mines? I realize this only goes to their good faith.

Representative CHUDOFF. That does not put gold in the ore. If they spent a million dollars they could not put gold in ores if there was not any ore.

Mr. HATTAN. I do not know how much they spent.

Representative HOFFMAN. My purpose is to show good faith.

Representative CHUDOFF. I understand they sold about \$300,000 worth of stock and they had to spend some.

Representative HOFFMAN. You say six of the contested claims were covered by that report you made that was quoted here?

Mr. HATTAN. Beg pardon? I believe I misunderstood your question.

Representative HOFFMAN. On page 32 they read a paragraph to you about a report that you made. I understood you to say that six contested claims were covered in that report.

Mr. HATTAN. Portions of six of the contested claims.

Representative HOFFMAN. All right. What is your complaint about the finding of the Secretary?

Mr. HATTAN. I haven't any complaint about the finding of the Secretary.

Representative HOFFMAN. Were you working for Forestry or BLM?

Mr. HATTAN. Bureau of Land Management.

Representative HOFFMAN. But Forestry contested the claim.

Mr. HATTAN. Yes, sir, Forestry contested the claim.

Representative HOFFMAN. And your position coincides with what they claimed?

Mr. HATTAN. Yes, sir, I recommended in this case.

Representative HOFFMAN. Now, you knew about this mine and you knew about the people. You were familiar with them before they applied, when they filed their application, were you not?

Mr. HATTAN. I never knew a thing about them.

Representative HOFFMAN. When did you first become acquainted with them?

Mr. HATTAN. When I first went on the property in May.

Representative HOFFMAN. Of 1949?

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. What was your duty as a registered mineral surveyor?

Mr. HATTAN. I am not a registered mineral surveyor. I as a registered professional engineer in the State of Oregon. I was at that time commonly called mineral examiner, but my title was evaluation engineer, mining.

Representative HOFFMAN. What was your duty then?

Mr. HATTAN. My duty was to examine in cases of mineral application for patent to examine the claims and see that the mining laws had been complied with under the rules and regulations laid down by the Secretary.

**Representative HOFFMAN.** Were you familiar with the work of the mineral surveyor?

**Mr. HATTAN.** I usually make some check of his work, yes, sir.

**Representative HOFFMAN.** Just what does he do?

**Mr. HATTAN.** The mineral surveyor?

**Representative HOFFMAN.** In connection with these claims. I am not concerned with any others.

**Mr. HATTAN.** In connection with these claims he surveyed the boundaries of the claims put in corners at the corner of each of the claims. He measured and surveyed the tunnels. He measured the cuts, shafts, and all of the improvements, at least he was supposed to have, all of the improvements within the limits of each of the claims, and he set a value on those improvements.

**Representative HOFFMAN.** Did you agree with his estimates of the value?

**Mr. HATTAN.** On five of the claims I did not.

**Representative HOFFMAN.** On the others you did. We are talking about the 15, now, are we not?

**Mr. HATTAN.** Yes, sir. On the other claims that were located in 1897, the work on these claims along tunnels, the raises and the interconnecting drifts and crosscuts, all except, I believe, a crosscut known as the south crosscut and the north drift were constructed as nearly as I could tell prior to the location of the mining claims located subsequent to 1932. I say this because there is a map which appears in USGS Bulletin 893 and that was spoken of here today, there is a map in there which shows the work which was measured and listed by two men who were on the property during 1930 and 1931.

**Representative HOFFMAN.** Did you have an engineer, too, in connection with this? Was there some other engineer?

**Mr. HATTAN.** These people whom I spoke of were for the United States Geological Survey. They make examinations and reports on property and it was along with and in cooperation with the organization, Department of Mines I believe it was at that time, now Department of Geology and Mineral Industries.

**Representative HOFFMAN.** And your report contradicted the report they made?

**Mr. HATTAN.** No, sir.

**Representative HOFFMAN.** Are you sure?

**Mr. HATTAN.** I am sure of that.

**Representative HOFFMAN.** How did you become involved in the first place as a mineral examiner on these claims?

**Mr. HATTAN.** Because the Forest Service requested that the Bureau of Land Management supply a mineral examiner to examine and report on these claims.

**Representative HOFFMAN.** Who in BLM sent you for the Forestry?

**Mr. HATTAN.** The regional administrator at that time. They didn't send me over. The Forest Service makes request in writing.

**Representative HOFFMAN.** That is all right. You are the one who went over, then, from BLM to Forestry and made the contest?

**Mr. HATTAN.** I made the examination of the claims and based upon what I found, the certificate proceedings were recommended to the Forest Service.

**Representative HOFFMAN.** And that decision was made on March 18, 1949, after public hearings?

Mr. HATTAN. That was when my report, I believe, was made.

Representative HOFFMAN. Request for the hearing?

Mr. HATTAN. I do not know what happened on March 18. I have no record here of March 18, 1949. I believe Mr. Rice stated that.

Representative HOFFMAN. Do you know who made the request for your office to have the field examination made on these claims?

Mr. HATTAN. I happened to be field examiner and mineral examiner and worked out of the office at that time. My superior directed me to work in my schedule the requests of the Forest Service.

Representative HOFFMAN. All right. The request came in a letter dated April 14, 1949, from Leonard Netzorg, did it not, who was then regional counsel and acting administrator for BLM and that letter stated that the Forestry Service made the request for you to be signed over?

Mr. HATTAN. The letter of request was directed to Mr. W. H. Horning, regional administrator, and was dated December 15, 1948.

Representative HOFFMAN. That is the letter that was signed by you, was it not, the one that was dated December 15, 1948?

Mr. HATTAN. No, sir.

Representative HOFFMAN. You did not sign that?

Mr. HATTAN. December 15, 1948, was signed by Mr. K. Wolf, of the Forest Service. He signed for Frank B. Folsom, assistant regional forester.

Representative HOFFMAN. Have you seen a copy of a letter in the file dated April 14, 1949, addressed to McDonald?

Mr. HATTAN. Yes, sir, I have a copy right here.

Representative HOFFMAN. What did that letter request?

Mr. HATTAN. That was signed by Leonard B. Netzorg, acting regional administrator, addressed to Mr. McDonald.

Representative HOFFMAN. That is the one I was asking about before you referred to this last letter.

Mr. HATTAN. I am sorry. Do you wish me to read it?

Representative HOFFMAN. No. If anybody wants it, it is all right with me. All I want to know is if you had the request come in.

When you took these first samples they aroused your suspicion because of the low mineral values shown, then you took the second lot and that confirmed your first opinion that it was not a valid mining claim, did it not?

Mr. HATTAN. The 15, yes, sir.

Representative HOFFMAN. All I am talking about is the 15. Then you took the third one?

Mr. HATTAN. Yes, sir, I went back to confirm some assay results found on an assay certificate which had been submitted to me by Mr. McDonald.

Representative HOFFMAN. Did anybody request that you take the third ones?

Mr. HATTAN. No, sir, I went back so that I would be in a position to testify at the hearing.

Representative HOFFMAN. At these hearings?

Mr. HATTAN. No, sir, at the hearing September 13, 1950.

Representative HOFFMAN. And you had learned that someone else had taken samples, the report of which did not agree with yours?

Mr. HATTAN. That is correct.

Representative HOFFMAN. So in effect you were going back to confirm your previous judgment?

Mr. HATTAN. That is right, sir.

Representative HOFFMAN. And that you did, to your satisfaction anyway?

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. Do you know the men who took the others, who they were and when they took them?

Mr. HATTAN. You mean those samples that I went back to check?

Representative HOFFMAN. Yes.

Mr. HATTAN. No, I do not know who took them. I think perhaps one or both Messrs. McDonald or Aultland. I do not know.

Representative HOFFMAN. Will you give me an outline of just how the samples are handled when they are taken, usually, that is?

Mr. HATTAN. These samples and most of them, as I stated before, were taken by a pick in a channel if the ground was soft enough. If it was too hard, we had a 4-pound hammer and maul in which we chiseled out the rock in a channel about 2½ inches wide and from a foot to 3 or 4 feet long.

Representative HOFFMAN. I do not care so much about your taking them. I wanted to know the procedure after they come into your possession.

Mr. HATTAN. Those which I took first in May, I took personally after I had put them in the sack and marked them.

Representative HOFFMAN. No one was with you at that time?

Mr. HATTAN. I took them personally to the assay office.

Representative HOFFMAN. No one was with you except the caretaker at that time?

Mr. HATTAN. No, sir. That is right.

Representative HOFFMAN. And you delivered them personally?

Mr. HATTAN. I delivered them personally to Annes Engineering Co. in Grants Pass, Oreg.

Representative HOFFMAN. And the next one?

Mr. HATTAN. The next group of samples, Mr. Sanborn and I were Government representatives, we together took the samples. We kept them in our possession at all times and, as I have said before—

Representative HOFFMAN. Before you delivered them to the assayer?

Mr. HATTAN. I did not deliver them. Mr. Sanborn can testify as to what he did with them.

Representative HOFFMAN. You did not deliver those yourself?

Mr. HATTAN. No, sir.

Representative HOFFMAN. And you do not know what date they got to the assayer?

Mr. HATTAN. No, sir. I only received back the assay certificate.

Representative HOFFMAN. Do you know of your own knowledge that those samples were in the possession of Mr. Sanborn continuously until they reached the assayer?

Mr. HATTAN. The last time I saw them I helped Mr. Sanborn put them in the back of his car.

Representative HOFFMAN. Well, there was a period of some 30 days lapse between the time he put them in his car and the time the assayer got them, was there?

Mr. HATTAN. I do not know whether it was 30 days.

Representative HOFFMAN. How long a period, in your judgment, was there before you learned that they went to the assayer? Give us the dates?

Mr. HATTAN. The assayer reported on August 10, 1949. Mr. Sanborn and I parted company on, I believe it was, the 15th of July, but I can verify it.

Representative HOFFMAN. That is near enough.

Mr. HATTAN. On the 15th of July. It was late at night when we got back.

Representative HOFFMAN. And they got to the assayer on the 10th of August.

Mr. HATTAN. That is when the assayer reported.

Representative HOFFMAN. That is when he reported?

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. Now, in the event that someone fraudulently gets title to a mine or gets a patent issued on a mining claim, what remedy has the Federal Government?

Mr. HATTAN. I believe upon the proper showing if it is in the national forest, it can be cancelled.

Representative HOFFMAN. By whom?

Mr. HATTAN. I think it is the Secretary, but I am not legally minded on that.

Representative HOFFMAN. And, of course, if there is fraud, they can go to the United States district attorney.

Mr. HATTAN. I believe they can, sir.

Representative HOFFMAN. And they have available the FBI to make investigations.

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. What arrangement, if any, was made for the mining people to submit that on samples and reports?

Mr. HATTAN. Upon the submission.

Representative HOFFMAN. Did you not suggest an arrangement that in the interest of fairness they take their own samples and have their own assay?

Mr. HATTAN. I was charged with the investigation of this particular application. I told the agents for the company that if they wished to they could submit assays of samples to me.

Representative HOFFMAN. That was because you wanted to be fair about it?

Mr. HATTAN. So as to further substantiate their claim. The last group of samples came in after my report had been filed, sent over to the Forest Service. I went over their assays and there was some mixup in the description of where they were taken. I wrote back and got a further reply, but I still could not verify where all of them had been taken.

Representative HOFFMAN. Well, part had been taken in August and part in September.

Mr. HATTAN. I am speaking, sir, now of the samples that were taken by the applicant's agents and I understood those are the one you asked me about.

Representative HOFFMAN. All right.

Mr. HATTAN. I had already recommended that a hearing be held and it is the right of the contestee in such hearings to present this evidence at a hearing about any samples they may have taken after

I had last been on the property or any other samples that they desired to submit.

Representative HOFFMAN. Well, in a letter dated January 4, 1950, you acknowledged receipt, did you not, of the reports?

Mr. HATTAN. Yes, sir.

Representative HOFFMAN. One report was on a sample taken in August and 1 in September and 1 in December.

Mr. HATTAN. Are you referring now to a composite assay certificate?

Representative HOFFMAN. Yes, these reports. You acknowledged one in August, but they never got the others, as I understand it.

Mr. HATTAN. No. Those were for my own investigation of these claims. I make my own investigation of my own samples and take the word of other people if I can, if I think that I should. In this case I felt that there should be a further substantiation of the samples, and the assays that were submitted to me, because I had gone back, I had taken samples at the same places which were indicated on these assay certificates, and the results that I had were nil.

Representative HOFFMAN. And the one taken by the McDonald outfit showed something?

Mr. HATTAN. They did.

Representative HOFFMAN. By whom were those assays made?

Mr. HATTAN. They were made by—this particular one was A. W. Williams Inspection Co., countersigned by, I believe, G. F. Bailey. Maybe I can't read it right.

Representative HOFFMAN. Did you know that Congressman Boykin had asked that that firm make an assay?

Mr. HATTAN. No, sir.

Representative HOFFMAN. That is a reputable firm?

Mr. HATTAN. I do not know.

Representative HOFFMAN. Do you not know anything about them?

Mr. HATTAN. No, sir.

Representative HOFFMAN. You never heard of them until this thing came up?

Mr. HATTAN. I never heard of them before this thing came up.

Representative HOFFMAN. You did not know they had offices in other cities?

Mr. HATTAN. No, sir.

Senator SCOTT. Where is that firm located?

Mr. HATTAN. Alabama, I believe, is the address on this certificate.

Representative HOFFMAN. It is in Congressman Boykin's district, I think.

Mr. HATTAN. Mobile, Ala.

Representative CHUDOFF. Had this firm ever made any other assays, to your knowledge, for the claims up in Oregon?

Mr. HATTAN. Not of any other claims that I ever ran across, no.

Representative CHUDOFF. Other than Al Sarena, you do not know of them; is that right?

Mr. HATTAN. I do not know of them, no.

Representative CHUDOFF. Have they ever made any for the State of Washington, to your knowledge?

Mr. HATTAN. Not that I know of.

Representative CHUDOFF. Or Idaho?

Mr. HATTAN. I don't know, no.

Representative CHUDOFF. They would be absolute strangers to this part of the country, then?

Mr. HATTAN. Yes.

Representative HOFFMAN. They had an office in Eugene, did they not?

Mr. HATTAN. A. W. Williams?

Representative HOFFMAN. Yes.

Mr. HATTAN. I do not know. There was no assay office there that I know of.

Representative HOFFMAN. Mr. Chairman, I have quite a long matter here. I can not very well finish this evening. I wondered if Congressman Ellsworth could be permitted to make his statement. It is about time to adjourn or aren't you going to adjourn at 5?

Representative CHUDOFF. We find that the building is going to be closed tomorrow and they would have to open it specially for us. We are going to go tonight until we finish.

Representative HOFFMAN. If you are going to finish tonight, I will go ahead, unless you want to let Congressman Ellsworth in so he may go home.

Senator SCOTT. I would like to go home myself.

Representative HOFFMAN. You do not have a chance to go home.

Senator SCOTT. I would have had a chance if it had not been for this. Proceed with your questioning.

Representative HOFFMAN. I have some other questions. Perhaps I could shorten them after these other witnesses come on the stand.

Senator SCOTT. I think it would answer a lot of your questions if you would let these other witnesses be called and let us hear from them.

Representative HOFFMAN. I would just as soon suspend temporarily.

Mr. REDWINE. I want to ask another question, if I may.

Senator SCOTT. Yes.

Mr. REDWINE. Mr. Hattan, when you examined the property in 1949, was there any mining going on?

Mr. HATTAN. No, sir.

Mr. REDWINE. On any of the claims?

Mr. HATTAN. No, sir.

Mr. REDWINE. When you examined it the next time, was there?

Mr. HATTAN. No, sir.

Mr. REDWINE. And the third time?

Mr. HATTAN. No, sir.

Mr. REDWINE. Have you been back since?

Mr. HATTAN. No, sir.

Mr. REDWINE. Have you heard of any mining up there since your last visit?

Mr. HATTAN. I haven't.

Mr. REDWINE. Have you heard whether there is any timber cutting going on up there?

Mr. HATTAN. I have heard there was but I haven't been there.

Mr. REDWINE. That is all I have.

Senator SCOTT. Senator Neuberger?

Senator NEUBERGER. I have just one question.

Mr. Hattan, was there anything unusual, abnormal, or extraordinary about the way in which you entered this case at the request of your superiors?

Mr. HATTAN. No, sir.

Senator NEUBERGER. That was the usual routine that you would follow in your regular employment by the Bureau of Land Management?

Mr. HATTAN. It is, sir.

Senator NEUBERGER. That is all I have, Mr. Chairman, except to say that the very frank and forthright way in which Mr. Hattan has answered many difficult questions confirms again my high opinion of the career people who serve us in our various Federal agencies connected with natural resources.

Mr. HATTAN. Thank you, sir.

Senator SCOTT. The next witness.

Mr. REDWINE. Mr. Leavengood.

**TESTIMONY OF G. ROBERT LEAVENGOOD, DISTRICT RANGER,  
MOUNT HOOD NATIONAL FOREST, ESTACADA, OREG.**

(The witness was previously duly sworn.)

Mr. REDWINE. State your name, please.

Mr. LEAVENGOOD. Robert Leavengood.

Mr. REDWINE. And your position?

Mr. LEAVENGOOD. I am district ranger on the Mount Hood National Forest, Estacada, Oreg.

Mr. REDWINE. You were a witness at the contest hearing before Mr. Rice on the Al Sarena claims, were you not?

Mr. LEAVENGOOD. Yes, sir; in September of 1950.

Mr. REDWINE. You accompanied Mr. Hattan on one of his visits to the property?

Mr. LEAVENGOOD. I have never accompanied Mr. Hattan to this property.

Mr. REDWINE. Excuse me. You are with the Forest Service?

Mr. LEAVENGOOD. Yes, sir.

Mr. REDWINE. Tell us something about the timber on that property up there, Mr. Leavengood.

Mr. LEAVENGOOD. I spent a very short time in examination of the timber on the contested claims. I recall it was approximately three days in early September of 1950. There was a scattered stand of old growth, principally Douglas-fir, running approximately 25,000 board feet per acre. From 10 to 15 percent of the old growth timber is in sugar pine.

There was quite a thick understory of both Douglas-fir and some sugar pine which came in as a result of a fire approximately 50, 55 years ago.

Mr. REDWINE. There is a total of about 25,000 feet per acre you say?

Mr. LEAVENGOOD. About 25,000 feet to the acre was my estimate of the net merchantable stand.

Mr. REDWINE. That is leaving a stand there for seeding purposes, and so forth, too?

Mr. LEAVENGOOD. Well, as I recall, that was the total net merchantable stand of the old growth timber.

Mr. REDWINE. What percentage of it is sugar pine?

Mr. LEAVENGOOD. Well, as I recall, it ran about 10 to 15 percent sugar pine.

Mr. REDWINE. And the rest of it was principally Douglas-fir?

Mr. LEAVENGOOD. The remainder was just about all Douglas-fir.

Mr. REDWINE. What is the annual growth of that timber up there?

Mr. LEAVENGOOD. Well, I made a very short investigation of the growth, I made a few instrument borings on the young stand and, as I recall, the estimate was around 250 board feet per acre per year on this young stand. The overmature timber was just about—I think the mortality would just about stand still, so to speak.

Mr. REDWINE. And it was 1950 that you made this survey, was it not?

Mr. LEAVENGOOD. Yes.

Mr. REDWINE. So since then there has been a net increment estimated of some 2,500 board feet per acre, has there?

Mr. LEAVENGOOD. This estimate you would actually have to have a growth study to get to the bottom of it, but it ran about 250 board feet per acre per year.

Mr. REDWINE. It would be about a thousand or twelve hundred, then.

Would the timber bring the premium price?

Mr. LEAVENGOOD. Well, in southern Oregon, the sugar pine is considered the most valuable.

Mr. REDWINE. What, if you can recall, was the average price being received for sugar pine in 1950?

Mr. LEAVENGOOD. Oh, I would almost need to consult the district records. I think at that time it was bid up in the neighborhood of \$25 a thousand, average. Shortly after that, we had some terrific bids of up to \$80, but I think they would average around \$25.

Mr. REDWINE. That was in 1950?

Mr. LEAVENGOOD. Yes.

Mr. REDWINE. What is the status in respect to price today?

Mr. LEAVENGOOD. I have not been in southern Oregon for about 4 years and I would suggest that you check with some of the fellows that live there now.

Mr. REDWINE. At that time what was the average price of Douglas-fir?

Mr. LEAVENGOOD. There again, if you would check the district records, you could get it very specifically, and it would only be a recollection. In 1950 it would be my recollection that Douglas-fir was bringing in the neighborhood of \$7, somewhere in there. It depended on the road development that was necessary, of course.

Mr. REDWINE. That is all I have.

Mr. COBURN. Mr. Leavengood, you were the district forester down there in this area?

Mr. LEAVENGOOD. Presently I am the district ranger on Mount Hood. At the time of this examination, I was a timber management assistant on the district involved in these contested claims.

Mr. COBURN. You say you estimated at that time that in 1950 it ran about 25,000 board feet to the acre in Douglas-fir?

Mr. LEAVENGOOD. The net merchantable stand was about 25,000.

Mr. COBURN. And there are 20 acres on each of these claims, is that correct?

Mr. REDWINE. About 20.6, the records show.

Mr. COBURN. And there are 15 claims in dispute. That would come to 300 acres in all. You have not testified as to the value, have you?

Mr. LEAVENGOOD. No, as I recall at the time of the other hearing, I believe they asked a question regarding our cutting methods that we might use on these contested claims if we were to cut, and I believe under Forest Service practice in this particular area, about 75 percent of the merchantable timber would be removed and the value of that timber was around \$77,000 at that time.

Mr. COBURN. \$77,000 at that time?

Mr. LEAVENGOOD. Yes.

Mr. COBURN. Mr. Leavengood, do you think you can get \$30 a thousand for Douglas-fir today?

Mr. LEAVENGOOD. Well, I would only be speaking on the Mount Hood Forest. Our bid prices have been averaging somewhat above that recently.

Mr. COBURN. You could say that \$30 is a reasonable price to put on Douglas-fir, could you, under present market conditions?

Mr. LEAVENGOOD. Our appraised prices have been running a little less than \$30.

Mr. COBURN. I am talking about fair market value. I do not want to get too technical. I am referring to what can you get today for Douglas-fir. Can you get \$30?

Mr. LEAVENGOOD. Are you asking the question for the Mount Hood area or for southern Oregon?

Mr. COBURN. We can confine it to the Mount Hood area.

Mr. LEAVENGOOD. I would say you would get in excess of \$30 at the present time.

Mr. COBURN. But you cannot testify as to what they would get down in the Medford district?

Mr. LEAVENGOOD. Well, I wouldn't be qualified.

Mr. COBURN. Do you think that Douglas-fir could bring \$30 down there?

Mr. LEAVENGOOD. Well, wouldn't it be better to check with some of the boys that are working right in that area? They could tell you more specifically.

Mr. COBURN. I understand from counsel that there will be a witness from that area but you will agree that \$30 is a pretty fair price, that is, a very reasonable price on the Mount Hood area?

Mr. LEAVENGOOD. I would say our appraised prices have been running less than that on the average sale. However, the bid price currently is somewhat more.

Mr. COBURN. Somewhat more than \$28?

Mr. LEAVENGOOD. Yes, sir.

Mr. COBURN. That is all.

Senator SCOTT. Senator, do you have anything?

Senator NEUBERGER. I have no questions of Mr. Leavengood, Mr. Chairman.

Senator SCOTT. Mr. Lanigan?

Mr. LANIGAN. You were talking about the merchantable timber. Did I understand correctly that you said there is an undergrowth of about 50-year-old timber coming up, on that land?

Mr. LEAVENGOOD. Yes, sir, there was in 1950 when I examined the area. It was somewhat a two-story stand. The old growth was the

upper story and this younger growth about 50 years old coming up quite densely.

Mr. LANIGAN. When would that be matured and ready for cutting?

Mr. LEAVENGOD. Oh, I would imagine that at that growth rate, I imagine it would be perhaps 100 years.

Mr. LANIGAN. You mean 100 years total?

Mr. LEAVENGOD. One hundred years from now it would be in the mature stage.

Mr. LANIGAN. It would be what?

Mr. LEAVENGOD. Mature.

Mr. LANIGAN. Does it have any value at the present time?

Mr. LEAVENGOD. The value at the present time is its potential for the future.

Mr. LANIGAN. Could you estimate the acreage value of the undergrowth if somebody were to sell it to, say, a tree farm or company operating a tree farm?

Mr. LEAVENGOD. Well, it perhaps would take a little calculation.

Mr. LANIGAN. Could you just figure it out?

Mr. LEAVENGOD. I probably could but it would take a little while probably.

Mr. LANIGAN. Would it be substantial?

Mr. LEAVENGOD. There would be a fair value to it. It was a very nice stand as I recall. The average growth rings were about nine rings to the inch which is fair growth for that country.

Mr. LANIGAN. I just wanted to ask, Mr. Redwine, would you be interested in getting that?

Mr. REDWINE. Yes.

Mr. LANIGAN. Would you submit your estimate of the present value of the undergrowth?

Mr. LEAVENGOD. If it meets with your approval, I could check with the fellows now there and come up with a figure for you.

Mr. REDWINE. We wish you would, please.

When you were on the property, were any mining operations going on?

Mr. LEAVENGOD. There were none, to my knowledge.

Mr. REDWINE. That is all.

Representative HOFFMAN. Pardon me, Senator. I have some questions.

When were you on the property?

Mr. LEAVENGOD. You mean the last time?

Representative HOFFMAN. Were you on there in October of 1954 or around about that time?

Mr. LEAVENGOD. No, sir.

Senator SCOTT. Just hold your answer. I am going to ask Senator Neuberger to take over.

Record should show Senator Neuberger taking over

Mr. LEAVENGOD. I was transferred from that country in June of 1952 so I haven't been down in that area since then.

Representative HOFFMAN. In October of 1954, there were extensive mining developments which substantiated the company's claim that it has a sincere interest in mining were there not?

Mr. LEAVENGOD. Sir, I haven't been down on the ground since, well, it would be back in 1951.

Representative HOFFMAN. Would it not be ridiculous to describe the timber involved, and I quote, as "one of the finest stands of Douglas-fir in the Northwest?"

Mr. LEAVENGOOD. Would you repeat that again?

Representative HOFFMAN. I say, would it not be ridiculous to describe the timber on those claims as "one of the finest stands of fir in the Northwest?"

Mr. LEAVENGOOD. I think your question is a little misleading. As I recall, in the September hearing—

Representative HOFFMAN. I am not talking about those at all.

Mr. LEAVENGOOD. If you will permit me?

Representative HOFFMAN. I asked a simple question. If you do not want to answer it, all right. I did not ask about any other hearings.

Representative CHUDOFF. What has that got to do with the question?

Representative HOFFMAN. What has that to do with it? Well, the whole case, as I understand, is that so far as this witness is concerned, that under the guise of a mining claim, they got timber. Is that it, Mr. Coburn?

Mr. COBURN. I am not on the witness stand.

Mr. LEAVENGOOD. If you repeat your question, I will be glad to answer to the best of my ability.

Representative HOFFMAN. I say, would it not be ridiculous to describe the timber on these claims as one of the finest stands of Douglas-fir in the Northwest?

Mr. LEAVENGOOD. I couldn't agree to that. I can only give you a picture of the timber as I saw it back in 1950. At that time it was a very good average for the Elk Creek drainage.

Representative HOFFMAN. "For the Elk Creek drainage" that does not cover the whole Northwest.

That is all.

Senator NEUBERGER (presiding). When were you first assigned at Union Creek?

Mr. LEAVENGOOD. I came to Union Creek in the fall of 1947.

Senator NEUBERGER. When you visited the Al Sarena property was there any mining taking place there then when you first visited?

Mr. LEAVENGOOD. No, sir, not to my knowledge.

Senator NEUBERGER. There was none taking place to your knowledge?

Mr. LEAVENGOOD. There was a caretaker there that spent most of his time during the summer months, this Fred Aultland, I believe his name was.

Senator NEUBERGER. There was no commercial mining taking place there?

Mr. LEAVENGOOD. Not to my knowledge at that time.

Mr. REDWINE. I have no further questions.

Senator NEUBERGER. Thank you, Mr. Leavengood, for your help and cooperation.

Representative ELLSWORTH. Mr. Chairman, I wonder if the Senator from Oregon would allow the Congressman from Oregon to make a statement at this time?

Senator NEUBERGER. I have no objection. I would be happy to have you do so, Congressman Ellsworth.

Representative CHUDOFF. Congressman, you should have made that statement when I asked you to before we started in.

Congressman ELLSWORTH. It is just as good now.

Senator NEUBERGER. I would like to say that we are happy to have you here. I think that you represent, if I am not mistaken, the district in which there is more commercial lumbering and timber activity than any other congressional district in the United States. I think that is correct.

Representative ELLSWORTH. I believe that is a correct statement.

Senator NEUBERGER. We are very happy to have you here.

#### **STATEMENT OF HON. HARRIS ELLSWORTH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OREGON**

Representative ELLSWORTH. Mr. Chairman and members of the subcommittees, as you know, I have attended as an observer all of the hearing sessions you have held in western Oregon. I am the member of Congress representing the Medford, Roseburg and Eugene areas where hearings were held. I have a feeling of personal gratitude that you gentlemen have expended the time and energy necessary to make the trip out here to hold public hearings regarding the many problems which are faced by the largest part of our economy, the logging and wood products industry.

Since the raw material upon which our greatest payroll industry is based is more than 50 percent owned by the Federal Government, the administration of this raw material supply is a matter of great concern to the Federal agencies and is of utmost importance to our State.

As you have discovered, and which is clearly set out in the voluminous record you have made, the Federal agencies and the industry are agreed that there are problems common to all which seem at this time almost without solution.

You have heard it stated many times that the manufacturing capacity of the area far exceeds the availability of timber. This obviously creates the question as to which manufacturer will receive enough logs and which will do without or operate on short supply.

Contributing to the problem of short supply is the inadequacy of the timber access road system in several areas. Contributing also to the short supply problem is the fact that the available cut on Federal Government lands is deemed to be based upon outdated inventory figures which are considered too low. If and when a modern inventory is computed, it is anticipated the allowable cut, hence the available timber for processing, will be substantially increased.

You have heard also that certain harvesting restrictions known as marketing area boundaries were established several years ago in the O & C area by Bureau of Land Management. Witnesses have appeared before you to insist that marketing area restrictions be eliminated. Others have insisted they be left in force.

The authority for creating similar marketing area protection in national forest areas was given the Forest Service by Congress in 1944. You have heard representatives of some communities insist that such marketing areas or sustained yield units were essential to their communities. You have heard other representatives declare such units were inadvisable.

Obviously, all of these problems are serious and most of them are highly controversial. All of them are subject to Federal action, either by Congress or administrative agencies. I am certain that the comprehensive record you have written will be of material assistance, both to congressional committees concerned and also to the Bureau of Land Management and the Forest Service.

There is another industry, smaller in volume at this time in Oregon, but of great potential. I refer to the mining industry. Little mention of this potentially great Oregon industry has been made in these hearings before today, but for the reason that undeveloped minerals in vast quantities are below the surface in the same mountainous on which our timber grows, the people of Oregon have a vital concern that laws and regulations which are designed to protect and perpetuate the forest resources do not have the effect of harassing, discouraging, or eliminating the development of what ultimately must be our second greatest industry.

It has been clear to many of us for a long time that there is nothing incompatible between the complete and total protection of Federal forest values and the development of a vigorous mining industry.

Until recently, however, the development of mineral properties on Federal lands has been based on the old mining laws of 1872. These old laws take little or no account of the value of standing timber on the mountainous areas subject to mineral exploration and entry. Such timber did not, in fact, have dollar value worth mentioning until motortruck logging was developed and until quite recently the price of timber stumpage has become so high.

Meanwhile, down through the years most of the mineral and mining industry of our Nation has developed under the 1872 laws which permit the filing of mining claims and the patenting of them under very liberal terms which were designed to encourage exploration and development.

Since it became apparent that the value of timber on mineralized areas is considerable, I and other Members of Congress have been working to secure the passage of legislation to separate and preserve to the United States the timber on such lands, while permitting exploration, mining claim filing and patenting of mineral areas.

When the O & C lands were placed under the statute passed in 1937, no mention was made in that law of mineral rights, so that land was withheld from entry from 1937 until the bill I sponsored in the House of Representatives became law in 1948. That law gives the mining element everything he has under the 1872 mining laws except the timber on the claim.

In the first session of the 84th Congress, this Congress, I and others introduced bills identical in nature to provide substantially the same restrictions with respect to mining claims on lands in national forests and other Federal lands.

Thus, no Federal timber may now be acquired under the provisions of the mining laws but the rights of miners to discover and develop minerals in forested areas are not impaired.

We must remember, though, that until the 1948 law and the 1954 law were enacted, the laws of 1872 were in full force and effect. Bona fide mining claims filed under these laws may still be taken to patent under them. Thousands of such patents have been heretofore granted and unquestionably many other patents on such claims will be granted

in the future. The obligation of the Secretary of the Interior to grant such patents is clearly set out in the law. When a mining element has complied with the provisions of the laws, the Secretary of the Interior has no choice but to grant the patents. His failure to do so and to comply with the laws can be and has been remedied by the courts.

We know, however, that hundreds of attempts during the past several years have been made by people seeking to obtain valuable Federal timber under the mining laws when in fact they had made no mineral discovery. Such claims will be voided. The provisions of the laws are clear that bona fide mineral discoveries must be made and proven.

On the other hand, bona fide mining claims can, have been, and will continue to be patented. Nevertheless and for political purposes, the fact that Secretary McKay is bound to carry out the provisions of the laws and has issued certain mining claim patents in Oregon has been branded with the political smear word "give-away."

It would seem from the developments in the "Timber" hearings at this point that an important part of their purpose is to now dig out and warm over a completely discredited smear attack used in the political campaign against the administration and Republicans in Oregon last year.

The attempt then was to mislead people into believing that there was something bad or illegal or underhanded in the granting of final patent papers to a Southern Oregon mining company, the Al Sarena Mining Co. The implication was made that the company had thus obtained valuable timber lands and that Secretary McKay and the administration were guilty of giving away Federal property. No proof at all was ever offered. No facts were presented to back up that smear.

During the 1954 campaign the Eugene Register-Guard, aware of the unfairness of the attack, if it were indeed without foundation, sent a reporter and investigator to the mine to get the facts and to get the story. The result was a series of articles printed over some 2 weeks in that newspaper which told the whole Al Sarena story. The implication that there was any give-away or scandal in the case was completely exploded by those articles.

The Al Sarena property is a long established mine. It was once known in Jackson County, I believe, as the old "Buzzard Mine." The first of the claims in question was filed in 1897; the last in 1936—when timber was of little or no value in that area. I am told that some \$225,000 has been expended in mining development, and that during World War II Al Sarena Mine filled an emergency zinc quota for the Metals Reserve, employing as many as 50 men at that time.

Following the war the company began the long, tedious and expensive process of taking the claims to patent—or deed. I understand that they have plans for full scale development of the property in the future.

When the claimants had complied with all of the requirements of the mining laws to the satisfaction of the Department of the Interior, that department had no choice under the laws but to issue the patents.

It is regrettable, I think, that two great legislative committees of the United States Senate and House of Representatives now are proceeding to allow this hearing to be used in an effort to revive the previously discredited smear attempt. Very little advance notice of this revival of the attempted character assassination of Secretary

McKay was given either to Republican members of the committee or to Department of Interior top officials.

The department files on the Al Sarena matter are, of course available to this committee and have been at all times. No one has the slightest objection to a full and complete investigation. When it was rumored that this committee might bring up the matter here, the Al Sarena Mine principal owners came to Portland and I believe they are here in the room today. They feel that they, too, have been smeared by the unproven statements made on this subject. Earlier this year they went to Washington and to Senator Neuberger's office. They presented him with some statements of facts regarding the matter and at that time urged that a full and complete airing be made of the case before a Senate or congressional committee and their good names cleared. I'm sure that their feeling in this regard is exactly the same as of this minute. However, it is obvious, I think that what this committee is doing today does not clear any air but can serve only to further harass those people.

However, it is obvious, I think, that what this committee is doing today does not clear the air but can only serve to further harass these people and Secretary McKay.

It is obvious that no full and complete hearing on this case can be conducted in the remaining hours today. It is equally obvious that, had the committee intended to conduct such a full and fair hearing on this subject, it could have done so earlier and at length during this week in Oregon. As it stands however, some witnesses are being called, enough, no doubt, to establish the question that there is something questionable called the Al Sarena case, and then the committee will adjourn here and go on its way. The political purpose will have been served. I feel that this is unfair and I take this means of voicing a protest against it.

Representative HOFFMAN. You wrote some letters about this, did you not?

Representative ELLSWORTH. I have written several letters about it. That is true.

Representative HOFFMAN. Back a year or two ago?

Representative ELLSWORTH. Shortly after I first heard of the problem faced by these men who are constituents of mine in southern Oregon, I made inquiry of several reputable mining engineers as to whether or not in their judgment as licensed mining engineers there was a legitimate mining property.

Representative HOFFMAN. Did those letters state your position at that time?

Representative ELLSWORTH. My position then, now, and always is only this: that my constituents came to me along in, I think, 1951, or thereabouts, the first time, and said that they felt that they were being abused and mistreated by the great Federal Government, that they had not been able to get the proof of their claims, their mine, before the Department, so that they could have their patents processed, either denied or granted; and when I went over their problem and contacted some mining engineers and determined that it was, in fact, a legitimate mine not just a timber application, I requested the Secretary in a letter—

Representative HOFFMAN. To cut it short, and I know you want to, I have in my hand here photostats of some of these letters that you

wrote and also this investigation that was made, and I would like to offer that in evidence as a part of the record.

Representative CHUDOFF. That is the Eugene Register-Guard?

Representative HOFFMAN. Yes.

Representative CHUDOFF. It is a good paper when it is on your side, and a bad paper when it is against you.

Representative HOFFMAN. I am following the precedent you established today.

Representative CHUDOFF. It just does not make sense to me. I think the Eugene Register-Guard probably reports the news as it sees it.

Representative HOFFMAN. Don't you think we ought to have it, then? Do you object?

Representative CHUDOFF. I object? I can't object to something I never saw.

Representative HOFFMAN. You are interested in the facts.

Representative CHUDOFF. I am interested in the facts as developed by witnesses.

As soon as I read it, I will let you know whether I object to it.

Representative HOFFMAN. There are photostats of letters you wrote are there, Congressman?

Representative ELLSWORTH. Let me finish my statement bearing on that letter. When the McDonalds explained the situation to me, I urged them to take the matter to the courts because they were apparently aggrieved and had a case. They attempted that route, I think, and filed a suit in the Federal Court in 1951, but the delays and costs involved were tremendous and they again appealed to me to see if there could not be some better way of handling a matter like that. They had paid some 2 or 3 thousand dollars to the Secretary of Interior Chapman or his office previously for the patents. They had been issued some kind of papers indicating that they were to be given patents. They then appealed to the Department to grant the patents, and that is where they sat for about 3 years.

Under those conditions, I did what I have done many times before and will do every time that is necessary in the future. I requested the Department to take some action. I knew nothing about the merits of the case. I merely said to the Department, "These people have paid their money. They want it back and the claims denied or they want the patents to the claims."

I said, and you will find it in the letter, words to the effect that "I am not concerned myself one way or the other but those are the facts and something should be done"; and I learned later that something was done.

Representative CHUDOFF. Mr. Chairman, I have been looking over these papers and I feel that the Eugene (Oreg.) Register-Guard is a reputable newspaper and report the facts as they find them in accordance with their editorial policy, and I feel that certainly we introduced into the record some newspaper articles printed about Mr. Stewart and the mining claims there, and I personally have no objection to allowing this to go into the record.

Senator NEUBERGER. I think very definitely with you that the articles from the Eugene Register-Guard should be admitted for the record.

Representative ELLSWORTH. Thank you very much.

(The articles referred to follow:)

[Eugene (Oreg.) Register-Guard, October 9, 1954]

# REPRESENTATIVE ELLSWORTH RELEASES LETTER ON MINE CASE

(EDITOR'S NOTE.—Full text of the Ellsworth letter to Solicitor Clarence Davis, injected as a political issue in the present congressional campaign, will appear in the Sunday edition of the Eugene Register-Guard, along with the first of a series of articles on the Al Serena case attempting to get to the facts involved.)

(By Dan Wyant of the Register-Guard)

Congressman Harris Ellsworth (Republican, Oregon) Saturday made public to the Eugene Register-Guard a copy of a letter he wrote June 1, 1953, to Clarence Davis, Solicitor of the Department of the Interior in regard to the Al Serena Mines, Inc., in southern Oregon.

This is the letter which Columnist Drew Pearson referred to in a recent article labeling the award of patent on the mining claims a "giveaway" of valuable timberland.

It's the letter which Ellsworth's opponent for office, Charles Porter, of Eugene, challenged the Congressman to make public in a speech Porter made in Medford Wednesday night.

The lengthy (six pages, single-spaced) letter charged that data important to the case was missing from the files and that the record "as it stands is a sham and deceit to those who were called upon to pass judgment and is prejudicial to any fair decision as to the rights of the applicant."

The missing data were identified as a number of supplemental assay reports submitted by the mining company to Federal Mineral Examiner Elton M. Hattan, of Portland, as further proof of mineralization of the area.

Ellsworth quoted from a letter by Hattan sent to H. P. McDonald, Jr., secretary-treasurer of the mining company, acknowledging receipt of some of the assay reports—which he said had arrived too late to be incorporated into the report. "The assay results submitted by you in August and September were incorporated in the report," he added.

## REPORTS MISSING

These are the reports which Ellsworth said were entirely missing from the Interior Department files when a representative from his office searched the files.

"It is a matter of conjecture whether the decision at any point, regardless of collateral testimony of witnesses and experts, would have been accepted as sufficient in the absence of the applicant's evidence of mineralization, as against the Government's assay reports, all of which are in the file. If not in substance, at least in effect, the result accomplished was essentially in the nature of accepting the evidence of the contestant and suppressing the evidence of the contestee."

Ellsworth added that "such action, wilfully done, would constitute fraud and vitiate every action and decision predicated upon the incomplete file. At the very least, however, the lack of this evidence of mineralization in the file deprived the applicant of a substantial legal right to have his evidence considered; and any action taken in the absence of such data cannot result in any semblance of justice."

## ASKED DELAY

Ellsworth said expenditure in development of the property aggregates more than a quarter of a million dollars, including a mill and machinery, more than a mile of tunnel work and roads.

He then requested the Interior Department to "defer further action and decision on this case until the applicant's evidence of mineralization—whether it be the original or reports filed or whether it be certified copies or next best evidence—is secured."

He concluded: "As to the proposal, for carrying out this recommendation, I have no specific proposal, but trust that some plan may be developed which will not compound the injustice and the cost to the applicant in again producing for the record what he has already produced, and at the same time will enable the Government to fulfill its duty under the mineral law of the United States."

At that time both the Portland Bureau of Land Management and the BLM in Washington had ruled that 15 of the 23 claims did not have sufficient minerals

on them to justify granting a patent. The mining company had followed the usual legal proceedings in appealing the decision to the Department of Interior.

Subsequently, Solicitor Davis agreed to a new mineral examination of the area and a patent was finally issued for all the claims in February of this year.

---

[Eugene (Oreg.) Register-Guard, October 10, 1954]

### DREW PEARSON TOUCHED IT OFF; AL SERENA CLAIM "BLOOMS" AS ISSUE

**EDITOR'S NOTE.**—This is the first of a series of articles attempting to get at the facts of the controversial Al Serena Mining Co. case, currently a hot political issue. The first article deals with the basic charges made by both sides.)

(By Dan Wyant of the Register-Guard)

One of the hottest issues of the current Oregon political campaign was focused last week on a remote group of mining claims in the mountains of southern Oregon, about 45 miles north of Medford. This is the property of Al Serena Mining, Inc., an Oregon corporation with head offices in Mobile, Ala.

The issue was touched off by Columnist Drew Pearson, who charged in his nationally circulated report of September 29 that "one of the finest stands of Douglas-fir in the Northwest" was given away to the Al Serena Co. for \$5 an acre by Secretary of the Interior Douglas McKay.

Pearson further charged that Congressman Harris Ellsworth of Oregon exerted pressure upon Clarence Davis, Solicitor for the Department of the Interior, in a series of "long, pleading letters" on behalf of the mining company.

### MADE ADDITIONAL CHARGES

Pearson cited one letter in particular, written on June 1, 1953, which has been released by Ellsworth and which appears in its entirety in this edition of the Eugene Register-Guard. (See column 8.)

Pearson made further charges in support of the above basic counts. These will be discussed in later articles of this series.

Ellsworth's opponents quickly picked up these charges in their political campaign here in Oregon.

Senator Wayne Morse in a speech in Coos Bay on the night the column appeared said he would ask for a full scale Senate investigation of the charges.

### SUGGESTS LEGISLATION

"If half the facts printed in the column are true, then remedial legislation should be passed against those persons responsible," he said.

Ellsworth's opponent for office, Charles Porter, of Eugene, visited the mining claims Wednesday of last week and told a Medford audience that the Al Serena Mining Co. is "mining timber, not minerals." Porter declared that patenting of the Al Serena claims can only be called a scandal.

He added that the case was a perfect one in point for charges of giveaway against the present administration. This statement was carried in a report of Porter's speech in the Medford Mail-Tribune the following day.

### VIEWED THE MINE

Recognizing that the charges against McKay and Ellsworth were fast becoming a major issue in the campaign, the Register-Guard last Tuesday sent this reporter to the Medford area with instructions to get as complete a set of facts as possible on the Al Serena case, in an attempt to "sift fact from fiction."

This reporter viewed the mine installations and the logging operation now going on. He interviewed Jack Wood, supervisor of the Rogue River National Forest, in which the claims were patented, talked at length to Charles and H. P. McDonald Jr., sons of the president of the Al Serena Co., and went over many of the records in the case which were in their possession.

H. P. McDonald, Jr. is secretary-treasurer of Al Serena. His brother Charles, a professional engineer, is not a stockholder in the company, but he has devoted most of his time since his discharge from the United States Navy and after World War II to the company's long and bitter battle to secure patent on the claims.

## WELCOME A PROBE

The two brothers declared they would welcome an investigation such as Senator Morse suggested.

They declared that such an inquiry would show that granting of the patents was not a give away. Rather, they said, the record would show the case involved a "take away" attempt on the part of the Federal Government before the Republicans came into power.

They charged that the Government refused to grant the patent after the applicants had complied with all the necessary steps set forth by law and even after the Bureau of Land Management had transferred the property into the company's name on the Jackson County tax rolls.

## CLAIM RECORDS TAKEN

The McDonalds charged that when the Forest Service contested 15 of the 23 applications for a patent, certain records of the case favorable to the mining company were removed or withheld from the files (as mentioned by Ellsworth in his letter to Davis), so that subsequent decisions were bound to be unfavorable to the company.

Many of the mining company's charges were set forth in a 58-page complaint in conjunction with a suit filed against the United States and the then Secretary of Interior, Oscar Chapman, in Federal Court in Alabama. This was on July 28, 1951.

As to Porter's charge of "timber mining," the two brothers freely told this reporter that they were logging on the claims. They conducted the writer to the logging operation.

## LIKE A HOMESTEADER

They pointed out that when a patent is granted they have the same right to the timber as does a homesteader who gets title to public land.

They maintained themselves to be morally justified in selling off part of the timber to regain the extensive legal expenses involved in their fight to get a patent to the claims. The patent, they assert, should have been granted back in 1949, after their application was processed.

At the same time they assert that their primary purpose in seeking the patent to the claims was not to get the timber. They said the record shows that investments in the mining development are beyond the figure at which the forest service has estimated the timber to be worth.

## THE MAIN ISSUE

The McDonalds pointed out that when the company acquired the claims during the middle and late thirties far better timberland was available in a number of Oregon counties to anyone willing to take it off the tax rolls at \$2 an acre. The fee for mining claims is \$5 per acre.

This then is the chief political issue:

A charge on one side that valuable timberland was practically given to a private mining company with the help of Ellsworth and McKay.

A charge on the other side that the applicants' clear rights to the patents were delayed and denied until the new administration took over and proceeded to see that justice was done.

The first step in discussing those charges will be a look at the history of the claims and the Al Serena interest in them—a look that includes both the minerals and timber involved. This will be the subject of the next article in this series.

## LETTER SHOWN BY ELLSWORTH

(EDITOR'S NOTE.—Following is the full text of the letter dated June 1, 1953, which Congressman Harris Ellsworth wrote to Solicitor Clarence Davis on behalf of the Al Serena Mining Co. It is the letter which Ellsworth's opponent for office, Charles Porter, of Eugene, challenged him to make public.)

JUNE 1, 1953.

HON. CLARENCE DAVIS,  
*Solicitor, Department of Interior,*  
*Washington 25, D. C.*

DEAR MR. DAVIS: This letter is in further reference to the Al Serena Mines, Inc. case, Oregon No. 0665, now pending in your office on appeal and concerning which I have sent previous communications.

The issue at this point, and actually the basic issue from the beginning in this case, is the question of a valid mineral discovery such as would warrant reasonable prudent mining in developing and extracting the minerals from the deposit. The act of making application, under oath, for patent, creates the presumption that the applicant has made such discovery and stands ready to support such presumption. The Government with its obligation to protect the public domain, has the privilege of investigating and determining the validity of the application, the supporting evidence of mineralization, and compliance with the mineral laws of the United States. Obviously, a file for a patent application which is deemed to lack the usually legal sufficient evidence of mineralization creates a duty upon the officials of the Federal Government to take such steps as are necessary to verify the sworn documents of the applicant.

#### NOT USUAL

It is pertinent in the instant case, in connection with the proceedings heretofore had, that the application involved is not the usual common application for patent covering the area within which is located only a vein or pocket of enriched mineral. In contrast this application covers what is legally recognized in the courts and the Mineral Division of the Bureau of Land Management as a broad zone claim.

At the request of the regional cadastral engineer, the applicant made an extended survey showing the interior lines of claims which would follow within the exterior boundaries of the broad zone claims. This involved expense beyond that required for survey of a broad zone of contiguous locations and beyond the cost of the lands involved and necessitated nearly a year's delay in time. The record shows that the examiner then used these additional lines, obtained at additional expense to the applicant, to treat the application not as a broad zone claim application as filed, but as an application for 23 separate claims.

#### SPECIFIC ISSUE

In a broad zone claim the mineralization is widely dispersed rather than concentrated within a pocket or vein. The limited mass of mineralized rock has the required essentially genetic oneness, and has well defined boundaries closely separating it from the surrounding rock. Some areas within these well-defined boundaries will be substantially richer in mineralization than others, but the general mineral characteristics will persist throughout the broad zone mineralized area. Such a deposit is generally practical of development only as a large volume, low-grade mining operation.

This concept becomes important in this case in understanding the nature of the decisions and contest action, bringing it on to its present status. Turning to the specific issue of proof of mineralization in this case, the applicants, looking toward the development of the deposit for a mass production low-grade mining operation and toward patenting on the basis of a broad zone claim, prepared their initial papers toward this end.

Despite the fact that more than 2,000 assays were on record and pulps available to the Department for verification and comparison with assay records, the examiner in the regional office requested that the applicant perform additional sampling and submit assay reports for this report and record, made by impartial laboratories, and in his own specified form.

The file in this case is now devoid of this data showing a precise location of each sample taken and the assay reports showing mineralization, and which evidence is essential to any bona fide adjudication of the application on its merits. These reports are entirely missing.

A search of the file by the Bureau of Land Management personnel and a further search by a representative from my office failed to reveal any of the correspondence between the regional office and the applicant concerning the receipt of any such assay reports on the assay reports themselves which were submitted in further proof of mineralization.

## ASSAY RESULTS

To illustrate, I quote from a letter dated January 4, 1950, addressed to Mr. H. P. McDonald Jr. secretary-treasurer, Al Sarena Mines, Inc., 408 First National Bank Building, Mobile, Ala., and signed by Mr. Elton M. Hattan, mineral examiner for the Bureau of Land Management, Region I, Swan Island Station, Portland, 18, Ore. In the second paragraph of the letter, Mr. Hattan states: "My report was completed and submitted last month. The December 27 letter did not reach here in time to include any of the information which was enclosed with it. The assay results submitted by you in August and September were incorporated in the report."

The file does not disclose a single one of the assay reports, receipt of which is acknowledged by Mr. Hattan, and which he stated were incorporated in the report.

In the third paragraph of the same letter, Mr. Hattan stated: "The information supplied as to the exact place of taking the samples last reported by you is not clear. If you will supply more definite information, I shall be glad to incorporate such information in a supplementary report." This is followed by requests for very precise survey descriptive data which would enable a person to locate the precise point from which an assay sample had been cut. The information which was transmitted pursuant to this request is not in the file and contrary to Mr. Hattan's statement, there is no supplementary report in the file carrying such data.

None of the assay reports transmitted on 20 samples, receipt of such reports being acknowledged by Mr. Hattan under date of January 4, 1950, are in the file.

## DENIED DISCOVERY

Under date of December 19, 1949, Mr. Hattan transmitted his report to the regional forester, Mr. H. J. Andrews, and to the Interior Department in which he denied mineral discovery on 15 claims. This is apparently the report referred to in his letter mentioned above, and accompanying which none of the evidence furnished by the applicant as to mineralization was transmitted with the record, nor is there at present any supplemental report referred to in Mr. Hattan's letter.

Following this report, the docket sheet shows an entry "Adverse proceedings vacated." Thereafter the lands were placed upon the tax rolls of Jackson County, Ore., by the Bureau of Land Management regional office. Notice of Forest Service contest was thereafter received by the applicant and such action was protested by the applicant who gave notice that all evidence of bona-fides, samples, and assays were again refiled and resubmitted under oath for the record. The case went on to hearing on a basis of the incomplete file, lacking the applicant's evidence of mineralization. Counsel for the applicant demurred and when the demurrers were overruled, made a formal appeal to the Secretary of Interior, which appeal was granted. Within the time limits prescribed by regulation, counsel for the applicant gave notice of refiled all evidence of mineralization for the record for the third time. The record came on to the central office still devoid of this evidence and the decision of Regional Manager Rice, dated December 14, 1950, was transmitted to the Bureau of Land Management denying the validity of 15 claims within the board zone claim essentially repeating the substance of the previous decision by Mineral Examiner Hattan.

## SUBSTANTIAL COST

From this history it is abundantly clear that the applicant was willing and cooperative, and at a very substantial cost to itself endeavored to place in the record evidence of mineralization in support of his application. Although this evidence was acknowledged and received and the applicant was led to rely upon the statements of the agency that such evidence had been or would be placed in the file, these papers either never were placed in the file or were removed thereafter. In consequence, this case went to adjudication and went to hearing without the supporting data as to mineralization, submitted by the applicant.

It is a matter of conjecture whether the decision at any point, regardless of collateral testimony of witnesses and experts, would have been accepted as sufficient in the absence of the applicant's evidence of mineralization, as against the Government's assay reports, all of which are in the file. If not in substance, at

least in effect, the result accomplished was essentially in the nature of accepting the evidence of the contestant and suppressing the evidence of the contestee.

Such action, willfully done, would constitute fraud and vitiate every action and decision predicated upon the incomplete file. At the very least, however, the lack of this evidence of mineralization in the file deprived the applicant of a substantial legal right to have his evidence considered; and any action taken in the absence of such data cannot result in any semblance of justice. The action taken in denying patent on the 15 claims is claimed to be justified on the record as it stands; but the record as it stands is a sham and deceit to those who were called upon to pass judgment, and is prejudicial to any fair decision as to the rights of the applicant.

#### ASSURE EQUITY

A basic function and obligation of government is to administer justice. Wherein the Government or one of its agencies, in the course of such action, finds itself in the combined capacity of a party at interest, prosecutor, judge, and jury, the sovereign is called upon to exercise the highest degree of impartiality and for this reason the burden of proof is placed on the Government to assure fairness and equity to its citizens.

The Government should as quickly assert its powers to remedy any defect prejudicing its citizens as it would insist upon such remedy prejudicing the Government. Accordingly, it would appear to be only fair and reasonable in the instant case that this record at this time be made whole by the uncovering of the missing mineralization reports in particular, and other correspondence and papers pertinent to the action in this case which are likewise not present in the file, securing the originals if possible or certified copies where originals are not available, and the record reviewed and considered as it should have been at the time the mineralization showing of the applicant was complete. Had all proofs of mineralization been in the record, it is reasonable to assume the case would never have gone to contest. It is pertinent to note that the report of the mineral examiner who transmitted the Government assay reports but did not transmit report could reasonably reach any other conclusions than that expressed by those of the applicant, was of such a nature that no other individual studying the him. It is little wonder that the decision of the regional director of almost a year later, in December 1950, essentially reiterates the statements of the examining engineer in his earlier report.

#### UNITED STATES SURVEY

It is in point, I believe, to refer to the United States Geological Survey Bulletin No. 893, entitled "Metalliferous Mineral Deposits of the Cascade Range in Oregon." This report carries information on an examination made in the early 1930's and published in 1938, carrying exhibits (plates 3, 6, and 22) and reporting on part of the instant property then known as Buzzard's mine, on pages 131 and 132. Since that date, the development work on the broad zone claims involved in the application and including the Buzzard's mine operation has been more than doubled.

There are more than a mile of tunnel workings, numerous surface pits, shafts, cuts and winzes. Roads have been built involving substantial expenditures; geophysical examination has been made as further proof of the existence of the broad zone mineralization and which information the mineral examiner refused to permit in the record. At this time there is in place at this mine a 125-ton capacity mill and machinery for flotation, jigging, tabling and cyanidation. The expenditure in development of this property aggregates more than a quarter of a million dollars.

#### PROOF ABSENT

The foregoing facts are easily discernible. Certification of the United States mineral surveyor certifying as to the nature, extent, and value of the work performed on and character of the property, and the further certification by the United States cadastral engineer are present. The applicant's full proof of mineralization is absent. In view of this, it is my desire that this record be made complete. Accordingly, it is my request that the department defer further action and decision on this case until the applicant's evidence of mineralization—whether it be the original of reports filed or whether it be certified copies or next best evidence—is secured.

As to the procedure for carrying out this recommendation, I have no specific proposal, but trust that some plan may be developed which will not compound

the injustice and the cost to the applicant in again producing for the record what he has already produced, and at the same time will enable the Government to fulfill its duty under the mineral law of the United States.

Sincerely yours,

HARRIS ELLSWORTH.

[Eugene (Oreg.) Register-Guard, October 11, 1954]

# THE AL SERENA MINE CASE: DISPUTED CLAIMS OPENED FIRST BY APPLGATE CLAN

(EDITOR'S NOTE.—This is the second in a series of articles investigating the serious charge raised in the current political campaign that valuable national forest timberland was improperly turned over to the Al Serena Mining Co. by Secretary of the Interior Douglas McKay and Congressman Harris Ellsworth. This article deals with the history of the claims—and the minerals and timber that is upon them.)

(By Dan Wyant of the Register-Guard)

The history of the present Al Serena mining claims started back in the spring of 1897.

That's when Jackson County's surveyor, a member of the famous Applegate family, stopped to do a little prospecting while surveying in the forest. The stream in which he scooped up some gravel for his gold pan was either Elk Creek or one of its tiny tributaries, northeast of Trail. When he washed away the gravel and said he found there was gold in the pan.

Applegate worked up the stream to what appeared to be the mother lode—the deposit from which the gold had washed downstream. The first claim on the deposit was recorded at the Jackson County courthouse on May 11, 1897, by Mark Applegate. Peter Applegate and J. L. Grabbe filed two additional claims the next day. Within a month these men and their associates filed six more claims. A 10th claim was filed before the end of the year.

All these original claims later passed into the hands of the Pearl Mining Co. and were purchased by the Al Serena Mining Co. after it was incorporated in 1935.

H. P. MacDonald, of Mobile, Ala., the president and founder of the Al Serena Mining Co., first became interested in the possibilities of the area in the 1920's, according to his two sons.

The mining company was incorporated as an Oregon corporation with head offices in Mobile. In addition to the 10 original claims, the company also bought up 11 other claims from their individual owners during a period up to 1939. In 1939 the company staked out the last two claims—the Oro Rico and Oro Alto.

The details of how the claims were acquired by Al Serena are shown in the company's patent application of 1948. The date of each original claim is on file at the courthouse in Medford.

## IMPORTANT POINT

This is perhaps an important point in the politically contested issue of the Al Serena mines since the Portland Oregonian, in an editorial earlier this year, declared that the mining company filed the claims in 1948 (at a time when the timber had much more value because of higher market prices than in the middle and late 1930's when the claims actually were filed). The editorial called for the "closest possible scrutiny" of how the company acquired several hundred acres of "rich Oregon timberland."

The Al Serena claims are located chiefly in sec. 29, T. 31S, R. 2E, Willamette meridian. Small portions of the claims are in the adjoining secs. 19, 20, 21 and 28. This is about 18 miles northeast of the point where Highway 62 crosses Elk Creek, 3 miles beyond Trail. The claims are approximately 45 miles north of Medford.

## LOW-GRADE ORE

Officers of the company, in addition to the president, are C. C. Huxford, vice president, of Mobile; and H. P. MacDonald Jr., secretary-treasurer, who has lived on the mining property and at Trail for a number of years. His brother, Charles, has also taken an active part in the mining company although he says he is not a stockholder.

The two brothers said the company is primarily a family corporation with some close friends also holding an interest in it.

What about the mineral deposits?

Very briefly, the mining company contends the claims contain a vast quantity of chiefly low-grade ore—possibly some 190 million tons—which can be successfully developed for large-scale mining operations. The ores contain gold, silver and other minerals. Assay reports filed by the company in support of its patent application ranged from 70 cents to \$2.56 per ton. The two brothers said the Alaska-Juneau Mining Co. carried out a profitable operation under conditions more difficult than those present on the Al Serena claim handling ore which averaged some 86 cents a ton.

#### HOLDINGS DESCRIBED

A detailed description of the company's estimate of its holdings and its plans for developing them was included in the patent application. The mineral character of the ground was described in its technical terms as "one of a large, hydrothermally altered rhyolite intrusion containing essentially uniformly disseminated values throughout, showing enriched areas along the numerous faults, fissures, veins, and slips."

The company said "it is our intention to develop this entire low-grade ore body through a systematic program of geophysical and exploratory work with core drills and such additional tunnels, drifts, shafts, winzes and other openings as may be deemed appropriate and in accordance with further recommendations by eminent mining authorities."

The report explained some of the exploratory work which had been carried out prior to 1935 toward the development of the low-grade ore body and of conferences with various mining engineers including Milnor Roberts, dean of the College of Mines, University of Washington, which brought the company to the conclusion that the claims held at that time and the adjoining claims offered promise of "large scale gold mining operations, on a profitable basis."

The company then purchased the 10 claims held by the Pearl Mining Co. and "immediately thereafter we built a pilot mill and began carrying on exploratory operations aimed to give us some idea of the probable size and content of the ore body, and to learn the most profitable methods of extraction and treatment. By the summer of 1937 we had advanced to the point where we felt justified in calling in outside authorities to check our findings and to advise what further steps to take. Besides the laboratory tests made by Dean Roberts, we had similar tests made by two other specialists. While each expressed different views concerning the treatment phase of the ore, all three agreed that it was easy to treat and lent itself to several methods of recovery."

#### ENGINEER'S REPORT

One of the engineers called in by the company was D. Ford McCormick, of Medford, who for a number of years was in charge of the Sterling mine, near Jacksonville. He was identified in the patent application as "a member of the American Institute of Mining and Metallurgical Engineers, graduate of the University of Texas with C. E. degree, of the Colorado School of Mines with E. M. degree, and having long experience in important mining activities, including full charge and responsibility of the development of the Mata Hambre mine in Cuba."

McCormick's conclusion, in part: "Indications are excellent that a large tonnage of low-grade ore may exist within a mass which could be milled at a profit."

In the Drew Pearson column which touched off the controversy over the grant of patents to the company, McCormick was identified by Pearson as a man "who had worked for Al Serena and the MacDonald family ever since 1937."

#### "NOT ON PAYROLL"

The two brothers at Medford said the statement and its implication was unfair. "McCormick worked in the same capacity that a doctor works for you; he is a consulting engineer, available to anyone who hires him," said Charles MacDonald. "At no time was he on the Al Serena payroll."

The company during World War II put the experimental pilot plant into commercial operation to meet Government quotas for war-scarce lead and zinc. The two brothers said the work was purely experimental and that various processes of reducing the ore were tried out in the test plant. The mill has not been in operation since 1945, according to H. P. MacDonald, Jr. Since then, he said the

company's efforts and finances have been devoted to further exploration of mineral deposits and to the lengthy attempt to secure a patent to the land.

#### BOUGHT PATENT

The company applied for patent to its lode claims in 1948, under procedures set forth in the basic mining law of 1872. Essential requirements include a proper survey of the land, proof of possessory rights, proof of annual assessment work benefitting the claim to the amount of \$500, proof of mineral deposits "in a quantity sufficient to justify a reasonably prudent man in expending further time and effort" in developing a paying mine; and finally, payment of \$5 an acre to the Government for the claim. This, of course, is only a sketch of the basic procedure defined by law.

At the time the patent application was filed, the company listed improvements to the claims totaling \$79,915, which represented more than 1 mile of tunnels, other mine works, and roads.

#### OTHER COSTS

That figure did not include the cost of the pilot plant or other buildings on the claims. The two brothers last week declined to say what the pilot plant cost to build and equip. They said the company spent between \$50,000 and \$100,000 in purchasing the claims from previous owners. Legal and engineering expenses brought about by the contested patent were listed in excess of \$50,000, paid or accrued, in a suit filed by the company against the Government. Actual cost of the land from the Government, under the mining law, as \$5 an acre—a total of \$2,375.

Altogether, the brothers said the company's investment in the property is between \$150,000 and \$250,000.

Now what about the timber?

The Forest Service contested 15 of the company's 23 claims, asserting that the minerals were not as valuable as the timber upon the land.

#### TIMBER ESTIMATED

Jack Wood, supervisor of the Rogue River National Forest, said the "usual procedure" was followed when a Federal mineral examiner recommended that eight of the claims "go patent" and ruled against the others. He said a timber management assistant from his office made an "ocular" estimate of the value of timber on the other 15 claims, comparing it to forest areas in which the timber value had been established. No formal cruise of the timber was made.

Wood said the forester's estimate of the timber value on the contested claims was "roughly, \$100,000." (The figure fixed by the Forest Service, leaving a growing stock still standing, was \$77,000 according to a statement by Interior Department Solicitor Clarence Davis.)

If timber on the 8 uncontested claims is equal to that on those included in the above estimate (all the claims are approximately 20 acres each), the total estimated value would be about \$150,000, less growing stock.

At a reporter's questioning, Wood said the timber on the Al Serena claims probably ranged from 10,000 to 40,000 board-feet per acre and probably averaged 20,000 to 25,000 board-feet. Asked if he considers that "choice timberland," he replied that some blocks of the Rogue River National Forest go as high as 100,000 board-feet per acre.

Wood said he would not wish to make any other estimate on the value of the timber than that of the original report. He said he had no idea where Columnist Drew Pearson got his information to say that the timber should have brought \$170,000.

Wood said emphatically: "I want to make it clear that not a single iota of the information in Drew Pearson's column came from the Rogue River National Forest."

#### VISIT TO CLAIMS

The two McDonald brothers said they did not feel qualified to make any other estimate of the timber value than the \$77,000 set by the Forest Service in 1948.

To get as many facts as possible in the case, it seemed necessary for a reporter to actually visit the mining claims to view the logging work being carried out by the McDonalds and to see the mining developments there. That visit will be on the subject of the next article in this series.

[Eugene (Oreg.) Register-Guard, October 13, 1954]

## AL SERENA MINES TOUR BRINGS OUT NEW FACTS

(EDITOR'S NOTE.—This article, the third in a series, describes a reporter's visit to the controversial Al Serena Mining Co. claims in southern Oregon. The articles are attempting to get to the facts raised by the political charge that valuable timberland was given away at \$5 an acre by Interior Secretary Douglas McKay and Congressman Harris Ellsworth.)

By Dan Wyant of the Register-Guard

An on-the-spot tour of the Al Serena mining claims discloses several facts important to this investigation:

Logging is going on and the mine is idle. The company maintains that money received from sale of the logs will be used to pay off debts, incurred in its long legal battle to get patent to the claims, and to provide capital to resume development work.

The extensive mining developments to date substantiate the company's claim that it has a sincere interest in mining. The firm is certainly in a different category from persons who in other instances have staked out mining claims in Federal forests and made only token efforts toward mineral development and whose obvious interest is the timber on the land.

## LOGGING INVESTMENT

The brothers have invested money in equipment to do the logging rather than selling the stumpage to a logging contractor. For that reason they should realize a higher price for the timber than the \$77,000 cited by the Forest Service on the contested claims (based on stumpage price). It is impossible to tell from the records available if this price will approach or exceed the \$170,000 figure used by Drew Pearson.

It is ridiculous to describe the timber involved as "one of the finest stands of Douglas-fir in the Northwest"—as Drew Pearson did in the column which touched off the Al Serena issue. I saw finer stands of timber on Forest Service lands near the claims. Most of the timber which I have seen in the Willamette National Forest here in the Eugene area is better than the overall stand on the Al Serena claim.

## PATENT "BASIC STEP"

Due to rising markets, the timber was worth considerably more when the company applied for patent to the lands in 1948 than it was when the company acquired the claims in the middle and late 1930's.

To Drew Pearson's charge that the company didn't need a patent to continue mining—and only wanted surface rights for the timber involved—the brothers reply that obtaining patent is the first "basic step" in any large-scale mining operation.

## REMOTE FROM HIGHWAY

"We're talking about an operation to handle low-grade ore on a mass-production basis," declared H. P. McDonald, Jr. "It's an operation that will require millions of dollars of capital. How can you interest that kind of capital when your claims are unpatented and the Government is charging that the minerals are worth less than the timber?"

To get to the Al Serena mining claims, you turn off Highway 62 (the road from Medford to Crater Lake) about 3 miles above Trail and follow a road up Elk Creek. For the first few miles the road is oil-surfaced and winds up a small but lush valley with a number of farms. The next road is a one-lane dirt and gravel Forest Service road, with frequent turnouts for meeting other vehicles. The final road is one built by miners with picks and shovels, years ago. The claims are about 18 miles in from the highway.

I accompanied Charles McDonald and H. P. (he's called "Smokey" by his friends) McDonald, Jr., both members of the family that is the principal owner of the mining claims.

On the trip into the claims we met several loaded logging trucks—some of them rather abruptly—on the one-lane twisting mountain road. Some of the trucks were from the McDonalds' logging operation on the claims; others were hauling for firms which are cutting timber they have bought from the Rogue River National Forest.

UNIVERSITY OF MICHIGAN LIBRARIES

## LOGGING OPERATION

During the trip in, the two men said that neither of them had any logging experience before this summer.

We made our first stop at the No. 1 portal of the mine—the end of a tunnel which runs through a mountain to the pilot plant on the other side. The timber here—as on the rest of the claims—was mostly Douglas fir, white fir, and pine. There was little commercial timber here. Most of the trees were too small to log even for poles and piling. The brothers pointed out that most of the bigger trees were overripe—as evidenced by dead tree tops and lots of conk (tree fungus).

From there, we went to the landing for the logging operation. We arrived as a three-man crew finished loading a log truck, using a “cat” and boom to hoist the logs. These logs and another turn of logs brought in by a “cat” while this reporter was present appeared to be good, sound—and large—pine.

The area around the landing had already been logged, with much smaller timber left standing (as seen in the photo in Sunday's Register-Guard).

## SUMMARY

The men described their logging operation as “selective cutting on a modest basis.” It's what loggers call a “cat show”—that is, the logs are yarded to the landing by a cat, rather than by a high-lead cable or other method, using a stationary “donkey.”

While it's less than half a mile from the landing to the main mining structures, the road leads around a mountain for about  $3\frac{1}{2}$  miles, partly on the Al Serena claims and partly on National Forest lands. At one stop the two men pointed out a slope with a dense stand of small Douglas-fir—about 20 acres in size—where considerable cuttings have been made for mine timbers. All the trees were about the size of fence posts.

To sum up: The claims contain some areas of good commercial timber, others in which much of the timber is small or overripe, and at least one slope of no value to a lumber mill.

## MAIN PLANT

Now to the mining: The structures on the property include a big log cabin and shed with shake roof, and a more recent dwelling occupied by Fred Altoud, who has worked for the company on the claims since 1941. When the mine was in operation he was the mine foreman. At present he serves as caretaker and is doing limited development work.

The older cabin had just been refinished inside with fragrant cedar plank floors and cedar board walls. The brothers have lived there off and on and said they may do so this winter. They recalled times when the snow has been so deep it was necessary to burrow down from above the eaves to get to the cabin door.

The biggest structure is the pilot plant which the company constructed to test methods of treating ore in the mine. It is situated about 200 yards up the hill from the dwellings, close to the mouth of the mine entrance.

The frame building has weathered from the severe winters but the equipment inside appeared through. The mill has been idle since the war years.

## ORE PROCESSING

H. P. McDonald, Jr., and Altoud explained what the equipment was for. Briefly, ore is brought from the mine by rail, dumped by size in bins, run through a crusher, then put through a ball mill where big metal balls in a revolving container grind the ore to powder. Reagents necessary to treat the ore are added at this point and other points in the process.

The ground-up ore passes over a “jigger” which shakes out any free gold. The ore is mechanically divided by its degree of fineness (bits too coarse are automatically returned to the ball mill) and separated for the type of treatment required. Part of the material goes to a cyanide treatment plant, outside the main plant. Part of the ore goes to three long tables where lighter materials are agitated away (tabling process), leaving the minerals. Part of the material goes through a flotation process in which the minerals are floated off in a froth created by the addition of reagents. The final product of all the processes is various mineral “concentrates” which are sent to a smelter for final processing. Gold, silver, lead, and zinc are among the metals present in the ore.

## OTHER INSTALLATIONS

The plant also contains two diesel engines to power the air hammers and other mine equipment and to provide electric power for the mine, mill and camp.

A building at the mine entrance—now used for storage—contains shower and dressing rooms for the miners and space for a blacksmith and machine shop.

The mine works are extensive, including about a mile of tunnel on several levels.

Much more could be said in describing the remaining developments on the claims but other points in the involved Al Serena case also need attention. The Government ruled that minerals on 15 of the claims were not sufficient to justify patent. What it based the ruling on, the company's countercharge that evidence favorable to Al Serena was withheld, and other major points in the complicated patent proceedings will be the subject of the next article in this series.

[Eugene (Oreg.) Register-Guard, October 14, 1954]

## MINE PATENT CASE STUDIED STEP-BY-STEP

## BLM FILES REVEAL AL SERENA HISTORY

(EDITOR'S NOTE.—This is the fourth in a series of articles investigating the charges that the award of patent on 23 mining claims in southern Oregon was a "giveaway" of valuable timberland.)

By Dan Wyant of the Register-Guard

Why did the Bureau of Land Management turn down a request for patent on 15 of the 23 lode claims held by Al Serena Mines, Inc.? And why did the company appeal that decision to the Department of Interior, which eventually overruled the BLM?

Answers to these two questions are best found in a step-by-step study of the patent application proceedings. Records, chiefly on file at the Bureau of Land Management office in Portland, show as follows:

On October 4, 1948, Al Serena Mines, Inc., applied for mineral patents to the 23 lode claims which the company had held for a number of years in southern Oregon.

Final proofs in the proceedings were filed with the Oregon District Land Office on January 13, 1949, following official publication in the Medford Mail Tribune for the period prescribed by law. No adverse claims to lands involved were noted in the record during the period of publication. Payment of the purchase price was requested by Carl F. Spaulding, assistant manager of the land office, on February 8, and receipt of a check for \$2,375 from the company, covering the purchase price at \$5 an acre, was entered in the BLM files on February 17.

On April 6, a final certificate of mineral entry was issued to the mining company. The certificate contained the added typed statement that "Patent will be withheld by the Bureau of Land Management pending a report by the regional administrator, region I, upon the bona fides of the claims."

During the summer months of 1949 a BLM mineral examiner, Elton M. Hattan made three separate trips to the claims to take assay samples. Part of the time he was accompanied by a mining engineer for the United States Forestry Department, William C. Sanborn.

The samples were taken in the presence of either Fred Altond, caretaker at the mining properties, or in the presence of Charles and H. P. McDonald, of the mining company.

Hattan later testified that he took the samples at the point on each claim which the mining company representatives indicated was their "point of discovery." He said it was not up to him to make the discovery but rather, to get a "representative sample" of what they felt to be their mineral discovery.

It was at this time, the McDonalds say, that they protested that the samples taken in this way were not adequate and requested permission to take supplementary samples for assay at their own expense. They said Hattan agreed to this, provided they indicated by detailed legal description the exact spot they cut these samples so Hattan could later duplicate them, if necessary.

UNIVERSITY OF MICHIGAN LIBRARIES

## ASSAY RESULTS

On January 4, 1950, Hattan sent a letter to the mining company's head offices in Mobile, Ala., acknowledging receipt of a letter of December 27, 1949, and a list of assay results from samples taken by the company.

Hattan's letter, still in the possession of the McDonalds, went on to say that "my report was completed and submitted last month. The December 27 letter did not reach here in time to include any of the information which was enclosed with it. The assay results submitted by you in August and September were incorporated in the report."

Hattan then listed some additional information he needed to identify the exact places in which the company had cut the samples referred to above. The company replied immediately that it would supply this information.

On February 10, 1950, Roscoe Bell, associate director of the BLM in Washington, D. C., sent a notice to the manager of the district land office in Portland that "adverse proceedings" were ordered on 15 of the 23 claims on the grounds the claims were nonmineral in character, that minerals were not present in sufficient quantities to constitute a valid discovery; and that expenditures of \$500 had not been made as required by law to benefit five of the claims. The decision was apparently based on Hattan's report.

## WRONG PROCEDURE

On March 14, 1950, Bell, ordered the adverse proceedings dropped, noting this was the wrong procedure "as the land is within a national forest reserve, and adverse proceedings, if any, against the claims will be brought by the Forest Service."

On April 13, 1950, the Portland BLM received notice from H. J. Andrews, regional forester, that patent application was protested by the Forest Service on the 15 claims. Andrews listed the same grounds for contesting the application as Bell noted above.

On May 22, 1950, the mining company filed an answer to the Forest Service protest, embodying several demurrers to the charges and a motion that the protest be dismissed and the patent issued.

On September 1, 1950, Pierce M. Rice, manager of the district land office, received a telegram from Senator D. Milliken (R., Colo.), requesting "expeditious handling and reply Government collect present status" of the Al Serena case. The McDonalds said last week that one of their stockholders who lives in Colorado requested Milliken to do what he could to help. Likewise, the record shows that Congressman Frank Boykin, of Alabama, where the company's head offices are located, also inquired as to the status of the case.

## HEARING ON CLAIMS

The hearing on the Forest Service contest of the 15 claims took place September 13, 1950.

The first six pages of the transcript of the hearing, now on file at the Portland BLM office, are written as a summary of what happened rather than as a direct word-by-word account of what was said.

The proceedings started on a stormy note with the mining company's attorney, W. O. MacHanon, demanding that the demurrers filed previously be ruled upon before the hearing got underway. The demurrers were on several technical grounds.

Rice, who was conducting the hearing, treated the demurrers as motions and denied them. The company's lawyer protested, then noted an appeal to the solicitor of the Department of Interior. Further legal sparring took place and the Al Serena representatives walked out.

"At this point," the transcript notes, "counsel for the contestant requested a temporary recess to avoid noises and interference occasioned by the departure of the contestee in order that the hearing might proceed by the examination of the Forest Service witness. The manager allowed a temporary recess and the contestee departed, after which the hearing was resumed."

The McDonalds were later to say it was their understanding that the hearing was closed at this point.

## FIRST WITNESS

G. Robert Leavengood, of the Forest Service, was the first witness when the hearing resumed. (From this point in the transcript, the record is a word by word account of what was said by the witnesses, attorney for the Forest Service, and the examiner.)

Leavengood described the timber on the contested claims. He said the older timber is "very old and mature and roughly averages around 25,000 merchantable board-feet per acre." He said a newer understand of young timber was very good. "I don't think we have anywhere else that I can think of as nice a stand as this is," he declared, referring to the younger trees. He said the value of the timber which could now be cut on the 15 contested claims was about \$77,000, allowing for growing stock left standing.

Mineral Examiner Hattan was the next witness. The crux of his testimony was that the 15 contested claims shown no valid mineral discovery. He said assays had been made from samples on all the claims on two occasions and on part of the claims a third time. Assay work was done by Annes Engineering Co. of Grants Pass, Abbot A. Hanks, Inc., in San Francisco, and by the Bureau of Mines at Albany.

Hattan discussed the assay results on samples from each of the contested claims. In all but one case the assays showed only a trace of gold and in all but one case either only a trace or no silver present. The two exceptions were one assay worth 35 cents per ton and on another claim showing silver at 12 cents a ton of ore.

## CHECKED POINTS

On several occasions Hattan referred to the fact that he had checked points where the company had said it had taken samples which showed much higher assays—\$1.75 for the gold, for example, where Hattan's assay showed only a trace.

Hattan explained how he had gone back to the claims for a third time to cut more samples at the indicated spot after the company sent him supplementary assays showing significant amounts of gold.

He said seven samples taken in this manner were sent to the Bureau of Mines at Albany for assay. The results of the assay was only a trace of gold, he said.

Hattan mentioned some of the company's supplementary assay values in his discussion above but at no time did he enter the complete list of the supplementary assays into the record.

Hattan concluded his testimony with his observation that the 15 contested claims failed to show sufficient evidence of mineralization to warrant granting a patent. The eight uncontested claims, he said at one point, did appear to have evidence of mineral deposits and for that reason he had recommended that the patents be granted on them.

## SAME TESTIMONY

The Forest Service's mining engineer, Sanborn, testified along the same lines as Hattan.

Next in the files at Portland is a teletype message dated October 13, 1950, from J. A. DeLang, Acting Chief, Branch of Minerals, Division of Adjudication, Department of Interior. It was sent to the land office manager, at Portland. It read: "Subject: Call for missing papers. Request that be transmitted copies of answer, demurrer and motions filed in defendants' behalf in this case and other papers in your files that may be of assistance in rendering a decision in this matter."

On October 16, 1950, DeLang received a letter from the mining firm's attorney, MacHanon, charging that the "record" (the quotes are MacHanon's) of the hearing held in Portland was "incorrect, incomplete, and irregular." He said his firm would be bound only by a tape recording which it had made of the hearing (up to the point the Al Serena representatives left).

On November 24, 1950, the director of the Bureau of Land Management in Washington, D. C., returned the records of the Al Serena case to Rice, in Portland, instructing him to give a decision on the case rather than a recommendation.

## ADVERSE RULING

On December 14, 1950, Rice entered his decision. He ruled that patents should not be granted on the 15 contested claims. Rice said testimony and Hattan's assay reports showing only traces of gold and silver upheld the Forest Service

UNIVERSITY OF MICHIGAN LIBRARIES

contention that timber upon the land was more valuable than the minerals, and that no valid mineral discovery had been made.

On April 27, 1951, the adverse decision against Al Serena was upheld by William Zimmerman Jr., assistant director, Bureau of Land Management, in Washington, D. C.

In his decision, Zimmerman said that the Al Serena attempt to appeal the case from the hearing on its demurrers, if successful, would have done away with further considering of the basic issue in the contest hearing: that of whether each of the claims had a valid mineral discovery and the proper \$500 assessment work.

#### CASE APPEALED

Al Serena Mines, Inc., took its next legal steps by appealing the case to the Department of Interior. The company charged a number of irregularities in the way the patent application was processed and in the hearing, itself. It charged that evidence favorable to its case (the supplementary assay reports) was not in the record upon which both adverse decisions were based.

The handling of the case from this point on is where Columnist Drew Pearson leveled most of his charges of "giveaway" which touched off the current political controversy over the Al Serena case. What the record shows on this phase of the proceedings, leading up to the eventual grant of patent on all 23 claims, will be the subject of the next of this series of articles.

---

[Eugene (Oreg.) Register-Guard, October 15, 1954]

#### ELLSWORTH'S PART IN PATENT CASE DESCRIBED

##### AL SERENA FIRM SOUGHT HIS ADVICE

(Fifth in a series)

(By Dan Wyant of the Register-Guard)

Congressman Harris Ellsworth was first approached about June 1, 1951, by two members of the McDonald family—Charles and H. P. McDonald Jr., who sought his advice in connection with the family's Al Serena Mines, Inc., disputed patent application.

That was about 1 month after the Bureau of Land Management in Washington, D. C., made an adverse ruling against 15 of the company's 23 lode claims. The company had appealed that ruling to the Interior Department—the agency which has the final ruling on such matters.

"We went to Congressman Ellsworth in the same way that any other constituent goes to his congressman," the two brothers said last week.

Although the firm's head office is in Mobile, Ala., it is an Oregon corporation. H. P. McDonald, Jr. had then spent about 16 years working at the mining property, near Trail. Charles had spent most of his time since 1936 at the mine, except while in college, in defense work, and in military service during World War II.

Said Ellsworth: "My connection with the Al Serena Mines case has been in full accord with my conception of the responsibility and duty of a member of Congress serving the people of his district. Ours is a government of laws and not of men. When the rights of citizens are prejudiced by officials who set themselves above the law or who, by intent or gross carelessness, place the rights of citizens in jeopardy, there is no remedy open to the injured citizen except through the courts or through the legislative branch of the Government."

Ellsworth said he went over the facts of the case with the brothers, found that "substantial expenditures" had been made on the mines by the company and "compliance with the mining laws demonstrated." He said the record showed that the company had made their payment for the lands, following completion of the final patent proceedings.

"I was informed that thereafter officials of both the Bureau of Land Management and the Forest Service had taken action for the purpose of contesting and invalidating the transfer of the property, payment for which had been received by the Government from the applicants.

"Because of numerous bureaucratic acts, the applicants had brought an appeal to the Department of Interior. The appeal, requesting the grant of the patents, was then pending before the office of the solicitor.

## FINAL DECISION

"The McDonald brothers asked what suggestion I might have, if any, to bring about a final decision on the facts of record in the case."

Ellsworth said he found some "interesting parallels" between the Al Serena case and some mining claims which were the subject of investigation before a Senate committee in 1949.

"I expressed the opinion that the most expeditious means of bringing the case to a conclusion would be through filing suit in the United States district court."

The company took his advice. The suit was filed July 28, 1951, against "The United States of America and/or Oscar Chapman, Secretary of the Interior," in United States district court, in the southern district of Alabama.

The suit asked that the Government turn over the patents on the mining claims to the Al Serena Mines, Inc.

In a 58-page complaint the company listed numerous allegations and cited a number of previous court cases to support its basic charge that the government's conduct of the case had been illegal and that the company had the legal right to the patents.

## CRITICAL OF HEARING

The complaint was especially critical of the conduct of the contest hearing in Portland. It alleged that the record of the hearing contained "so much severe and material falsification" that the hearings stenographer had refused to certify the portions of the record which described the events leading up to when the company left the hearing. (This is the portion of the transcript which was written summary style rather than in the usual word-by-word account of what was said by each party.)

This suit was followed up with a "motion for summary judgment" in which the company included a letter from Mastin G. White, the Interior Department's Solicitor, dated August 3, 1954, in which he acknowledged that "it appears \* \* \* that the reporter failed to obtain a complete transcript of the earlier portions of the proceedings. \* \* \* If you desire a further opportunity to submit evidence bearing on the question of whether valuable mineral deposits have been discovered on the claims involved in your appeal, it would be appropriate to remand the case for a supplemental hearing with respect to that issue."

The company said in its motion that the letter was proof of their charge that the record of the case was at fault. The firm declined to have the case remanded for the supplemental hearing and sought, instead, to continue its legal action.

## SUIT DELAYED

That was the status of the case when the Republican administration took over in 1952-53. The suit in Federal court was delayed by various government legal moves and no decision was made on the appeal to the Interior Department.

The McDonald brothers came to Ellsworth again "on or about March 29, 1953," according to Ellsworth, after Clarence Davis had been named the solicitor of the Department of Interior by the new administration.

Ellsworth said he arranged a conference with Davis and accompanied the brothers for a discussion of the case. It was then that Davis said he would make a "careful review of the case to determine its merits," Ellsworth said.

On June 1, 1953, Ellsworth wrote his lengthy letter to Davis which was reprinted in last Sunday's issue of the Register-Guard, pointing out that papers important to the mining company's interest were not in the record and asking that they be restored.

On June 4, in agreement with Davis, Ellsworth wrote to several mining engineers who had some knowledge of the claims involved for their opinion of the claims' value. He forwarded to Davis the replies he receives, arguing they showed "that there is no reasonable question as to the bona fide nature of the mineral discovery and compliance with the mining law by the applicant for patent."

The engineers included J. E. Morrison, Oregon mining engineer identified as resident engineer at Al Serena Mine at the time of application for patent (and at the time the letter was written a colonel in the U. S. Air Force); J. Cleveland Taylor, Sacramento mining engineer who surveyed the claims for Al Serena; D. Ford McCormick, Oregon engineer now living at Eagle Point, who was a consultant at various times for Al Serena; Alan Kissock, of New York, who said he visited the property in October 1945, to see if he might be interested in it; and

Fay Libbey, head of the Oregon Department of Geology and Mineral Industries, who reported he could give no opinion of the mineral value of the particular claims.

None of the engineers' opinions made any distinction between the 15 contested claims and the 8 claims which the Government had not challenged, according to A. Robert Smith, the Register-Guard's Washington correspondent who spent several days investigating records in the Nation's Capital.

On September 3, 1953, Davis sent a memo to the Bureau of Mines, requesting that new samples and assays be obtained "upon which no doubts will be harbored by anybody."

#### NEW ASSAYS

He added: "The decision on the application for patent should be considerably easier after we have the new assays \* \* \*. My principal concern is to have a qualified Government representative present to see that the assay samples are fairly taken from each claim and then delivered to a competent assayer."

On the same day, he wrote to McCormick, whom the company had suggested as its representative, that "in an effort to determine the matter fairly, I have agreed with Congressman Ellsworth, who has interceded on behalf of the company, to ask you and Mr. Valin, of the Bureau of Mines, Spokane, or his substitute to procure personally sufficient samples of the deposits on each claim to afford adequate assays on which the Secretary can base his decision on the validity of the discoveries."

Selection of R. N. Appling of the Bureau of Mines office in Grants Pass, as the one to take the samples for the Bureau of Mines was later made in the field. He had a team of three men with him to help prepare the samples for assay—that is, crush the ore.

McCormick accompanied Appling and his team to the claims and watched Appling cut the various samples. All the samples were taken from "ore, in place," McCormick said, some from exposed rock outcroppings, some from the bottom of cuts where bulldozers had scooped the earth away down to bedrock.

#### SAMPLES NUMBERED

Each of the samples was numbered and one-fourth of each sample was turned over to the Oregon Department of Geology office in Grants Pass to hold as an "umple."

McCormick said this was done in case the samples shipped to the assayer became lost, or if any question arose in regard to any of the individual samples. The purpose, he said, was to avoid the necessity of going back to the claims for more samples, if any were lost or questioned during the assay process.

On November 17, 1953, the samples were shipped by Railway Express to the A. W. Williams Inspection Co., in Mobile, Ala., to be assayed at the expense of the Al Serena Co.

The Mobile testing firm was chosen by the company. It is located in the same city as Al Serena's head office and had done assay work for Al Serena before. It was one which the Government agreed was an "acceptable laboratory for analysis." (In Washington, A. Robert Smith said it is on the Government's list of accredited testing labs).

On December 17, 1953, the Williams firm sent its assay certificates on the samples to Al Serena's Mobile office. These were forwarded to the Bureau of Mines' man, Appling, who matched up the numbers of the samples with the assay results and prepared his report.

#### ENCLOSED FINDINGS

In his report he described how the samples were taken and enclosed the assay findings of the Williams Co.—but not, according to the file in Washington, D. C., the assay certificates.

For each sample, the new assay reports showed much greater mineral value than BLM Mineral Examiner Elton Hattan reported from his three assay tests of the 15 contested claims (almost all of which showed only traces of gold or silver). It was Hattan's assay reports upon which the two previous adverse decisions to the company had been decided.

The lowest of the new assays for gold was 70 cents (per ton of ore): 7 assays ranged from \$1.05 to \$1.40; 9 were reported at \$1.75; 7 ranged between \$2 and \$3; 1 was for \$3.50 and the high was \$4.20. Assays for silver were also significantly higher than Hattan's samples assayed in almost every case. The new figures included at least two samples on each contested claim.

Appling submitted his report to Washington on January 2, 1954. Four days later, on January 6, Solicitor Davis announced his decision. It overruled the two adverse decisions of the Bureau of Land Management and awarded the patents to the company on all 23 claims. Davis based his decision on the new assay findings.

(A further look at Solicitor Davis' decision—and some more light on the re-examination of the claims which led to his decision—will be the subject of the next article in this series).

[Eugene (Oreg.) Register-Guard, October 16, 1954]

#### PATENT DECISION ARRIVED AT AFTER LENGTHY REVIEW

(EDITOR'S NOTE.—This article, the sixth in a series, discusses the decision of Solicitor Clarence Davis which granted 23 controversial lode claim patents in southern Oregon to Al Serena Mines, Inc.)

(By Dan Wyant of the Register-Guard)

The first 13 pages of Solicitor Clarence Davis' decision on the Al Serena case are devoted to a review of the facts which brought the case up to appeal in the Department of Interior.

He notes that in its appeal the company made 18 assignments of error, contending it was entitled to a patent prior to the filing of a protest against 15 of the claims by the Forest Service, and contending that there were certain irregularities in the protest and in the manner in which the hearing upon the protest was held.

Davis cited a number of court decisions to support his finding that most of the company's contentions were untenable.

"The fact that the appellant had paid the purchase price, submitted its proofs, and received a final certificate does not detract from this department's authority to inquire into the merits of the claims," he wrote. "Unless there has been a discovery of valuable minerals within the limits of the claims, there have been no valid locations and the claims cannot go to patent."

#### CHARGES UNJUSTIFIED

Davis added that most of the charges of irregularities in the handling of the case were unjustified. However, he noted that the company's reports of assays on the various claims were not included in the file when it reached his office. He said that although copies of these reports were later supplied, it appeared best to require new assays to be submitted to review the case.

Davis said these new samples were taken by a Bureau of Mines team and a registered mining engineer (D. Ford McCormick), representing the appellant. Davis said the samples were sent to an acceptable laboratory for analysis. (The A. W. Williams Inspecting Co., in Mobile, Ala.).

"The resulting assay reports submitted and now on file show that the samples contained silver and gold of sufficient value to justify a person of ordinary prudence in further expending his time and money in an effort to develop a paying mine."

Davis then quoted a portion of the testimony which BLM Mineral Examiner Elton Hattan gave at the Portland hearing describing the "central mass" of the deposit and saying that possibilities are good that the whole mass could be developed, mined, and milled at a profit.

#### HOPE OF SUCCESS

Davis said this "would seem to confirm that by careful and prudent operation the appellants may continue to develop the property with reasonable hope of success."

(A check of Hattan's testimony, however, indicated that when he was discussing the "central mass" and its possibilities of further operations he was referring primarily to the portion of the deposit which lies on the eight claims which were not contested by the Government. On the other hand, the mining firm had insisted all through the proceedings that it was interested in a large-scale operation which would include all the mineralized deposits—not just the richest ones.)

Davis continued: "The assays, therefore, showing mineralization in paying quantities on all of the claims, and the cadastral engineer (whose job it is to check patent qualifications) on September 27, 1948, having certified that more than \$500 has been expended in developing and improvements on each claim, the requirements of the statute seem to be met."

(The cadastral engineer's certification that \$500 assessment work had been carried out on each claim had been challenged by the BLM and Forest Service on five of the contested claims. There is nothing in the decision written by Davis or in the Washington files to indicate that any further efforts to determine the value of assessment work on the five claims had been made after the case came to Davis' attention.)

#### TIMBER NOT A FACTOR

Davis concluded with the observation that the mining company had spent amounts estimated from \$150,000 to \$200,000 on developing the claims—an amount which he said was two to three times the estimated value of the timber on the claims. This, he said, "would seem to negative the suggestion \* \* \* that the appellants are more interested in the timber than in the mine."

(Davis here was using the figure given on the estimated value of timber on the 15 claims which were contested. The estimated figure for marketable timber on all 23 claims is probably closer to \$150,000, less allowance for growing stock, according to the Rogue River National Forest.)

The Solicitor then concluded his decision by ordering the case "remanded to the Bureau of Land Management with instructions to process the application for patent."

That, then, brings this series of articles through the major steps of the Al Serena case, as shown in the record. Several points remain:

Columnist Drew Pearson, who touched off the current political charges against the handling of the Al Serena case, was critical of the fact that Solicitor Davis let "disinterested, independent" (the quotes are Pearson's) Ford McCormick become one of the engineers who helped take the new samples on the claims.

#### FIRM REPRESENTATIVE

The record shows that McCormick was chosen, not as a disinterested engineer, but rather as a representative of the Al Serena Co. to accompany the Bureau of Mines team.

McCormick was independent in the sense that he is a consulting engineer. He had been hired by the company on previous occasions for specific jobs in the capacity of a consulting engineer. McCormick says that the charge that he helped "build" the mine plant, made by Ellsworth's opponent, Charles Porter, is false. He said that on one occasion he had worked for several months at the mining property when it was under lease to another party.

McCormick was described this week by Faye Libbey, director of the Oregon Department of Geology and Mineral Industries at Portland as a man of "absolute integrity."

Pearson termed it "amazing" that the ore samples were shipped "all the way across the United States to Mobile, Ala., home town of the McDonald family." He added: "There the ore was assayed by the A. W. Williams Inspection Co., located in an area which has little experience in assaying gold and silver ore."

Records show that the Williams Co. is accredited by the Government for testing work, and was agreed upon as "acceptable" by the Government to make the tests. The McDonalds argue that since they were paying for the assays, they directed them sent to a firm with which they had done business before.

#### STANDARD METHODS

A Williams company letterhead which the Register-Guard's Washington correspondent, A. Robert Smith, observed, indicated the firm tests primarily various construction materials. However geologists such as Libbey say that methods of conducting gold and silver assay tests are so standard that there's no question but that any organized laboratory could conduct them accurately.

The most puzzling question, of course, is why were Williams' assay results from the samples taken by the Bureau of Mines so drastically superior to those taken on three different occasions by the BLM mineral examiner, Hattan?

The Geologist Libbey declined to speculate.

McCormick, himself, said only that the Bureau of Mines man, R. N. Appling, was "very conscientious" in cutting the samples. McCormick added that samples

cut within a range of 10 ft. on the various claims might range from values which were negligible to values of several dollars per ton of ore.

The record shows that Hattan took the samples at spots indicated by Al Serena representatives and took them on several occasions. His qualifications to do such work were read into the record and showed years of experience in the field. It might be fair to add at the time Hattan took the samples, the mining company protested the samples might not be fair to the company and requested permission to submit supplementary samples—the one is which later turned up missing in the files.

#### STATE AN "UMPIRE"

At the time the final samples were taken, a portion of ore from each sample was turned over to the Oregon Department of Geology office at Grants Pass as an "umpire."

McCormick explained that this was done to guard against the need of taking further samples in case some of those sent to the assay lab became lost en route or were questioned in any way.

Davis' whole decision turned on the results of the Mobile assay. For that reason it would be reasonable to assume that any further investigation into the Al Serena case, such as Senator Wayne Morse had declared he will call for, should start with those umpire samples.

And here is the most disappointing part of this reporter's investigation of the Al Serena case:

Once the assay certificates were returned from Mobile, the samples matched up with the assay numbers, and the report sent in by Appling to Washington, D. C., there appeared to be no further need to save the "umpire samples," according to McCormick.

#### SAMPLES DUMPED

Where are those umpire samples now?

Somewhere in the bottom of the Rogue River near Grants Pass where they were dumped by Appling and McCormick after the report was sent in.

(A final article in this series will discuss what Secretary of Interior Douglas McKay has described as a "basic conflict" between timber and mining, and what legislation has been considered to supplement the basic mining law of 1872.)

[Eugene (Oreg.) Register-Guard, October 17, 1954]

#### THOSE DAYS TIMBER WASN'T WORTH MUCH—NOW IT IS: AL SERENA MINING CONFLICT STEMS FROM OLD LAW DATING TO 1872

(EDITOR'S NOTE.—This article, the last in a series, turns from the Al Serena mining case to an outline of what Secretary of Interior Douglas McKay has called "a long-time conflict of interests between mining and forestry." Problems of questionable mining claims, designed to obtain timberland, are also discussed.)

(By Dan Wyant of the Register-Guard)

When the Nation's basic mining law was written back in 1872, there was, of course, little thought given to timber which might be present upon mining claims staked out under the law's provisions.

In earlier days the West had looked largely to mineral deposits for its development. The original law was designed to encourage that development. Timber resources seemed unlimited.

#### NO CHANGES

Through the years there has been no change in the basic provisions of the law. Any person may still stake out a mining claim upon public land. If he does assessment work benefiting the claim to the amount of \$500, and if he proves minerals are present under the broad terms of the law, he is entitled to have the claim patented. With the patent, under present law, gives all surface rights to the claim. That includes the timber which is upon it.

And this points up the basic conflict between forestry and mining interests. This conflict involving the application and/or misuse of the mining law has contributed much to the controversy around the Al Serena mines of southern Oregon, described in earlier articles.

## TIMBER MINES

Timber is worth a lot more now than it was in 1872. It's worth enough that many mining claims have been staked out, forestry officials say, obviously for the timber that is on them.

More than 7 billion board-feet of the public's timber is tied up on mining claims of the 12 Western States, a staff writer for the Denver Post concluded in a 1951 series of articles on this problem.

In Oregon and Washington somewhere around 200,000 acres of forest land has been tied up by mining claims. Some of these claims are no doubt legitimate—but forestry officials question many of them.

## DISPUTED CLAIMS

Claims which have attracted the most attention are some 300 mining claims embracing about 50,000 acres of forest land in the Union Creek basin of the Rogue River National Forest.

So many inquiries have been directed to the forestry headquarters that Supervisor Jack Wood has prepared a mimeographed "fact sheet" on the claims.

The claims he said, "support an estimated stand of mature and high quality timber totaling 1,800,000 feet. Another 1,700,000 feet of timber lying behind he claims is effectively blocked off by claimants who deny access across their claims. Total volume of timber involved is 3½ billion board-feet. A conservative estimate of timber value on the stump is \$35 million."

## MINERALS LACKING

Wood said most of the claims are are filed in the name of one man and his associates. He said repeated mineral examinations have shown there are no valuable minerals in commercial quantity on the claims.

Closer to home, in the Willamette and Umpqua National Forests near Eugene, a number of mining claims exist on forest lands. It would be unfair to question all of the claims, but some of them bear investigation.

The fact that the claims have been filed doesn't mean that the timber is lost to the public. Until the claims are patented, the claimants have no rights to timber other than that needed for mine supports, or possibly, dwellings on the claim.

## SALE PREVENTED

But the timber is effectively tied up from public sale by the Forest Service. The claims in many cases also bar access to other valuable stands of timber that would otherwise be put up for sale.

The actual number of patents granted on mining claims during the postwar years in Oregon and Washington totals less than 40 on less than 800 acres of Forest Service land.

Because of the value of the timber involved in many cases, the Forest Service has been vigorous in contesting many patent applications. This is where the conflict between forestry and mining is most apparent.

## DELAY CHARGED

Mining spokesmen say that the procedures involved in contesting the claims go beyond the basic mining law to make it equally hard for a legitimate miner to get patent to his claim. They charge that delay has been one of the Government's chief tactics.

Certainly it would seem that some method should be found to effectively prevent the filing of mining claims for valuable timberland and at the same time not penalize legitimate miners who find worthwhile deposits of minerals which will be subject to contest just because they are on timberland.

## REVISION OVERDUE

Secretary of Interior Douglas McKay has said: "Revision of the mining laws which would define the surface rights vested in the locator of a mining claim is long overdue."

Legislation has been introduced in Congress to bring the basic mining law up to date.

Principal attention was directed to a bill introduced by Representative Cliff Hope, of Kansas, which would have retained the Government's possessory rights on the timber involved in a claim.

The Government would sell the timber off the claims, under sustained yield management plans. The miner who acquired patent on the claim would be given a 3-year period in which to purchase all the timber at fair market price, if he wished. The miner would be permitted to use what timber was necessary in his mine work—and if all the timber was sold off his claim, be given a chance to get timber off other Government holdings for his mine.

#### BILL WAS DEFEATED

The bill had a further provision which drew objections from mining interests: That surface uses of the claim would be under national forest rules and regulations. That provision, mining spokesmen complained, would make a miner's operation subject to the authority of forestry people who had no particular knowledge or interest in mining practices.

The Hope bill did not pass.

Representative Harris Ellsworth was at one time prepared to introduce a bill which he felt would solve the problem and then found that Representative D'Ewart, of Montana, had prepared a measure similar to his.

This bill, which also never was passed, would, in Ellsworth's words "allow a person who files a mining claim practically no benefits whatever unless, and until, he actually develops a mine."

---

[Eugene (Oreg.) Register-Guard, October 20, 1954]

#### DREW PEARSON'S AL SERENA ALLEGATIONS FOUND LOADED WITH FACTUAL ERROR

On September 29, when Drew Pearson, nationally famous columnist, launched his Al Serena mine charge against Congressman Harris Ellsworth and Interior Secretary Douglas McKay, we recognized them as so serious that we said to our staff:

"If these charges are true, both Ellsworth and McKay ought to be run out of public life. If they are not true, McKay and Ellsworth are entitled to protection against a vicious slander. In any case, the people of the fourth district, especially those who read the Register-Guard are entitled to every bit of factual information we can get so that they may judge."

Accordingly Reporter Dan Wyant was dispatched to Jackson County to go over the ground, take pictures of the timber and of the mining properties involved, inspect every available record, interview every available person known to have had any connection with this dispute. Our Washington correspondent, A. Robert Smith, had similar assignments at his end.

Mr. Wyant's reports have been published in a series of six articles, all starting on page 1, concluding last Saturday. Each reader will, of course, make his own conclusions. Quite apart from any recommendations which we may make in the current congressional race, we believe we should offer our findings in this Al Serena matter.

#### NOT A TRACE OF ACTUAL CORRUPTION IN EVIDENCE

At the risk of oversimplifying, this we believe to be a fair summary of the allegations of Columnist Pearson:

1. That a certain McDonald family, of Mobile, Ala., had acquired mining claims (gold and silver) in the Rogue River National Forest, and that under pretext of mining they sought to "patent" their claims (a patent gives clear title).
2. That for 6 years, the McDonalds had been unsuccessful because of alert opposition in the then Democrat administration at Washington.
3. That when McKay came to power things changed; Ellsworth became a special pleader for the Alabamans.
4. That under these pressures, the McDonald matter was reopened by Solicitor Clarence Davis, that he went through the motions of considering "disinterested" reports from engineers who turned out to have been employes of the McDonalds.
5. That finally new ore samples were taken but they were sent to an assayer in Mobile, Ala., not to professionals on the Pacific Coast, and on the new assays, the patents were granted.

6. That shortly after all this, Solicitor Davis was made Under Secretary of Interior, next to McKay himself.

In our opinion, such charges cannot be "laughed off." The only answer is in facts. There were 23 paragraphs in Pearson's story. Our Mr. Wyant's factual studies reveal misstatements in 13 paragraphs plus 1 paragraph which he classifies as true as far as it goes, plus 4 paragraphs which contain unsupported assertions, plus 1 paragraph on which he has not been able to throw any light. Only 4 paragraphs are accepted as substantially correct.

These substantially correct paragraphs are the statement that the McDonalds could have mined without patenting their land; that the McDonalds wanted the aboveground timber rights as well as mining rights (although the McDonalds say they needed the timber sales to raise mining capital); that when the case was reopened, the McDonalds insisted on ore samples being sent to the assayer in Mobile; that the Mobile reports were much more favorable than the preceding reports.

#### HOW WOULD A JURY LOOK AT A MESS LIKE THIS?

Many important facts were brought out in the Wyant reports which were not in Pearson's blast:

The timber on the McDonald claims is not one of the finest stands of Douglas-fir in the Northwest, but relatively poor stuff.

At least two of the McDonalds are long-time residents of Oregon, and their company is an Oregon corporation although its main office is in Alabama.

The McDonalds acquired their mining claims in the mid-thirties, long before the timber boom began, when they could have had all the choice timber they wanted for a few dollars an acre, if that had been their object.

That the McDonalds are in fact primarily in the mining business, not in lumber, and that they have extensive tunnels and equipment for mining on their properties.

That a substantial portion of their mining claims were accepted as sufficient for patenting even under the Democrats, and that Oregon State geological reports are favorable on the area.

That since 1948 the McDonalds had been subjected to costly delays and they even allege bureaucratic suppression of some of their important evidence.

That Congressman Ellsworth, in interceding for the McDonalds did not actually plead their case but argued only that they be given fair and prompt rehearing.

That there was nothing secret about the rehearing and the McDonald engineer was not palmed off as an "impartial" expert but stood as the accredited representative of his clients.

In our opinion, no grand jury in the world would indict nor would any trial jury convict on the kind of faulty evidence (inferential hog wash) presented by Columnist Pearson. We have such a distaste for reporters who slant news or distort facts that we do not want to impugn Mr. Pearson's motives.

#### INJUSTICE IS INJUSTICE HOWEVER INTENDED

We will say that whatever Columnist Pearson's reasons for this assault on Ellsworth and McKay he has done a thoroughly bad job of reporting and one which works a grave injustice on the people accused.

The real trouble is rooted in mining laws which go back 80 years. They were intended to help prospectors then. They offer an opportunity for cheaters now. As far back as 1947, the Register-Guard was running articles on this problem as it is shown in the Bohemia district near Cottage Grove. It is reasonable to ask:

"Why did not these virtuous Democrats who kept the McDonalds from patenting their claims get a decent law passed?"

In the last session there have been two such measures—the Hope bill (which Pearson mentions) H. R. 5358 which would relate only to mining lands within national forests and the D'Ewart bill, H. R. 4983, which would apply to mining claims on all public lands. There is also S. 3347 by Dworshak of Idaho and Anderson of New Mexico on which hearings were held May 22. This seeks to redefine and limit all surface rights.

(The Hope bill is supported by the Department of Agriculture; the D'Ewart bill by the Department of Interior. The Dworshak-Anderson measure seems to have considerable support from mining people.)

At least the Republican Congress seems to be making a try to cure the troubles. We do not accept as sufficient the Ellsworth and McKay statements

that so long as the obsolete laws are on the book they have no other choice than to comply with them.

The only thing of importance that has come out of all this hubbub is the necessity for mining laws which will conform to present day conditions. Our foresters here tell us they are being deviled by three classes of people under the present statutes:

1. Genuine mining men who seek timber rights only to finance themselves.
2. Timber hogs who buy up or stake out mining claims for timber rights only.
3. Out and out highbinders who are staking out phony claims in the way of roads, rock pits—all kinds of business operations just to see if they can extract a few dollars. (We have heard of two State highway cases where the State had to pay rather than endure the long process of proving the mining claims phony.)

#### IS ELLSWORTH AT ALL BLAMEABLE IN AL SERENA CASE?

It is for each person to decide to what degree Congressman Ellsworth is blameable for his conduct in the Al Serena case. You might state it this way:

"Did he do any more for the McDonalds than you would expect him to do for you? Or was he just too easy with his obligin'?"

Having known Harris Ellsworth for nearly 30 years we would bank on his personal integrity! Sometimes, in our opinion, he can be downright "dumb," especially in the direction of "helping folks." We don't think he asks enough questions about some of the weisenheimers who ask for his help.

In this Al Serena case, we think he's been just a bit lucky. He might have found himself lending his good name and his influence to some of the gen-u-ine, triple plated stinkeroos who abound in the mines and in our woods.

Representative ELLSWORTH. Frankly, I have not read all the articles, but I am told they are a fine series of articles and someone has told me within the week that they were offered for the Heywood Broun award for the writer. I believe his name is Wyant. I do not know whether he received the award or not, but somebody thought enough of the articles to send them higher up.

Representative CHUDOFF. Somebody thought enough of the articles to get them out of the Interior file and photostat them for Mr. Hoffman. I am saying it depends on whose ox is gored on whether it is a good paper.

Representative ELLSWORTH. I think that is the essence of my complaint voiced in my statement.

Representative CHUDOFF. Mr. Stewart objected to the paper because he said somebody's brother-in-law gave somebody an article.

Representative HOFFMAN. That was just a reporter, not the editor. The articles offered and received did not come from the Interior Department, nor from anyone connected with it.

Senator NEUBERGER. Are there any questions of Congressman Ellsworth? Mr. Redwine?

Mr. REDWINE. I have no questions.

Senator NEUBERGER. Mr. Coburn?

Mr. COBURN. Did you ever request the Secretary of Interior to order another hearing before the Bureau of Land Management, Congressman?

Representative ELLSWORTH. No, indeed, I made no such request.

Mr. REDWINE. Just a moment, Senator.

Congressman, let me ask you this: You did have several conferences, you and your administrative assistant, with Mr. Davis and others, and work out the procedure whereby the Bureau of Mines made a subsequent investigation? You did, did you not, Congressman?

Representative ELLSWORTH. I had one conference myself with Solicitor Davis. My executive assistant was there at that time. So

was Mr. Reuel Armstrong, who is now Solicitor, I believe. I renewed my request that some action be taken. There was some discussion at that time as to what might be done. It was obvious just from the file that the mining claimants had never had a chance to present their case, had never had a chance to put in their own proof.

I think from hearing the testimony of Mr. Rice, that it was not their fault but the fault of their attorney that they did not have such opportunity, but, nevertheless, the file is very clear on the point that their proof of claim was not in it and you can find that out for yourself by looking at the files. It was clear to the people in the Department, I am sure, or they would not have done what they did that in simple justice these people should have a chance to have their claim and their proof established or disestablished. They should have their day in court, in other words.

I finished the conference with Mr. Davis at that point and said I would make no particular suggestion as to what to be done, but I felt certain that there was a fair and reasonable way of getting a proper evaluation of the property, and Congress recessed shortly thereafter, and I learned later that he had worked out such a procedure that was used.

I think, in fact I know, that my executive assistant had other conferences with the Department, but I was not there and I do not know very much about them.

Mr. REDWINE. Congressman, subsequent to that conference with Mr. Davis, however, there was an exchange of letters between you and Mr. Davis, was there not, as to you going to procure or recommend to him the names of some very reputable engineers who were going to make a survey? That plan fell through, did it?

Representative ELLSWORTH. We discussed how to get at the problem, yes, I recall that it was, I think I volunteered, the idea that maybe I could write letters to some reputable engineers who might know something about the property and I remember very well doing that. One of them was in fact in service at that time.

I do have the replies that I received from those engineers in my envelope down there. I dug them out of the file because I thought they might be of some service here.

I would like to offer them for the record if you would like to have them in it.

Mr. REDWINE. One of them was Mr. Ford McCormick, was it not?

Representative ELLSWORTH. That is correct.

Mr. REDWINE. He, however, at that time was still appearing as representing the Al Serena Mining Co., was he not?

Representative ELLSWORTH. I do not know. I know that Ford McCormick is a highly respected mining engineer. He has the highest credentials, certificated, licensed and everything else.

Mr. REDWINE. I would like to make it plain that I am not questioning his ability. I am questioning what his representative capacity was at that time, however, as to whether he would be a suitable umpire.

Representative ELLSWORTH. I was merely asking these engineers not to give me a decision as to what action should be taken; I merely wanted to know what was this, a legitimate enterprise; was it a reasonable deal? Mr. McCormick, incidentally, is in the room now. I think that in all fairness something on the side of the defendant in this case ought to be heard, but, as I said in my statement, how can that be with

the thing set out in this manner? It is just impossible, as you can plainly see, to give a full and decent and fair hearing on this case.

Mr. REDWINE. Mr. Congressman, I would like to make one request of you.

I do not recall your exact language in the statement you read there, but it was something to the effect of this tremendous contribution that was made by this mine to the war effort.

Representative ELLSWORTH. No, I did not say tremendous contribution. I said that they did fulfill a quota for the Metals Reserve Corporation and at that time did employ, so I am told, at least 50 men on the job.

Mr. REDWINE. Well, Congressman, here is what I am getting at: Are you familiar with what the quota requirements were?

Representative ELLSWORTH. No, I have no knowledge.

Mr. REDWINE. The staff has checked the Government records very carefully to see what that quota performance was, and we have been unable to find any record beyond \$24.60 worth of lead and zinc. I wonder if you could fill in that missing link for us?

Representative ELLSWORTH. Mr. Redwine, I am very grateful to you. You are making the case for me that I attempted to make before the committee. Obviously, I have not such information, but the people who have are here. They can come up here under oath. I do not feel that they are going to get a chance to clear themselves. That information was given to me by them, I think, but at least it is in my memory. My whole point is that this is a political trial of defendants who are absolutely helpless except for the few feeble words of mine here now, absolutely, helpless to clear their own names.

Senator NEUBERGER. Are there any other questions?

Representative CHUDOFF. I have no questions.

Senator NEUBERGER. Mr. Lanigan?

Mr. LANIGAN. No questions.

Senator NEUBERGER. Congressman Ellsworth, may I ask you several questions?

Representative ELLSWORTH. Yes.

Senator NEUBERGER. Have you any definite recommendations as to what recommendations this committee should make as to the continuation of marketing areas?

Representative ELLSWORTH. No, Senator Neuberger, that is an administrative problem. If I were to be either so bold or so foolish as to sound off with an opinion on that subject, I would not be worthy of the trust put in me by the people who have elected me to Congress. That problem, as has been testified before this committee, has many, many ramifications and it certainly is controversial. The Departments concerned have a very difficult decision to make on it. They have indicated that they only want to do it after public hearings, and I recall a question asked of one of the top officials as to his opinion and he, like I, said that he would not attempt to prejudge a case. In his case, he wanted to hear all the evidence.

In my case, I am not qualified in any way to hear evidence. Therefore, I have no answer on that.

Senator NEUBERGER. I would like to just ask you whether you believe that if this committee prepares a report that ultimately we have to recommend either the elimination of marketing areas or their continuation, one or the other?

Representative ELLSWORTH. I would sincerely hope that this committee not attempt, even from the record that you have, to write a report recommending on that subject. It is much too technical for a congressional committee, including its competent staff, to pass judgment on without the full and complete technical field work on it, and the executive recommendation itself. I feel that way about it.

We have given the agencies the authority to do that. The 1944 Act, which was Senator McNary's bill in the Senate, and mine in the House, authorized the creation of Federal-sustained yield units by the Forest Service. The Bureau of Land Management did not have such specific authorization, but it assumed it, and it has never been challenged. That, in my judgment, is the extent to which Congress should act without clear and conclusive proof developed by technical people as the result of complete public hearings.

Senator NEUBERGER. In other words, then, you think the existing regulations should be left in effect?

Representative ELLSWORTH. No, I certainly did not say that. You know, this is really quite amazing. I have heard the talk about putting words in the witness' mouth, and I never went through it before. I said nothing even nearly like that.

Senator NEUBERGER. I merely have asked you. This is a very difficult question. You are the Congressman from the district that is most involved. I have merely asked you what your suggestion is to the committee. You said that we should not do anything on this until we have the best advice of technical people involved.

Representative ELLSWORTH. Again, I did not say that you should not do anything on this. I think you will want to write a report which contains, of course, your record of the testimony. I think any one of the Members of the Senate or House can offer his own opinion. I think the committee could take any action it sees fit. Heaven knows, congressional committees do that. I have not said what I think you should do; nor do I have an opinion on it.

Senator NEUBERGER. You do not have an opinion on it, then?

Representative ELLSWORTH. Certainly not. It is not in my province to have an opinion on this subject. It is an executive determination under authority given by Congress. I help to make the authority. If it turns out that the authority we have granted is not adequate, heavens, it is our province then to review that authority, to review the situation, and then try again if we have not been right as of now.

Senator NEUBERGER. Who is going to decide whether the authority is adequate or not? That is what I am trying to get from you if it is possible.

Representative ELLSWORTH. Congress will have to decide it, of course.

Senator NEUBERGER. Again I get back to what I have asked you, which is that I assume that the Congress will look to some extent for guidance to this committee, which has spent more time on this than has any other committee. I am asking what guidance we should give to the Congress as to what authority we think is adequate.

Representative ELLSWORTH. I am not a member of this committee. I sat as an observer. Had I been allowed to question witnesses, I think I could have developed considerable information. That is no point except that to ask me that, I have no place in answering it. I am going to repeat what I said a while ago. This committee is certainly very

responsible to Congress on this subject because this committee is the one and only committee that I know of that has gone into this matter of marketing area restrictions.

It is certainly your obligation to report completely on it but, again, I say I would hesitate if I were you members of this committee to come up with a solemn and firm answer on it until you have heard further from the technical people in the field and had the benefit of the agency decisions.

I am merely reciting these things a second time to be perfectly sure that they are understood. My feeling and my understanding and my obligation as a member, I think, is pretty sharp and clear.

Senator NEUBERGER. The only thing I say is that I feel the same conscientious interest in this as you do. As a Senator from Oregon, I help to represent the fourth district, as you represent it exclusively in the House. I still do not know what you think about marketing areas in any degree whatsoever. If you feel that you would rather not answer, that is quite all right.

Representative ELLSWORTH. If I have to say it again, I will. I have said not once but twice and this is the third time that I not only will not give an opinion on this subject at this time, but I do not think I am competent to give such an opinion, and that if and when it comes before Congress, I will have, I hope, adequate enough information before me so that I can cast my vote. That really ought to be clear, don't you think?

Representative HOFFMAN. May I ask him a question?

Senator NEUBERGER. Certainly.

Representative HOFFMAN. Is that not the same position that the Senator took all through when asked about marketing areas, and he said he was not expressing an opinion as to whether they should or should not have marketing areas.

Senator NEUBERGER. I have said that and I have said that when we make a report which our committee will do, if it is the majority consensus of the committee that we should take a position on marketing areas, I will take a position on marketing areas. The question was asked of Senator Morse. Senator Morse did not take a position and did not beat around the bush about it, and the Oregonian had an editorial about it.

Representative ELLSWORTH. Senator, I assume that that reference is to me. If I beat around the bush three times I will do it the fourth. I cannot take a position on this subject until I have had a chance to know the opinions of the executive agencies and their reasons for making them.

Representative CHUDOFF. I can say this because I do not run for office in Oregon. From what I have heard and the little I know about timber, I think one of the main points if not the main point in the entire problem is the question of marketing areas and somebody is going to have to take the position as far as marketing areas. I do not know what should be done, but I think as long as the members of congressional committees or members of Senate committees won't take a stand on marketing areas, you are going to have these problems as long as there are trees growing in Oregon and you could send one hundred committees here and not get to the bottom of this. I think something should be done on an experimental basis possibly as far as marketing

areas are concerned. If it does not work out, maybe they can be changed. Certainly if you leave the Secretary an elastic right to change marketing area boundaries, if he wants to, and he won't do it, nothing is going to happen. The have nots are going to yell about the haves and nothing will be changed.

Representative ELLSWORTH. I think you will have that. True enough.

Representative CHUDOFF. I certainly will say that the law is very clear and if the Secretary wanted to do an honest job——

Representative HOFFMAN. What? Wanted to do what?

Representative CHUDOFF. Wanted to do an honest job, he would sit with his staff and work out this marketing area problem. He is ignoring it. Everybody in Oregon is afraid to make a statement on it. I do not know much about timber, but I know that is the crux of the problem and unless somebody takes the bull by the horns you are going to have this problem for a long time.

Representative ELLSWORTH. You are also going to have this problem when you write detailed legislation on a matter of this kind. My present prediction is that you will find that you cannot spell out in a law the terms and conditions under which there will or will not be a marketing area restriction.

Representative CHUDOFF. Maybe if we had a Secretary that came from somewhere else, we would be able to work it out more easily.

Representative ELLSWORTH. I could have brought a lot of this out on questioning if I had been a member of this committee. Let me explain that present marketing area restrictions were placed in effect by the previous Secretary, the previous administration in the executive department; this present administration since President Eisenhower became President, fell heir to that situation so far as the Bureau of Land Management restrictions are concerned.

Representative CHUDOFF. I agree with you on that.

Representative ELLSWORTH. I think to expect them to solve something that was created without their knowledge and consent and do it instantly is a little tough.

Representative CHUDOFF. I am not arguing that Mr. McKay did not inherit the marketing area law from a prior administration. I am not arguing that point. I do not care whether the Secretary is a Republican or Democrat; you have to have somebody who has enough guts to get into this and straighten it out and whoever does it is going to lose some friends.

Representative ELLSWORTH. I am not pretending to say that because the other administration was the other party it has any bearing on this point. Unquestionably the reasons for setting up those restrictions were sound and good or they would not have been done. Now, however, with these changed conditions coming on, what to do about the restrictions as set up under present conditions is something that is not going to be worked out with anything except a crystal ball right this minute.

Representative CHUDOFF. One of the greatest examples in this situation is Abraham Lincoln before he signed the Emancipation Proclamation. I read a book about it and he had a lot to think about before he signed that proclamation and he made a lot of enemies and it probably resulted in his death. If he did not have the guts to issue the

proclamation at the time he did, we might have had slave States and free States in this Nation now.

Representative ELLSWORTH. You want to be sure. When you issue a proclamation on this subject you want to be sure that you have done it right. As you have discovered in your hearings there are many differences in the several communities and areas. I want to make one more point on this.

I explained the nature and genesis of the Bureau of Labor Management marketing area restrictions. The Forest Service operates under a law on the subject which, as I said earlier, was enacted in 1944, and that authorizes the Forest Service to set up what are called federally sustained yield units. It is fairly well spelled out. The Forest Service has set up, as you have heard, a procedure for doing that. That, too, is not satisfactory to all concerned but it does give a place and a means and a method for adjudication determination or an executive determination of the problem.

Representative HOFFMAN. May I have one more question?

Senator NEUBERGER. Yes, sir.

Representative HOFFMAN. I have been looking at Senator Morse's statement here and I have looked in vain for any statement on marketing policy.

Senator NEUBERGER. If you would just listen, I said he was questioned about it and Senator Morse said he was not prepared to take a position on marketing areas at this time.

Representative HOFFMAN. That is the same as he said.

Senator NEUBERGER. When I asked him if he was not prepared, he did not give a flat answer.

Representative HOFFMAN. The Congressman said he did not know enough to express a hard and fast opinion—at least that is what I understood.

Senator NEUBERGER. He did not.

Representative HOFFMAN. Was that not the substance of what you said?

Representative ELLSWORTH. How could I or any other member of Congress make a flat out determination of it as a result of what we have heard here? It would be ridiculous.

Representative HOFFMAN. Do you know how many areas this marketing regulation covers?

Representative ELLSWORTH. No, I do not.

Representative HOFFMAN. Does not each individual area have a problem of its own. Over, for example, in the Smith River they have one thing and in Redding they have another and each problem is different.

Representative ELLSWORTH. Yes, and it is complicated by the need for salvage in several of the areas, too.

Representative HOFFMAN. About all you can do is make a general regulation or law authorizing the Secretary to provide for each case.

Senator NEUBERGER. I asked the Congressman if he thought the existing law should be left. He would not state a position.

It may be that he should not have an opinion on it. I am just trying to find out if the Congressman from the district most involved has an opinion on marketing areas or not. He has not answered that except in an involved manner that I can not understand.

UNIVERSITY OF MICHIGAN LIBRARIES

Representative HOFFMAN. You know that he could not express an opinion covering the whole area. You decline to express an opinion. Why expect someone else to do so?

Representative CHUDOFF. I want to ask one question.

Congressman, I listened to your statement very carefully and you did state frankly the way you felt about the Al Sarena case.

Representative ELLSWORTH. That is right.

Representative CHUDOFF. I do not want to get into that because we are in the middle of a hearing on it.

Do you think, outside of the Al Sarena case, that this committee is doing a good constructive job?

Representative ELLSWORTH. Yes, I do, Mr. Chudoff. I stated that in the early part of my statement. I feel that this has been a good job. I think that you have written a very valuable record. It is long overdue. I think you have sat as chairman almost the entire time, and I think you have conducted the hearings very fairly. I believe most all sides of the controversial question, as far as I know, have at least been brought before the committee. As I said in my opening paragraphs I have a feeling of personal gratitude to you gentlemen who I know have given a part of your recess time to come out here and do this. It certainly is commendable and I think the people of Oregon are grateful to you for doing it. Other than for these last few hours, I think it has been a marvelous thing.

Representative CHUDOFF. Do you not think it is fair to say that this committee may do some good and it cannot do any harm?

Representative ELLSWORTH. You are correct except for the last 3 hours.

Representative CHUDOFF. I am taking the Al Serena case out of it.

Representative ELLSWORTH. I reiterate that I feel a personal gratitude for the job.

Representative CHUDOFF. I would not want to venture an opinion on the Al Sarena until I heard it all.

Representative ELLSWORTH. That is my point.

Senator NEUBERGER. Do you have further questions?

Representative HOFFMAN. I want to put in the decision on the Al Serena mine case.

Mr. REDWINE. It is in with the first witness.

Senator NEUBERGER. I want to ask several questions. I want to get one thing straightened out.

Representative ELLSWORTH. Not that same question.

Senator NEUBERGER. We will go over the record, but that has not been ascertained. On the question of mining patents at the present time under existing law, as it now stands, when a firm or corporation or an individual acquires patent to a mining claim on the National Forest; does not that person get the timber at the present time?

Representative ELLSWORTH. Yes, if he brings that claim to patent even under the new law and has carried out all of the requirements.

Under the old law, when he brings that claim to patent, he has exactly what the claim called for when he filed it. In other words, as you undoubtedly know, even though I have long objected to the fact, a mining claim which can be filed so easily under the old laws without anything more than just sticking up a piece of paper on a stick, has acquired property rights. It is property. Being property and so ad-

judicated, many times it is not possible for the Congress to take away the right of that claimant to whatever is on that land at the time he takes it to patent.

Senator NEUBERGER. In other words, then, at the present time, it does exist. I was not sure, from your previous comments on this, whether you said that will, when a firm gets patent to a mining claim, that timber growing on the claim then belongs to that firm or individual.

Representative ELLSWORTH. That is correct. More than that, under the new law the timber on the claim as it comes to patent, if it has not been sold or marketed by the Forest Service, I believe that that timber also would go to the mining claim.

Senator NEUBERGER. I wanted to ask you a further question, because you were discussing the Al Sarena case.

Do you think that mineral employees or mining employees or mineral experts of the Federal Government or mining experts who are in the employ of the company involved should be the final determining agents of the mineral worth of land when patent is at issue?

Representative ELLSWORTH. Well, obviously, the Federal Government, under no circumstances should take the word of the mining claim man alone. That, I think, is self-evident. There has to be a floor that can be established completely as being absolutely without influence on the part of the claimant.

Senator NEUBERGER. In this particular case, do you think, as I say, the mining experts in the employ of the Federal Government should have the final authority or the assayers or the mining experts in the employ of the company that was involved?

Representative ELLSWORTH. As I understood it, there again I only regret that this matter has been brought up and left hanging in the air; I only regret that the procedure under which the decision was made is not brought into this hearing because, of course, the Government supervised and actually arranged for the taking of the necessary samples. That has long been stated.

Senator NEUBERGER. Did Government people go over the final samples?

Representative ELLSWORTH. What do you mean "go over the final samples"?

Senator NEUBERGER. What I mean is this: I am just again trying to get back to the final question, the question of who you think should be the final authority, the mineral experts of the Government agencies or mining experts employed by the company involved?

Representative ELLSWORTH. The Secretary of the Interior must determine to his entire satisfaction as the result of the testimony and work of his own people that the proof of mineralization submitted by the applicant is in fact true and bona fide and shows mineralization or that it does not; but under the laws, the mining claimant certainly has the right to attempt to establish the fact. Since he claims there are minerals there, under those laws he certainly has a right to come before the Department and prove that he has the minerals if he can and many times he cannot.

In this case he had no such opportunity—the record is very clear on that—until the opportunity was given to him by the Department on appeal.

Senator NEUBERGER. I want to thank you very much, Congressman Ellsworth. I just want to tell you one thing. It is my understanding that Senator Murray, the chairman of the full Interior Committee, wants to have a very full and thorough study of this case, that everybody will be given a chance to testify, including the officials of the Interior Department, including the owners of the Al Sarena partnership or corporation or whatever it might be, and that no one having a bona fide interest in it will be excluded from the opportunity to testify.

Representative ELLSWORTH. I am sure that is right. I would not bore the committee by reading my last two pages of my statement again. I hope this is the end of the time I will take up but my point in appearing here and saying what I did is emphasized, that this hearing has been staged at this late hour, in my opinion, for the sole purpose of warming over the baseless charges made last year by a newspaperman and then picked up and used in the campaign. If it were otherwise, why bring this case in at this late hour, bring in a few witnesses which would seem to corroborate a little bit, at least, the false statements made or statements that I think are false, why bring the case in at that point, get the story in the papers again, have it all warmed over if possible, and then drop it and go back to Washington and perhaps at some later date set up a hearing and really get the file out, because, in the long run, it is my belief that your committee will decide that this whole proceeding was quite right and regular and there is no Al Sarena case; but my charge against the committee is that, as you leave it, you have done nothing under the sun but warm over a political gimmick of last year.

Senator NEUBERGER. It is a perfectly proper thing for the committee to find out what happened in the field. The place to find out what happened in the field is when they are out in the State where it occurred.

Let me say this: I will refuse to sign any report here, regardless of its contents, until everybody has had an opportunity to testify, whether in the field or in Washington, and by everybody, I mean the owners of this firm; that means the Secretary, if he chooses to, or if he does not choose to testify, his representative in the Interior Department. I can assure you definitely about that so far as I myself am concerned.

Representative ELLSWORTH. I appreciate that very much, but I am sure you realize that the principals of the mine and their people are also in the field and this committee has been in the field itself for a week and there have been several days when there would have been time; in fact it could have been done in Medford where these gentlemen lived if the committee really intended to do so; and I renew my statement that it did not intend to give a full and fair hearing about this thing at the present time.

Representative CHUDOFF. I did not want to talk about it further but all I can remember is working and riding and I do not know when we had time.

Senator NEUBERGER. I concur. It was our feeling that, because of the controversial nature of the Al Serena case, it should not be discussed while we were discussing timber; that the people in the plants or field should be heard before the Al Serena case ever was taken up.

I am not very experienced in Congress, but I can see no difference in the net effect of testimony, whether it is taken in the morning or after-

noon or evening. The printed record will not show at what minute it was taken.

Representative ELLSWORTH. I am sorry you could not see it, because it is pretty evident. If you could take all of the incriminating evidence against a man who is being tried for murder, or for any other crime, and then delay 6 or 8 months before you heard his evidence, I do not think you would have a fair trial.

You say that this is controversial. So far as any of the rest of us are concerned, the controversy is one-sided. Some allegations and statements have been made and so far as I know made only from one source, by a newspaper columnist, and that is the extent of the controversy. The facts can easily be determined. They could have been determined last year when the mine owners went to your office. You could have asked for a hearing and gone into it.

Senator NEUBERGER. You brought that up twice. Let me tell the situation. The mine owners came to my office and discussed the matter with me. I arranged on the following day for them to have an appointment at either 2 or 3 in the afternoon. I do not remember the day. I think it was 3 in the afternoon with Mr. Coburn and Mr. Redwine, so they could present these facts to them. I said either to call back my office or call them. I believe they were staying at the Carroll Arms Hotel. We never heard from them again.

We arranged the appointment. Mr. Coburn and Mr. Redwine phoned my office and wanted to know where the McDonalds were. We never heard from them again. I listened to them for an hour.

Mr. COBURN. We even had a reporter there to take the thing down.

Senator NEUBERGER. We arranged an appointment and they never showed up. Is that correct?

Mr. COBURN. That is absolutely correct.

Representative ELLSWORTH. What they want and what we want, what anybody wants on this or any other case where a question has been raised, I think it may be said that the integrity of the Government officials has been questioned by this smear attack. What that requires is a complete airing, not in pieces, not to try the plaintiff's case here and now in the newspapers and then hope that folks will not get a good look at the final proof, but to do it all at one time so that we know what it is all about; but that can not be done.

Senator NEUBERGER. I just wondered if you do not know of many congressional studies where there has been evidence taken in the field and then by the people at Washington. For example, I just sat with the Agriculture Committee. The Agriculture Committee sat at Pendleton from 9 in the morning until 7 at night. They heard all kinds of charges against the Secretary of Agriculture from all kinds of organizations, farmers, and ranchers. Senator Ellender said that after the committee returned to Washington they would hear Secretary Benson and his staff. I heard no objections. I am very new to Congress, but it has always been my understanding that this is standard order of procedure.

Despite all the criticism of Secretary Benson, he will not be heard until the committee has completed its tour around the country, listening to the farmers.

Representative ELLSWORTH. I think everybody thought this joint subcommittee was out here in the field for specific purposes. Those

purposes have been related several times. A good job has been done.

Now in the very closing hours, the purposes for which the subcommittee came here are brushed aside and something entirely new is taken up without announcement, without any time for even our minority member to have suitable questions to ask the witness, and so on.

So I will have to end and I hope I may end by reiterating what I said in my original statement; that I do not think it has been a fair deal and I hope it is so noted throughout Oregon.

Representative HOFFMAN. They gave me notice that they were going to take it up yesterday and then it came along today.

Senator NEUBERGER. Mr. Redwine, did you want to ask something?

Representative HOFFMAN. I want to put on the record the fact that for the last hour the committee has been operating without Senator Scott, who I understand has left or at least he took his hat and coat and away he went; to make a talk at Salem, I understand, and it is obvious that we do not intend to get through and cannot get through tonight if we are given a chance to examine the witnesses who are here.

I am willing to assume the responsibility of asking for a recess. I think the hearing should be continued in Washington unless you want to hold hearings tomorrow or the next day or the next day.

Senator NEUBERGER. Mr. Redwine.

Mr. REDWINE. Here is a letter, Mr. Chairman, signed by Clarence A. Davis, dated September 3, 1953, address to the Al Serena Mines, Inc., Trail, Oreg., a copy to Director of the Bureau of Mines, Congressman Ellsworth, and Mr. D. Ford McCormick:

Pursuant to my conversation with Mr. Barber, the following modus operandi is acceptable to me in acquiring further evidence of a valid discovery on your contested claims—

Then he sets up the procedure that should be followed and it was followed to some extent as will be developed by further witnesses.

Representative ELLSWORTH. That is correct, Mr. Redwine.

As I said earlier, Congress was in adjournment at that time. The Solicitor did inform my office of the procedure to be worked out. Mr. Garber transmitted that information on to me. It was, I think, a proper thing for the Solicitor to do since he knew that I was interested in the matter.

Mr. REDWINE. Do you have any idea of what the Solicitor might have meant when he said "is acceptable to me"; who he is accepting from?

Representative ELLSWORTH. I think that is an ordinary term. He had worked out a plan which he says was acceptable to him. It was his own determination. I know that. I did not attempt to tell him how to work it out and I am sure Mr. Garber did not.

Senator NEUBERGER. Do you want to submit this for the record?

Mr. REDWINE. Yes.

Senator NEUBERGER. It may be received.

(The letter referred to is as follows:)

UNITED STATES DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SOLICITOR,  
Washington, D. C., September 3, 1953.

AL SARENA MINES, INC.,  
Trail, Oreg.

GENTLEMEN: Pursuant to my conversation with Mr. Garber, the following modus operandi is acceptable to me in acquiring further evidence of a valid discovery on your contested claims:

1. I should like N. E. Volin, a mineral expert from the Bureau of Mines in Spokane, to accompany Mr. D. Ford McCormick when samples are obtained for assaying purposes. In the event Mr. Volin is unable to take the assignment, he will designate one or more substitutes from the Bureau of Mines who will be available.

2. The two men may arrange the time and place of meeting to suit their convenience. They should meet as promptly as possible, however.

3. Accurate record should be kept of the location from whence each sample is taken.

4. Samples should be taken from each of the following claims:

Henry Applegate, J. W. Merritt, Rainboe, Sulphide, Della McKinnon, Cougar, Oro Escondido, W. C. Leever, J. L. Grubb, J. D. McKinnon, Manganeese Claim, Staples, Arroyo Verde, Alabama and LaJolla.

You may take as many samples of whatever weight from each claim as you desire.

5. The samples should be retained in the possession of Mr. McCormick and the Government representative until shipped or delivered to a qualified assayer who is acceptable to both men.

6. The assay reports should be labeled so that they are easily identified to the claims from which they are procured and the reports sent to me promptly.

7. Mr. McCormick's salary and expense and the assaying costs will have to be borne by you. The Government will bear only the expense of its representative.

Very truly yours,

CLARENCE A. DAVIS,  
*Solicitor.*

Senator NEUBERGER. Congressman Ellsworth, you mentioned that you thought the committee came here to study one thing and was studying another. I think that what happens to timber growing in the forests is a proper concern of any committee studying the lumber industry in the State of Oregon.

The situation of mining claims on national forest land has been a controversy in this country and in this State for many years. It certainly seems to me a proper thing for the committee to find out the facts about this case. If the facts are found out and the case amounts to nothing nobody has anything to worry about.

Representative ELLSWORTH. I had not intended saying this. My regret is that according to the record that I read with reference to the handling of the 1955 act in the Senate you did not take a very active part in trying to do a job of protecting the timber on mining claims which was accomplished and was passed by the Congress and on which a lot of us have been working for a long time and which is generally acclaimed all over the country.

Senator NEUBERGER. What do you mean, I did not have an active role?

Representative ELLSWORTH. About all I know is I read your minority report and I do not recall any activity on your part toward the passage of that. I am sorry that I even brought that up. It had run through my mind that it would have been helpful had we had a little more assistance from the Senate side in that matter because it was something that some people were interested in.

Senator NEUBERGER. I will gladly submit your views to Senator Clinton Anderson, who was the sponsor in the Senate.

Let me inform you that I urged the passage of the bill and commended the bill, S. 1713, I will make a part of the record when I return to Washington, my individual views but what I objected to was that the bill still left the major shortcoming to which I objected today. I felt the bill should pass. I urged it on the floor of the Senate and voted for it in the committee but I said it still left open the great loop-

hole that once patent had been claimed the mining claimant could then have the timber on the claim. I felt that that loophole should be plugged.

(The material referred to is as follows:)

INDIVIDUAL VIEWS OF SENATOR RICHARD L. NEUBERGER, OF OREGON

I have joined in the committee's report on S. 1713, which I believe makes some long-needed improvements in public-land administration in areas where prospecting is prevalent. I want to make it clear, however, that in my own view the bill fails to go far enough and should not be mistaken for a permanent solution to the problems of the multiple use of the surface and subsurface of the public lands.

This bill fails to correct one glaring defect in the mining laws. It will still be legal, by proving a mining patent to public land, to convert to commercial gain the timber growing on that land—even though the timber has no relation to the mineral deposits, the discovery and development of which are the justification of the patent.

The committee report recognizes that this practice is against the public interest and deters sound conservation practices, and that in a number of national forests the separation of surface rights from mineral rights has by law been extended to mining patents as well as mining claims. I believe this loophole should be closed by general legislation for all federally owned timberlands.

RICHARD L. NEUBERGER.

Representative ELLSWORTH. I apologize for my previous comment, then. I am glad to know that you did help.

With reference to the other point, I feel a little bit that way myself, that the law is not as good as it should be; but there is a constitutional problem regarding the property rights on mining claims, and if you or anyone else has any suggestion for the solution to that that will stand up constitutionally along with it, and I do apologize for the previous reference because I did not know the record. I am very happy indeed to know that you did join in passing the bill. I only read your minority report comments and I assumed from that that you did not have an enthusiasm about the bill.

Senator NEUBERGER. If you read my minority report, you would see that it started off by commending the bill, and merely said it did not go far enough.

Representative ELLSWORTH. I am sorry.

Representative HOFFMAN. That is usual in a minority report, is it not?

Representative ELLSWORTH. Gentlemen, thank you very much. I apologize to the committee for occupying so much time, but I am grateful for having a chance to be heard since these hearings are held in my own State and I feel an obligation to be a part of the record of the hearings.

Thank you.

Senator NEUBERGER. We are grateful to you for coming. I think it is entirely appropriate and fine that a member of Congress from so important a district has honored us with his views.

We will take a short recess.

(Short recess.)

Senator NEUBERGER. The subcommittees will please come to order. We will resume.

Mr. REDWINE. Mr. Ashe, please.

Mr. Ashe was previously duly sworn.

**TESTIMONY OF LOWELL ASHE, ROGUE RIVER NATIONAL FOREST,  
DISTRICT ASSISTANT, UNION CREEK DISTRICT**

(The witness was previously duly sworn.)

Mr. REDWINE. Will you state your name and position.

Mr. ASHE. My name is Lowell Ashe of the Rogue River National Forest, district assistant of the Union Creek district.

Mr. REDWINE. How long have you been stationed there, Mr. Ashe?

Mr. ASHE. I have been there about 13 years now.

Mr. REDWINE. You are familiar with that entire national forest?

Mr. ASHE. Yes, I am.

Mr. REDWINE. Under a cooperative agreement between the State of Oregon and the Forest Service, I believe that the Forest Service rangers prepare what you call slash reports.

Mr. ASHE. That is right.

Mr. REDWINE. As to timber that is cut in the national forest areas even on private land?

Mr. ASHE. On private land, that is right.

Mr. REDWINE. Just how do you go about preparing a slash report, Mr. Ashe?

Mr. ASHE. Well, we are required under law to cooperate with the State in taking care of all slash disposal on private lands within our boundaries. That is part of my job. Ordinarily along in August we make our first report, preliminary report. Then along in any time after the 30th of September, we make our final slash report for the year.

The slash season or slash year runs from September 30 to September 30.

Any slash created after September 30 is classified as current slash or will go in on the next year's report.

These reports are made and—

Mr. REDWINE. Prior to the time you make the report, what do you do in the way of surveying as a basis for your report?

Mr. ASHE. We go and look over the areas and ordinarily with the operator, and plan what is the best or the cheapest way to reduce the slash hazard.

Mr. REDWINE. That report, then, contains what information?

Mr. ASHE. Oh, it contains the status of the land when the final slash report is made, the timber cut.

Mr. REDWINE. When you say "timber cut," you mean the volume of timber that has been cut?

Mr. ASHE. Yes, sir.

Mr. REDWINE. Is there a price figure also given, an estimated price as to what that timber was worth?

Mr. ASHE. No, sir.

Mr. REDWINE. Only volume?

Mr. ASHE. Volume is all.

Mr. REDWINE. I requested through your superior that you bring with you a slash report covering the Al Sarena area for last year, and I believe you have prepared the current one, too, have you not?

Mr. ASHE. Yes, sir.

Mr. REDWINE. May I see it, please? [Handed.]

Mr. ASHE. This is the one for 1954 and this is the one for 1955.

Mr. REDWINE. This figure on the back "volume removed from your current area, 800 M. b. f."; what does this "M. b. f." mean?

Mr. ASHE. That is thousand board feet.

Mr. REDWINE. In other words, there was 800,000 board feet cut last year?

Mr. ASHE. That is right, up until September 30.

Mr. REDWINE. Yes, sir.

Mr. ASHE. 1954.

Mr. REDWINE. And as to the volume cut then, it shows here "Volume removed per acre 26 M. b. f."

Mr. ASHE. 26,000.

Mr. REDWINE. That means that 26,000 board feet per acre is being cut?

Mr. ASHE. That is right.

Mr. REDWINE. Then the one for this year shows volume removed 1420. That is 1,420,000 board feet? Is that what that means?

Mr. ASHE. Yes, sir, that is right.

Mr. REDWINE. And again the cut was at the rate of 26,000 board feet?

Mr. ASHE. That is the estimate.

Mr. REDWINE. I realize that. Was that clean cutting?

Mr. ASHE. No. This was cut to a diameter limit.

Mr. REDWINE. What is the diameter limit?

Mr. ASHE. Sixteen inches.

Mr. REDWINE. In other words, everything from 16 inches down is left standing?

Mr. ASHE. That is right.

Mr. REDWINE. Are there many 11- and 14- and 16-inch diameter logs cut in this part of the country?

Mr. ASHE. Yes, sir, I guess there are quite a few.

Mr. REDWINE. What would you say about the stand between 10 and 16 inches in diameter? What is left there?

Mr. ASHE. I would not even offer an estimate. I am in no position to do that.

Mr. REDWINE. Do you think that they are cutting 75 percent? I believe you have a percentage on cut. Does that show here?

Mr. ASHE. 75 percent.

Mr. REDWINE. What does that 75 percent mean?

Mr. ASHE. That 75 percent, I think you will see on the other form, is 75 percent of the hazard removed after the burning was done.

Mr. REDWINE. I see. Are you in any position to estimate of this total and this is my total, adding the figures together, to 2,200,000 board feet, what percentage of that is Douglas-fir?

Mr. ASHE. I could not make an estimate. When I make my reports all I am interested in is the total volume.

Mr. REDWINE. You are familiar with that forest, however, are you?

Mr. ASHE. Oh, yes.

Mr. REDWINE. Well, what percentage do the larger trees run of Douglas-fir?

Mr. ASHE. Sir, I am not a timber sale officer. I am primarily a fire-control officer on the district.

Mr. REDWINE. I am talking about the species of trees. You do not have to be a sales officer for that. You are a forester.

Mr. ASHE. I would rather have one of our timber salesmen tell you that.

Mr. REDWINE. You not being a timber sales officer, you do not know anything about the value of that lumber, do you, those logs?

Mr. ASHE. No, sir.

Mr. REDWINE. You have been there how many years did you say?

Mr. ASHE. I have been there at that location 13 years. I have been 30 years with the Forest Service.

Mr. REDWINE. That is a long time. Thirteen years would make it since about 1942, would it not?

Mr. ASHE. I believe that is right.

Mr. REDWINE. And you have been on and off that property at fairly regular intervals during that period of time?

Mr. ASHE. Quite regular.

Mr. REDWINE. When you made your recent survey, was there any mining operations going on?

Mr. ASHE. Not to my knowledge.

Mr. REDWINE. When was the last time you saw any mining on there, roughly speaking?

Mr. ASHE. I could not say, sir. To my knowledge, not in the last 13 years.

Mr. REDWINE. No mining in the last 13 years, to your knowledge?

Mr. ASHE. Not to my knowledge.

Mr. REDWINE. That is all I have, Mr. Chairman, from this witness.

Senator NEUBERGER. Mr. Coburn?

Mr. COBURN. I do not have any questions of this witness.

Senator NEUBERGER. Mr. Lanigan?

Mr. LANIGAN. No questions.

Senator NEUBERGER. Congressman Chudoff?

Representative CHUDOFF. No questions.

Senator NEUBERGER. Congressman Hoffman?

Representative HOFFMAN. Did they cut any trees in 1955?

Mr. ASHE. Not to my knowledge.

Representative HOFFMAN. Not a single tree has been cut in 1955?

Mr. ASHE. Not to my knowledge.

Representative HOFFMAN. You made this survey in May?

Mr. ASHE. No, sir, I made my final survey in the latter part of October of this year.

Representative HOFFMAN. Final one. Did you make one in May of 1955?

Mr. ASHE. I was over there in May; yes, sir.

Representative HOFFMAN. Who was with you?

Mr. ASHE. At that time I was alone.

Representative HOFFMAN. Did Mr. Porter ever go over there with you?

Mr. ASHE. Mr. Porter?

Representative HOFFMAN. Yes.

Mr. ASHE. I do not know the gentleman.

Representative HOFFMAN. Did you make an estimate as of that time?

Mr. ASHE. No, sir.

Representative HOFFMAN. Did you see Drew Pearson's television account of what was happening over there?

Mr. ASHE. No, sir.

Representative HOFFMAN. That is all.

Senator NEUBERGER. Mr. Ashe, I want to thank you. I know it is sometimes difficult for a man who is working in the field and in the outdoors and with these resources to come in and submit to testimony and questions like this, but some of the facts brought out may bear on the custodianship of those resources and, as acting chairman of the committee, which is all I am, I am very grateful to you for your cooperation in coming here. Thank you, sir, very much.

Mr. ASHE. Thank you.

Senator NEUBERGER. We will submit for the record these slash reports by Mr. Ashe of the Forest Service.

(The reports referred to is filed with the committee.)

Representative HOFFMAN. Is your assistant named Klansky?

Mr. ASHE. That is right, sir.

Mr. REDWINE. Mr. Wood, please.

### TESTIMONY OF JACK H. WOOD, FOREST SUPERVISOR, ROGUE RIVER NATIONAL FOREST

(The witness was previously duly sworn.)

Mr. REDWINE. State your name.

Mr. WOOD. My name is J. H. Wood.

Mr. REDWINE. Your official position?

Mr. WOOD. I am the forest supervisor of Rogue River National Forest.

Mr. REDWINE. How long have you been at that particular position, Mr. Wood?

Mr. WOOD. Four years.

Mr. REDWINE. You have been with the Forest Service how long?

Mr. WOOD. Since 1934.

Mr. REDWINE. You have been at the present post for about 4 years?

Mr. WOOD. That is right.

Mr. REDWINE. Mr. Wood, you have been on this Al Serena property how many times in the last 4 years, would you say?

Mr. WOOD. Maybe three.

Mr. REDWINE. Have you seen any mining operations going on there?

Mr. WOOD. No, sir.

Mr. REDWINE. You have seen timber cutting though?

Mr. WOOD. I have seen it after it was cut.

Mr. REDWINE. But there is timber cutting going on there?

Mr. WOOD. There has been.

Mr. REDWINE. What about the sales contracts in that area, Mr. Wood. What is Douglas-fir selling for?

Mr. WOOD. Well, currently, we have sales on the forest in Douglas-fir that run, or, roughly between \$20 and \$30. There is a few under that, and a few over that, but the majority of them the Douglas-fir has sold in the last year or 18 months for anywhere from \$20 to \$30, depending upon the quality and accessibility and development cost.

Mr. REDWINE. So \$25 maybe would be a fair average, do you think?

Mr. WOOD. Well, fairly close; yes, sir.

Mr. REDWINE. What about sugar pine?

Mr. WOOD. Well, sugar pine is the premium species. It usually sells for not less than \$40. We have one sale that we sold last summer

which went for an alltime high of \$80; that is, an alltime high for our forest.

Mr. REDWINE. Mr. Wood, can you tell the committee what the comparable prices for Douglas-fir were in 1939?

Representative HOFFMAN. Mr. Chairman, what do you mean by comparable price, fir in the same location?

Mr. REDWINE. Yes, sir.

Representative HOFFMAN. Same road, same everything?

Mr. REDWINE. Same situation.

Let me ask one more question and we will go back to that.

Representative HOFFMAN. Surely.

Mr. REDWINE. This property is served with access roads, is it not?

Mr. WOOD. Yes, sir.

Mr. REDWINE. There are two roads on it, are there?

Mr. WOOD. Yes, sir.

Mr. REDWINE. How long have those roads been there?

Mr. WOOD. A long time, probably 30 years.

Mr. REDWINE. They are Forest Service roads, are they not?

Mr. WOOD. Yes, sir.

Mr. REDWINE. Does that take care of the question you had, Congressman Hoffman? The witness says that the roads have been there probably 30 years. The access situation was the same.

Representative HOFFMAN. He does not tell anything about the elevations or what the cost of hauling to market is. That is my point. If you are going to get a market price, conditions should be comparable, of course. Timber might be worth 1 price 1 place and something else another, and that \$80 fellow is out of business. He went bankrupt, did he not?

Mr. WOOD. No, sir.

Representative HOFFMAN. You are sure he did not?

Mr. WOOD. Positive.

Representative HOFFMAN. He is not in business, is he?

Mr. WOOD. Yes, sir.

Representative HOFFMAN. Where?

Mr. WOOD. In the Medford area.

Representative HOFFMAN. What is his name?

Mr. WOOD. Wilson.

Representative HOFFMAN. How much profit did he make on that, do you know?

Mr. WOOD. No, sir, I do not know.

Representative HOFFMAN. Of course, what somebody paid for something somewhere is something else again. It does not establish market prices.

Mr. REDWINE. What was Douglas fir worth in 1939, would you say?

Mr. WOOD. Mr. Redwine, I don't believe I can answer that question for this reason: In 1939 I was stationed on a forest in the northeastern part of the State of Washington, which is just about as far away from the Medford area in region 6 as you can get, and I do not have any personal knowledge of, you know, what lumber prices were. I can say that they were substantially less, not how much less.

Mr. REDWINE. They were not half as much as they are now, were they, Mr. Wood?

Mr. WOOD. No, sir, I would say they were less than half as much.

**Mr. REDWINE.** In other words, they have more than doubled in that period of time?

**Mr. WOOD.** Yes, sir; that is a safe statement.

**Mr. REDWINE.** Mr. Chairman, I would like to explain why I am going back to 1939 under this subject. This same corporation earlier than 1939 in applying for an RFC loan, which was turned down because the ground was not sufficiently mineralized to give the Government sufficient security for a \$20,000 loan, set up as part of its assets, which will be shown later by documents from the RFC, as the timber being worth \$80,000 at that time.

**Senator NEUBERGER.** This is of record at the RFC?

**Mr. REDWINE.** That is of record at the RFC and will be submitted for the record.

**Representative CHUDOFF.** It is probably a loan application.

**Mr. REDWINE.** It is a loan application to the RFC. That is the reason I am going back to 1939.

**Senator NEUBERGER.** You may proceed.

**Mr. REDWINE.** What about sugar pine? Has the price on that more than doubled also?

**Mr. WOOD.** Yes, sir, it has.

**Mr. REDWINE.** That is all I have from this witness, Mr. Chairman.

**Senator NEUBERGER.** Mr. Coburn, do you have any questions of Mr. Wood?

**Mr. COBURN.** I just wondered.

You have testified that \$25 is about the average price that you are getting for Douglas-fir?

**Mr. WOOD.** Currently, yes, sir.

**Mr. COBURN.** Have you every made any estimate publicly of the value of the timber involved in these 15 contested claims?

**Mr. WOOD.** No, sir.

**Mr. COBURN.** Would you care to make some estimate of the value of that timber?

**Mr. WOOD.** No, sir. I am in no position to, Mr. Coburn. I do not have enough personal knowledge. I have not even been on most of the claims.

**Mr. COBURN.** Does the figure, \$77,000, mean anything to you?

**Mr. WOOD.** Well, that was Mr. Leavengood's estimate, as I understand it, of his estimated value on the 15 contested claims. I believe that is right.

**Mr. COBURN.** On the 15 contested claims?

**Mr. WOOD.** Yes, sir.

**Mr. COBURN.** Do you agree with that figure, Mr. Wood?

**Representative HOFFMAN.** He just said he did not have any knowledge.

**Mr. COBURN.** He has answered that he is quoting someone else. He may have an opinion as to whether that is an accurate figure.

**Representative HOFFMAN.** He testified before that he had not been on that and did not know.

**Mr. COBURN.** I am asking if he agrees with that figure as a figure.

**Representative HOFFMAN.** That is the same thing.

**Mr. COBURN.** No, it is not.

**Representative HOFFMAN.** The other fellow gave a figure and you ask him to verify it.

Mr. COBURN. I have not asked him to make an estimate. I want to know if he agrees with the other opinion.

Senator NEUBERGER. The question can be put and Mr. Wood does not have to answer if he does not care to.

Representative HOFFMAN. I am calling attention to the fact that he says he was not on the land and does not know and cannot express an opinion that is worth a nickel.

Mr. REDWINE. Mr. Chairman, I want to point out that Mr. Wood testified that he has been on the property three times.

Is that correct, Mr. Wood?

Mr. WOOD. I have not been on all the claims.

Mr. COBURN. Mr. Wood, I have no intention of embarrassing you or to clutter up the record with a lot of irrelevant facts. If you do not answer the question it is all right with me.

Mr. WOOD. Mr. Leavengood estimated timber to be approximately 25,000 feet to the acre. The slash report which Mr. Ashe submitted a few moments ago which I have seen, of course, for that amount of timber which was cut substantiates that figure of 25,000 feet to the acre. Well, on that basis, how many acres would there be on 15 claims?

Mr. COBURN. Three hundred.

Mr. WOOD. Three hundred times twenty-five would be 7,500,000, so his figure gives it a value of somewhere in the neighborhood of \$10 per thousand, which I would say is not excessive, if that answers your question.

Mr. COBURN. That is fine.

Mr. REDWINE. What is the appraised value of that timber in that area per thousand?

Mr. WOOD. You mean on the claim?

Mr. REDWINE. Not on the claim; in the forest. If you are getting ready to have a sale, what is the appraised value?

Mr. WOOD. I will go back to my former answer, Mr. Redwine, that our sales we have made in the last year have been appraised, most of them, between \$20 and \$30 per acre. We have had some for less than that. We have also had some for more.

Mr. COBURN. That does not reflect the bid prices you have been getting?

Mr. WOOD. No, sir.

Mr. COBURN. Are the bid prices substantially higher or substantially lower?

Mr. WOOD. Well, there has been a wide variation, Mr. Coburn.

Mr. COBURN. Have they ever gone below the appraised price?

Mr. WOOD. No.

Mr. COBURN. Have they been higher than the appraised price?

Mr. WOOD. Yes, sir.

Mr. COBURN. Substantially higher?

Mr. WOOD. Well, it depends on what you call substantial, I guess. We have had some that I think in the last year the highest price we have had on Douglas fir is approximately \$32.

Mr. COBURN. The highest bid price?

Mr. WOOD. Yes, sir, maybe \$33, in that neighborhood.

Mr. COBURN. That is all.

Senator NEUBERGER. Mr. Lanigan?

Mr. LANIGAN. I have no questions.

Senator NEUBERGER. Congressman Chudoff?

Congressman CHUDOFF. No questions.

Senator NEUBERGER. Congressman Hoffman?

Representative HOFFMAN. If \$32 is the highest bid you have had, you would not say it was worth \$80 a thousand, would you?

Mr. WOOD. No, sir.

Representative HOFFMAN. So that that figure does not amount to much, that \$80.

Mr. WOOD. You are talking about two different species, Mr. Hoffman.

Representative HOFFMAN. Sure. You have no timber to sell on these claims anyway, have you?

Mr. WOOD. No, sir. That is private land.

Representative HOFFMAN. Then what we are talking about and what it is worth does not affect the Government's profit or loss on any timber sales in connection with these claims, does it?

Mr. WOOD. Would you repeat that question?

Representative HOFFMAN. Well, it is a long one. If you did not get it, maybe I could not explain it any better.

Mr. WOOD. I am sorry.

Representative HOFFMAN. I give up.

That is all.

Senator NEUBERGER. The gentleman from Michigan mentioned that it is private land. It became private land when patent was granted, is that correct?

Mr. WOOD. Yes, sir.

Senator NEUBERGER. Until then prior to the time that patent was granted, these claims were part of the Rogue River National Forest?

Mr. WOOD. Yes, sir.

Senator NEUBERGER. They belonged to the Federal Government?

Mr. WOOD. Yes, sir.

Representative CHUDOFF. Can I ask a question?

Representative HOFFMAN. So far as you know, the Government has not taken any court action to get them back, has it?

Mr. WOOD. No, sir.

Representative CHUDOFF. May I ask a question, Mr. Hoffman? I am trying to understand what is going on here.

Representative HOFFMAN. Yes.

Representative CHUDOFF. I have not made up my mind whether this is a good or bad case, but it could be a very bad case. When you get a mining patent under Federal law, do you pay anything for that? Did the Al Serena Mining Co. buy the patent from the Government or did somebody give it to them?

Mr. WOOD. Well, they pay a fee.

Representative CHUDOFF. How much is that fee?

Mr. WOOD. I do not know.

Representative CHUDOFF. Is it substantial?

Mr. WOOD. No, it is a small amount per acre.

Representative CHUDOFF. And you get all this timber free when you pay it and also everything that is underneath the ground free, too?

Mr. WOOD. Let me put it this way, Mr. Chudoff. When the patent is issued, all the resources both below and above the surface become the property—

Representative CHUDOFF. I understand that, but I want to know what you give for it or whether you get it for nothing.

Mr. WOOD. There is a small fee that they pay at the time.

Representative CHUDOFF. What is it, \$5 an acre?

Mr. WOOD. I think it is \$4 or \$5 an acre.

Representative CHUDOFF. I should get out of Congress and get all these patents. That would be a good business if I could get into it.

Mr. WOOD. You do not want me to answer that question.

Representative CHUDOFF. All you have to do is convince somebody that there are minerals on that land, that you staked a good and valid claim, and for \$4 an acre they will give you a thousand acres of this land and you are entitled to all the minerals and all the timber on this property and the public get nothing for it.

Mr. WOOD. Outside of the fee.

Representative CHUDOFF. And you have to spend about \$500 a year.

Mr. WOOD. I believe it is \$100 a year to the limit of \$500.

Representative CHUDOFF. In the language that we use back East, how you describe that is that you would say that is a great racket.

Mr. REDWINE. Congressman, let us ask Mr. Rice that question and get that on the record right now in answer to your question.

Mr. Rice, would you step forward just a moment and answer Congressman Chudoff's question?

#### TESTIMONY OF PIERCE M. RICE, MANAGER, OREGON LAND OFFICE—Resumed

(The witness was previously duly sworn.)

Representative CHUDOFF. I just wanted to find out how this thing worked. I understand that when you got a patent you got everything under the ground and everything above the ground, so that you were entitled to the timber on that.

Mr. WOOD. That is correct.

Mr. RICE. That is correct.

Representative CHUDOFF. You pay a \$5 filing fee for the application whether it is 1 claim or 100, and then you pay at the rate of \$5 an acre or a fraction thereof for the area.

Mr. RICE. On lode mining claims and placer claims \$2.50.

Representative CHUDOFF. This law was probably passed for the purpose of encouraging mining on these lands.

Mr. RICE. That is right.

Representative CHUDOFF. In other words, you threw in a bonus of the timber growing on the land.

Mr. RICE. All the resources contained, land and resources passed upon the issuance of patent.

Representative CHUDOFF. \$5 an acre and a \$100 a year development.

Mr. RICE. No, \$100 is the annual assessment requirement on each claim.

Representative CHUDOFF. Do you have to show a guaranteed expenditure for developing?

Mr. RICE. Five hundred dollars on each claim.

Representative CHUDOFF. That is a pretty good business if you get into it. I mean you can answer that question. That is not incriminating.

Senator NEUBERGER. That is a matter of opinion rather than fact.

**Mr. Rice.** That is true as a rule. Of course, on the O. and C. area we have a different situation.

**Senator NEUBERGER.** Thank you very much.

Did you have any further questions of Mr. Wood?

**Representative HOFFMAN.** Assuming that the applicants for this mining claim had expended around \$200,000 in attempting to develop it, would you not think that they believed they had a mine there before they put that amount of money into it?

**Mr. Wood.** Mr. Hoffman, I am not a mining engineer. I am a forester and it is pretty hard for me to offer an opinion on what they might have.

**Representative CHUDOFF.** I understand they sold a lot of stock to a lot of trusting individuals so they had to spend some of the money to look as if they had a mine.

**Representative HOFFMAN.** The average individual is not a sucker. And why do you usually interrupt before the witness answers?

**Representative CHUDOFF.** As I said before, spending money would not put gold in the ore. That has nothing to do in the case because certainly you do not get credit for what you spend in developing the land.

**Representative HOFFMAN.** It shows good faith.

**Representative CHUDOFF.** I guess the corporation had quite a few officers that got substantial salaries. I have not looked into it.

**Representative HOFFMAN.** You are just throwing that in.

**Representative CHUDOFF.** I am convinced that even though the property had only lumber the Al Sarena people got a good thing.

**Senator NEUBERGER.** Mr. Wood, I want to ask you one question. Do not answer if you do not want to.

Assuming that \$200,000 or \$2 million are spent on a series of mining claims in the anticipation of minerals and no minerals developed: Do you think that the public is under any obligation to reimburse the miners in the form of national forest timber?

#### TESTIMONY OF JACK H. WOOD, FOREST SUPERVISOR, ROGUE RIVER NATIONAL FOREST—Resumed

**Mr. Wood.** I think we would have to progress along whatever the law dictates, Senator.

**Senator NEUBERGER.** Do you have any further answer to the question?

**Mr. Wood.** No, sir.

**Senator NEUBERGER.** Mr. Redwine has another question.

**Mr. REDWINE.** Mr. Wood, although you say you have not been on each and every one of these disputed claims, you are familiar with the overall picture there. Is the timber growth fairly constant?

**Mr. Wood.** You mean, for example, in that drainage?

**Mr. REDWINE.** Yes, sir.

**Mr. Wood.** Yes, sir, I think within reasonable limits it is.

**Mr. REDWINE.** And in that particular area of the drainage it is constant, is it not?

**Mr. Wood.** Yes, sir. I think so.

**Mr. REDWINE.** That is all.

**Representative HOFFMAN.** And regardless of what may have been spent or may not have been spent on a mining claim when the Govern-

ment issues a patent the timber as well as what is under the ground belongs to the patentee, does it not?

Mr. Wood. Yes, sir.

Representative HOFFMAN. So the company owned the timber, did it not?

Mr. Wood. Yes, sir.

Representative HOFFMAN. And is it anybody's business if they owned it and they had a good sound, equitable title to it, what they got out of it? That is not a question for you anyway.

Mr. Wood. We have been treating it like any other private land, Mr. Hoffman, since patent was issued, if that answers your question.

Senator NEUBERGER. You have been treating it as any other private land since patent was granted?

Mr. Wood. Yes, sir; we have.

Senator NEUBERGER. You are doing right and carrying out your obligations as a forest officer.

Thank you for your cooperative attitude. We appreciate your coming in today. I just wanted to excuse Mr. Wood, if you are through.

Representative HOFFMAN. I am through.

[Mr. Hoffman continued:]

The other day you put in some figures about the loss of income in Oregon. Now, I want to put in some from the Survey of Current Business, United States Department of Commerce.

The Oregon personal income 1951, 1952, 1953, 1954, and then, the Oregon per capita income and the manufacturers, the payrolls for the same years together with the lumber industry payroll and then in connection with that, call attention once more to the 3 or 3½—whatever it was—months' strike in the lumber industry. I will not take the trouble to read them in.

Senator NEUBERGER. I will be happy to have you put them in. I want to make it clear inasmuch as you question my figures.

Representative HOFFMAN. No.

Senator NEUBERGER. Do you want to let me finish?

Representative HOFFMAN. When you do not state it accurately, I will interrupt.

Senator NEUBERGER. The situation I stated was that we had failed to hold our own. The State of Washington was similarly affected by the lumber strike of which you make a point, but the State of Washington in no way suffered the income decline with the comparison to other States that Oregon did from 1952 to 1954. I do not have the table with me. I will be glad to incorporate it in the hearings.

The State of Washington which had the similar strike did not suffer the similar decline.

I did not mention it in connection with this case at all but merely to point up the necessity for the committee to arrive at the best set of procedures that we can to keep this vital lumber industry in complete operation and maintain our business pace in the State of Oregon.

Representative HOFFMAN. No one is finding fault with that. I am trying to point out that there was a strike and there was loss of payroll payments. There was a drop. There is no question about it.

Senator NEUBERGER. That was the only reason I mentioned it because of the importance of keeping every lumber payroll that we can in operation that is consistent with sound principles. That was the

context in which I made the statement and again I repeat it. These will be accepted for the record, of course.

(The information referred to is as follows:)

[From Survey of Current Business, United States Department of Commerce]

*Oregon personal income*

	<i>Billion</i>		<i>Billion</i>
1950-----	\$2, 456	1953-----	2, 906
1951-----	2, 742	1954-----	2, 881
1952-----	2, 900		

*Oregon per capita income*

1950-----	\$ 1, 607	1953-----	1, 794
1951-----	1, 749	1954-----	1, 757
1952-----	1, 814		

<sup>1</sup> Decrease, 2 percent.

NOTE.—United States decrease, 1953-54=1 percent.

[From Oregon Unemployment Commission]

*Oregon payrolls*

ALL MANUFACTURING		LUMBER INDUSTRY PAYROLLS	
1950-----	\$1, 049, 540, 700	1950-----	\$293, 726, 444
1951-----	1, 210, 551, 565	1951-----	343, 888, 058
1952-----	1, 270, 837, 444	1952-----	360, 106, 195

Senator NEUBERGER. Mr. Sanborn.

**TESTIMONY OF WILLIAM C. SANBORN, MINING ENGINEER, FOREST SERVICE, SAN FRANCISCO, CALIF.**

(The witness was previously duly sworn.)

Mr. REDWINE. What is your name and official position, Mr. Sanborn?

Mr. SANBORN. William C. Sanborn. I am a mining engineer for the Forest Service.

Mr. REDWINE. How long have you been so employed?

Mr. SANBORN. Since September 1945.

Mr. REDWINE. Will you briefly give your background experience and qualifications?

Before you start answering that; Mr. Chairman, a little bit later I am going to suggest to the Chairman that we include in the record the transcript of the hearing on this matter. Mr. Sanborn testified at that time.

Senator NEUBERGER. Of what date was that, Mr. Redwine?

Mr. REDWINE. This was September 13, 1950. Mr. Sanborn was a witness at the hearing conducted by Mr. Rice. At that time, Mr. Sanborn put all of his qualifications in and I would like just briefly for him to mention his background at this time because it will show in the record later on.

Senator NEUBERGER. Will you do so briefly, please?

Mr. SANBORN. Well, I have a degree of bachelor of science in mining engineering from the Michigan College of Mining and Technology, 1933.

Representative HOFFMAN. Mr. Chairman, in the interests of brevity, I have no objection to your putting them in later instead of repeating them here.

Mr. REDWINE. That is satisfactory.

Senator NEUBERGER. That is all right with me.

Representative HOFFMAN. I assume he is qualified.

Senator NEUBERGER. We ought to let him finish that sentence. Why do you not finish the part about your education.

Mr. SANBORN. That completes my education so far as college goes.

Senator NEUBERGER. How long have you been employed by the United States Forest Service?

Mr. SANBORN. Since September 1945.

Senator NEUBERGER. Where are you stationed?

Mr. SANBORN. San Francisco, Calif.

Senator NEUBERGER. Thank you very much.

Mr. REDWINE. You have had experience as an assayer and underground sampler, have you not?

Mr. SANBORN. Yes, sir.

Mr. REDWINE. You accompanied Mr. Hattan on an examination of the Al Sarena claims, did you not?

Mr. SANBORN. Yes, sir.

Mr. REDWINE. What was that date?

Mr. SANBORN. I believe it was July 12, 13, 14, and 15, 1949.

Mr. REDWINE. That was what has been testified to by Mr. Hattan as his second sampling trip, was it not?

Mr. SANBORN. I believe that is correct.

Mr. REDWINE. Besides you and Mr. Hattan, who were present?

Mr. SANBORN. Mr. Charles McDonald, Mr. H. P. McDonald, Jr., and also present at the camp was a Mr. Aultland.

Mr. REDWINE. Did you visit the 15 claims?

Mr. SANBORN. Yes, sir; I did.

Mr. REDWINE. What procedure was followed in determining where samples would be taken?

Mr. SANBORN. Well, in effect, samples were secured at points suggested, or, if you will, directed by the McDonald boys. In addition, there were a few samples taken at places that appeared to be favorable. In other words, it is the usual practice to not rely wholly on 1 or 2 samples.

Mr. REDWINE. But in the main, most of the samples were taken at a spot designated by the McDonald boys, I believe you said?

Mr. SANBORN. Yes, sir.

Mr. REDWINE. And that was supposed to be the discovery point, or not?

Mr. SANBORN. Well, the discovery points are set forth on the mineral survey plots, and in practice many times when you go into the field you find no exposures to sample at the discovery point as shown on the mineral survey plot, so you rely on the applicant then to point out the areas that most favorable results might be expected.

Mr. REDWINE. After the samples were taken, what happened?

Mr. SANBORN. They were sacked and properly marked. Mr. Hattan kept a record of all the identification of the samples. Tags were placed inside of each sack and they were retained in our possession.

Mr. REDWINE. Until you delivered them to the railroad, I believe.

Mr. SANBORN. No, I did not myself deliver them to the railroad.

Mr. REDWINE. Who did?

Mr. SANBORN. That I could not say. I directed the packaging of them and the submission to San Francisco to the regional forester.

Mr. REDWINE. And when they reached San Francisco, what happened?

Mr. SANBORN. I personally took them to Abbot A. Hanks, Inc., with the instructions as to what assaying we wished to have conducted.

Mr. REDWINE. What do you mean by that, as to their gold and silver content?

Mr. SANBORN. That is correct.

Mr. REDWINE. You did not dictate the method by which they should assay them, did you?

Mr. SANBORN. No, sir.

Mr. REDWINE. Only that you wanted the gold and silver content determined?

Mr. SANBORN. That is correct.

Mr. REDWINE. With instructions then to direct the report to whom?

Mr. SANBORN. To Mr. Hattan.

Mr. REDWINE. Do you recall what the date was that you delivered those samples to Abbot A. Hanks?

Mr. SANBORN. I do not; no.

Mr. REDWINE. On the basis of your experience, what you observed on the claims, and your study of the assay report as delivered by the Abbot Hanks concern, do you consider that a valid discovery had been made on those 15 claims?

Mr. SANBORN. No, sir.

Mr. REDWINE. That is all, Mr. Chairman.

Senator NEUBERGER. Have you any questions of Mr. Sanborn, Mr. Coburn?

Mr. COBURN. No.

Representative CHUDOFF. I would like ask one question on a matter of general knowledge for the record. When you take these ores or whatever you call them, and put them in these canvas bags, do you seal the sack?

Mr. SANBORN. Not as a general practice.

Representative CHUDOFF. Is there not a rule of the Department that it has to be sealed with a wire stamp and the seal of the Department placed on it?

Mr. SANBORN. Not to my knowledge.

Representative CHUDOFF. Everybody trusts everyone?

Mr. SANBORN. Not if you keep possession of them.

Representative CHUDOFF. But you did not keep possession of them. I am not saying it happened, but if somebody wanted to they could dump something out and put in something else. It would not be considered good business, in my opinion, not to do something that would keep it from being substituted. You have a like sample and you send the sample on to the assayer?

Mr. SANBORN. Normally, I keep the samples in my possession at all times, but in this instance I rode from San Francisco to Redding. I secured a car from Redding and I drove to Medford, so it was impossible for me to, and I did not at the time, proceed in any different way than I normally do.

Representative CHUDOFF. But this was the second sample that had been taken and that showed not to have enough gold or silver content to warrant having a valid claim; is that right?

Mr. SANBORN. It was the second sampling that Mr. Hattan had.

Representative CHUDOFF. There was a third sampling that got from Oregon to Alabama somehow. Who took it from Oregon to Alabama? Do you know, or would somebody have to tell us that?

Mr. SANBORN. I do not know.

Representative CHUDOFF. I understand that that was the fourth. There was some sample that got from Oregon to Alabama that showed a lot of gold and silver sampling. I was wondering how that got from Oregon to Alabama, but somebody else would tell us that later, I guess.

Mr. REDWINE. In your opinion, the assaying was done in a proper manner?

Mr. SANBORN. Yes, sir.

Mr. REDWINE. What is the reputation of the company that did the assaying?

Mr. SANBORN. Very, very good.

Senator NEUBERGER. Mr. Lanigan?

Mr. LANIGAN. I have no questions.

Senator NEUBERGER. Mr. Hoffman?

Representative HOFFMAN. Do you know anything about the standing of Abbot A. Hanks, San Francisco?

Mr. SANBORN. Yes, sir.

Representative HOFFMAN. What is it, good or bad?

Mr. SANBORN. Very good.

Representative HOFFMAN. Included in that, it has the reputation for integrity?

Mr. SANBORN. That is right.

Representative HOFFMAN. What about Smith of Los Angeles?

Mr. SANBORN. As far as I know, very good.

Representative HOFFMAN. What about Williams of Alabama?

Mr. SANBORN. I do not know about them.

Representative HOFFMAN. Do you remember what date it was that you got those samples with Mr. Hattan?

Mr. SANBORN. Yes. July 12, 13, 14, and 15, 1949.

Representative HOFFMAN. Did you have them from that time on until they were delivered to someone to ship to San Francisco?

Mr. SANBORN. Yes, sir.

Representative HOFFMAN. You had them in the back of your car?

Mr. SANBORN. In Mr. Hattan's car until we arrived in Medford on July 15. We transferred them to a vehicle I was using. I do not recall especially whether I spent an additional week on the Klamath Forest or not. I could determine that, however, by going to my diary.

Representative HOFFMAN. When were they shipped?

Mr. SANBORN. That I could not say exactly, when I left the samples for boxing and shipping.

Representative HOFFMAN. With whom did you leave them for boxing and shipping?

Mr. SANBORN. I do not have a recollection of who I left them with.

Representative HOFFMAN. You do not know who did get them from you?

Mr. SANBORN. Well, I could look it up. I could determine that.

Representative HOFFMAN. But you do not recall at the present time?

Mr. SANBORN. No, sir.

Representative HOFFMAN. You mean you had a record of it.

Mr. SANBORN. Perhaps in my diary. I could ascertain who I left them with for crating and shipment to San Francisco.

Representative HOFFMAN. If that information is available, would you send that to us by mail to the committee in Washington?

Mr. SANBORN. Yes, sir.

Senator NEUBERGER. Thank you very much.

Representative HOFFMAN. The Senator means, I assume, that if you had it in a book made at the time, if that information is available from some record you made at the time.

Representative CHUDOFF. That is what he means.

What we want is a true and correct copy of your book of original entry, I believe they call it in law.

Mr. SANBORN. It may be very little. It is not normal that I record every step that I do.

Representative CHUDOFF. If you have it, send it to us, and if you do not have it, you can not give it to us.

Representative HOFFMAN. What is the ordinary, normal, practice with reference to samples? How do you handle them? You handle these in a different way, I understand.

Mr. SANBORN. Simply because I did not have a vehicle out of San Francisco; not abnormal at all. In other words, when I go to southern California, many times I ride the train to Los Angeles, pick up a car there. If I take samples on the San Bernardino Forest, I leave them with the warehouseman and tell him to ship them to the regional forester.

Representative HOFFMAN. Ordinarily when you take a sample, do you split it and keep some part of it?

Mr. SANBORN. No, sir.

Representative HOFFMAN. You do not do that?

Mr. SANBORN. No, sir.

Representative HOFFMAN. Did you in this case?

Mr. SANBORN. I believe we split some.

Representative HOFFMAN. You believe you did. Do you remember whether you did or did not?

Mr. SANBORN. I know we split some but as to which ones we split. I do not know.

Representative HOFFMAN. You are talking about the ones you took on those days you mentioned?

Mr. SANBORN. That is correct.

Representative HOFFMAN. You had several samples. Some you split and some you did not?

Mr. SANBORN. That is right.

Representative HOFFMAN. What would be the purpose of splitting some and not others?

Mr. SANBORN. It is because of their bulk.

Representative HOFFMAN. You just split the big ones?

Mr. SANBORN. That is correct.

Representative HOFFMAN. What did you split them for, so as to have some on hand because they were too big?

Mr. SANBORN. That is right.

Representative HOFFMAN. If they were too big, why did you not split them at the mine?

Mr. SANBORN. That is where we split them, right where we were taking the sample.

Representative HOFFMAN. If you took a sample and then split it, I thought what you took at the time at the hole or wherever it was, did not become a sample until you got through splitting it.

Senator NEUBERGER. I have heard a lot about these split samples.

Mr. SANBORN. It was at the point of sampling that the splitting was done.

Representative HOFFMAN. But you did not at any time afterward split any and keep a part of it?

Mr. SANBORN. No, sir.

Representative HOFFMAN. That is all.

Senator NEUBERGER. Are there any other questions of Mr. Sanborn?

Representative CHUDOFF. I have no questions.

Senator NEUBERGER. Thank you very much, Mr. Sanborn, for being with us and answering so helpfully.

Mr. REDWINE. Mr. Kansky, please.

(The witness was previously duly sworn.)

### TESTIMONY OF GEORGE W. KANSKY, DISTRICT RANGER, UNION CREEK, ROGUE RIVER NATIONAL FOREST

Mr. REDWINE. State your name and official position, Mr. Kansky.

Mr. KANSKY. I am George W. Kansky, district ranger at Union Creek on the Rogue River National Forest.

Mr. REDWINE. Mr. Kansky, Mr. Ashe works under your supervision, does he not?

Mr. KANSKY. Yes, sir, he does.

Mr. REDWINE. Are you familiar with his work in making the surveys and preparing the reports on slash?

Mr. KANSKY. Yes, sir, I am.

Mr. REDWINE. Is he a competent man?

Mr. KANSKY. He is very competent.

Mr. REDWINE. That is all I have, sir.

Senator NEUBERGER. Are there any other questions of Mr. Kansky?

Mr. Coburn?

Mr. COBURN. No, Mr. Chairman.

Senator NEUBERGER. Mr. Lanigan?

Mr. LANIGAN. No.

Senator NEUBERGER. Congressman Chudoff?

Representative CHUDOFF. No.

Senator NEUBERGER. Mr. Hoffman?

Representative HOFFMAN. No.

Senator NEUBERGER. Thank you very much, Mr. Kansky. That was not much to take you away from Jackson County for 2 days.

Mr. REDWINE. Mr. Appling.

(The witness was previously duly sworn.)

**TESTIMONY OF RICHARD N. APPLING, JR., MINING ENGINEER,  
UNITED STATES BUREAU OF MINES**

**Mr. REDWINE.** Will you state your name and official position?

**Mr. APPLING.** Richard N. Appling, Jr., employed as a mining engineer with the United States Bureau of Mines. At the time that this affair took place, I was stationed in Grants Pass and I am now in Spokane.

**Mr. REDWINE.** Will you identify that, please?

**Mr. APPLING.** Yes, sir. This looks like a copy of my report on the sampling that we did at the Al Sarena.

**Mr. REDWINE.** This is your report including the maps as to where the sampling was done?

**Mr. APPLING.** Well, those are just part of the maps, I believe. I have a more complete copy.

**Mr. REDWINE.** Do you have them with you?

**Mr. APPLING.** Yes, I do. Those were sort of supplemental maps where I thought more detail might be needed.

**Mr. REDWINE.** Will you leave with the committee all these maps that you have brought with you for inclusion in the record, please?

**Mr. APPLING.** All right. These others are copies of what you have.

**Mr. REDWINE.** Then separate from the formal report and the maps that we have there, what is that document there?

**Mr. APPLING.** That is a copy of the assays and samples that we took on the claims at the time.

**Mr. REDWINE.** Made by the A. W. Williams Co. of Mobile, Ala.?

**Mr. APPLING.** That is right.

**Mr. REDWINE.** Mr. Appling, will you tell the committee how you first heard of this case and from whom, and what happened, what you were instructed to do?

**Mr. APPLING.** Approximately the first of November 1953, I received a phone call from our superior, Mr. M. E. Volin in Spokane. He informed me that I had been designated as his alternate to sample 15 contested mining claims of the Al Sarena Mining Co. in Jackson County. He informed me that they were sending instructions by mail but that in the meantime I should try to contact Mr. D. Ford McCormick and arrange an appointment with him.

**Mr. REDWINE.** Just who is Mr. D. Ford McCormick?

**Mr. APPLING.** Mr. McCormick is a registered professional engineer, a mining engineer.

**Mr. REDWINE.** I realize that, but what was his connection with this case?

**Mr. APPLING.** At that time I did not know. Later I found out that he had been designated as the company's representative during this sampling of the fifteen claims.

**Mr. REDWINE.** To get this in the record so that the committee will know what you are talking about, will you read the first paragraph of the introduction of your report?

**Mr. APPLING.** This is the introduction and my report on the sampling at the Al Sarena property.

At the request of Mr. Clarence A. Davis, Solicitor to the Department of the Interior, a representative of the Bureau of Mines was present in November 1953 during the sampling of 15 located mining claims held by Al Sarena Mines, Inc. R. N. Appling, Jr., was designated as the representative on October 7—

I think I stated that was about November 1. My memory slipped on that—

October 7, 1953, by Mr. M. E. Volin, and was instructed to contact Mr. D. Ford McCormick, the engineer retained by Al Sarena Mines, Inc., and to arrange with him a suitable time for the sampling.

Mr. REDWINE. You did contact Mr. McCormick?

Mr. APPLING. Yes, sir, I did.

Mr. REDWINE. Then what happened?

Mr. APPLING. We arranged to visit the property, I think it was on the 9th of September, for the purpose of looking the job over, determining how to go about it, and accordingly we met on the 9th, and I think I picked up Mr. McCormick and we drove to the property and we looked over a few of the claims, not all of them, and laid general plans for the sampling, and I returned to Grants Pass.

I called Mr. Volin when I got back to Grants Pass and discussed with him the arrangements that we had made and told him at the time that Mr. McDonald, Charles McDonald, and H. P. McDonald, had expressed a preference to the A. W. Williams Inspection Co. in Mobile, Ala., as the assayer.

I had not heard of the firm and neither had Mr. Volin.

Mr. REDWINE. Do you have the correspondence, telegrams, that passed between you and Mr. Volin in respect to no one in the Bureau having heard of A. W. Williams Inspection Co.?

Mr. APPLING. No, I have no telegram to that effect.

Mr. REDWINE. Do you have the telegrams that were exchanged between you trying to find out who they were?

Mr. APPLING. Yes, I think I have that.

Well, here is Mr. Volin's telegram to Mr. John Thoenen, acting regional director of region 7, Norris, Tenn. That would be the region in which Mobile, Ala., is located.

Mr. REDWINE. Would you read it, please?

Representative CHUDOFF. Give us the date of that, too.

Mr. APPLING. Pardon me. That was in a letter. That was a follow-up telegram. Evidently they did not act on the letter soon enough. Going to the letter—

Representative CHUDOFF. I think it would be better to read the letter.

Mr. APPLING. The letter is dated November 9, 1953, to John R. Thoenen, acting regional director, region VII. Subject: Information on assaying firm in Mobile, Ala.:

This office of the Bureau of Mines has been directed to represent the Government in connection with the sampling of mining claims held by Al Sarena Mines, Inc., Jackson County, Oreg., on which a denial of patent has been appealed to the Secretary of the Interior.

The instructions received through channels from the Solicitor direct that the samples shall be shipped or delivered to a qualified assayer who is acceptable to the representatives of the applicant and the Government. The applicant wants to ship the samples to A. W. Williams Inspection Co., Post Office Box 314, Mobile, Ala. We have suggested reputable assayers at nearer locations, but the applicants' representative seems to prefer the above firm. We would like to have a report on the reputation of this firm for assaying mineral samples. The analyses involved in this case will be for gold, silver, lead, zinc, and possibly copper. A few assays for gangue minerals may be required, but I cannot state what these will be until we go into the job further.

Your earliest action in looking into the reputation of the above firm will be appreciated because the sampling of the Al Sarena properties is to take place in the near future.

Mr. REDWINE. Now, if you will read the reply that Mr. Volin received from Mr. Thoenen.

Senator NEUBERGER. Speak a little louder, please, sir.

Representative HOFFMAN. And not quite so fast.

Mr. APPLING (reading):

Re your tel today. Williams Inspection Co. of Mobile is listed in Department Commerce directory and has O. K. of State geologist of Alabama by telephone to me today. No other information available. Letter not received.

J. R. THOENEN,  
*United States Bureau of Mines.*

Mr. REDWINE. When and by whom was final decision made that Mr. McCormick's insistence upon A. W. Williams Inspection Co. would be accepted?

Mr. APPLING. The decision was made by Mr. Volin. I received a wire from him repeating in effect what he heard from Mr. Thoenen.

Mr. REDWINE. Which you have just read into the record?

Mr. APPLING. Yes.

Mr. REDWINE. Then you proceeded?

Mr. APPLING. We proceeded with the sampling.

Mr. REDWINE. On that basis. I believe the record shows that you had Mr. Pattee, minerals technologist, and Gerald L. Briggs, core drill helper, associated with you, representing the Government.

Mr. APPLING. Yes, sir.

Mr. REDWINE. Now, in the actual sampling, when that was done, outside of the Government people headed by yourself, who was present?

Mr. APPLING. Mr. Charles McDonald, Mr. H. P. McDonald, Mr. Aultland, and I think that is all.

Mr. REDWINE. And Mr. McCormick?

Mr. APPLING. Yes, Mr. McCormick. Mr. Aultland was not there all the time, just part of the time.

Mr. REDWINE. Under your report, under "location," will you read page 2, will you read the first paragraph, please?

Mr. APPLING (reading):

Samples were taken from outcrops, pits, or trenches designated by the McDonalds. According to them, locations were selected that had been sampled with satisfactory results. Location of the sample on the outcrop or in the pit was at the direction of McCormick and the writer.

Mr. REDWINE. At spots designated by the McDonalds?

Mr. APPLING. Well, in the general locations designated by them; yes, sir.

Mr. REDWINE. Was that supposed to be discovery points?

Mr. APPLING. I do not think necessarily so. I think in some cases they were discovery points, trenches, or just general outcrops, but not always.

Mr. REDWINE. After the samples were collected, what was done?

Mr. APPLING. We prepared the samples on the spot. That is, we crushed them and ground them and split them, using a mechanical splitting device to assure an equal split. Each sample was split in 4 ways and half of the quarters or 2 of the 4 quarters, half of each sample was panned at the time by 1 of the McDonalds or Mr. Aultland.

Mr. REDWINE. What was the purpose of that?

Mr. APPLING. I think to show me the fact that there was mineralization in it. Each panful showed a tail of dark minerals. Some were

magnetic and some were pyrite; but in every case there was mineralization in the sample.

Mr. REDWINE. Proceed.

Mr. APPLING. One quarter of each sample was shipped to the assayer. One quarter was retained as an alternate sample. The reason for this procedure—I have never done it before—was that we retained an alternate sample because the weather was bad and I spent 5 days swinging a 4-pound hammer cutting these samples in the rain.

Mr. REDWINE. You spent how many days?

Mr. APPLING. I think it was 5 days altogether—4, perhaps. But at any rate, I wanted to retain one split just in the event they might be lost in transit and we would have something to replace them with and would not have to do the work over again.

Mr. REDWINE. What did you do, keep that alternate sample, as you call it, in the back of your car; or where?

Mr. APPLING. No, sir, we deposited that with the State department of geology office in Grants Pass for safekeeping. Mr. McCormick and I took it in and asked them to keep it there until we came after it.

Mr. REDWINE. Then what happened?

Mr. APPLING. Well, we got the assay returns and I wrote the report. Some time afterward, Mr. McCormick came to Grants Pass and we picked up the samples from the State department of geology office and destroyed them.

Mr. REDWINE. At what date?

Mr. APPLING. I could not say, sir.

Mr. REDWINE. I want to go back for a minute. Who received the A. W. Williams assay report?

Mr. APPLING. I do not know.

Mr. REDWINE. Did you receive it?

Mr. APPLING. I have a copy, but it was not mailed to me.

Mr. REDWINE. Who told you that it had been received?

Mr. APPLING. Nobody told me. They gave me a copy of the certificate.

Representative CHUDOFF. Whom do you mean by "they"?

Mr. APPLING. I think Mr. McCormick gave it to me.

Mr. REDWINE. You mean this assay report did not come back to the Bureau of Mines? It went to Mr. McCormick?

Mr. APPLING. The letter accompanying the assay report is addressed to the Al Sarena Mines, Inc.

Mr. REDWINE. Is that the original assay report?

Mr. APPLING. It is one of them. I think there were four copies.

Mr. REDWINE. It says here that they went to the First National Bank Building, Mobile, Ala.

Representative CHUDOFF. Do the Al Sarena Mines, Inc., have an office in Mobile?

Mr. APPLING. I could not say, sir.

Mr. REDWINE. You mean that the report did not come directly from the assayer to the Bureau of Mines?

Mr. APPLING. No.

Mr. REDWINE. What was the date that you went and picked up those samples that had been turned over to the Oregon Department of Geology and Mineral Industry?

**Mr. APPLING.** I cannot say exactly. It was at some time after the date of my report which was January 2. I honestly couldn't say how long after.

**Mr. REDWINE.** You came back down to Jackson County?

**Mr. APPLING.** No, I was stationed there at that time. I was living there.

**Mr. REDWINE.** I see. You went, then, and got these samples and destroyed these retained samples?

**Mr. APPLING.** Yes, sir.

**Mr. REDWINE.** How were they destroyed?

**Mr. APPLING.** They were shaken from the envelopes and dumped in the river, destroyed irrevocably.

**Mr. REDWINE.** You mean individually?

**Mr. APPLING.** Yes, sir.

**Mr. REDWINE.** And you do not remember the date that that was done?

**Mr. APPLING.** No, sir, for the reason that I attached no particular importance to it at that time. I had no reason to keep them. The more they would be around the more they would be open to question.

I would say it was around the 15th of January, but I couldn't say exactly.

**Mr. REDWINE.** Had you received a copy of this assay report at that time?

**Mr. APPLING.** Yes, sir. I received a copy of the assay report, I believe, just before the 1st of January.

**Mr. REDWINE.** You were representing the Federal Government in a dispute such as this and you permitted those samples to go to an assay house that you yourself in the beginning apparently had questioned, or because you did not know anything about it, you permitted those samples to go. Is that what you want to tell the committee?

**Mr. APPLING.** I did not permit anything. That decision was Mr. Volin's to make.

**Mr. REDWINE.** Did Mr. Volin make the decision that the report should come back to the Al Sarena Corp. rather than the Bureau of Mines?

**Mr. APPLING.** I do not think that that entered into it. I think the conclusion we arrived at was that they were paying for it.

**Representative CHUDOFF.** Who is Mr. Volin?

**Mr. APPLING.** He was formerly the chief.

**Representative CHUDOFF.** He was your superior and called you and told you to destroy the samples?

**Mr. APPLING.** No, sir. As a matter of fact, it was my idea to retain the samples. There was no mention made of retaining these alternates.

**Representative CHUDOFF.** You threw them in the river. Was that your idea of getting rid of them?

**Mr. APPLING.** There was no point in keeping them around.

**Representative CHUDOFF.** But having had prior assays showing no value of the ore and then this assay, all of a sudden, appears from A. W. Williams Co., whom you did not know, being picked by the fellow who filed the claim, showing a very substantial value of the ores, don't you think that as a reasonable man, you might have made a recheck of your samples because of the well-known assayers in the neighborhood?

Mr. APPLING. No, sir, I had no background information on this at all. I knew there was a contest and dispute.

Representative CHUDOFF. Did you have to go very far to dump these things in the river?

Mr. APPLING. About two blocks.

Representative CHUDOFF. Could you not have thrown them in the wastebasket?

Mr. APPLING. I suppose we could.

Representative CHUDOFF. Do you always throw them in the river?

Mr. APPLING. I never kept any before.

Representative CHUDOFF. Did you know of any of your co-workers to throw them in the river? It was very unusual to throw things like that in the river, was it?

Mr. APPLING. That is right.

Representative CHUDOFF. That is all.

Mr. REDWINE. You said that you wanted to get rid of them because the longer you kept them the more they would be open to question. What did you mean by that?

Mr. APPLING. They were not in an absolutely safe place. Somebody could have tampered with them.

Mr. REDWINE. Why put them in there if it was not a safe place?

Mr. APPLING. That was the only place we could think of to put them. We tried to put them in a bank vault and the bank would not accept them.

Representative CHUDOFF. They could not get them in the bank so they threw them in the river.

Representative HOFFMAN. He tried to put them in the bank one time and threw them in the river another time after he got the report. If there are any other insinuations that you think will hurt the young man, go ahead.

Representative CHUDOFF. I am not insinuating.

Representative HOFFMAN. Yes, you have been.

Mr. REDWINE. You refer to these retained samples as alternate samples because you were afraid the first shipment would get lost. You have had considerable experience in sampling?

Mr. APPLING. A fair amount.

Mr. REDWINE. You know what an umpire sample is?

Mr. APPLING. I certainly do.

Mr. REDWINE. You did not regard this as an umpire sample?

Mr. APPLING. I did not. Those are not umpire samples, definitely not.

Mr. REDWINE. They certainly were not used for one.

Representative HOFFMAN. What was that remark?

(Record read.)

Mr. COBURN. Could I ask him a question?

Mr. REDWINE. Please go ahead.

Mr. COBURN. I am not clear and I say this in all good faith. What was the purpose of retaining these samples, Mr. Appling?

Mr. APPLING. Just on the vague chance that the original samples might have been lost in transit.

Mr. COBURN. Might have been lost?

Mr. APPLING. In transit.

Mr. COBURN. In other words, you felt under no obligation to check the samples you kept against anything that you sent in, is that correct?

Mr. APPLING. Well, sir, I would not say that. The original instructions to Mr. Volin from the Director of the Bureau of Mines specifically stated that our activities were to be limited to the actions described in a memo from Mr. Davis' office and no mention was made of umpire samples or any check samples in there.

Mr. COBURN. Have you read those instructions into the record?

Mr. APPLING. No, sir, I have not.

Mr. COBURN. How long are they?

Mr. APPLING. I think they have been previously mentioned. I think Mr. Redwine mentioned them.

Mr. REDWINE. Here are the instructions.

Mr. COBURN. Are they detailed instructions as to how you should proceed?

Mr. REDWINE. Here are the instructions.

Representative ELLISWORTH. It was the letter that you asked me about.

Mr. COBURN. This letter is from Mr. Davis to Mr. Volin, is that correct?

Mr. APPLING. No, sir, I think it was directed to the Director of the Bureau of Mines.

Mr. REDWINE. The letter in question was from Mr. Davis to Al Sarena mines with copies to the Director of the Bureau of Mines and to Congressman Ellsworth. That was the direction.

Mr. COBURN. Let me ask the witness this: Under what specific instructions did you feel you were operating in this case?

Mr. APPLING. Well, those instructions are not in that letter.

Mr. COBURN. Can you give us a general idea of what you thought you were supposed to do?

Mr. APPLING. Well, merely sample each claim, one or more samples from each contested claim, and adequately locate the samples so that we could show where they were taken, and, as a normal safeguard, I took it on myself to be sure that the samples were not salted or tampered with in any fashion while they were in my possession.

Mr. COBURN. I did not want to catch you up, but did you not testify previously that they were in an unsafe place?

Mr. APPLING. Those were the alternates. I would not say they were unsafe, no. I think they could have been in a safer place, and I frankly doubt if we would have used them if the original samples would have been lost.

Mr. COBURN. You frankly doubt that you would have used them?

Mr. APPLING. Yes, sir. We did try to get them in a bank vault. If we could have put them there, it would have been a different matter.

Mr. COBURN. The other samples that you sent in, how long did you keep them in your possession?

Mr. APPLING. They went in the day after we finished sampling.

Mr. COBURN. Up to that time, have you testified they were in your possession?

Mr. APPLING. Yes, sir, they were in my possession.

Mr. COBURN. Did the detailed instructions tell you what to do about the retained samples?

Mr. APPLING. They mentioned no retained samples.

Mr. COBURN. You took that on your own responsibility?

Mr. APPLING. I took that on myself.

Mr. COBURN. Did Mr. McCormick agree?

Mr. APPLING. Yes, sir.

Mr. COBURN. Did the other members of your team agree?

Mr. APPLING. I do not think it was even put up to them.

Mr. COBURN. Just you and Mr. McCormick?

Mr. APPLING. Yes, sir.

Mr. COBURN. Were you under any directive from the Department, either from Mr. Volin or from the Bureau of Mines, to speed up action on this matter?

Mr. APPLING. No, sir, except as concerned the weather. That hurried our actions because winter was imminent.

Mr. COBURN. You did not get the impression anywhere that speed was of the essence here?

Mr. APPLING. I recall in the instructions—well, if I may read this sentence.

Mr. COBURN. Certainly.

Mr. APPLING (reading):

The two men—

referring in this case to McCormick and Mr. Volin—

the two men may arrange the time and place of meeting to suit their convenience. They should meet as promptly as possible, however.

That is the only reference I know of.

Mr. COBURN. That is your only recollection as to the element of speeding up action?

Mr. APPLING. That is right.

Mr. COBURN. That is all.

Mr. REDWINE. How long have you been with the Bureau of Mines?

Mr. APPLING. Since 1949.

Mr. REDWINE. Have you been in the Pacific Northwest all that time?

Mr. APPLING. Yes, sir.

Mr. REDWINE. Before you went with the Bureau of Mines, what was your experience?

Mr. APPLING. Except for some prospecting experience that was the first job I had when I got out of school.

Mr. REDWINE. How much mineral sampling have you done?

Mr. APPLING. Well, quite a bit of it during these 6 years.

Mr. REDWINE. How much? How many samples do you suppose you have taken?

Mr. APPLING. I imagine at least six or seven hundred samples.

Mr. REDWINE. You have never been a party to sending any to Alabama for assay, have you?

Mr. APPLING. No, sir.

Mr. REDWINE. Except this one instance?

Mr. APPLING. We have always sent them to our own laboratory in Albany.

Mr. REDWINE. When you and Mr. McCormick discussed where these samples were going to be sent, to whom did you suggest they be sent?

Mr. APPLING. I believe I mentioned Abbot A. Hanks, the firm whose reputation I know and, I believe, Smith Emory.

Mr. REDWINE. But you knew nothing about the reputation of the Williams Co.?

Mr. APPLING. No, sir.

Mr. REDWINE. What is the reputation of the Bureau of Mines Laboratory at Albany?

Mr. APPLING. Am I under oath?

Mr. REDWINE. Yes, sir.

Mr. APPLING. The assay laboratory?

Mr. REDWINE. Yes, sir.

Mr. APPLING. Very poor. I would please like the record to read that that is under oath.

Mr. REDWINE. What is wrong with this assay laboratory?

Mr. APPLING. I have a number of cases in the file where the assays were entirely incorrect by comparison with check samples.

Representative CHUDOFF. Did you ever complain to your superiors about that?

Mr. APPLING. Yes, sir.

Representative CHUDOFF. How many assayers do you have there or chemists or whatever these fellows are called?

Mr. APPLING. I do not really know. I suppose about 6 or 8.

Representative CHUDOFF. In your opinion, they do not know what they are doing?

Mr. APPLING. Some of them evidently do not.

Representative CHUDOFF. If no good comes of these hearings, at least we will get up there and get some decent assayers.

Mr. APPLING. I would like to see it.

Representative HOFFMAN. Maybe, for the record, we ought to have a record of his complaints and specific instances if you want to go into that.

Representative CHUDOFF. Whoever has jurisdiction over that laboratory ought to be informed that the engineers who work for the Bureau of Mines have no confidence in their assayers.

Representative HOFFMAN. Do we know whether Mr. McKay appointed them?

Representative CHUDOFF. You are the only one worried about that. If they were appointed by the previous administration, and are no good, they ought to be fired, too. You are the only one worried about that.

Representative HOFFMAN. I have worried about a lot of things since I came out here. It is the first time I ever knew Federal funds to be used for political propaganda.

Mr. REDWINE. You have no confidence in the Federal Bureau of Mines assay office at Albany?

Mr. APPLING. I have only limited confidence.

Mr. REDWINE. When you were assigned to this particular job, you knew it involved a dispute as to mineral values, did you not?

Mr. APPLING. Yes, sir.

Mr. REDWINE. Did Mr. McCormick and Mr. McDonald tell you when they wanted the Williams Co. that they were dissatisfied with the assay report that had resulted from the Bureau of Land Management assay?

Mr. APPLING. No.

Mr. REDWINE. You did not know they were dissatisfied?

Mr. APPLING. I knew they were under contest, and I did not know why.

Mr. REDWINE. In all that walking around in 5 days down there, there was no discussion as to what had happened in the past?

Mr. APPLING. Not that I can recall of, no.

Representative HOFFMAN. Mr. Chairman, I was just advised that the Bureau of Mines at Albany did not have anything to do with this case. Why did we drag them in there?

Representative CHUDOFF. The witness did.

Representative HOFFMAN. No, counsel asked him.

Mr. REDWINE. The previous witness testified that the Bureau of Mines laboratory at Albany has made an assay of these same mines.

Representative HOFFMAN. I can see that it is pertinent, then. I had forgotten that.

Mr. REDWINE. Knowing or thinking that you knew that the Bureau office had limited capacity, or whatever you want to call it, and knowing this was a dispute and having become a party to using an assay office way back in Alabama, it seems to me that you would have wanted to check on them. You check on your own organization. You say your files show that you have. Why did you not want to check on them?

Mr. APPLING. We had specific reasons to check on them. I have offered samples for assay there that I knew contained a given mineral and they would not find the mineral in it. I had no reason to believe the Williams Co. needed checking and, well, I did not consider it necessary. In the first place, it was not my decision to make. It was Mr. Volin's.

My job is purely the mechanical job of carrying out his instructions.

Representative CHUDOFF. How do you spell that?

Mr. APPLING. V-o-l-i-n.

Representative CHUDOFF. Where is he?

Mr. APPLING. I think he is in Michigan now.

Mr. REDWINE. He is not with the Bureau any more?

Mr. APPLING. No, sir, he resigned.

Mr. REDWINE. With all this trouble you have with assay houses, then the minute you get this one back, because you do not want these alternate samples to be more open to question, you throw them in the river.

Mr. APPLING. That was by agreement. We agreed to retain them until the assays were returned to us when we would destroy them.

Mr. REDWINE. "Returned to us"?

Mr. APPLING. They were merely a precaution against possible loss.

Representative CHUDOFF. With whom did you have this agreement?

Mr. APPLING. Mr. McCormick.

Representative CHUDOFF. Were you keeping them to worry Mr. McCormick?

Mr. APPLING. No, I was worrying about my own right arm. I did not want to cut the samples again.

Representative CHUDOFF. When you got a favorable assay, you thought the best thing to do was throw the samples in the river.

Mr. APPLING. That had no bearing on it at all. I would have thrown them away whether the assay showed anything at all.

Representative CHUDOFF. Is that the usual procedure, to throw them away when you got the assay?

Mr. APPLING. I have never retained alternate samples before.

Senator NEUBERGER. Any questions, Mr. Coburn?

Mr. COBURN. No.

Senator NEUBERGER. Mr. Chudoff?

Representative CHUDOFF. As I understand the usual practice of your Bureau is to send samples for assaying to local individuals; is that right?

Mr. APPLING. No, sir, we send them to our own lab.

Representative CHUDOFF. You send them to your own?

Mr. APPLING. Yes, sir.

Representative CHUDOFF. How did these get down to Alabama instead of to your own organization?

Mr. APPLING. I think that is explained in these telegrams, sir.

Representative CHUDOFF. Mr. McCormick got together with somebody and made a set of rules, is that it?

Mr. APPLING. No, sir; when we visited the property and set up the job we discussed assayers, and they expressed a preference for the Williams Inspection Co.

Representative CHUDOFF. Now, assaying is a very important part of filing these claims, is it?

Mr. APPLING. I presume it is.

Representative CHUDOFF. Is it the policy of the Government to allow the man filing the claim to pick the assayer?

Mr. APPLING. I do not know about that.

Representative CHUDOFF. Has that happened before?

Mr. APPLING. I don't know. This is my first experience with a contested or a patented mining claim.

Representative CHUDOFF. You say you have been with this Bureau since 1949.

Mr. APPLING. That is right.

Representative CHUDOFF. This was in 1953?

Mr. APPLING. Yes, sir.

Representative CHUDOFF. And before or since you have never had it?

Mr. APPLING. Before or since I have never done any. I suppose it is in the province of some other Bureau.

Representative CHUDOFF. It would seem odd if the fellow having the dispute could pick his own judge. He was able to do it in this case, was he not?

Mr. APPLING. Here are the telegrams, sir.

Representative CHUDOFF. I understand that you were acting under orders. I do not think any of this was your fault. You had a job and somebody told you to do it and you did it. I want to find out whether it was very unusual to have that kind of situation arise.

Mr. APPLING. Well, the whole business was unusual. As I say, I have never had it.

Representative CHUDOFF. One thing we all agree is that the Al Sarena case was a very unusual case.

Mr. LANIGAN. Could I ask a question?

Senator NEUBERGER. As far as you know, is this the only time the Bureau of Mines has been brought into a contested mining claim?

Mr. APPLING. I believe so far as I can recall.

Senator NEUBERGER. And in this case, so far as I understand it, the Forest Service was saying the claim was no good and the claimant, of course, was saying it was good, so that you had a controversy. Your

instructions were to go and see the representative of the mining claim and arrange with him to sample. Those were the instructions you got from Washington or from Spokane?

Mr. APPLING. Yes, sir.

Senator NEUBERGER. Was anything ever said to you about having a representative of the Forest Service, the other party, present?

Mr. APPLING. No, sir.

Senator NEUBERGER. To your knowledge, was the Forest Service ever notified as to what was going on?

Mr. APPLING. Not so far as I know.

Senator NEUBERGER. To your knowledge, did the Forest Service ever see a copy of the assay report?

Mr. APPLING. So far as I know, I just do not know. I would have no idea.

Senator NEUBERGER. You do not know.

Mr. APPLING. No, sir.

Senator NEUBERGER. That is all.

Representative CHUDOFF. Did you ever discuss this with any representative of the Forest Service?

Mr. APPLING. No, sir.

Mr. LANIGAN. Would the same be true of the Bureau of Land Management?

Mr. APPLING. Yes, sir.

Mr. LANIGAN. So far as you know, they never knew anything about your activities?

Mr. APPLING. I have no knowledge of it at all.

Representative CHUDOFF. So that this was an unusual proceeding that the Bureau of Mines was called in. Do I understand that the Secretary has the authority to call in any agency of Government that he wants to help him decide the case; is that right?

Mr. APPLING. I would presume so.

Representative CHUDOFF. He just called you in because the Bureau of Land Management was pretty specific in their decisions, first at the regional level, and then at the higher level?

Mr. APPLING. Well, he did not actually call me in. He called Mr. Volin in, and I do not know why he did.

Representative CHUDOFF. Is it not true that the whole crux of this case, the whole point of the triangle in this case, is whether or not the organization assayers knew what they were talking about when they assayed the samples or whether or not the Alabama assayers knew what they were talking about?

Mr. APPLING. That is right.

Representative CHUDOFF. Do you not think, as a matter of good judgment and business, if you have 2 assays as far apart as these 2 were, that you ought to have an umpire sample?

Mr. APPLING. In retrospect, yes.

Representative CHUDOFF. Operating on your own responsibility, you would have?

Mr. APPLING. I possibly would, but would depend on a lot of circumstances. I have never taken umpire samples or had check samples taken.

Representative CHUDOFF. Because you have never been in this situation?

**Mr. APPLING.** Well, in any sort of operation, I doubt if it would have occurred to me.

**Representative CHUDOFF.** You were acting under Mr. Volin's instructions first of all, as to how to get the samples, and second, what happened when you got the assays, to dump the other samples in the river.

**Mr. APPLING.** No, sir, he did not say a thing about retaining alternate samples. That was my own doing.

**Representative CHUDOFF.** Let us get the record straight. Did you not testify that Mr. Volin told you to dump the samples in the river?

**Mr. APPLING.** No, sir, I don't think I did. If I did, I was in error.

**Representative CHUDOFF.** I just wanted to make sure.

**Senator NEUBERGER.** Any questions, Mr. Hoffman?

**Representative CHUDOFF.** May I ask one more question? Will you yield?

Do you know what date Mr. Volin resigned from the Department?

**Mr. APPLING.** No, sir, I do not.

**Senator NEUBERGER.** Mr. Hoffman?

**Representative HOFFMAN.** Something was said about this being unusual. It was unusual for the Secretary to order another hearing, was it?

**Mr. APPLING.** Well, as far as I know, it is the first time I have encountered it.

**Representative HOFFMAN.** You would not criticize that if somebody was yelling that they had been trimmed, would you?

**Mr. APPLING.** I wouldn't, no, sir.

**Representative HOFFMAN.** You did not have any interest in the matter?

**Mr. APPLING.** None at all, sir.

**Representative HOFFMAN.** You did not volunteer for the job?

**Mr. APPLING.** I certainly didn't.

**Representative HOFFMAN.** And you had never been employed by these people in this mine, had you?

**Mr. APPLING.** I had never met them before.

**Representative HOFFMAN.** You did not know them?

**Mr. APPLING.** No, sir. I knew who they were.

**Representative HOFFMAN.** All you got was an assignment to go and do a job?

**Mr. APPLING.** That is right, sir.

**Representative HOFFMAN.** Who sent that wire down?

**Mr. APPLING.** Mr. Volin.

**Representative HOFFMAN.** Where is he located?

**Mr. APPLING.** I think he is in Michigan.

**Representative HOFFMAN.** Where is the first wire? Who inquired first about it?

**Mr. APPLING.** Mr. Volin inquired about the Williams Co. from Mr. Thoenen. Mr. Volin initiated the inquiry.

**Representative HOFFMAN.** Yes.

**Mr. APPLING.** He asked the regional director of that region.

**Representative HOFFMAN.** Then he got a wire back from—who is this man?

**Mr. APPLING.** That is the man that he addressed the wire to. Mr. Volin wrote him a letter. Here is a copy of the letter. That is the inquiry. This is the answer.

Representative HOFFMAN. That is the answer. Did you read that in the record?

Mr. APPLING. I didn't read it in.

Representative CHUDOFF. That is in the record. He read it once before.

Senator NEUBERGER. I think we ought to have one speak at a time.

Representative CHUDOFF. Mr. Chairman, it is in there.

Representative HOFFMAN. That shows that the State geologist said he was all right, did he not?

Mr. APPLING. Yes, sir.

Representative HOFFMAN. Do you think that geologist was interested in this mine in any way? Have you reason to believe he was?

Mr. APPLING. I have no reason to believe so, sir.

Representative HOFFMAN. Now, they have been talking about the dumping of these samples in the river. Hattan did not even keep any extra ones, did he?

Mr. APPLING. I do not believe he did.

Representative HOFFMAN. According to the testimony here some were carted around for a week or more or maybe 15 days in the back of an automobile. You put yours in some place you thought was secure, the extra ones?

Mr. APPLING. Alternates, yes, sir.

Representative HOFFMAN. And you kept it until the report came back.

Mr. APPLING. And for some time after that. A week or two, anyway.

Representative HOFFMAN. Do you know of any reason why you should clutter up our office or any other place with it any longer after you got the report?

Mr. APPLING. I couldn't think of any.

Representative HOFFMAN. You said that your sole purpose in taking the duplicate or alternate, as I understood it, was if they ever got lost in some way?

Mr. APPLING. Yes, sir.

Representative HOFFMAN. Have you ever had your reputation or actions questioned by anybody other than Drew Pearson?

Mr. APPLING. Not even by him, I am afraid.

Representative HOFFMAN. It is in the papers. Didn't you read the papers here about it?

Mr. APPLING. No, I am afraid I missed on that.

Representative HOFFMAN. I thought he cast a few insinuations your way, but do not be worried about it. I think two presidents have characterized him as being untruthful.

These helpers that you took along, what was their mission in going with you?

Mr. APPLING. One man did the surveying. He located samples on the map and the course and distance from the nearest corner post.

Representative HOFFMAN. Did either one of them have anything to do with the question of where the samples should be sent? Was that any part of their duty?

Mr. APPLING. No, sir.

Representative HOFFMAN. The statement I have says that the first two were deposited with the postmaster for safe-keeping first.

Mr. APPLING. I believe that should have been the first day. I do not recall it too well, but I know that we left the samples with the

postmaster at Trail after the first day's sampling. We thought they would be safe there. We discontinued it after the first 1 or 2 days for the reason that the post office closed early and we had to quit too soon to get down there.

Representative HOFFMAN. Did you take any extra precautions during the pulping of the samples?

Mr. APPLING. Well, when we used the jaw crusher and disk grinder, we brushed them out thoroughly and the same with the splitter, so there would be no contamination. We used clean pulp sacks to put the splits in. After we had them sacked we sealed them in boxes with tape so that they could not be disturbed without our knowledge.

Representative HOFFMAN. The reason for those extra precautions was because there was some dispute about the quality of the samples?

Mr. APPLING. Yes, sir.

Representative HOFFMAN. I believe that is all.

Mr. REDWINE. Mr. Appling, you just sampled 3 days, did you not?

Mr. APPLING. I do not recall. I think that we actually cut samples on 4 days and possibly 5.

Mr. REDWINE. Earlier in your report, you say 3 days.

Mr. APPLING. Then that is correct. I do not recall.

Mr. REDWINE. Maybe 4 days. It started on November 12 and continued through November 15. That would be 4 days. Half of those samples, the ones that were taken on November 12 and 13—and I am referring to page 3 of your report—were deposited with the postmaster at Trail. In other words, half of them were out of your possession, were they not, until you got ready to ship them?

Mr. APPLING. Yes, sir, they were out of my possession in the custody of the United States mail.

Mr. REDWINE. What do you mean, they were packed with a frank or stamp on them?

Mr. APPLING. No, the postmaster kept them with his mail.

Mr. REDWINE. They were not in custody?

Representative HOFFMAN. You ask a question and then butt in.

Mr. APPLING. They were retained by the postmaster in the mail room along with the mail. They were not stamped or addressed.

Mr. REDWINE. They were not in the custody of the United States mail, were they?

Mr. APPLING. They were in custody of the United States postmaster.

Mr. LANIGAN. There was something said about these people getting another hearing. At any time were you ever called to a hearing in which this evidence was presented?

Mr. APPLING. No, sir, this is the first time I have had the pleasure.

Mr. LANIGAN. Have you read the decision of the Department in the Al Sarena case?

Mr. APPLING. Yes, sir, I think I have. I think it was sent to me.

Mr. LANIGAN. Was there any mention in that decision of a second hearing?

Mr. APPLING. I do not recall.

Mr. LANIGAN. But you never went to another hearing? You never presented evidence?

Mr. APPLING. That is right.

Mr. LANIGAN. Do you recall whether the decision states whether or not it is based upon this assay that we have been talking about here?

Mr. APPLING. I do not really know.

Mr. LANIGAN. It will speak for itself.

Senator NEUBERGER. Mr. Appling, I just want to ask you one question. Is this the only time in your experience that any minerals which were subject to examination and assaying from this region were sent to Alabama for examination?

Mr. APPLING. Yes, it is. Actually, almost all of our samples have been sent to our own laboratory. Very few have been sent to outside laboratories.

Senator NEUBERGER. Thank you very much.

I know this has been a rather difficult experience for you, Mr. Appling, and I sympathize with you, and I do appreciate your coming here.

The assay report submitted may be inserted in the record.

(The report referred to is as follows:)

A. W. WILLIAMS INSPECTION CO., MOBILE, ALA.

REPORT OF ASSAYS OF GOLD ORES

For: Al Sarena Mines, Inc., 408 First National Bank Building, Mobile, Ala.

Sample identification: Al Sarena 1-28 Incl.

Sample: Submitted. By Mr. D. Ford McCormick.

Lab. No. 53-912.

Report No. 431869.

Date: December 17, 1953.

Our Order No. 38001. Date 11-25-53.

We find the samples submitted by Mr. D. Ford McCormick to contain the following:

Sample	Au, ounce per ton	Ag, ounce per ton	Au, dollars per ton	Ag, dollars per ton	Total value, dollars per ton
1.....	0.05	0.15	1.75	.14	1.89
2.....	.04	.60	1.40	.54	1.94
3.....	.05	.20	1.75	.18	2.03

Assays by J. A. McDaniel.

Four reports to: Al Sarena Mines, Inc., 408 First National Bank Building, Mobile, Ala.

A. W. WILLIAMS INSPECTION Co.,  
By MORRIS MILLER.

Senator NEUBERGER. Mr. Rice, would you come forward again, please?

Representative HOFFMAN. May I ask how many more witnesses we have tonight?

Mr. REDWINE. This will be the last one that I have. I do not know what the chairman has in mind.

This will be the last one that I am calling up, Mr. Hoffman.

Senator NEUBERGER. I think we should have one further witness after Mr. Rice.

(The witness was previously duly sworn.)

TESTIMONY OF PIERCE M. RICE, MANAGER, OREGON LAND  
OFFICE—Resumed

Mr. REDWINE. Mr. Rice, the tenor of some of the questions that have been asked today would lead one to think that there may be a feeling that this hearing held by you might have been a bit unfair. I am not saying that but the tenor of some of the questions that have been asked would show that.

I would like to have you tell the committee what your feelings are as to the fairness of the hearing held by you and was it held according to law and regulations under which your office is regulated?

Representative HOFFMAN. Before he answers that, Mr. Chairman, I want to put on the record the statement that insofar as any questions that I may have asked, there was no intimation of any unfairness. This gentleman never had an opportunity to hear the other side of the case. They, that is the attorney, I guess, got mad and walked out. That is right, is it?

Mr. RICE. That is correct. I might answer a question, if I may.

Senator NEUBERGER. Go ahead.

Mr. RICE. That hearing was conducted in strict conformity with the rules of procedure as issued by the Department of the Interior, and as to an opportunity to be heard, why, the counsel for the contestee was requested and, in fact, urged, to submit his evidence. Owing to his attitude as exhibited on that occasion, why, he refused, and declined, and departed without submitting such evidence.

Mr. COBURN. Is it not true, Mr. Rice, that they had three opportunities to be heard, including an appeal?

Mr. RICE. Yes, subsequently, when the decision was rendered after the proceedings, based upon the testimony, a copy of the decision was forwarded to the Al Sarena Mines, Inc., by registered mail, and in that decision they were allowed an additional 30 days within which to apply for a new hearing or to appeal.

Mr. COBURN. Is it not also true that at the first hearing, under the rules of the Department, when Mr. MacMahon, I think you said, departed—

Mr. RICE. That is right.

Mr. COBURN. —that at that moment, you would be authorized under the rules to decide that the contestant's suit was granted, or however you put it in your own hearing procedure.

Mr. RICE. I think the point that probably you are trying to bring out is the fact that if the contestant appears at the hearing and refuses to participate in the proceedings and departs without doing so, such action may be treated as an admission of the truth of the charges and no further testimony is required.

Representative CHUDOFF. It is not a question of truth. It would be treated as not having denied any of the charges.

Mr. RICE. He denied the charges in his answer.

Mr. COBURN. Could you not have made a decision at that point?

Mr. RICE. Without taking further testimony.

Mr. COBURN. You could have decided one way or the other?

Mr. RICE. But in order to decide on the merits rather than on a point of technicality, it is a policy of the Bureau to construe those rules more liberally.

Mr. COBURN. But the point remains that legally you could have made that decision?

Representative HOFFMAN. Without hearing anybody after they walked out.

Mr. RICE. I think it appears on page 11 of the Department's decision. On the bottom of page 10 and the paragraph continued on page 11, it says—

the Federal rules of civil procedure were not applicable to the hearing—  
those were the rules insisted upon by the contestee—

were not applicable to the hearing and the rules of practice of the Department (43 CFR pt. 221) do not provide for any such procedure. The purpose of the hearing under the Department's rules of practice is to give both parties full opportunity to present their evidence and if a claimant chooses to withdraw from the hearing without submitting his evidence or subjecting the Government witnesses to cross-examination, he must bear the consequences.

Senator NEUBERGER. Is there any other question of Mr. Rice?

Mr. LANIGAN. I have just one.

Now, if the parties appear at the hearing and evidence is presented in the hearing, is it not true that each party then has an opportunity to cross-examine the other and test the veracity and adequacy of the evidence?

Mr. RICE. That is correct.

Mr. LANIGAN. And in the normal mining contest that goes to hearing, is that what happens, that all the evidence is put in at the hearing?

Mr. RICE. All the evidence is submitted at the hearing and the Government brings its case on and introduces its evidence, the testimony of the witnesses, any exhibits they may have are marked for identification and offered in evidence, and at the conclusion of the Government's case, the contestee, through counsel, introduces his evidence in like manner, and during these examinations of witnesses and giving of testimony, counsel for the opposing parties have the right of cross-examination.

Mr. LANIGAN. Have you ever heard of another mining case in which evidence was brought in after the hearing without notice to the Forest Service, where it was involved, and the case decided without them ever having a chance to contest it or examine a witness?

Mr. RICE. Not of my knowledge.

Mr. LANIGAN. Did you ever hold any second hearing in this case?

Mr. RICE. No, sir, none was applied for.

Mr. LANIGAN. Does the decision say that any second hearing was held?

Mr. RICE. Not that I know of.

Mr. LANIGAN. That is all I have.

Senator NEUBERGER. Thank you very much.

Representative HOFFMAN. A question.

Do you know whether or not the Forest Service had any notice in this case of what the Secretary was doing or contemplating doing?

Mr. RICE. Not to my knowledge.

Representative HOFFMAN. You do not know?

Mr. RICE. After the case reaches the Department, I have no knowledge of what takes place other than what is reflected in the opinion.

Representative HOFFMAN. After it left your hands?

Mr. RICE. That is right.

Representative HOFFMAN. You know, though, that he did tell the Bureau of Mines to do something about it, did he not?

Mr. RICE. Apparently.

Representative HOFFMAN. That is evident from the hearings here.

Mr. RICE. That is right.

Representative HOFFMAN. That is all.

Senator NEUBERGER. Is there any other question of Mr. Rice?

Thank you, Mr. Rice, very much.

Do you have any more witnesses, Mr. Redwine?

Mr. REDWINE. That completes the witnesses that we have scheduled in Portland.

Senator NEUBERGER. Would Mr. Charles P. McDonald like to make a statement to the committee at this time?

Mr. McDONALD. I think Mr. D. Ford McCormick would like to make a statement to the committee at this time.

Mr. McCormick accompanied Mr. Appling.

Representative CHUDOFF. According to Mr. Hoffman's regulations, would you stand up and raise your hand?

Do you solemnly swear that the testimony you are about to give before this committee shall be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. McCORMICK. I do.

Representative HOFFMAN. Let the stenographer record that it is quarter after eight.

Senator NEUBERGER. It is 3 minutes after 8.

Representative HOFFMAN. I stand corrected. Yes, sir. Thank you. There would be no further time for a complete hearing on this. This move is just to give color to the claim that the defendant did have a little time.

Senator NEUBERGER. Mr. McCormick, we are glad to hear you.

#### TESTIMONY OF D. FORD McCORMICK

Mr. McCORMICK. The statement I would like to make is that I did accompany Mr. Appling on this examination and the two of us together performed our duty as we were requested to do. Samples were taken absolutely according to all mining practice and they were turned over to the assaying firm and had been protected during the whole procedure.

Senator NEUBERGER. Are there any questions?

**Mr. COBURN.** Mr. McCormick, from whom did you get a copy of the assay report?

**Mr. McCORMICK.** From whom?

**Mr. COBURN.** Yes.

**Mr. McCORMICK.** I got it from the McDonalds.

**Mr. COBURN.** You got it from the McDonalds in Oregon or the McDonalds in Mobile?

**Mr. McCORMICK.** The same McDonalds. I think they mailed it to me.

**Mr. COBURN.** They mailed it from Oregon?

**Mr. McCORMICK.** I do not remember where they mailed it from. I did not pay too much attention.

**Mr. COBURN.** You do not happen to have a copy of the report you received?

**Mr. McCORMICK.** Yes, I believe I do have.

**Mr. COBURN.** I wonder if you would like to put it in the record.

**Mr. McCORMICK.** I would like to keep it. It is my only record of the assays. You have a copy.

**Mr. COBURN.** It is the true copy of the one we have?

**Mr. McCORMICK.** I do not know. I have not seen it.

**Representative CHUDOFF.** Would you make a copy of the one you have and send it to us?

**Mr. McCORMICK.** Certainly.

**Senator NEUBERGER.** Have you any questions?

**Representative HOFFMAN.** No questions.

**Senator NEUBERGER.** Mr. Lanigan?

**Mr. LANIGAN.** No questions.

**Senator NEUBERGER.** Mr. Chudoff?

**Representative CHUDOFF.** I have no questions.

**Mr. McCORMICK.** I might add one thing.

As a result of all of this, I have certainly been grossly maligned in the press and by certain members or parties who were running for offices at the time that this particular thing came to the public, and I had some statements to make, but I am not going to divulge them at this time.

**Senator NEUBERGER.** I wanted you to know that any statement you desire to make, this committee would be glad to receive and put in the official record.

**Mr. McCORMICK.** I will probably be examined again so I will just keep them.

**Senator NEUBERGER.** Congressman Hoffman, would you like to ask a question?

**Representative HOFFMAN.** Thank you, Senator.

Are you a registered consulting engineer?

**Mr. McCORMICK.** Yes.

**Representative HOFFMAN.** Will you tell us about your qualifications?

**Mr. McCORMICK.** In order not to miss anything, I think I had better read some of them.

**Representative HOFFMAN.** We have plenty of time now.

**Mr. McCORMICK.** Well, I am a graduate of the University of Texas in civil engineering; graduate of the Colorado School of Mines.

**Representative HOFFMAN.** The University of Texas?

Mr. McCORMICK. Yes. I am also a graduate of the Colorado School of Mines.

Representative HOFFMAN. That is another recognized institution of learning.

Mr. McCORMICK. I think it is, and I have a mining degree there as of 1910.

Representative HOFFMAN. Go ahead.

Mr. McCORMICK. I have practiced the mining profession for about 45 years, during which time—

Representative HOFFMAN. Have you ever been accused by inference or any other way of any misconduct?

Representative CHUDOFF. You are objecting to the witness being interrupted.

Representative HOFFMAN. He is not objecting. You started this show. Never mind. I will ask the questions the way I wish.

Senator NEUBERGER. The witness will proceed.

Mr. McCORMICK. My first employment was at the Socorro mines, New Mexico, a gold and silver property where I held every job—in the concentrator, cyaniting, amalgamating, and smelting, to bullion—every job in the mine as well as underground contracting; then the engineering position, and finally designing and supervising the construction of the powerplant for this 150-ton capacity plant.

Later I was employed by Orcotti mines in Costa Rica, Central America, a gold and silver producer, as engineer and worked up to be assistant manager; another 150-ton capacity plant, the Minez de Mata Hambre, a copper and silver property, employed me as chief engineer and general manager, where I had the pleasure of developing this mine from grassroots to 1,000 tons per day production. I designed and supervised the construction of the concentrator, the powerplant, 17-kilometer transmission line, shipping facilities at our own seaport, and a town to house \$5,000 inhabitants at a cost of well over \$30 million; this, during World War I, when copper was so scarce that the United States gave us the protection of gunboats and submarines to safeguard shipments to the smelter in New Jersey. Uncle Sam was desperate for copper. The Cold Spring Mining Co. in Virginia, U. S. A., employed me to reorganize and manage the mine and plant to prepare kaolin for paper, rubber, and paint filter and for pottery manufacture. This expanded to the Georgia Kaolin Co. of Georgia, where I took out process patents and designed and supervised the construction of a million dollar beneficiating plant now shipping 30 to 40 railroad cars a day of prepared kaolin. I am director of this property at this date.

In 1933, I examined a gold mine in Jackson County, Oreg., liked the Pacific Northwest so well that I moved here to spend my days, I hope. This gold property is still hydraulicizing each year during the period that the Fish and Game Commission allows the muddying of the Rogue River during the winter runoff season. I am looking after this mine's interest.

The Codero Mining Co., a mercury producer, employed me to organize and operate their mine and plant from its beginning, which was started in 1941, and it developed into the second largest producer of mercury during World War II when mercury imports were cut off from Spain and Italy and Uncle Sam was again so desperate for mer-

Mr. COBURN. Mr. McCormick, from whom did you get a copy of the assay report?

Mr. McCORMICK. From whom?

Mr. COBURN. Yes.

Mr. McCORMICK. I got it from the McDonalds.

Mr. COBURN. You got it from the McDonalds in Oregon or the McDonalds in Mobile?

Mr. McCORMICK. The same McDonalds. I think they mailed it to me.

Mr. COBURN. They mailed it from Oregon?

Mr. McCORMICK. I do not remember where they mailed it from. I did not pay too much attention.

Mr. COBURN. You do not happen to have a copy of the report you received?

Mr. McCORMICK. Yes, I believe I do have.

Mr. COBURN. I wonder if you would like to put it in the record.

Mr. McCORMICK. I would like to keep it. It is my only record of the assays. You have a copy.

Mr. COBURN. It is the true copy of the one we have?

Mr. McCORMICK. I do not know. I have not seen it.

Representative CHUDOFF. Would you make a copy of the one you have and send it to us?

Mr. McCORMICK. Certainly.

Senator NEUBERGER. Have you any questions?

Representative HOFFMAN. No questions.

Senator NEUBERGER. Mr. Lanigan?

Mr. LANIGAN. No questions.

Senator NEUBERGER. Mr. Chudoff?

Representative CHUDOFF. I have no questions.

Mr. McCORMICK. I might add one thing.

As a result of all of this, I have certainly been grossly maligned in the press and by certain members or parties who were running for offices at the time that this particular thing came to the public, and I had some statements to make, but I am not going to divulge them at this time.

Senator NEUBERGER. I wanted you to know that any statement you desire to make, this committee would be glad to receive and put in the official record.

Mr. McCORMICK. I will probably be examined again so I will just keep them.

Senator NEUBERGER. Congressman Hoffman, would you like to ask a question?

Representative HOFFMAN. Thank you, Senator.

Are you a registered consulting engineer?

Mr. McCORMICK. Yes.

Representative HOFFMAN. Will you tell us about your qualifications?

Mr. McCORMICK. In order not to miss anything, I think I had better read some of them.

Representative HOFFMAN. We have plenty of time now.

Mr. McCORMICK. Well, I am a graduate of the University of Texas in civil engineering; graduate of the Colorado School of Mines.

Representative HOFFMAN. The University of Texas?

Mr. McCORMICK. Yes. I am also a graduate of the Colorado School of Mines.

Representative HOFFMAN. That is another recognized institution of learning.

Mr. McCORMICK. I think it is, and I have a mining degree there as of 1910.

Representative HOFFMAN. Go ahead.

Mr. McCORMICK. I have practiced the mining profession for about 45 years, during which time——

Representative HOFFMAN. Have you ever been accused by inference or any other way of any misconduct?

Representative CHUDOFF. You are objecting to the witness being interrupted.

Representative HOFFMAN. He is not objecting. You started this show. Never mind. I will ask the questions the way I wish.

Senator NEUBERGER. The witness will proceed.

Mr. McCORMICK. My first employment was at the Socorro mines, New Mexico, a gold and silver property where I held every job—in the concentrator, cyaniting, amalgamating, and smelting, to bullion—every job in the mine as well as underground contracting; then the engineering position, and finally designing and supervising the construction of the powerplant for this 150-ton capacity plant.

Later I was employed by Orcotti mines in Costa Rica, Central America, a gold and silver producer, as engineer and worked up to be assistant manager; another 150-ton capacity plant, the Minez de Mata Hambre, a copper and silver property, employed me as chief engineer and general manager, where I had the pleasure of developing this mine from grassroots to 1,000 tons per day production. I designed and supervised the construction of the concentrator, the powerplant, 17-kilometer transmission line, shipping facilities at our own seaport, and a town to house \$5,000 inhabitants at a cost of well over \$30 million; this, during World War I, when copper was so scarce that the United States gave us the protection of gunboats and submarines to safeguard shipments to the smelter in New Jersey. Uncle Sam was desperate for copper. The Cold Spring Mining Co. in Virginia, U. S. A., employed me to reorganize and manage the mine and plant to prepare kaolin for paper, rubber, and paint filter and for pottery manufacture. This expanded to the Georgia Kaolin Co. of Georgia, where I took out process patents and designed and supervised the construction of a million dollar beneficiating plant now shipping 30 to 40 railroad cars a day of prepared kaolin. I am director of this property at this date.

In 1933, I examined a gold mine in Jackson County, Oreg., liked the Pacific Northwest so well that I moved here to spend my days, I hope. This gold property is still hydraulicizing each year during the period that the Fish and Game Commission allows the muddying of the Rogue River during the winter runoff season. I am looking after this mine's interest.

The Codero Mining Co., a mercury producer, employed me to organize and operate their mine and plant from its beginning, which was started in 1941, and it developed into the second largest producer of mercury during World War II when mercury imports were cut off from Spain and Italy and Uncle Sam was again so desperate for mer-

cury to manufacture explosives. It is still the second largest producer of mercury today.

During the years I have made mine examinations in the United States, Mexico, Canada, Central America, the Philippines, and Cuba, and reported on gold, silver, platinum, iron ore, copper, lead, zinc, aluminum, chrome, manganese, antimony tungsten, rare earth minerals, asbestos, clay, gypsum, fluorite, mica, gem, stones, nickel, sulfur, uranium, pumice, marble, limestone, et cetera.

I am a registered professional mining engineer in Oregon and a member of the American Institute of Mining Engineers; member of the Professional Engineers of Oregon, and past president of the Southern Oregon Section; a member and a director of the Oregon Mining Association; a member of Oregon State Board of Engineering Examiners, and represent mining and metallurgy in that department.

I think that will about cover it. I think that is enough.

Representative HOFFMAN. Were you chairman of the board of the State board of engineering examiners?

Mr. McCORMICK. I am not chairman. I am just a member and represent mining and metallurgy.

Representative HOFFMAN. Have you finished?

Mr. McCORMICK. Yes, that is enough.

Representative HOFFMAN. You said something about feeling hurt, I think it was, about the statements that have been made.

Mr. McCORMICK. Yes, I did; here and elsewhere.

Representative HOFFMAN. To what were you referring?

Mr. McCORMICK. Well, I was quite concerned about the articles that appeared in the local press, all over the State, and then a syndicated column, all of which smeared my name and reputation by insinuating that I had acted dishonsetly in performance of my duty in this case and had been a party to cheating my Government out of timber.

Representative HOFFMAN. That did not make you feel good.

Mr. McCORMICK. It certainly did not.

Representative HOFFMAN. Not after 45 years in the business.

Mr. McCORMICK. No.

Representative HOFFMAN. Did anybody come up with any proof?

Mr. McCORMICK. No, and I will admit that I was quite upset at first and furious because my honesty and my reputation had been attacked and an attempt at a sort of character assassination, but when I realized that I could not command a first page nor make the first page on any newsprint nor headlines by denying these charges, I finally just considered the source and the littleness of the authors and how low they had stooped to try and win votes. I simply had a talk with the editor of our home paper and presented him with a letter of denial which was published in the back pages under the heading "Communications."

Representative HOFFMAN. You are evidently reading something. Go ahead until you finish it.

Mr. McCORMICK. It was my thought at the time how little some of our citizens and the Government employees realize the importance of our mineral industry; the very great and grave importance to the national defense and the necessity of preparedness for any surprise or emergency. Twice we have been caught woefully short. If you

citizens realize that everything we eat, we wear, we use, in this day and age is dependent in one way or another on mineral of this earth. These minerals are often hidden in our forests and on Government lands. They are far more important than the timber of our forests. Every encouragement should be given to those men who are willing to sacrifice their time, their money, and oftentimes their whole lives in search for and development of our mineral resources, and Al Sarena is no exception.

As to my honesty, I might add that I have been a Rotarian for 31 years in Virginia, in Georgia, and in Medford; and I am a past president of the Medford Club; and an Elk for nearly 50 years; was chairman of the fund drive to build the Medford YMCA and president of the Y for two terms. I was chairman of the county for the Community Chest drive in Jackson County and, sir, I do not like to have my name dragged in the mud.

Senator NEUBERGER. When did you first become acquainted with the Al Sarena mines?

Mr. McCORMICK. I think that it was about in 1937. I was up in that neighborhood. I had been deer hunting prior to that and I knew about the old Buzzard mine and the McDonald boys asked me to take a look at the property.

Senator NEUBERGER. And did you?

Mr. McCORMICK. Yes, I did. I looked it over.

Senator NEUBERGER. And were paid by them?

Mr. McCORMICK. No, this was just a visit. My second contract was in 1939 when Mr. Hayden had a lease on this property and employed me to rehabilitate the concentrator and run tests on the high grade, the medium grade, and low-grade ores.

Senator NEUBERGER. Do you mean that you worked there on the mine or your services were used on the mine before the McDonalds got it?

Mr. McCORMICK. I do not know whether they had it or not. I was employed by Mr. Hayden, who had a lease on the property at that time. The concentrates of gold, silver, lead, zinc, and copper were sent to the smelter. The tests were completed early in 1940 and my job was over.

However, I know that the McDonalds did continue to make tests and to explore the surrounding country in search of low-grade minerals.

Senator NEUBERGER. When was your first employment for money?

Mr. McCORMICK. I was paid for this by Mr. Hayden. Then in 1950, the McDonalds asked me to attend a hearing in Portland pertaining to their application for a patent, which I did, and I had no voice in that. I just listened.

In November 1953, I was employed by the Al Serena Mines, Inc., to represent them as an independent engineer to take samples in company with a representative of the Department of the Bureau of Mines, which I did, and the third contact is now.

Representative HOFFMAN. You have a statement. I wish you would go ahead without me asking you questions.

Senator NEUBERGER. He may. There has been no objection.

Representative HOFFMAN. If you have anything prepared, read it.

**Mr. McCORMICK.** These are just notes that I jotted down. I think that covers everything that I have in this. I do not know of anything else that I have.

**Representative HOFFMAN.** Then go ahead and describe in detail the procedures that were used by you and Appling in the taking of and transmitting of the samples, and also why you selected the Alabama folks.

**Mr. McCORMICK.** We received instructions, apparently at about the same time, and Mr. Appling wrote me a letter telling me that he would meet me at a certain time, and we went up to the mine early in November and looked the proposition over to arrange the time which we could use and which would suit my convenience to go up and take these samples. I think it was on November 12 that he picked me up and he had with him two others, and we proceeded to the mine and started taking samples.

We asked the McDonalds where the claims were and to show us where there was probable signs of ore, mineralization.

We proceeded to take the samples and the first day, as I recall it, we left the samples at the post office in Trial in custody of the postmaster and we picked them up the following day, and the following 3 days Mr. Appling kept the samples in his own possession.

**Representative HOFFMAN.** Were they taken in the usual customary way?

**Mr. McCORMICK.** Absolutely, positively in the usual and customary way, and Mr. Appling had the pleasure of taking them. I assisted him once or twice when his arms got so tired that he could not continue. The samples were then prepared by Mr. Appling and his two assistants.

**Representative HOFFMAN.** What do you mean "prepared"? What did they do with them?

**Mr. McCORMICK.** We crushed the samples, pulverized them, and split them ready for shipment to the assay office.

**Representative HOFFMAN.** What precautions did you take, if any, when preparing them?

**Mr. McCORMICK.** Took every precaution that is ordinarily used to be certain the samples were not salting each other or any other sample would be salting them. We took half the split and had it panned.

I think the McDonalds panned some and an oldtimer panner panned the rest of them to see if we can see any visual evidence of mineralization. There was in every sample, Mr. Appling's attention was called to that, and we both remarked on that. Then we took the other half of the splits, which was in two quarters, and packaged them ready for shipment. It was snowing all of that last day and had started to snow the day before. We agreed that it would be very wise to keep an alternate sample in case those original samples shipped to the assay office were destroyed or lost in transit or in any way did not reach the assayer. This we agreed among ourselves. There was no instruction to do that.

When the samples were shipped at the express office, we went to the First National Bank and, by the way, Mr. Appling picked out 1 of the 2 boxes that were identical to be shipped, and the First National Bank said that they had no place to take care of such an assignment, so we took them over to the department of geology and mineral industry and either he or I phoned the director in Portland, asking him if it

would be all right to leave them there in their custody and that they would not be disturbed, and he said "certainly."

This we did, and as soon as the assay certificates were received, 2 or 3 days afterward, I went over and talked to Mr. Appling and we decided to destroy the samples. There was nothing more to do with them, no use for them, so we went over and got them and laughingly said, "What shall we do with them?" And I said, or he did—I do not know which—"Let's take them down to the river and chuck them"; and we took them down and unsealed the package and threw them in the river.

Representative HOFFMAN. How did you happen to send them to Alabama?

Mr. McCORMICK. We discussed where the samples would be assayed and we mentioned Abbot Hanks and we mentioned Smith Emory and Williams. We asked the McDonalds where they had had samples tested, and they said at all three places.

We said, "Do you have any preference as to where these samples should be sent?" And they said, "We have a charge account and have been getting some very prompt, and, we think, accurate assays from Williams, and we would like to have them sent to Williams." I suggested to Mr. Appling that we send them there, and he said he would like to communicate with his superior, which he did.

Representative HOFFMAN. He took the precaution of trying to learn whether Williams was all right?

Mr. McCORMICK. Yes, I think he said he had not heard of them and didn't know who they were. Mr. Volin evidently secured the necessary information and we shipped the samples to Williams. That is all there was.

I wrote my report independently and he wrote his report independently and that is the last that I know of this particular thing.

Representative HOFFMAN. Do you know anything about the reputation of Williams, the company, whichever it is?

Mr. McCORMICK. I know that they do considerable work all over the United States in testing and investigations, and I had understood that they had an officer in Eugene but I do not know about that because I never sent them any samples.

Representative HOFFMAN. Did you ever hear that they were charged with any crookedness of fraud?

Mr. McCORMICK. Certainly not. They are an accredited assayer.

Representative HOFFMAN. They are accredited?

Mr. McCORMICK. Yes.

Representative HOFFMAN. Why do you call them "Williams"? Is that the name of the company?

Mr. McCORMICK. That is a shortcut.

Representative HOFFMAN. What is the real name, or do you not know?

Mr. McCORMICK. I do not know the full name.

Representative HOFFMAN. Do you have it there somewhere?

Mr. McCORMICK. I think I could find it.

Representative CHUDOFF. It is in the record.

Mr. COBURN. It is the Williams Inspection Co.

Representative HOFFMAN. The Williams Inspection Co. Do you think of anything else you want to say?

Mr. McCORMICK. I have nothing else to say.

Representative HOFFMAN. I think that is all I have at this time.  
Senator NEUBERGER. Do you have any questions, Mr. Coburn?

Mr. COBURN. How long have you been employed by the Al Sarena people?

Mr. McCORMICK. I told you the first contact was in 1950 for appearance at the hearing in Portland and in 1953 to do this particular job, and that is all.

Mr. COBURN. The employment has not been continuous since 1950?

Mr. McCORMICK. No, I had nothing to do with it.

Mr. COBURN. You are not now an employee?

Mr. McCORMICK. No, I was paid for this job and that is it.

Mr. COBURN. You are not now retained by them?

Mr. McCORMICK. No.

Mr. COBURN. Do you have any stock interest in the company?

Mr. McCORMICK. Absolutely not 1 cent's interest in the company.

Mr. COBURN. That is all.

Senator NEUBERGER. Are there any other questions?

Mr. Lanigan?

Mr. Chudoff?

Representative CHUDOFF. Are they operating the Al Sarena Mine?

Mr. McCORMICK. I believe not.

Representative CHUDOFF. Was it operated in 1950 when you were there?

Mr. McCORMICK. I did not go out to the mine but I do not think it was.

Representative CHUDOFF. How about in 1953, when you were taking samples? Was it being operated then?

Mr. McCORMICK. No.

Representative CHUDOFF. I have no further questions.

Mr. LANIGAN. Did you keep any other records in the course of the two times that you were employed by them, any diaries or other records, memoranda?

Mr. McCORMICK. Well, I made a report in this instance here, and in 1950, no, I just listened in.

Senator NEUBERGER. Mr. Redwine mentions to me that we would like to have for the committee record a copy of your report. You said that you and Mr. Appling made independent reports. Could we get a copy for the committee record of your report?

Mr. McCORMICK. I could have one made for you, yes.

Senator NEUBERGER. Could you do that, please, Mr. McCormick. Would you please send it to the Senate Committee on Interior, Senate Office Building, Washington, D. C., attention Mr. Redwine?

Mr. McCORMICK. Senate Interior Committee, Senate Office Building.

Senator NEUBERGER. Mark it for the attention of Mr. Redwine.

Mr. McCORMICK. Do you wish a photostat of the assay sheet?

Senator NEUBERGER. Yes.

Mr. McCORMICK. You want that attached along with that?

Senator NEUBERGER. If you could conveniently, please.

Mr. McCORMICK. Certainly. It is a photostat of my copy of the assay sheet.

Senator NEUBERGER. Yes.

(The document referred to follows:)

[Photostat copy of McCormick report]

PROCEDURE AND METHOD OF SAMPLING THE 15 CLAIMS OF THE AL SARENA MINES, INC., JACKSON CO., OREG., NOVEMBER 1953

Instructions were received to take samples for the Al Sarena Mines, Inc., on the following 15 claims:

Henry Applegate, J. W. Merritt, Rainboe, Sulphide, Della McKinnon, Cougar, Oro Escondido, W. C. Leever, J. L. Grubb, J. D. McKinnon, Manganese Claim, Staples, Arroyo Verde, Alabama, and La Jolla.

Mr. N. F. Volin of the Department of the Interior, Bureau of Mines Office, Spokane, Wash., or designated substitutes from his department, were to be present when samples were obtained for assaying purposes, and accurate records kept of the location from whence each sample was taken.

Mr. R. N. Appling (mining engineer in charge), 119 SW M Street, Grants Pass, Oreg., Office of the Department of Interior, Bureau of Mines, was designated; and, with Messrs. Jerry Briggs, Elton Pattee, and Ben Lettekon, all from his department, assisted in surveying locations by Brunton Compass and chained measurements from claim corner posts or survey stations established and set by the mineral surveyor. This was of great help, speeded up the work, and was very satisfactory to all concerned. Messrs. Herbert and Charles McDonald designated the places to be sampled. All samples were cut by Messrs. Appling and McCormick, and kept in their possession at all times, though part of the prepared samples were placed in the custody of Mr. Irwin Howe, postmaster, in the post office at Trail, Oreg., until all sampling was completed and boxed for expressing to be assayed. The samples were taken more or less of a uniform size from freshly cleaned surfaces of rock in place. A small laboratory 5" x 7" jaw crusher and a UA model Braum pulverizer powered by a 5 hp. gasoline engine were used to reduce the dried samples to proper size for the laboratory by splitting through a 16 section splitter. Of the last split, one half of the reduced sample was used for assay purposes and the other half kept as an umpire (just as a safety measure in case the original lot of 28 samples were lost in transit). The umpires are stored with the Oregon State Department of Geology and Mineral Industries in Grants Pass, Mr. Fay Libby, director in Portland, Oreg., having been requested to safe-keep them. The original lot of 28 samples were numbered and tagged, and expressed to A. W. Williams Inspection Co., Mobile, Ala., on November 17, 1953, to be assayed.

The samples were about 3-foot cuts, or more, chipped across the cleaned surface of the outcrops or bulldozed exposures. In some instances as many as 3 samples were taken from 1 outcrop, or from several different outcrops on the same claim. Most of the country is covered by overburden, heavily brushed and timbered. Note: Mr. Appling took photographs of every sample cut, although the weather was rather bad for picture taking. The notes and information gathered by Mr. Appling will be forwarded to Mr. Volin, along with maps showing the claims and location of samples on each; also, a copy of the assay certificate from the A. W. Williams laboratory.

The rejects from all samples were handed to Messrs. McDonald, who had Mr. Fred Allward (an old experienced prospector and miner at present living on and acting as caretaker of the Al Sarena property) pan each sample in our presence and showed the results to both Mr. Appling and myself. In every instance sulfides were plainly visible in the pan. The sulfides present seemed to consist of magnetite, pyrite, galena, and possibly some sphalerite when tested by a magnet and viewed through a high-powered magnifying lens.

The formation has generally been classified as a rhyolite, which appears to fit the case.

Numerous old diggings, pits, channels, tunnels, shafts, trails, and roadways were observed as we walked over the claims sampled.

The differences in elevations of the places sampled, compared with the base elevation taken (by altimeter) at the mine headquarters on the A. W. Dahlberg claim, ranged from 3,400 at the base and 3,460 feet on the Sulphide to 4,000-foot elevation on the Cougar and J. W. Merritt claims, 3,900-foot elevation on the J. D. McKinnon down to 3,360 feet on the Managanese.

The samples were cut from the surface outcrops and as deep as 15 feet below the normal surface in the discovery pits and bulldozed clearings starting November 12 and ending November 16, 1953.

The attached map shows approximate locations of the samples taken and numbered from No. 1 through No. 28.

The attached tabulation sheet gives information regarding the samples taken from the 15 claims. In general, the samples were taken from surface outcrops, pits, or clearings that were fairly easy to locate from fixed survey corners or points. The easiest places to get to, and survey, were chosen; many other locations were available but not so convenient to fixed survey markings. Even so, considerable climbing up steep grades and over running streams, fallen timbers, and thick brush was necessary. The weather was threatening all the while, and snow fell all day the 16th while we were preparing part of the samples for shipment.

Respectfully submitted.

[SEAL]

D. FORD MCCORMICK.

Senator NEUBERGER. I would like to ask you one question, if I may. Your experience is certainly impressive. Have you ever before in your experience in Oregon and the Northwest had minerals sent to Alabama for assaying and examination?

Mr. MCCORMICK. I have never sent any before, no.

Senator NEUBERGER. That is the only question I have. I want to thank you very much for coming here today and making this statement to us, Mr. McCormick.

I would like to submit for the record, because I think that these are pertinent parts of the record: one, the report of the sampling at the Al Sarena Mines by R. N. Appling, Jr., regional engineer.

Mr. REDWINE. May we ask the reporter to let the maps that Mr. Appling left with us follow Mr. Appling's report?

(The documents referred to follow:)

#### REPORT ON SAMPLING OF AL SARENA MINES, INC.

By R. N. Appling, Jr., Mining Engineer,

Region II, January 2, 1954

#### INTRODUCTION

At the request of Mr. Clarence A. Davis, Solicitor to the Department of the Interior, a representative of the Bureau of Mines was present in November 1953, during the sampling of 15 located mining claims held by Al Sarena Mines, Inc. R. N. Appling, Jr. was designated as the representative on October 7, 1953, by Mr. M. E. Volin,<sup>1</sup> and was instructed to contact Mr. D. Ford McCormick, the engineer retained by Al Sarena Mines, Inc., and to arrange with him a suitable time for the sampling.

Shortly after these instructions were received, the owners, Mr. Herbert McDonald and Mr. Charles McDonald met the writer in Grants Pass, Oreg., and informed him that the sampling should be postponed several weeks because of a delay in rebuilding roads and cleaning sloughed pits and trenches preparatory to sampling.

An exchange of correspondence with Mr. McCormick led to a meeting on November 5 in Grants Pass, at which time it was decided to visit the property on November 9 in order to plan the sampling procedures. The property was visited as planned and November 12 was established as the date on which to begin sampling. The sampling operations took 5 days, along with mapping of the sampled areas, and preparing the samples for shipment.

#### GEOLOGY

The rocks underlying the claim area are principally rhyolite flows, with minor amounts of andesite in the north and northwest claim area. Volcanic agglomerate is common on many of the claims. Alteration is extensive in places in the eastern claim area. No outstanding fault or flexure was noted.

<sup>1</sup> Chief, Mining Division, region II.

Pyrite is visible in minor quantities in most of the rhyolite exposures and galena was observed in some places. Panned concentrates made from discarded sample splits showed pyrite and a larger amount of magnetite. Apparently the gold is associated with the pyrite. No free gold was noted megascopically.

#### DEVELOPMENT

A number of old pits and trenches of small size are scattered throughout the claims. Recently completed work includes a bulldozer trench 100 feet long and 8 to 10 feet deep, and approximately a mile of access road. The underground workings were either inaccessible or unsafe and were not examined; however, a sizeable dump at the portal of the main adit indicates that a considerable amount of underground development has been completed.

Buildings on the property include a mill building, timber shed, assay office and several bunkhouses. Mill equipment was not examined, but is reported to be sufficient to treat approximately 100 tons of ore in 24 hours. The tailings pile was quite small, indicating that little milling has been done. The company owns an International TD-18 tractor used in trenching and road building.

#### SAMPLING

Sampling was started on the morning of November 12, and continued through November 15; sample preparation was completed on November 16. Members of the sampling party included Mr. McCormick, the owners, Herbert McDonald and Charles McDonald, and 3 Bureau of Mines employees, R. N. Appling, Jr., mining engineer, Eldon C. Pattee, minerals technologist, Gerald L. Briggs, core drill helper, and Mr. Fred Aultland, a caretaker who lives on the property was present occasionally during the sampling.

#### *Location*

Samples were taken from outcrops, pits, or trenches designated by the McDonalds. According to them, locations were selected that had been sampled with satisfactory results. Location of the sample on the outcrop or in the pit was at the discretion of McCormick and the writer.

A copy of Oregon Mineral Survey 879 was used as a base map for plotting sample locations, which were determined by compass and tape traverse from claim corner posts. Traverses were made by Pattee assisted by Briggs.

As a further check, sample locations determined by the above means were compared to claim lines established during the mineral survey.

A copy of the base map on which the sample locations are plotted is appended to this report. Additional maps on a larger scale are included for those samples that are not sufficiently clear on the base map.

#### *Sample cutting*

Sample 1 was taken by Mr. McCormick; at his request the remaining samples were taken by Appling with McCormick's assistance. Before sampling, the surfaces were examined for signs of "salting," then cleaned by chipping away one-half to 2 inches of rock, depending upon the hardness. All samples were taken from solid rock as nearly as could be determined. Two grab samples Nos. 18 and 20 were taken; the remainder were chip samples taken with hammer and maul, in lengths varying from 28 to 82 inches.

After collecting each sample, it was placed in a canvas sack together with a metal tag bearing a stamped number, the sack tied securely and given to Briggs who retained possession until the end of the day.

The Government representative took possession of the samples after the day's sampling, and thereafter retained them in locked boxes until they were ground and shipped to the assayer. It was originally planned to deliver them for safe-keeping to the postmaster at Trail, Oreg., at the end of each day. This was done on November 12 and 13, but the practice was then discontinued because of the lost time involved.

A photograph was taken of each sample surface. The photos are identified by the sample number in the upper right hand corner and the claim name in the upper left. White dashed lines indicate the position and length of each sample.

**Sample preparation**

During the first 2 days of sampling it was the practice to cut samples in the morning, prepare them in the afternoon and deliver them to the postmaster at Trail late in the afternoon. Because of approaching storms which threatened to make access to the claims difficult, preparation was postponed until November 16 after all samples had been taken. The samples were kept in sealed boxes until that time.

Equipment used for preparation consisted of a 3- by 6-inch jaw crusher, and an 8-inch Braun disk grinder, both belonging to Al Serena Mines, Inc., and a 16-inch Jones type sample splitter belonging to the Bureau of Mines. Samples were crushed, dried, ground to approximately 50 mesh, and split into quarters. One quarter was immediately put in new paper sacks, sealed, and retained in the possession of the Government representative until shipped to the assayer. Another quarter was similarly treated and delivered to the Oregon Department of Geology and Mineral Industries for safekeeping in the event the assay samples should be lost in transit. The remaining quarters were turned over to Mr. McDonald for panning.

The crusher, grinder, splitter, and drying pans were thoroughly brushed out before and after each use. The various stages of preparation were handled solely by McCormick, Pattee, Briggs, and the Government representative. Sample preparation was completed November 16. Samples were retained in sealed containers by the Government representative until the morning of the following day when they were packaged and shipped by Railway Express to the assayer.

**ASSAYS**

Assays were performed by the A. W. Williams Inspection Co., Mobile, Ala. Query of Mr. John R. Thoenan<sup>2</sup> established that the firm is listed in the Department of Commerce directory and has the verbal approval of the Alabama State geologist. The assays and other pertinent data are shown in table I.

**TABLE I.—Assays**

Sample	Claim	Type	Located	Length	Au, ounce per ton	Ag, ounce per ton	Au, dollars per ton	Ag, dollars per ton	Total, dollars per ton
				<i>In feet</i>

## MINERAL ENTRY OREGON 0665

Contest No. 38

AL SARENA MINES, INC.

4—084 a

## STENOGRAPHER'S AFFIDAVIT

I, Gertrude C. Cannada, do solemnly swear that I am the stenographer who took down in shorthand the testimony and proceedings at a hearing before the manager, land office, Portland 18, Oreg., on September 13, 1950, in the case of *United States of America, contestant v. Al Sarena Mines, Inc.*, and that the foregoing transcription, being pages 7 to 55, inclusive, is a full, true, and correct record of the testimony and proceedings taken and had at said hearing.

GERTRUDE C. CANNADA.

Subscribed and sworn to before me this 29th day of September 1950.

PIERCE M. RICE.  
*Manager, Land Office.*

## INDEX

Mineral Entry 0665.

Contest No. 38.

Contestant's witnesses:

G. Robert Leavengood.

Elton M. Huttan.

William C. Sanborn.

Exhibits:

(For identification only):

No. 1. Mineral survey map 879 (2 sheets).

No. 2. Assay certificate, Annes Engineering Co.

No. 3. Assay certificate, Abbot A. Hanks, Inc.

No. 4. Assay report, United States Bureau of Mines.

(Received in evidence):

No. 1. Mineral survey map 89 (2 sheets).

No. 2. Assay certificate, Annes Engineering Co.

No. 3. Assay certificate, Abbot A. Hanks, Inc.

No. 4. Assay report, United States Bureau of Mines.

LAND OFFICE, BUREAU OF LAND MANAGEMENT, DEPARTMENT OF THE INTERIOR

PORTLAND, OREG.

SEPTEMBER 22, 1950.

Contest No. 38

UNITED STATES FOREST SERVICE, CONTESTANT, v. AL SARENA MINES, INC., CONTESTEE

On April 6, 1949, mineral certificate was issued on mineral application Oregon 0665 filed October 4, 1948, by the Al Sarena Mines, Inc., for a patent to the Oro Alto, Oro Rico, Cougar, Oro Real, J. W. Merritt, Peter Applegate, Oro Escondido, W. C. Leever, Mark Applegate, H. McKenzie, J. L. Grubb, J. D. McKinnon, Henry Applegate, A. W. Dahlberg, Telluride, Alabama, Rainboe, Delia McKinnon, Sulphide, Staples, Manganese, La Jolla, and Arroyo Verde lode mining claims situated on lands in secs. 20, 21, 28, 29, and 30, T. 31 S., R. 2 E., Willamette meridian, within the Rogue River National Forest, Oreg. The certificate was issued bearing a notation that the issuance of a patent should be withheld pending a field examination as to the bona fides of the claims.

On April 13, 1950, the United States Forest Service filed notice of protest against the following claims: Henry Applegate, J. W. Merritt, Rainboe, Sulphide, Delia McKinnon, Cougar, Oro Escondido, W. C. Leever, J. L. Grubb, J. D. McKinnon, Manganese claims, Staples, Arroyo Verde, Alabama, and La Jolla.

The protest was based on the charges that the lands are nonmineral in character and that minerals have not been found in sufficient quantities to constitute a valid discovery. It was further charged that patent expenditures in the sum of \$500 have not been made on or for the benefit of the Manganese claim, Staples claim, Arroyo Verde claim, Alabama claim, and La Jolla claim.

On April 25, 1950, the manager of the land office addressed notice of the charges preferred to the Al Sarena Mines, Inc., by registered mail. On May 22, 1950, the contestee filed an answer in which it was requested that the protest be dismissed and that patent be issued for the claims described. Thereafter, pursuant to the request of the Al Sarena Mines, Inc., and instructions of the Director, Bureau of Land Management, the manager of the land office arranged with the parties in interest and set a date for a hearing to be had to determine the validity of the claims protested. The hearing was set for 10 a. m., September 13, 1950, before the manager of the land office in Portland, Oreg., and the United States Forest Service and the Al Sarena Mines, Inc., were duly notified. The contestant and the contestee appeared at the hearing, and each was represented by counsel.

Before the proceedings were opened, Mr. W. O. MacMahon introduced himself as a representative of the Al Sarena Mines, Inc., and presented demurrers and motions and insisted that they be ruled upon before proceeding with the hearing upon the merits of the case. The manager stated that the proceedings would be opened and that the demurrer and motions would be ruled upon before proceeding to a hearing.

The manager recited the proceedings leading up to the hearing and defined the issues raised, and stated that the purpose of the hearing was to determine the validity or invalidity of the claims protested. The demurrer was based on the ground, (1) that the claims were located and filed prior to the inclusion of the lands in the national forest, and that the act of Congress withdrawing the lands was *ex post facto* as to these claims and that such an act was *ultra vires*, and that the United States Forest Service was without jurisdiction; (2a) that the notice by the United States Forest Service was not properly dated by the Forest Service, and (2b) that the notice entitled "*United States of America, contestant, v. Al Sarena Mining Company, contestee*" is no notice as there is no such company, and that the protest was made against a nonexistent company, and not against the Al Sarena Mines, Inc., and (3) that the contest recites requirements that all answers of contestee shall be under oath, but neither the contest citation nor the protest was under oath.

The demurrer as a form of pleading was set forth in the answer, but having been discontinued in Federal proceedings, it was considered and ruled upon as a motion. The motions were overruled on the following grounds: (1) That the President of the United States has statutory authority to withdraw and reserve public lands for a public purpose; that the lands in question were public lands on September 28, 1893, when they were included in the national forest by Executive order issued pursuant to the act of March 3, 1891 (26 Stat. 1103), and *ex post facto* laws are penal statutes relating to criminal procedure and do not apply in this case; (2a) on the ground that the United States may through any governmental agency file such a notice at any time before the issuance of patent, which appears to have been done in this case, and that, therefore, failure to date the notice is immaterial; (2b) that the fact that the protest was addressed to the Al Sarena Mines, Inc., as the Al Sarena Mining Co. is without merit for the reason that the charges preferred are against the validity of the mining claims and not against the applicant as such, and that the proceedings are in the nature of a proceeding in rem rather than personam, and for the further reason that the contestee responded and entered general appearance; (3) on the ground that the laws and regulations governing proceedings instigated by the United States are not required to be sworn to as contended. The various motions appearing to be without merit, were dismissed for the reasons stated, and the hearing was ordered to proceed for the purpose of determining the validity of the claims protested.

Counsel for the contestee noted an appeal to the Solicitor of the Department of the Interior, and demanded a ruling on the appeal before the taking of any testimony. He was advised that all decisions of the manager were subject to review by the Director of the Bureau of Land Management and the Secretary of the Interior, and that he had a right of appeal to the Director. Counsel for the contestee objected to the taking of any testimony until a decision had been rendered on the appeal and stated that he would not attend the hearing or be

charged or bound by the proceedings. Counsel for contestant cited the regulations and rules of practice and stated that the decision of the manager on the motions did in no wise affect the legality of the proceedings, and that the Government wished to proceed with the hearing to establish its case, and that he wished to serve notice on the contestee that the proceedings will go forward without additional expense and that it shall be continued in the regular manner as far as the representatives of the Forest Service are concerned. Counsel for contestee then stated that he went to Washington and talked to Mr. Mastin G. White, the Solicitor and Acting Secretary of the Interior; that he pointed out to the Solicitor what he considered some of the inadequacies of the rules of practice, and asked if the regular rules of practice as obtained in Federal and other courts would obtain at this hearing, to which the Solicitor replied in the affirmative, and that he stated to the Solicitor that if whoever held the hearing decided against the contestee on the demurrers and motions, contestee should then and there have a right of appeal direct to Washington, and that no further testimony should be taken by the contestee or anyone else until that was adjudicated. He stated that that was the agreement that he had with the head of the Department, and that it was the only agreement that he was going to be bound by, and that if any testimony was taken at the hearing, he would reserve the right to attack it and that he reserved the right as to what was the agreement between himself and the head of the Department. He then stated, "As far as I am concerned, gentlemen, I am ready to go." Counsel for contestant stated that since witnesses had been brought to the hearing to testify, he saw no reason why the proceedings should be postponed.

At this point the manager referred to a statement in the record from the Solicitor of the Department of the Interior, and from the Director of the Bureau of Land Management to the effect that an early date, time, and place be set for conducting a hearing; that the hearing was ordered pursuant to such instructions for the purpose of the taking of testimony to determine the validity of the claims as a basis for a decision upon the merits of the case. The manager pointed out that he had no knowledge officially of any purported agreement made between the Solicitor and representatives of the contestee and that the proceedings initiated here and any rulings made by the manager of the land office would be subject to review and decision by the Director of the Bureau of Land Management and the Secretary of the Interior, and that the hearing should proceed by the taking of testimony tending to establish the validity or invalidity of the mining claims pursuant to the charges brought, and asked counsel for contestant if he cared to make any statement or proceed with the Forest Service case. Counsel for the Forest Service stated that he was prepared to proceed and called attention to the provision of title 43, of the Code of Federal Regulations, relating to the payment of the costs of proceedings to be borne by the parties to the contest. The manager announced that each party must pay the cost of taking the direct examination of his own witnesses and the cross-examination on his behalf of other witnesses, the cost of noting motions, objections, and exceptions to be paid by the party on whose behalf the same are made. Counsel for contestant so consented. However, counsel for contestee stated that the contestee would not be responsible for any cost in that regard as he considered the proceedings irregular and highhanded and without regard to the rules of procedure. The manager announced that since the motions had been ruled on, the hearing would proceed. At this point counsel for contestant called attention to a prayer contained in the notice of the Forest Service for the cancellation of the claims and stated that the intention was only that the application for patent be denied and that the Forest Service was not asking for a declaration declaring the claims null and void. The manager stated that the effect of the amendment was to deny the issuance of patent at this time, and asked counsel for contestee if there was any objection to that amendment. Counsel for contestee stated that he had no objection to that amendment and insofar as contestee was concerned, "You may proceed in your own pleasure, but at your own risk." At this point the manager asked the counsel for the contestee if he wished a temporary postponement pending a ruling by the Solicitor. Counsel for contestee answered, "No, sir. We will let it go as it is and fight it out in Washington. I think that my word is good and that he will tell you that it is good, and that you will ascertain from him that I have told you nothing but the truth."

At this point counsel for contestant requested a temporary recess to avoid noises and interference occasioned by the departure of the contestee in order that the hearing might proceed by the examination of the Forest Service witnesses. The manager called a temporary recess, and the contestee departed, after which the hearing was resumed.

The hearing proceeded at 11 a. m., with only the United States Forest Service, contestant, represented by Mr. Jesse R. Farr and Robert G. Rue, witnesses for contestant, the examiner, and reported present.

Mr. FARR. Mr. Examiner, as I construe the Rules of Practice, I must now present evidence affecting the validity of the claims under contest, and I request a ruling directing me to proceed with the case and to call my witnesses as I intended to do prior to this position taken by the contestee.

The EXAMINER. The request of Mr. Farr on behalf of the United States Forest Service is granted and you may now proceed by calling your first witness.

Mr. FARR. Mr. Examiner, I think one more motion is in order, and that is that since objection has been made that the name of the contestee has not been properly designated in the contest, pleadings be amended to conform to the proof which is that the proper name of the contestee is Al Sarena Mines, Inc.

The EXAMINER. The record will be so corrected.

Mr. G. Robert Leavengood was then called to the stand as witness for contestant. He was sworn and testified as follows:

#### DIRECT EXAMINATION

Question. State your name, please.

Answer. G. Robert Leavengood.

Question. And your address, where you live.

Answer. Union Creek Ranger Station, Prospect, Oreg.

Question. By whom are you employed?

Answer. United States Forest Service.

Question. In what capacity are you employed?

Answer. Timber management assistant.

Question. How long have you been employed in that capacity?

Answer. At Union Creek?

Question. Yes.

Answer. Since November 1947.

Question. And what are your duties?

Answer. My present duties are preparation of timber sales in this district. Appraisal of the timber and getting sales ready.

Question. Now in this connection, are you required to estimate values of timber on national-forest lands?

Answer. Yes.

Question. Are you familiar with the claims which are the subject matter of this contest known as the Al Sarena Mines, Inc., contest?

Answer. Yes, sir.

Question. Are they within your district?

Answer. They are within the Elk Creek district.

Question. Have you been on these claims?

Answer. Yes.

Question. For what purpose?

Answer. General reconnaissance of the timber and location, specifically of the contested claims. Land values which exist there.

Mr. FARR. Mr. Examiner, I would like to offer for identification only at this time 2 maps which are entitled "Mineral Survey 879, Oregon." These maps purport to be maps of the claims here involved. I shall later have them properly identified by the mining engineer for factual evidence, and have them marked for contestant's exhibit No. 1.

The EXAMINER. They will be received for identification only.

Mr. Farr then continued with his direct examination:

Question. Now, Mr. Leavengood, referring to this map, have you been on all the claims which are the subject matter of this contest, and which I for purposes of my own identification have numbered 1 to 15 on this map?

Answer. Yes, sir. I have been on all the contested claims, portions of all the contested claims. It is tied—the general area is tied into the northeast section corner of section 29 of the proper township and range, and the section corner exists on the 879 survey. There are 2 witness trees still standing.

Question. And working from that identification you are able to establish the general location of these contested claims?

Answer. Yes; in fact fairly specifically.

Question. Now, are you familiar with the general area surrounding these claims?

Answer. Yes, sir. Topography and so on.

Question. Well, with respect to topography, do you know whether there are any active mining operations going on in this vicinity?

Answer. In the Elk Creek drainage, at Union Creek, there are none other than the Al Sarena holdings.

Question. Now, have you examined the claims for timber values?

Answer. I have made a general reconnaissance of each claim.

Question. I wonder if you could give me the results of this examination and the type of examination you made?

Answer. I spent parts of 3 days on the area specifically for this purpose.

Question. What dates were those, please?

Answer. Last Wednesday, Thursday, and Friday. I would have to look at a calendar for that.

Question. That would be the 6th, 7th, and 8th of September 1950?

Answer. Yes, sir. And the results of the examination indicate that about a mile and a half to 2 miles to be low in topography. Logging has existed down at Elk Creek. Logging is in progress further down within about a mile and a half of these claims. Two roads go through the area and can be utilized with little improvement for logging purposes. The general nature of the stand is two-storied. The older timber is very old and mature and somewhat scattered in places, running to reasonably heavy stand, and roughly averages around 25,000 net merchantable board-feet per acre which is principally Douglas fir, and runs 10 to 15 percent sugar pine.

EXAMINER. May I interrupt the witness at this time. Do you have by virtue of your employment and observations, knowledge of mineral character of these claims in question?

Answer. In what respect?

EXAMINER. As to the mineral character of the lands covered by these claims?

Answer. Well, I observed, in my course of travels over the area, pits that they used in taking of samples, and so on.

EXAMINER. Have you examined any of these claims personally? Or did you examine any of these claims personally for the purpose of determining their mineral character?

Answer. No, sir; not the ore.

MR. FARR. Mr. Examiner, I am trying to show here the value of this land for national forest purposes in line with the decisions of this Department, *United States v. Dawson* which was decided April 12, 1944, by the Assistant Secretary, Mr. Chapman. It is cited as 58 ID, page 670, also in line with the criterion set by Mr. Ricketts in the American Mining Laws, volume 1, section 508, in which he discusses the criterion of a discovery and I should like to quote as follows: "It has been held that the finding of the mineral in location in place as distinguished from fluted rock, constitutes discovery, and warrants the prospector in making a location of a lode and mining claim. This broad rule, however, has in later cases been somewhat modified, and now the criterion for a valid location is determined by the fact as to whether, at the vital time, the land is known to contain minerals in quality and quantity reasonably inspiring the average man to believe that expenditure in developing is justified, and that it is reasonably probable that such minerals will be found to return reasonable profits on the investment and more valuable therefore than for other uses; the latest is that it is not more valuable for mineral if to secure the mineral, uses of a greater value must be destroyed." I was simply trying to establish the value of the land for national forest purposes.

EXAMINER. His testimony will be received with the exception noted.

Mr. Farr then continued his direct examination of Mr. Leavengood:

Question. You have testified that you have decided that there are about 25,000 board-feet per claim?

Answer. That is an average of the contestee's claims. That is overstory of mature timber.

Question. What did the understory consist of?

Answer. The understory resulted—there was a fire somewhat over 50 years ago, and the age of this understory is just about 50 years, or a little less, and it is a very thrifty and fast-growing stand of raised Douglas and sugar pine. It averages in size between 8 and 14 inches and it is growing about as good as we have in that district. It is a pretty nice stand for an understory.

Question. Is that 25,000 board feet per acre or per claim?

Answer. Per acre on the average of the claim.

Question. Did you test the rate of growth of this understory?

Answer. Yes. I have several with me here.

Question. And what do they show generally in the rate of growth?

Answer. The rate of growth for that country is a dense medium growth. I don't think we have anywhere else that I can think of as nice a stand as this is, and the density is very good.

In order that the person reading this transcript will understand what we are talking about, are there any measurements and figures which you can give with respect to the growth?

Answer. Your average inch-for-inch growth on your dominant and codominant trees is average about nine rings to the inch in the last growth, on the outer growth. It almost would take an expert to figure out the actual board-feet increment per acre, but a very safe figure would be 250 board-feet per acre per year. We have the two values, the overstory and merchantable timber which could be harvested, incidentally—the appraisal on that, using the roads and cutting the timber which the Forest Service would normally cut, leaving perhaps 25 percent standing as growing stock, the value of the timber which we would cut now runs about \$77,000 on the contested claims.

Question. Then it would be this present value of \$77,000?

Answer. Yes. It could be harvested within a short time if the sale were made and then save the second crop in the 8- and 14-inch trees.

EXAMINER. At this time I wish to interrupt the witness. These proceedings are based upon charges that the land is nonmineral in character, that minerals have not been found in sufficient quantities to constitute a valid discovery; the land is nonmineral in character, and the witness has not qualified as a mineral examiner and the testimony as given is irrelevant and does not tend to support the charges brought.

Mr. FARR. I would like to note an exception on this ruling based on the citation of law that has an effect on the actual discovery, whether or not there has been a sufficient discovery on the claims.

EXAMINER. The exception will be noted and the witness will proceed.

WITNESS. We have established these two values in timber, the overstory and the thrifty dense understory, and of course you have your land value, and for prospects of growing timber in the future on this land.

Mr. FARR. I believe that is all.

There were no further questions, and the witness left the stand.

Mr. Elton M. Hattan was called to the stand as a witness for the contestant. He was sworn and testified as follows:

DIRECT EXAMINATION.

Question. State your name, please?

Answer. Elton M. Hattan.

Question. And your address, please?

Answer. Swan Island Station, Portland 18, Oreg.

Question. By whom are you employed, Mr. Hattan?

Answer. By the Bureau of Land Management.

Question. In what capacity?

Answer. Field examiner, mineral.

Question. How long have you been employed in that capacity?

Answer. Since September 1939.

Question. And what do you do in this capacity?

Answer. I examine public lands, including some national forest land at the request of the national forest, as well as the vacant public domain for mineral character of the land or discoveries in the case of mineral applications for patent.

Question. Would you state your qualifications as a mineral examiner, please?

Answer. I graduated from Oregon State College with a bachelor of science degree in mining in 1919, and thereafter I have been employed by various companies of which I will enumerate those that have a relative bearing on this kind of an examination. In the early 1920's I was employed by the Calumet & Arizona Mining Co. as a mining engineer at Bisbee, Ariz., doing mine stope engineering, general surveying and sampling. Thereafter I went to Lordsburg, N. Mex., as chief engineer for the same company, it was known as the 85 Mining Co., and was there for about a year. And after that I was employed by the Ahumada Lead Co. in the State of Chihuahua, Mexico, as chief engineer and ore boss for a matter of 2 years. This was a lead, zinc, gold and silver property, and in this capacity it was necessary to take a great many samples and also

oversee the taking of samples by others, and as well do the mine surveying and development work. I later was employed by the Sullivan Mining Co. at Kellogg, Idaho, where I was field engineer in the construction of a zinc plant, and being in the locality I became acquainted with the mining methods and milling methods that were taking place in the area. I was also employed by an engineer to go to British Columbia where I made an examination of a property at which I stayed for about 6 months. I sampled and surveyed the mine and assayed the samples which I took for gold, silver, lead, zinc and copper. I later was employed by the Phelps Dodge Corp. at Morenci, Ariz., where I was in charge of diamond drilling and also had the job of compiling all of the assays that had accumulated over a period of 30 or 40 years. In fact, there was some 45 miles of openings that had been sampled by channel sampling, diamond drilling and churn drilling. I put all of these samples together so that they could be used in determining the ore value of certain blocks if mined by block caving. I also oversaw the construction of a mine model. My first job was to put the assays together for a block caving scheme of mining. Later I put the samples together in a different manner to develop the ore body, which is roughly 302 acres in surface trace, into an open pit operation. Thereafter, after 1932, when this mine shut down, I was employed by the United States Engineers on Bonneville Dam and also up the Willamette Valley as an inspector in charge of diamond drilling. In this capacity I was in charge of the group that secured some field data that was used in the construction of 4 or 5 of the dams, most of which have now been constructed. I believe this is about all that has to do with this type of investigation.

Mr. FARR. Before proceeding further, I would like to make one observation which possibly should have come prior to Mr. Leavengood's and Mr. Hattan's testimony, and that is that the record be clear that the contestee made various motions at the outset of the hearing and demanded a ruling thereon by the manager who is serving as hearing officer, before proceeding.

EXAMINER. That is correct.

Mr. Farr then proceeded with the direct examination of the witness, as follows:

Question. Mr. Hattan, are you familiar with these two maps which I have marked for identification as contestant's exhibit No. 1?

Answer. Yes.

Question. Would you tell us what they are?

Answer. Those are \* \* \* the one at the left is a print from the mineral survey tracing which I secured over in the Public Survey Office upstairs, and the one at the right that has the writing on it, mineral survey 879, page 1 I believe it is \* \* \* or is that page 3?

Question. It says sheet 3.

EXAMINER. By left and right you mean exhibits 1 and 2?

Mr. FARR. That is all one exhibit. They have 2 sheets, but are all 1 exhibit.

The witness then resumed his direct testimony, as follows:

Answer. Sheet 3 is one that was furnished by the Public Survey Office. The sheet 2 is the one on which I have made markings. That particular sheet 2 has not been marked, however, or designated.

Question. Now, Mr. Hattan, do these two sheets, exhibit 1, faithfully represent the claims which are the subject-matter of this contest, not only contest, but which have been clear listed?

Answer. Yes, they are the mineral survey plats which have been surveyed and platted from the mineral surveyor's notes.

Mr. FARR. Since there will be no cross-examination, I would like to have these two sheets admitted as exhibit No. 1.

EXAMINER. They will be admitted into evidence as exhibit No. 1.

Question. Have you been on the claims as depicted by the exhibit?

Answer. Yes, I have been on all of them.

Question. When have you been on the claims?

Answer. I have been on all of them on two separate times, and on part of them a third time.

Question. Was anyone with you while you were on the claims?

Answer. Yes, the first time Fred Altman who is watchman at the Al Sarena Mines, Inc., went with me, and that was on May 19 through May 23, inclusive, 1949.

Question. And the next time?

Answer. That was July 12 through 15, 1949, and accompanied by Mr. Sanborn of the United States Forest Service, mineral examiner, and also by the MacDonald Bros., Charles and H. P. MacDonald, Jr., I believe it is, who are representatives of the Al Sarena Mines, Inc.

Question. Is that 25,000 board feet per acre or per claim?

Answer. Per acre on the average of the claim.

Question. Did you test the rate of growth of this understory?

Answer. Yes. I have several with me here.

Question. And what do they show generally in the rate of growth?

Answer. The rate of growth for that country is a dense medium growth. I don't think we have anywhere else that I can think of as nice a stand as this is, and the density is very good.

In order that the person reading this transcript will understand what we are talking about, are there any measurements and figures which you can give with respect to the growth?

Answer. Your average inch-for-inch growth on your dominant and codominant trees is average about nine rings to the inch in the last growth, on the outer growth. It almost would take an expert to figure out the actual board-feet increment per acre, but a very safe figure would be 250 board-feet per acre per year. We have the two values, the overstory and merchantable timber which could be harvested, incidentally—the appraisal on that, using the roads and cutting the timber which the Forest Service would normally cut, leaving perhaps 25 percent standing as growing stock, the value of the timber which we would cut now runs about \$77,000 on the contested claims.

Question. Then it would be this present value of \$77,000?

Answer. Yes. It could be harvested within a short time if the sale were made and then save the second crop in the 8- and 14-inch trees.

EXAMINER. At this time I wish to interrupt the witness. These proceedings are based upon charges that the land is nonmineral in character, that minerals have not been found in sufficient quantities to constitute a valid discovery; the land is nonmineral in character, and the witness has not qualified as a mineral examiner and the testimony as given is irrelevant and does not tend to support the charges brought.

Mr. FARR. I would like to note an exception on this ruling based on the citation of law that has an effect on the actual discovery, whether or not there has been a sufficient discovery on the claims.

EXAMINER. The exception will be noted and the witness will proceed.

WITNESS. We have established these two values in timber, the overstory and the thrifty dense understory, and of course you have your land value, and for prospects of growing timber in the future on this land.

Mr. FARR. I believe that is all.

There were no further questions, and the witness left the stand.

Mr. Elton M. Hattan was called to the stand as a witness for the contestant. He was sworn and testified as follows:

DIRECT EXAMINATION.

Question. State your name, please?

Answer. Elton M. Hattan.

Question. And your address, please?

Answer. Swan Island Station, Portland 18, Ore.

Question. By whom are you employed, Mr. Hattan?

Answer. By the Bureau of Land Management.

Question. In what capacity?

Answer. Field examiner, mineral.

Question. How long have you been employed in that capacity?

Answer. Since September 1939.

Question. And what do you do in this capacity?

Answer. I examine public lands, including some national forest land at the request of the national forest, as well as the vacant public domain for mineral character of the land or discoveries in the case of mineral applications for patent.

Question. Would you state your qualifications as a mineral examiner, please?

Answer. I graduated from Oregon State College with a bachelor of science degree in mining in 1919, and thereafter I have been employed by various companies of which I will enumerate those that have a relative bearing on this kind of an examination. In the early 1920's I was employed by the Calumet & Arizona Mining Co. as a mining engineer at Bisbee, Ariz., doing mine stope engineering, general surveying and sampling. Thereafter I went to Lordsburg, N. Mex., as chief engineer for the same company, it was known as the 85 Mining Co., and was there for about a year. And after that I was employed by the Abumada Lead Co. in the State of Chihuahua, Mexico, as chief engineer and ore boss for a matter of 2 years. This was a lead, zinc, gold and silver property, and in this capacity it was necessary to take a great many samples and also

oversee the taking of samples by others, and as well do the mine surveying and development work. I later was employed by the Sullivan Mining Co. at Kellogg, Idaho, where I was field engineer in the construction of a zinc plant, and being in the locality I became acquainted with the mining methods and milling methods that were taking place in the area. I was also employed by an engineer to go to British Columbia where I made an examination of a property at which I stayed for about 6 months. I sampled and surveyed the mine and assayed the samples which I took for gold, silver, lead, zinc and copper. I later was employed by the Phelps Dodge Corp. at Morenci, Ariz., where I was in charge of diamond drilling and also had the job of compiling all of the assays that had accumulated over a period of 30 or 40 years. In fact, there was some 45 miles of openings that had been sampled by channel sampling, diamond drilling and churn drilling. I put all of these samples together so that they could be used in determining the ore value of certain blocks if mined by block caving. I also oversaw the construction of a mine model. My first job was to put the assays together for a block caving scheme of mining. Later I put the samples together in a different manner to develop the ore body, which is roughly 302 acres in surface trace, into an open pit operation. Thereafter, after 1932, when this mine shut down, I was employed by the United States Engineers on Bonneville Dam and also up the Willamette Valley as an inspector in charge of diamond drilling. In this capacity I was in charge of the group that secured some field data that was used in the construction of 4 or 5 of the dams, most of which have now been constructed. I believe this is about all that has to do with this type of investigation.

Mr. FARR. Before proceeding further, I would like to make one observation which possibly should have come prior to Mr. Leavengood's and Mr. Hattan's testimony, and that is that the record be clear that the contestee made various motions at the outset of the hearing and demanded a ruling thereon by the manager who is serving as hearing officer, before proceeding.

EXAMINER. That is correct.

Mr. Farr then proceeded with the direct examination of the witness, as follows:

Question. Mr. Hattan, are you familiar with these two maps which I have marked for identification as contestant's exhibit No. 1?

Answer. Yes.

Question. Would you tell us what they are?

Answer. Those are \* \* \* the one at the left is a print from the mineral survey tracing which I secured over in the Public Survey Office upstairs, and the one at the right that has the writing on it, mineral survey 879, page 1 I believe it is \* \* \* or is that page 3?

Question. It says sheet 3.

EXAMINER. By left and right you mean exhibits 1 and 2?

Mr. FARR. That is all one exhibit. They have 2 sheets, but are all 1 exhibit.

The witness then resumed his direct testimony, as follows:

Answer. Sheet 3 is one that was furnished by the Public Survey Office. The sheet 2 is the one on which I have made markings. That particular sheet 2 has not been marked, however, or designated.

Question. Now, Mr. Hattan, do these two sheets, exhibit 1, faithfully represent the claims which are the subject-matter of this contest, not only contest, but which have been clear listed?

Answer. Yes, they are the mineral survey plats which have been surveyed and platted from the mineral surveyor's notes.

Mr. FARR. Since there will be no cross-examination, I would like to have these two sheets admitted as exhibit No. 1.

EXAMINER. They will be admitted into evidence as exhibit No. 1.

Question. Have you been on the claims as depicted by the exhibit?

Answer. Yes, I have been on all of them.

Question. When have you been on the claims?

Answer. I have been on all of them on two separate times, and on part of them a third time.

Question. Was anyone with you while you were on the claims?

Answer. Yes, the first time Fred Altman who is watchman at the Al Sarena Mines, Inc., went with me, and that was on May 19 through May 23, inclusive, 1949.

Question. And the next time?

Answer. That was July 12 through 15, 1949, and accompanied by Mr. Sanborn of the United States Forest Service, mineral examiner, and also by the MacDonald Bros., Charles and H. P. MacDonald, Jr., I believe it is, who are representatives of the Al Sarena Mines, Inc.

Question. Mr. Altman you say is the watchman at the mines? He is in the employ of the Al Sarena Mines, Inc.?

Answer. Yes, he has been for the past 9 years according to his statement to me.

Question. And when was the third time?

Answer. September 5 and 6, the afternoon of the 5th and the morning of the 6th, 1950.

Question. Who was with you then?

Answer. I went with Mr. Altman.

Question. Now, Mr. Hattan, would you explain what happened and what you did on the claims during your three visits you made?

Answer. Well, on the first visit in May I went with Mr. Altman and went to all of the places that had been designated as discovery places or any other places where \* \* \* which he considered to be mineral, and there I took samples.

Question. Before proceeding with the general discussion claim by claim, I wonder if you wouldn't tell us what the general topography is?

Answer. The general topography is that of a ridge \* \* \* the claims are situated over and upon a ridge that has a general trend northeasterly and southwesterly. The higher portion of the ridge near the north end of the property is roughly at elevation 4,200 feet above sea level, and at the lower end of the ridge it is around 3,900 feet. Now on the west side of the ridge, Swanson Creek, is approximately 300 feet in elevation below the top of the ridge, and on the east side of the property a tributary to Elk Creek \* \* \* in fact it is designated on sheet 2 as Elk Creek, cuts across the property and its elevation is roughly 700 feet below the top of the ridge. The claims are situated roughly 46 miles from Medford, 48 miles from Gold Hill, 20 miles from Crater Lake Highway at the mouth of Elk Creek. The first 15 miles from the mouth of Elk Creek is a semi-improved gravel road, and a very good road, but the last 5 miles is a Forest Service road that leads up to the property. Although it is steep and meanders, it is in good traveling condition. The claims are covered with timber and brush or small trees.

Question. I wonder, Mr. Hattan, before starting with the individual claims, if you could give a general description of the mineral characteristics, would you be more or less general. I realize that is included in your report, and normally I would ask you to read your report, but I feel that there would be objection to anything that would appear to be hearsay, and I feel that you should relate that. You may read from your report if you desire.

EXAMINER. You speak now about his area report of that general community?

Mr. FARR. Yes, the report prepared for the Forest Service. I want to get a general description. General area and general characteristics.

Answer. I made no intensive study of the aerial geology of the lands within the claims, but made only such observation as time would permit. Surface geology does not always tell whether a mineral vein or lode is valid or invalid, but it does have something to do with the general characteristics. However, in this case I did make enough of a determination and had the benefit of the reports that were shown to me, that were written up by company representatives, and maps that were supplied by the company so that I was able to outline roughly an area which would be a central mass in the lands in which there were evidences of mineralization. This central mass consists of flows and dikes of effusive and volcanic material. Some of the structures may even be small stocks or may be sills where an intrusion has been pushed between two former flows. This was pretty hard to determine because of there being no bedding. The rock consists of rhyolite and on down to andesite, and the related rock in between, some of which are dacite, phonolite-andesite and the related igneous rocks are made by flows over the surface.

EXAMINER. You speak about the presence or evidence of mineralization in the central area. Is this the area in which these claims are involved?

WITNESS. Some of the claims take in portions of this area. Most of the claims which were clear listed. The company supplied sufficient evidence in the form of assay maps on which more than a hundred assays were plotted. The samples were taken from a vein structure which cuts across the central part of this mass which would be the Mark Applegate, Peter Applegate, and Oro Real, and at the end of the Oro Rico and H. McKenzie and on down to the A. W. Dahlberg \* \* \* those assays show that that ground is mineralized sufficiently to warrant a person of ordinary prudence in expenditure of his time and money, and those claims have been clear listed.

EXAMINER. Those are the eight claims in this application against which proceedings have not been brought?

WITNESS. There were 8 claims. There is 1 claim that is almost entirely in the area which I have outlined on the map in blue dashes and designated in the right-hand corner as approximate limits of the central mass and it is the Cougar on which no valid discovery as determined by samples and assay results had been made. A discussion of the general geology of the ground involved in these contested and clear listed claims may be found in bulletin 893, page 131 of the USGS, and also in the Oregon Metal Mines Handbook, Bulletin No. 14 C, volume 2, section 2, page 195.

Mr. FARR. Mr. Hattan, these markings on this exhibit are yours; are they not?

Answer. They are mine, and were made with colored pencils.

Question. Alright, Mr. Hattan, I wonder if you would proceed claim by claim and outline what you have done and what you found?

Mr. FARR. Perhaps it would be well to recess. I notice it is 2 minutes to 12:00.

EXAMINER. Very well, we will recess for lunch, and meet again in room 121 at 1 p. m.

The hearing was resumed at 1 p. m., in room 121, with the United States Forest Service contestant, represented by Mr. Jesse R. Farr and Robert G. Rue, the examiner, witnesses for contestant, and reporter present.

EXAMINER. We will proceed with this hearing, Mr. Hattan resuming the position of a witness for the Forest Service.

Mr. Hattan then took the stand and was reminded that he was still under oath, and testified as follows:

Mr. FARR. Mr. Hattan, did you make an official report to the Forest Service of your findings in connection with these claims?

Answer. Yes, I made a report addressed to Mr. H. J. Andrews, Regional Forester, United States Forest Service, Portland, Oreg., which report was approved on December 19, 1949, by the Acting Regional Administrator.

Question. Now, in that report on page 2, beginning at the heading "General Geology," I would like to have you read into the record from there to page 5, or to the middle of page 6, the heading "Mineral Discovery Claims." This is a general characterization of the area, and it is believed it would be of assistance to the reviewing officer.

Answer. General geology: A short description of the geology of the area may be found in the above cited bulletin No. 893, and also in a publication by the Oregon Department of Geology and Mineral Industries, Oregon Metal Mines Handbook Bulletin No. 14-C, volume II, section 2, page 195.

No intensive study of the geology was made except to note the general trend of known veins and determine in general the rock types exposed on or over the surface of the individual claims. From an examination of the present underground development, and the various surface openings and rock outcrops, there appears to be a dome-shaped central mass, roughly 4,000 feet in diameter, which consists of volcanic breccias and rhyolite. Much of this mass of rocks is altered and bleached, and pyritized. Some of it, especially in the vicinity of the main vein, contains lead and zinc sulfide mineralization. These sulfides seem to be the carrier minerals for the gold and silver which are the principal values.

Outside of the central mass rhyolite, volcanic breccias, andesite and other rocks—possibly phonolite andesite and/or dacite—are found outcropping. The geology of the outcrops indicates they consist of flows, dikes, and possibly sills and stocks. There is no known mineralization of value contained in the dacite or andesite rocks found on the surface, but some pyritization was noted in the volcanic breccias and some of the rhyolite.

There was no evidence of any great movement, folding or tilting, however, no bedding occurs in the rocks and this may not be entirely true.

Mineral deposits: The mine development indicates there is 1 main mineralized vein structure and a possibility of there being 1 or possibly 2 more parallel mineralized veins. The main vein structure is in the central mass. It has a strike N. 41° W., and its dip is verticle to 85° northeast. The country rock in the vicinity of the vein, consisting of volcanic breccias and rhyolite, is generally altered, bleached, and pyritized. Some of the rock appears to be breesh, but generally, it is altered and intersected by many small seams, all of which contains disseminated pyrite.

The main vein has been explored and developed by 2 main levels, tunnel No. 1 at about elevation 3,675 and tunnel No. 2 at about elevation 3,400. Tunnel No. 1 is driven into the ridge from the Swanson Creek side and tunnel No. 2 from the Elk Creek East Fork side. They have been connected by step raises and stopes in the vein which averages, according to reports, about 2½ feet wide. The appli-

cation for patent indicates that ores to the value of \$30,000 to \$40,000 have been mined, milled, and sold, prior to April 1943; when development work in the mine was discontinued.

The main vein has also been explored in tunnel No. 5 on the Elk Creek East Fork side of the ridge and tunnel No. 6 on the Swanson Creek side, both at elevation 3,800, more or less. There are various cuts and trenches on the surface which indicate the surface trace of the vein.

Tunnel No. 4 in the southwest corner of the Telluride claim and tunnel No. 3 on the lode line of the H. McKenzie claim appear to be mineralized zones more or less parallel to the main vein. Little work has been done along these zones and they may be nothing more than local mineralizations. It was reported that a pocket of dendritic gold was found in tunnel No. 3. The main vein appears to be a zone of enrichment which is from 3 feet to possibly 100 feet wide. Mining by stoping between the two levels, tunnels Nos. 1 and 2, from 1939 to April 1943, was confined to a narrow width. Above tunnel No. 1, where mining was carried on many years ago, the apparent higher grade portion of the vein is defined by definite walls which are caused by narrow parallel gouge seams. The distance between the walls of this old stoped area was estimated to be  $2\frac{1}{2}$  feet. Although the ground in either direction from the higher grade zone is mineralized to an unknown distance, samples indicate its grade is low. Apparently the mining in years past, as well as pilot milling tests carried on from 1939 to March 1945, was confined to the narrow width, because the grade was not sufficiently high to warrant mining and milling the material in small-scale operations.

The main vein is intersected by a north-south fault vein, which cuts the vein and offsets it. The offset was reported to be about 30 feet. This fault vein, discussed as the north drift in the application for patent, and reported in Oregon Metal Mines Handbook, Bulletin No. 14-C, "is composed of rhyolite breccia, from 3 to  $3\frac{1}{2}$  feet wide, together with a persistent narrow gouge seam. Walls of the vein are not as clearly defined as those of the main vein and the accompanying gouge does not contain such a large amount of sulfides. This vein is apparently a fault fissure and contains circulating water." Samples were taken by the applicant company and assayed and the vein was found to carry appreciable amounts of gold and silver.

The drift on this fault vein is plotted incorrectly on the mineral survey plat. It is shown on the plat as having a direction approximately N.  $45^{\circ}$  E. Its direction is about N.  $4^{\circ}$  W., as determined from a map supplied by the applicant. The fault vein is also intersected by a southwest crosscut driven in the Mark Applegate claim. This crosscut was driven from tunnel No. 2 for a distance of 160 feet. It intersects the Mark Applegate northeast end line about 135 feet from its corner No. 3. It intersected the fault vein at a distance of 110 feet from its initial point.

Mr. D. Ford McCormick, mention of whom was made in the application for patent, stated in a report to the applicant company, that, "Practically the entire mass of so-called rhyolite is mineralized. Pyrite and pyrrhotite with some galena and sphalerite can be detected with a lense occurring as crystals or small grains, sometimes thickly grouped, then again scattered. Where the stringers occur the values rise. Shattered zones and banded structure also show higher values." McCormick, in quoting Otto Ellerman's findings, says that where fine-grained galena is present the values are highest. McCormick also reported in a report dated July 15, 1937, to the company, that samples from outcrops, from numerous places, over the claims showed mineralization without exception. Small crystals of pyrite, pyrrhotite, galena, and sphalerite are present, scattered more or less through the rock. At some locations narrow stringers occur with kaolin gouge containing a higher proportion of small grains of galena, and where this occurs high grade gold and silver samples are found. Where the stringers and fissures are numerous, the enrichment makes milling ore.

He went on to say that insufficient developments have been done to prove a large body of milling ore; several blocks of \$4 to \$5 ore are indicated, and some higher values are present; but aside from 1 possible zone (roughly 400 feet long by 400 feet high, with varying widths from 3 feet to 50 feet or more) only partially developed, practically no other work has been done to more than expose small areas with promising assays.

McCormick went on to say that the property has additional advantages of promising a large volume of low-grade ore, if sufficient enriched zones, similar to the one the present work has been done in, can be established. And says, if the samples assayed and listed as handed to me and shown on the attached sheets and blueprints are correct, there are several excellent showings that should

be investigated without delay. He suggested investigating the region around tunnel No. 3; the cliff and banded structure south of tunnel No. 5, both at the crest and below where excellent samples are shown; the region near the portal of No. 1 tunnel; and shafts, channels, and tunnels on the west side and north of tunnel No. 1. He stated that if these locations show good assays, there would be little doubt but that important mining operators would show a decided interest in the development of the Al Sarena mine. Then goes on to say that there is not sufficient exposure of milling ore at present to warrant the consideration of a mill other than a pilot mill, and from a study of the assay map, it does not appear as though there is any hope of operating profitably a 50- to 75-ton mill continuously from ore to be mined from the available stopes at the present time.

As far as could be determined the suggestions about investigating the certain areas named above were never carried out, and no other highly mineralized areas or veins were investigated other than those already known, when McCormick's report was written. The ore which was put through the pilot mill came from stopes on the main vein, some material taken from the southwest crosscut in the Mark Applegate claim driven from No. 2 tunnel, and from the north drift which was advanced about 230 feet from the No. 2 tunnel, on the strike of the above-mentioned fault vein.

**Concentrates made by the pilot mill** which was operated from 1939 to March 1943 were shipped to the American Smelting & Refining Co.'s Selby smelter. From one of these shipments which were concentrated 20:1, the metallurgist calculated the average value of the mill heads for that particular shipment. The per ton mineral content of the mill heads, which would be the mine run, was calculated to be: lead, 0.58 percent; zinc, 1.23 percent; gold, 0.032 ounce; and silver 0.79 ounce. The value of this material in dollars and cents, based on present prices: gold, \$35; silver, \$0.71; lead, 15 cents; and zinc, 10 cents, is \$5.88 per ton.

**Pilot mill tests:** A pilot mill was constructed by the company and tests for a metallurgical flow sheet were conducted from construction until about April 1943, when the mill was closed down because of inability to secure needed materials and labor. It was reported that the tests showed the feasibility of concentrating the ore on a 20-to-1 ratio with good recovery and separation of the minerals into four products, i. e., lead, zinc and iron sulfide concentrates, and tails. The lead and the zinc concentrates contain the greater portion of the gold and silver, but a small amount of these precious metals comes down with the iron sulfide concentrate. The iron sulfide when separated from the lead and zinc sulfides by gravity contraction, can be cyanided and any values in gold which it does contain can be recovered. It was found, however, that this is a fairly expensive process because of a tendency of the concentrate to slime.

The pilot mill was constructed to determine if the ores could be concentrated, but no information was available which would show the minimum grade of material which could be mined, concentrated, and sold at a profit. Whether an operation is large or small there is obviously a low point in grade of material which can be handled through any mill at a profit.

The indications are that the central mass is all mineralized to some extent, and if the prospective parallel shear and mineralized zones should prove to be extensive in length and depth, the possibilities are good that the whole mass could be developed, mined, and milled at a profit by low-cost large-scale mining methods. The topography is such that any one of three methods might be employed, i. e., glory holing, shrinkage system, and open pit mining.

Mr. FARR. Now, Mr. Hattan, would you proceed claim by claim, telling us what you did and what you found in your examination of these claims?

Answer. Cougar claim: In May I went with Mr. Altman onto the Cougar claim as well as all of the other claims in the group, and the Cougar claim—I am reading what I am saying from my notes that I took while on the ground at these various places at that date.

Mr. FARR. And those are the official notes that you are using in making your report?

Answer. Yes; at the discovery on the Cougar which is about—right by the "R" in the letter Cougar on the map, I found a small shaft, 4 feet by 8 feet by 5 feet deep, which contains oxidized rhyolite and broken material. A sample was taken in the shaft. This sample as well as all the other samples were collected in bags and each sample taken was identified by placing a ticket inside the bag which was marked "S79" followed by the number of the sample taken. The ticket also named the mineral or minerals the assayer was expected to report upon.

EXAMINER. What do you mean?

Answer. Samples numbered 879 followed by the numbers 1 to 24 were taken to the Annes Engineering Co., Grants Pass, Oreg., for assay, and an assay certificate was returned to me with the determinations.

Mr. FARR. Now, Mr. Hattan, I hand you the assay certificate and ask you to identify the assays taken from that claim on that certificate.

Answer. This certificate consisting of two pages contains the assays of the samples which were taken during May of 1949, and on this certificate sample No. 5 is the one I have just discussed.

EXAMINER. As having been taken from the Cougar claim?

Answer. From the discovery shaft on the Cougar claim. The results are recorded as trace in gold and—

EXAMINER. Just a moment. You wish to offer in evidence the original certificate as an exhibit?

Mr. FARR. Yes; I intend to offer that. I will offer that as evidence for identification as contestant's exhibit No. 2.

EXAMINER. You wish his interpretation of that certificate?

Mr. FARR. I am going to try to make an interpretation for each claim, and we also have other certificates which we will ask to be admitted at the proper time.

WITNESS. On this certificate the gold values are recorded as trace, and the silver as trace. The assayer has specified that when he records trace of gold he means 21 cents or under in value. When he records trace in silver he means 7 cents or under, with gold at \$35 per ounce and silver at 90 cents per ounce.

Mr. FARR. That is the assay report from this particular assayer. He considers the value to be 21 cents or under in gold and 7 cents or under in silver for this particular one?

WITNESS. Yes; for this particular one.

At a distance of about 150 feet north from the discovery shaft on the Cougar claim an outcrop was found \* \* \* an outcrop of rhyolite. The rock was considerably oxidized but it was quite hard. Some pieces of it contained minute specks of pyrite. A sample was taken from this outcrop and it was numbered 879-5A and was also taken to the assay office. The results of the assay determination was a trace of gold and a trace of silver. On the occasion of the visit to the property in July along with Mr. Sanborn and the 2 McDonald brothers, 2 other samples were taken from this claim. These samples were taken to the Abbot A. Hanks Assay Office at San Francisco by Mr. Sanborn.

Mr. FARR. Now I hand you a report of assay by Abbot A. Hanks, Inc., and ask you if the sample you were just speaking of was assayed to establish the number by this report.

Answer. This sample, as assayed by Abbot Hanks, was recorded on the assay certificate as No. 1. The certificate is signed by John L. Martel, of Abbot Hanks, Inc., and was sent to me by mail. On this assay certificate—

Mr. FARR. Mr. Examiner, I should like to have this marked for identification as contestant's exhibit No. 3. And by this I mean the report of assay by Abbot A. Hanks, Inc., dated August 10, 1949, signed by John L. Martel for Abbot Hanks, Inc. This consists of three sheets all signed by the same person.

EXAMINER. It will be so marked.

WITNESS. On these certificates the assay company has reported some of the assays as trace. A distinction is made at the bottom of the second and third sheet where it says that the term "trace" denotes that the element indicated is present but in such small amounts as to be unweighable. A trace of gold is less than 17 cents a ton. A trace of silver is a fraction of 1 cent per ton. This sample No. 5 shown on the assay certificate, under mark 5, when assayed showed about 0.005 of an ounce of gold and no silver. This sample was taken, now referring to the map, exhibit No. 1, 75 feet up the road from the south side line intersection with the road. It was a picked sample taken of rock that was picked up out of the bank and center of the road by the applicants.

EXAMINER. On the Cougar claim?

Answer. On the Cougar claim, and a sample was made of this. The material was—

Mr. FARR. Would you identify that as to number?

Answer. The sample is No. 5. Laboratory number is 10086, and the mark is 5. The material was, I believe, rhyolite, partly oxidized and iron stained and was more or less banded thus showing flow structure.

EXAMINER. Would that assay show the presence or the extent of the value of the mineral?

Answer. Yes; it was 0.005 of an ounce of gold and is worth 17 cents per ton. That is from the material on the road. A second sample was taken from the Cougar on this day. It was taken inside a small tunnel which is shown on the plat and is situated on the south boundary of the claim about 100 feet west of the West Fork of Swanson Creek as marked on the plat. The sample was taken 15 feet from the portal of the tunnel which was a storage place for powder that had been there quite a number of years. The sample was taken by Mr. Sanborn and one of the McDonald brothers. The material sampled was oxidized rhyolite that showed a banded structure. The result of the assay listed as No. 7 on the Abbot Hanks certificate, shows a trace of gold and none found of silver. On my visit to the property on July 5 and 6 in company with Mr. Altman, I made my third visit to the property.

EXAMINER. To the Cougar claim?

Answer. To the Cougar claim. The reason for my visit was that after I had made my report to the Forest Service, the Al Sarena Mines, Inc., submitted a copy of an assay certificate alleged to be determinations of samples taken from various places on various claims after my visit and Mr. Sanborn's visit to the property in July. I wanted to verify the samples, either give credit or discredit as to the validity of the samples taken. I took a sample in the place indicated on the Cougar claim which was shown on their assay certificate as being on the north line of the Cougar claim, on the west bank of Swanson Creek. Mr. Altman and I went to this point and I found rhyolite rock in place, and I took a sample where they had taken their sample.

Mr. FARR. Did Mr. Altman tell you that is where they had taken their sample?

Answer. Yes, he did. I saw chipped places in the rock. This sample, along with six others, was taken to the United States Bureau of Mines, Albany, Oreg. They were kind enough to rush them through and this morning I telephoned for the results. They told me they would send the results of these assays on a certificate within the next day or two. I have only the results as given to me by telephone.

Mr. FARR. Mr. Examiner, I should like to request that there be admitted in evidence as contestant's exhibit No. 4 the assay report prepared by the United States Bureau of Mines at Albany, Oreg.; that official document will be submitted by me to you as soon as it is received by Mr. Hattan.

EXAMINER. The report will be received and so marked.

Mr. FARR. And I shall ask also for permission to relate the results of the assay as will be verified by the certificate.

EXAMINER. Very well, subject to verification.

WITNESS. The sample taken at this point that I have discussed, on the bank of the creek was marked "879, No. 5A." The assay result as I received it over the telephone this morning was gold less than 0.005 of an ounce; silver less than 0.05 of an ounce; lead less than 0.05 percent; zinc less than 0.05 percent.

Mr. FARR. Mr. Hattan, I believe there is a confusion as to the date that you took these last samples. You said July. Did you take them in July?

Answer. No; I took them on September 5 and 6, 1950. I took another sample at a place along the trail about halfway between where the road, called West Portal Road, crosses the creek and the south line of the claim, and the point where the trail crosses the northeast end line of the claim. This is a cut that is roughly 20 feet long, 12 feet wide, and 5 feet deep at the face. This sample was marked "879-4A" and was assayed for gold and silver only. The results, as telephoned by the United States Bureau of Mines were less than 0.005 of an ounce of gold and less than 0.05 of an ounce of silver per ton.

Mr. FARR. What number does that carry?

Answer. 4A. This sample was taken at the same place that the exhibit I in the application for patent indicates opposite the Cougar claim, "a large cut on the claim between No. 1 and No. 8 tunnels" and which showed the value of \$1.75. These are all of the samples that were taken on the Cougar claim.

Mr. FARR. Now, Mr. Hattan, did you feel that you had sampled all of the places on the claim which could be expected to show values?

Answer. I sampled all of the places that were indicated to me showing values, that is, the places where the claimant stated that he had found values.

EXAMINER. Including the designated place of alleged discovery?

Answer. Yes.

On the J. W. Merritt claim, the discovery cut was visited in May 1949 and a sample was taken from the face of the discovery cut. It is oxidized rhyolite showing heavy iron stain, and the cut is 5 feet by 10 feet to an 8-foot face. The results from this sample, which is shown as No. 1 on exhibit No. 2, gave trace of

gold and trace of silver. During the July visit the discovery place was cleaned out again and a vertical channel  $2\frac{1}{2}$  inches wide was cut for a length of 24 inches right in the face of the cut. This sample is shown on exhibit No. 3 as No. 2, and the result was 0.01 ounce of gold and no silver, a total value of 35 cents per ton. This second sample was taken in the road while the McDonald brothers were along. It was taken between 80 feet and 85 feet south of the northeast end line of the claim. The material exposed in the road cut was banded rhyolite. A sample of this material was taken. The results are listed on exhibit No. 3 opposite mark 6 and shows a trace of gold and no silver. On my visit to the property on September 5 I took a sample in the road. A return to this place was made primarily to check a sample which was made previously, and which I discussed as having been sent to me by the claimants, in which they claimed mineral had been found 20 feet south of the discovery. When we went there, I found that the rock they had sampled was a large piece of float rock, and Mr. Altman, who was along with me, stated it was float rock. We went up the hill to the road and found some rock in place. I sampled this rock and marked it "879-6A" and took it to the United States Bureau of Mines for assay. The results, which were telephoned, showed gold less than 0.005 of an ounce and silver less than 0.05 of an ounce per ton.

Mr. FARR. Just before we go to that, referring to exhibit I of the application for patent, I note there that the contestee has alleged a finding of values of \$1.75. Now, did you take a cut from the bank that is described in exhibit I on the J. W. Merritt claim?

Answer. Yes.

Mr. FARR. Now, which would that be?

Answer. That would be the sample shown on exhibit 3 under mark 6. It shows a trace of gold and no silver.

Oro Escondido claim: During the May visit, I took a sample at a cut which in a north  $35^\circ$  east direction, about 40 feet from corner No. 4 of the claim. The material in the cut could not be identified as to whether it was rhyolite, andesite, or some intermediate rock. For field identification it is a volcanic or effusive rock. The cut was 12 feet wide by 6 feet deep to a 6-foot face. I took a sample there on my May visit, and it is shown on exhibit No. 2 as No. 17. The results were a trace of gold and a trace of silver. On the July visit, along with Mr. Sauborn and the McDonald brothers, I took a second sample, which is identified as No. 16 on exhibit 3. The assay results were: Gold, trace, and silver, none found. This is in the same cut previously sampled, but we dug it out, freshened up the face, and took the sample from the freshly exposed material in the cut. The discovery cut on this claim is about 190 feet from its northeast end line and shows nonmineral fine-grained andesite. A sample was not taken here.

Mr. FARR. Mr. Hattan, referring to exhibit I, the application for patent, it is noted that certain values are shown as having been secured from the cut near the southwest corner. Did you take any samples from this cut?

Answer. Both of our samples were from this cut.

Mr. FARR. And so designated to you by the McDonalds?

Answer. Yes.

The W. C. Leever claim: This claim is about 2,000 feet outside of the outlined central mass as shown on exhibit No. 1. The claim has outcropping of rhyolite interbedded with andesite which is nonmineral, and other volcanic rocks. There is considerable brush and timber on the claim, and it is hard to find any continuity of any outcrop. In fact, very little work was found on the claim from which to make any kind of determination as to geology. I do know there are tongues, dikes, or sills of rhyolite interbedded with andesite. A sample was taken at the discovery cut which is a small cut 3 feet wide by 8 feet long to 6 feet face, and at this point there is oxidized rhyolite. It was noted that the discovery cut of the Oro Escondido exposed fine grained andesite, but the discovery cut of the W. C. Leever exposed rhyolite. Immediately northeast a very short distance andesite is again exposed in the rock outcrops. I bring up this point because it was understood that the mining operation would be by glory hole or perhaps by underground caving methods or by open pit methods. Now if there were any mineralization in rhyolite flows, the thickness would be such so that they would have to be treated as if they were individual veins which, of course, would run mining costs up very high. Of course, there might be a small volume of mineral bearing ground which could be mined by open-pit method or by glory holing but if it were in such thickness that you would have to mine it like a flat vein, you would have to use a different method of mining which in one case might be worth the time and money to take it out and in another case would not be. The sample

taken on this claim in May is identified on exhibit No. 2 as No. 20, and the assay results show trace of gold and trace of silver per ton. A second sample was taken of float rock that was found up on the ridge above an andesite ledge that outcropped over the creek. I could not get down into the rock in place to get fresh rock, so I took what I considered a representative sample from a small area of broken rock. This place was about 675 feet upstream from the bridge and on the southwest slope above the creek. The results of this sample are shown on exhibit No. 2, No. 20. It shows a trace of gold and a trace of silver.

Mr. FARR. Mr. Hattan, did you attempt to find the spot which is designated on exhibit I of the application for patent on this claim?

Answer. Yes. We attempted to find it. It says here on the exhibit I, "Outcrop on Elk Creek, approximately 500 feet south of the northeast center end." Well, with Mr. Altman, we could not find that place. As nearly as we could tell, the next sample which I shall discuss came from material found in a very close vicinity to that described on exhibit I. I don't know if it is the same rock or not. It is on the same claim and within the same local area. On exhibit 3, sample No. 13 was taken on an outcrop of brecciated rhyolite found on the southwest side of the canyon of Elk Creek about 200 feet up from the creek and about 450 feet upstream from the bridge and also 20 to 30 feet above an andesite outcrop. It therefore is a rhyolite flow which lies on top of andesite. This sample is shown on exhibit No. 3, as No. 13, and gave a trace of gold and no silver.

The J. D. McKinnon: The discovery shaft of the J. D. McKinnon was visited in May and a sample was taken from the bottom of the shaft on the northeast side, that would be the northeast corner at the bottom of the shaft. There was only a small area of rhyolite around this shaft. The rest of the material found outcropping on the claim and north of it was andesite. This sample is shown on exhibit No. 2, as No. 22, and the results of the assay were gold trace and silver trace. In July the claim was again visited along with the applicants and we cleaned out the bottom of the discovery shaft. Mr. Sanborn took a sample of fine grain rhyolite which shows flow structure and was comparatively highly oxidized. He cut a channel sample 54 inches long across the full length of the bottom of the shaft on the northwest side and  $7\frac{1}{2}$  feet from the ground surface. The results of this sample, No. 14, shown on exhibit No. 3, is gold trace and silver none.

Mr. FARR. Just before leaving the J. D. McKinnon claim, referring to exhibit No. I in the application for patent, did you take a sample designated on that exhibit at the spot from which a sample had been taken by the applicants? It is described as "Creek bank, approximately 500 feet north of the bridge."

Answer. No. I did not take any sample there. I have no record of having taken one there. We went to that place and found nothing \* \* \* that is we found no outcrop of rhyolite or any mineralized rock. In May I went to that place and again in July we went past there and did not find anything.

J. L. Grubb claim: In May along with Mr. Altman I found a cut which is designated on the mineral survey map as being almost due north from corner No. 2; this was a very old cut and all covered with forest litter, but I dug down into the bottom and took a sample anyway. It is shown as No. 18 on exhibit No. 2, and the results were a trace of gold and a trace of silver.

Mr. FARR. Now was that the discovery point listed here?

Answer. No. At the discovery point which is a cut 5 feet by 5 feet to a 3-foot face and has rock in the bottom, and is probably oxidized rhyolite. There is only a small area around this discovery cut where rhyolite is exposed. The rhyolite area is roughly 300 feet more or less in diameter. Outside of that the exposed rock is fine-grained andesite. Some of the sample taken was bleached rhyolite, but the rest was andesite. The assays of this sample, No. 19 on exhibit No. 2, show gold—trace; and silver—trace. In July the discovery cut was again visited and a sample was cut from the lower part of the face. It was taken over 24 inches in length and was fine-grained rhyolite, like feldsite, and was very hard and tough. The assay results of this sample shown as No. 15 on exhibit No. 3 gives gold—trace, silver—none.

Henry Applegate claim: On the May visit along with Mr. Altman, I went to the discovery shaft which is a cut—it is called the discovery shaft on the map—and it is about 5 feet from the northeast end line of the claim. It is more or less a cut 3 feet wide by 8 feet long to a 3-foot face. It is all highly leached or oxidized material. And this sample marked "10a" on exhibit No. 2 assayed gold—trace, silver—trace. An outcrop was found about 75 feet west from the discovery cut which shows some rhyolite that contained some visible iron sulfide and possibly some lead sulfide specks. This sample shown on exhibit

No. 2, No. 10, reported gold—trace, silver—trace. In July with the McDonald brothers, we first went up on the hill and tried to find the place that was shown on exhibit 1 accompanying the application. The description states "banded rhyolite capping 150 feet southwest of northeast end line and 75 feet southeast of northwest side line [No. 21]" and the result was \$1.44. I tried to find this place, and we did find some banded rhyolite along the trail, but there was nothing like it in place within the limits of the claim. The banded rhyolite had apparently come from the Mark Applegate claim where it was noted in place. We then went farther southwest and found some outcrops of rock that projected 20 or 30 feet above the surface of the ground, like pinnacles of rock. There was some debate at the time as to whether we should or should not sample them as the claim corner had not yet been found. We later found the corner and determined that these outcroppings were probably outside the claim. Mr. Sanborn and one of the McDonald brothers went back on the claim during the afternoon to look for an outcrop that was within the limits of the claim. They reported that they did find such an outcropping and took a sample which I marked "No. 24," and the assay results are shown on exhibit No. 3, opposite the number 24. The results were gold—trace, and silver—trace. This point, from corner No. 2 of the claim, is south 16° east 45 feet, thence south 40° west 175 feet. In the meantime, after my report was submitted, I received the list of assays, before described, which indicated that a discovery had been made within the limits of the claim and not far from the common corner of the Rainboe and Delia McKinnon claims. On September the 5th I went with Mr. Altman to this place, and a sample was taken from an outcrop which is about 80 feet southwest of the corner common to the named claims, and within the limits of the Henry Applegate claim. It was rhyolite rock which is exposed on the side of a ridge that has a north-south strike. This ridge extends northeasterly into the Henry Applegate claim and also southerly into the Rainboe and across the northwest corner of the Delia McKinnon claim. This sample was taken to the United States Bureau of Mines at Albany last Monday, and the results were gold less than 0.005 of an ounce per ton; silver less than 0.05 per ton, lead less than 0.05 percent, and zinc less than 0.05 percent per ton.

Mr. FARR. What number would that carry on the Bureau of Mines certificate?

Answer. I haven't seen the Bureau of Mines certificate, but on my certificate I had 879-1A.

Mr. FARR. Mr. Hattan, before going further, I would like to return you to the J. L. Grub claim and ask you if you took this sample near the spot which is described in exhibit 1 in the application as a "cut 380 feet southwest of northeast center end."

Answer. Yes, my sample shown on exhibit 2, No. 19 I believe it is, yes; sample No. 19.

Mr. FARR. Proceed with the rest.

Answer. Yes, my sample shown on exhibit 2, No. 19 I believe it is, yes; sample No. 19. The exhibit 1 in the application for patent indicated that a sample had been taken at a point at a "pit 280 feet above station F on centerline." I found station F along the southwest end line of the claim and went up the slope 280 feet and there were some small cuts, old cuts in rock that appeared to be andesite. Anyway, we took a sample at this point in May which is No. 14 on exhibit No. 2, and the assay results were a trace of gold and a trace of silver. In July I again went back to the place because Mr. Altman was not sure where the rock had been taken for the sample, and he did not know any other place to go to, so we went back there to about the same vicinity. We went 200 feet northwest of station F. Station F, by the way, is on the M line 175 feet east of the southwest corner. That would be corner No. 2. We dug a hole in one of the old cuts and took a sample which was more or less oxidized rock, it may have been rhyolite or may have been andesite. It was one of the volcanics, and it was taken to Abbot A. Hanks, and is sample No. 8 on exhibit 3. It showed gold—trace, and silver—none. We also went at that time to the discovery cut on the claim and found that it is breccias material, probably andesite. We cleaned out the cut and took a large sample in its face. This is shown as No. 9 on exhibit No. 3. The results were trace of gold and no silver. As a result of the report that mineralized rock and a probable discovery had been found, judging from the assay certificate which I received from the claimants, I went back to this claim with Mr. Altman on September 5. I went on this claim and at a point 175 feet south from corner No. 4 and from which the applicant had taken a sample—alleged to have taken a sample, that was assayed by Abbot Hanks, Inc., of which I have a copy of the assay certificate. This sample was marked for identification "Laboratory

No. 9843" and called Rainboe No. 2 outcrop 10 feet above trail. This point was found to be 60 feet south 6 degrees west from the corner No. 4 of the Rainboe claim, thence 175 feet south. The sample was cut from the same rocks and same place that the applicant alleged that he took his sample. Mr. Altman was there with me, and he was the one who took the sample for the applicants. He showed me where he had taken it, and I took my sample from the same rock. This sample was marked "879 No. 2a," and taken to the United States Bureau of Mines laboratory in Albany. That was last Monday, and the telephoned results were gold—less than 0.005 ounce per ton; silver—less than 0.05 ounce per ton; lead—less than 0.05 percent; zinc—less than 0.05 percent.

Mr. FARR. Mr. Hattan, would you identify the samples that you took which were taken from the area noted as pit 280 feet above station F? From the centerline in exhibit 1?

Answer. They are No. 14 shown on exhibit 2 and No. 8 on exhibit 3.

The Delia McKinnon: In May the property was visited with Mr. Altman, and at the discovery cut a sample of rock was taken which is more or less an agglomerate. It has rounded pebbles as well as broken fragments of rock. Some of the rock appears to be andesite, and some of it is clearly not related. It is all cemented together very tightly, probably with rhyolite tuff which is partly oxidized. The rock on the discovery cut is the same as that found down on the road at a small cut shown on the mineral survey plat near the east side line of the claim and on the north side of the road. My sample was composited from material taken from the discovery cut along with an equal amount of material taken from this other cut down on the road. The sample results are shown on exhibit No. 2, No. 13, and the results were gold—trace, and silver—trace. I had this rock identified over at the Oregon State Department of Geology and Mineral Industries and the identification called it volcanic agglomerate.

Mr. FARR. Mr. Hattan, part of that composite sample was taken from the point designated in exhibit 1 to the application as the "Cut on main road 375 feet south of the Dahlbert southeast center end"; is that correct?

Answer. Yes. Part of it was. That is the little cut on the road as described. Now on the occasion of the visit in July, the whole sample was taken from that point down on the road, and it is brecciated hard rock well cemented. We made a 2-foot cut in that rock which is near the east side line and just north of the road. The results are shown on exhibit 3, No. 10, and show a trace of gold and no silver.

The Sulphide claim: Exhibit 1 of the application shows that a sample was taken by the claimant from a "pit on the mill road 190 feet to 200 feet northeast of assay office," and the result is shown as \$4.90. The assay office is shown on the mineral survey plat, and the shaft I am speaking of is the first shaft northeasterly from the assay office. The material found in this shaft that had been dug out was laterite, rotten rock and some stuff that had come down the hill. We dug down into the bottom of the shaft and took a sample from the material found in the bottom. It was in hard porous material. The results of this sample are shown on exhibit 2, No. 23, and are gold—trace, and silver—trace. The Sulphide discovery shaft as shown on the plat was found to be a cut 3 feet by 10 feet to a 3-foot face. There were only three boulders laying at the side of the cut. It was a very shallow cut that was evidently made in soil and loose talus material. Most of the cuts described, or shafts described by the mineral surveyor were found and examined. Most of them, however, did not expose rock in place. There was some rock in place exposed along the road. There is a ditch traversing a part of the claim through which water is conveyed from Elk Creek to a point about 50 feet from the shop and timber shed and above the portal of the tunnel on the A. W. Dahlberg claim. Along this ditch there are several outcroppings of rock in place. On the occasion of our visit in July, we went to a cut above the road, probably not shown on this plat, where there had been considerable ground excavated and we extended the cut until it contacted fairly solid rock. We were quite sure that it was rock in place or laterite. It was very highly oxidized and changed over to hard clay material. From this we took a channel sample  $2\frac{1}{2}$  feet long in the face of the cut and even dug down below the floor of the cut. This sample is shown on exhibit 3, and marked "No. 18." The results were gold—none, silver—trace. The claimants stated that they might have a better showing along the mill ditch which I described, so I went up there and with one of the McDonald brothers took a sample of the rock outcropping along the ditch. The place was probably about 300 feet from the northwest corner No. 3 of the claim and possibly 50 or 60 feet south of the north side line. This sample was a composite of rock that was jutting out on the side

of the ditch over a distance of about 30 feet. The sample is shown on exhibit No. 3 under mark 22, and reports gold—trace, silver—none. The indications from the applicant were that another sample had been taken after our July visit and in order to check this sample I returned with Mr. Altman to the place indicated, on September 6. The applicant stated that he took this sample at a point north 65° east from the most westerly corner of the claim 30 feet distance. In going back to this place I found that it was in a draw and all the rock exposed on the side of the ditch was talus which had slid down the hill. I did find a place in the ditch some 60 to 65 feet southwest from corner No. 3 of the sulfide some rock in place. I took a sample here which was marked 879, No. 3a, and this sample I took to the United States Bureau of Mines in Albany. The reported results were gold—less than 0.005 of an ounce per ton, and silver—less than 0.05 of an ounce per ton.

The Alabama claim: The discovery cut on the Alabama claim which is right on the southwest end line is crumbly andesite. However, about 40 feet out farther southwest from this point and on the telluride claim there appears to be some rhyolite. Along the end line a distance of about 125 feet northwest of the discovery cut there is a small outcropping of rhyolite within the limits of the claim. However, 15 or 20 feet to the northeast of this point the rock is again andesite which shows that this is very close, or probably in the limits of the central mass of the mineralized or partially mineralized area. The sample was taken of this rock outcropping and its results are shown on exhibit No. 2 under No. 15, the results being gold—trace, silver—trace.

Mr. FARR. Mr. Hattan, was that one of the samples that you took from the outcropping which corresponds with the outcropping of exhibit I of the application for patent?

Answer. Yes; it would. I would correspond with that. In July a second visit was made to this claim and to this outcrop and we found that the rock exposed there was 10 feet by 6 feet which is a fair outcrop. We took another sample of the same rock which shows massive structure and some banding and probably is rhyolite. This sample was taken to Abbot Hanks by Mr. Sanborn and is identified by mark 17, on exhibit 3. The results were gold—trace, silver—none. The two samples taken from the same outcrop check. The applicant indicated in a letter to me enclosing an assay certificate from Smith Emery Co., Los Angeles, that he had returned to this place after our visit in July and taken a sample from this same outcrop. The certificate shows the sample assayed gold 0.06 of an ounce, silver nil, total value \$2.10 with gold at \$35 per ounce.

Mr. FARR. Did you recheck this claim during your September visit?

Answer. No; I did not go back; there were two samples taken from this rock previously.

The Staples claims: Exhibit I accompanying the patent application indicates that a sample was taken from the Staples claim on the "East Branch of Elk Creek, 40 feet from southwest corner." I went to this place—I was there both in May and in July. In May I could not find any such place and Mr. Altman could not show me any outcropping or any place to sample. I went upstream about 125 feet from the corner and found a ledge in the side of the creek bank of what appeared to be an agglomerate or mixture of andesite and rhyolite, and which had been exposed by erosion. The lighter colored particles appeared to have a little iron sulfide, but I could not be too sure of that. However, the material was assayed and is shown on exhibit 2 as No. 12a and the assay results were a trace of gold and a trace of silver. When we returned to this place in July along with the McDonald Bros., they had nothing further to offer.

The EXAMINER. Was that on September 5 when you returned?

Answer. No; this was in July. They had nothing further to offer—a place to sample—and, consequently, no other sampling was done on the claim. There is no definite outcropping of rhyolite on any part of the claim. I think I covered the claim rather thoroughly, coming down on the centerline I waded down through the brush, I tried to find the cut that is shown near the center of the claim which is north of the East Fork of Elk Creek. Mr. Altman and I could not find that cut although it may be there. Thence coming on down through the center of the claim to the discovery cut which is in andesite and down to the cut as shown near corner No. 4, also andesite, and the cut on the sulfide claim near its corner No. 4, is fine-grained andesite. They had to blast it out. It is certainly nonmineral.

The La Jolla claim: During the May visit the discovery cut was found on this claim but it was caved in and no rock in place was found. However, in a creekbed

about 20 feet south of the discovery there is some rock in place exposed that may be rhyolite. It did show iron sulfide. A sample was taken of this rock and the assay results are shown on exhibit No. 2, sample 11, and were reported as gold—trace, silver—trace. On the occasion of the visit in July, along with the applicants, they pointed out a place on the east bank of the creek on the center line and near the northeast end line of the claim. The rock appeared to be iron-stained, fresh andesite, and showed considerable pyrite on the jointing. This sample was taken to Abbot Hanks and the assay results appear on exhibit 3, mark 11, and show gold—trace, silver—trace. The sample material as shown on exhibit 2, No. 11, is comparable with the sample material which appears on the exhibit 1 accompanying the application for patent. It was taken in the same local area according to the description given.

The Arroyo Verde claim: In May this claim was visited along with Mr. Altman. I went to the discovery cut which is the only work on the claim. A sample was taken from the cut which is a more or less round pit about 8 feet in diameter and approximately 5 feet deep in places. The rock exposed in the center is a jutting fragment of rhyolite. This sample was taken to the Annes Engineering Co., for assay, and the assay results are shown under No. 12 on exhibit No. 2 as gold—trace, silver—trace. In July the claim was again visited along with the applicants and we enlarged the hole by digging down to the side of the jutting rock in the center and took a sample of the rock as well as some gouge material in the side of the rock. This sample was taken to Abbot Hanks and the results appear on exhibit No. 3, mark 12. The results are gold 0.005 ounce per ton; silver none, total value 17 cents per ton.

Mr. FARR. Mr. Hattan, was that sample taken in the cut that is described in exhibit 1 of the application?

Answer. Yes.

The manganese claim: The discovery cut on this claim is up a very steep slope of the mountain, and at this point I found the original, or found the can containing the location notice of the claim. The rock found here was identified by the Oregon Department of Geology and Mineral Industries as dacite which is an interbedded rock of rhyolite and andesite. I did not notice any particles of pyrite or any other mineralization in the rock, and none were seen under the microscope. Mr. Altman took me to a point on the manganese claim along the north bank of the creek—it would be on the west bank of the creek about 150 feet upstream from the centerline of the claim. There is a bank of rock there about 12 feet high which appears to be rhyolite and contains a few specks of iron sulfide. This sample was taken to the Annes Engineering Co. and the results are shown on exhibit 2, sample 24. The results show a trace of gold and 0.14 ounces of silver per ton, total value 12 cents.

Mr. FARR. Was that sample taken near the creek bluff described in exhibit 1 of the application for patent?

Answer. Yes. At the same place; Mr. Altman said it was at the same place. During our visit to this claim in July we went to the same bank and took another sample across 2 feet of material shown in the creek bank, and which contained iron sulfide. This sample was taken to Abbot Hanks and the assay results are shown on exhibit 3, mark 19, which are gold—trace, silver—none. On September 5, I returned to a point which is about 20 feet downstream from where these samples were taken and where the claimant indicated he had taken a sample which had given good results. I went with Mr. Altman to this place on September 6 and took a sample over a length of 8 feet right along the creekbed. Some of the rock showed specks of iron pyrite. However, I did not see any lead or zinc. The sample was taken last Monday to the United States Bureau of Mines in Albany and the assay results were reported by telephone this morning. Sample 879 No. 7a showed gold less than 0.005 ounce per ton; silver less than 0.05 ounce per ton; lead less than 0.05 percent; zinc less than 0.05 percent.

The EXAMINER. I think it would be well to recess for 5 minutes.

The hearing was resumed at 3:35 p. m., with everyone present, and counsel for the Forest Service continued his direct examination of the witness:

Mr. FARR. Mr. Hattan, at all times when you were on these claims, were you accompanied by a representative of the contestee?

Answer. Yes.

Mr. FARR. Did this representative of the contestee suggest the place where you should take samples.

Answer. Yes.

Question. And you understood that the places where you took samples were where you thought values could be found?

Answer. Yes; I did.

Question. Now, did you feel that where you took samples that the places designated by them were places where values were likely to exist?

Answer. Well, it would be as good as any. I had no choice where the samples were to be taken. The purpose of making the examination was not to make a discovery for the claimants, but rather to check their discoveries.

Question. Mr. Hattan, did you find on any of these contested claims what you regard as a sufficient discovery under the law?

Answer. No.

Question. Now, Mr. Hattan, did you find any evidence of minerality or mineral-bearing rock or the evidence of minerals which would lead a reasonably prudent man, or which rather would justify a reasonably prudent man in expending time and money with the reasonable expectation of developing a paying mine?

Answer. No; I did not.

Mr. FARR. On any one claim which you examined and which had been contested?

Answer. On none of it.

Mr. FARR. Now, Mr. Examiner, at this time I should like to move for the admission in evidence of the contestant's exhibits 2, 3, and 4. I should like also to point out for the record that both of the assay reports furnished contain assays from claims which are not now being contested; is that correct?

Answer. That is right.

Question. Therefore, the only ones on which we are relying are the ones the numbers of which have been specifically referred to in the testimony by Mr. Hattan. Is that correct, Mr. Hattan?

Answer. That is right.

Question. As an illustration I call your attention to page 3 of contestant's exhibit 3 headed "Pulp." The values are rather high there. One shows a value of \$6.65, and one of \$7.70. Was the pulp taken from any of the claims contested?

Answer. No.

EXAMINER. Contestant's exhibits 2, 3, and 4 will be received in evidence.

Mr. FARR. Now, Mr. Hattan, is Abbot Hanks a recognized assayer of minerals?

Answer. Yes. When I was with the region in California, we took our samples there very often, with excellent results and found them very reliable.

Question. Is the Annes Engineering Co. a recognized and reliable assayer of minerals?

Answer. It is, and the assayer, Mr. Anderson, is a qualified assayer and holds a professional engineer's license in the State of Oregon.

Question. In your opinion, is the United States Bureau of Mines qualified to render a satisfactory assay?

Answer. Absolutely.

Question. You made certain check samples; did you not?

Answer. Yes.

Question. I wonder if you could relate what you found?

Answer. In making the examination we found that several hundred samples had been taken by the claimant over a period of years in the development and improvements in long tunnels and some other tunnels and openings on the property. In order to check the assaying and not be involved with these claims, we took some of the pulps that had been retained from these old samples and assays. They were found in the assay office, and we took three pulps from the original assays that had been made at the mine, and these pulps were sent to Abbot Hanks for a check to see whether our sampling, or whether their assaying had been in line and whether we could depend on it. And also there was some question about the Annes Engineering Co. assays since the assays shown on exhibit No. 2 are all trace for gold and trace for silver. We wondered if there might be some question as to whether these assays were in line. Consequently, two of these pulps were sent along with the Abbot Hanks bunch of samples to be assayed for a check of the Annes Engineering Co. assays. The two samples checked were the pulp of sample No. 23, assayed by Annes Engineering Co., being the same as sample 25 assayed by the Abbot Hanks, Inc. The Annes Engineering Co. reported trace of gold and trace of silver. Abbot Hanks reported trace of gold and no silver, which are right along in line. The sample No. 7 assayed by Annes Engineering Co. returned a trace of gold and trace of silver. Sample Mark 26 on Abbot A. Hanks certificate, exhibit 3, was the reject pulp of sample No. 7 assayed by Annes Engineering Co., and gave a trace of gold and no silver, which again checks, showing the samples assayed by the Annes Engineering Co. could be relied upon. The pulp shown on exhibit No. 3 as No. 605, 697 and No. 23 were pulps that were left from the assaying made by the mine employees

through previous years, probably between 1939 and 1942. These checked in general. The reported assay results were shown on assay maps furnished to us by the claimants and we felt, Mr. Sanborn and I felt, that we could rely in general on these samples and accepted them. It was on the checked results of these three samples that we clear listed some of the claims.

Question. You relied on the samples taken on the eight claims by the mining company. You of course made some of your own investigation?

Answer. Yes, I did.

Question. Now, Mr. Hattan, you have stated that you were were accompanied by Mr. Sanborn on certain of these trips and worked together in taking samples. What did you do with the samples when they were taken?

Answer. They were first put in small sample sacks. Then these sacks were put in gunny sacks, transferred from our cars and taken by Mr. Sanborn to the express office where he checked them for delivery by railroad express. What he did with them after that I don't know, but he must have delivered them to Abbot Hanks, Inc., because I received the assay certificates from that company.

Question. Did you receive the certificates directly from Abbot Hanks?

Answer. As I remember, yes.

Question. Now, Mr. Hattan, with respect to the manganese claim, the Staples claim, the Arroyo Verde claim, the Alabama claim, and the La Jolla claim, a contest was filed on the additional ground that the requisite expenditure of \$500 in improvements and development has not been made. Will you kindly explain the improvements which have been claimed as a common development for these five claims, taken individually, and what you regard as improvements, which could be regarded as common developments?

Answer. On the manganese claim the mineral surveyor's report lists four different places which have a total value of \$210. On the Staples claim he lists three different places that have a total value of \$275. On the Arroyo Verde he lists one place which he valued at \$150. On the Alabama claim he listed two places which have a total value of \$175, and on the La Jolla claim he listed three places which have a total value of \$240. In the list of common improvements made after subtracting certain amounts for the 10 original lode claims they arrived at a value of improvements for the group of 23 claims at \$8,500 or one-twenty-third interest which would be \$369; which if added to the amounts shown for the individual claims, would exceed \$500. Exception is taken to this allotment for the reason that common improvement No. 3 is in elevation considerably above most of the ground embraced in these five claims.

EXAMINER. What is the location of that improvement?

WITNESS. No. 3 is known as tunnel No. 6 and its portal is near corner No. 4 of the H. McKenzie claim. That is the portal of that tunnel. The improvement No. 2 is tunnel No. 1 whose portal is within the limits of the Peter Applegate claim. And improvement No. 1 is the long tunnel whose portal is at the timber shed and shop on the A. W. Dahlberg claim. Now improvement No. 1 is driven in a northwesterly direction, and the portal of this tunnel is approximately at an elevation of 3,400 feet. I ran out the contour of the elevation of 3,400 feet and found that it crosses the creek or intersects the Elk Creek about 50 feet downstream from corner No. 4 of the Sulphide claim. The contour thereafter comes down along the bank, goes up the East Fork of Elk Creek for a short distance and then back down the south side of that stream and on down Elk Creek Canyon. Now any of the work which has been done in improvements No. 1, 2, or 3 could not possibly assist or be of benefit in the mining or extraction of any ore which may have been or may be found within the limits of the five claims listed. There is a southwest cross cut which is shown on exhibit No. 1 that returns southwest into the Mark Applegate claim. There is a north drift marked in red that followed a fault structure for about 160 feet or more in a north direction from the main tunnel or drift. By the way, this north drift is platted incorrectly on the mineral survey map. The mineral survey map shows the north drift running northeast parallel to the center line of the H. McKenzie claim. That is not so. The north drift has a north direction, a north strike. Now this north drift, it might be said, would, by stretching your imagination, be of benefit to such claims as the H. McKenzie, J. L. Grubb, Oro Escondido, and possibly the W. C. Leever. But anyone who would drive a drift in that direction and then drive it back down through the Alabama and Staples and these other claims would certainly be throwing his money to the wind since he could start from the same elevation and drive from the surface right on any one of the claims.

Mr. FARR. Now is this north drift you are referring to in improvement No. 2 as he listed it?

Answer. It is part of the main tunnel, part of improvement No. 1.

EXAMINER. As shown in the examiner's report?

Answer. As shown in the mineral survey report. Under expenditure of \$500.

Mr. FARR. Now, could improvement No. 2 be regarded as a common development and to benefit these 5 claims mentioned?

Answer. No, it could not. It is at a higher elevation than No. 1 and comes from the other side of the mountain.

Mr. FARR. Then in your opinion, Mr. Hattan, \$500 has not been expended in improvements on or for the benefit of the La Jolla, Alabama, Staples, Arroya Verde, or the Manganese claims?

Answer. No.

EXAMINER. Did you observe any other expenditures made there? Other than what you just testified to?

Answer. No. There is a road that goes across the corner of the Manganese and Alabama but that is a Forest Service road constructed at the Forest Service expense.

EXAMINER. Are there any other developments that would tend to develop these particular 5 claims?

Answer. Well, there is a boarding house where a crew could be kept and bunkhouses. These improvement, I believe, were not claimed. They would, I believe, be of benefit, but they would be of such small amount it would not make any difference.

EXAMINER. Is that owned by the contestee?

Answer. Yes.

EXAMINER. A boarding house?

Answer. Yes, and a bunkhouse. They would be places for employees to live and consequently be of benefit.

Mr. FARR. Would they be to the benefit for the extraction of minerals?

Answer. I believe it has been so held.

EXAMINER. How far is that removed from the particular 5 claims?

Answer. It is at a central point.

EXAMINER. But these were not claimed as a patent expenditure by the applicant?

Answer. They are merely listed as other improvements and no claim was made for them.

Mr. FARR. Mr. Hattan, what would be the value of this boardinghouse? Do you happen to know?

Answer. Well, it is a 2-room log house. At one end is a kitchen and the other more or less is a bedroom-living room. That is where Mr. Altman stays at the present time and I don't suppose it has a value over \$1,000.

Mr. FARR. What would the bunkhouses be worth?

Answer. Several small bunkhouses were constructed, and were possibly built in 1939 when they brought the crew up there, and I should say there are 5 of them, and probably the cost did not exceed \$400 apiece.

EXAMINER. Are they now in use and occupied?

Answer. They are not occupied and haven't been since 1942.

EXAMINER. They have not been occupied in connection with these five claims?

Answer. They were occupied while they were running the mill.

Mr. FARR. If these values of the bunkhouses and cabin were divided by 23, would there still be enough to make up the \$500 development, or the deficiency in expenditures for improvements?

Answer. I rather doubt it. I did not make an appraisal of the buildings. I would have to guess at it.

EXAMINER. Are they in a state of deterioration now?

Answer. Yes. They have not been occupied since 1942. The roofs are sagging. One building caved down entirely last winter. They are not occupied at all.

Mr. FARR. The best is the cabin?

Answer. The best is the cabin.

Mr. FARR. I have no further questions.

There were no further questions, and the witness was excused.

Mr. William C. Sanborn, a witness for the United States Forest Service, was then called to take the stand. He was sworn and testified as follows:

#### DIRECT EXAMINATION.

Question. State your name, please?

Answer. William C. Sanborn.

Question. And your address?

Answer. 630 Sansome Street, San Francisco, Calif.

Question. By whom are you employeed, and in what capacity?

Answer. I am employed by the United States Forest Service in the capacity of a mining engineer.

Question. How long have you been employed in that capacity?

Answer. Well,, for the United States Forest Service for a period of about 5 years.

Question. What are your duties in connection with your work for the United States Forest Service?

Answer. Well, I examine mining claims on the national forest both occasionally before they come up for patent and other times when patents are applied for.

Question. Will you state your education and experience and qualifications as a mining engineer?

Answer. I have a bachelor of science degree as a mining engineer from the Michigan College of Mining and Technology in 1933. From 1934 to July of 1935 I was employed as assayer and underground surveyor for the Canyon Mines Corp., Placer County, Calif. From July 1936, I was employed by the Forks Hill Gold Mining Co. at Jamestown, Calif., as mil foreman and engineer. From June 1935 to August 1937 I was employed as mill foreman and mining engineer for the Gold Diggers Syndicate of Jamestown, Calif. From August 1937 to February 1942 I was employed as a mining engineer for the Arctic Circle Exploration, Inc., with chief operations at Candle, Alaska. From April 1942 to September 1945 I was employed by the United States Bureau of Mines, in Montana and California. I believe my official title at that time was associate mining engineer with the Bureau of Mines.

Question. Since 1945 you have been with the United States Forest Service?

Answer. Yes.

Question. Have you been on the claims which are the subject matter of this contest?

Answer. Yes.

Question. When was that, and with whom?

Answer. I visited the claims in July 1949, specifically on the 12th, 13th, 14th, and 15th in the company of Mr. Elton Hattan of the Bureau of Land Management. During our observations and reconnaissance on the days mentioned we were accompanied by Mr. H. P. McDonald, Jr., and Charles McDonald.

Question. Did these parties designate where they thought samples should be taken to show values?

Answer. Well, to begin with, I might mention that my first trip over the claims in connection with the examination was as sort of an observer and participant in supplementary examinations that Mr. Hattan was undertaking because of the findings which had been arrived at from a previous examination which I believe he made in May of the same year. As to what transpired in May I have no knowledge. But I do know that in July when we were accompanied by the McDonald brothers that we specifically asked them and expressed a willingness to sample at any particular point they would designate or had reason to believe would show values. We spent 4 days there and we took a great number of samples, all of which Mr. Hattan has specifically mentioned, and as to the location of taking the samples, and as to the sample results. I believe that of the 15 claims which are involved in the contest, 18 samples were taken and these samples were shipped to San Francisco, but I can't recall whether it was by freight or express. They were sacked individually, and put into several gunny sacks, and thereafter they were boxed in substantial boxes and shipped to San Francisco to the regional forester, direct to the regional forester. On their arrival in San Francisco I personally took the samples to Abbot Hanks and deposited them with them and gave them instructions as to the assay work to be done.

Question. Now was each of these small sacks individually marked to designate from where it came?

Answer. They were.

QUESTION. And that marking was delivered to Abbot Hanks?

Answer. They were. That is correct.

Question. And you yourself delivered the samples to Abbot Hanks?

Answer. I did.

Question. And you were present when all of the samples were delivered to Abbot Hanks?

Answer. Yes, I was. It is possible that there was one sample—I am not positive about this. It is possible that there was one sample taken by Mr. Hattan in the presence of Mr. H. P. McDonald when I was not there. On the last day I went up to the Henry Applegate claim in the late afternoon with Charles McDonald to get a sample that we had debated about previously and as long as we were on the property I thought we had better get an additional sample, and I believe that while Mr. Charles McDonald and I were getting this sample, Mr. Hattan and Mr. H. P. McDonald visited a claim along the ditch, I believe it was the Sulphide claim, which Mr. Hattan has already covered.

Question. Now, your identification slips that were with the sacks properly designated the claims from which the samples were taken?

Answer. Yes, they did.

EXAMINER. Are you positive that at least one of these bags came from each of the claims in question?

Answer. Well, I don't believe—I believe that there was one claim on which we took no samples during the period we were on the property. I believe that claim was the Staples claim. We took no samples off that claim. I remember specifically, we were down in the creek bed and discussed taking a sample there. We discussed it with the McDonald brothers and we said, "If there is any place within the limits of this claim that you wish us to take a sample, why we would be glad to take it," and they had nothing to offer as to where the sample should be taken, and inasmuch as Mr. Hattan had previously sampled the claim, no additional samples were obtained.

Mr. FARR. Now, Mr. Sanborn, you have heard Mr. Hattan's testimony regarding these claims. Did your observation lead you to believe that there were mineral values on these claims, each and all of them, which would justify a prudent man in the expenditure of time and money with the expectation of developing the mine?

Answer. Neither my observations nor the results obtained from various samples cut both by Mr. Hattan and myself would lead me to believe that a prudent man would be justified in spending his time and money with the expectation of developing a paying mine.

Question. In your opinion, has a discovery sufficient to meet the mining laws been made on any of these claims?

Answer. No. On the basis of my knowledge of the claims, no discovery has been made upon the claims in contest.

EXAMINER. You mean valid discovery? You mean that in your opinion a valid discovery of minerals has not been made on any of these claims?

Answer. Yes, that is right. I did not run out the contour line which Mr. Hattan did, but for the record I will be able to state that I am willing to concur in Mr. Hattan's conclusions which are in the record as to the character of the land and as to the insufficiency of the expenditures.

Mr. FARR. I wish to recall Mr. Hattan for one more question.

Mr. William C. Sanborn was excused, and Mr. Hattan took the stand. He was reminded he was still under oath, and testified as follows:

#### DIRECT EXAMINATION

Question. Mr. Hattan, referring to contestant's exhibit No. 2, which is a certificate of assay from Annes Engineering Co., did you take all the samples that are listed thereon?

Answer. Yes, I did.

Question. Did you personally deliver them to Annes Engineering Co.?

Answer. I did.

Question. And the Annes Engineering Co. delivered to you the certificate of assay which is contestant's exhibit No. 2?

Answer. Yes.

Mr. FARR. Now, Mr. Examiner, I have some observations that I would like to make for the record before closing, and they have to do with the interpretation of the rules of procedure and rules of practice established by the Bureau of Land Management with respect to answers, and I quote from section 221.13 of title 43, Code of Federal Regulations. "When and how answer must be filed. (a) Within 30 days after personal service of notice and affidavit of contest as above provided, or, if service is made by publication, within 20 days after the fourth publication, as prescribed by the rules in this part, the party served must file with the manager answer, under oath, specifically meeting and responding to the allegations of the contest, together with proof of service of a copy thereof upon the contestant \* \* \*." Now this sentence goes on, but it is not material to the point I want to make. Now the answer so called submitted by the con-

testee is in my opinion not an answer. It is a motion. It starts out and says that it is an answer and the only possible part of it that could be construed as meeting \* \* \* as "specifically meeting and responding to the allegations of the contest" would be where it says that the mineral surveyor made a statement of the exact value of the improvements and developments. Nowhere in here can I find any meeting or responding to our allegations with respect to discovery and the minerality of the claims. Now I maintain that this is not an answer, and now what is the effect of failure to answer? Section 221.14 of title 43 of the Code of Federal Regulations provides, "Upon failure to serve and file answer as herein provided, the allegations of the contest will be taken as confessed, and the manager will forthwith forward the case, with recommendation thereon, to the Bureau of Land Management, and notify the parties by ordinary mail of the action taken." Now what happens if the contestee fails to appear at a hearing? Section 221.49, title 43, Code of Federal Regulations provides, "No person who has failed to answer the contest affidavit, or, having answered, has failed to appear at the hearing, shall be allowed an appeal from the final action or decision of the manager." I submit that the contestee has not either properly answered or properly appeared at this hearing; that he is neither entitled to an appeal or further consideration of the case, and the protest is regarded as confessed. A question might be asked why this motion was not made at the beginning of the proceedings, the reason being that it is now a customary practice in most courts of law that even though a default is entered, that sufficient evidence will be presented to make a prima facie case so that the presiding official will have something on which to base his decision other than the pleadings, and this motion I believe is made at the proper time, and the Government rests.

EXAMINER. The motion made by the contestant will be taken under advisement and considered in connection with the testimony and a decision will be rendered.

Mr. FARR. I stipulate on behalf of the Government that it will be unnecessary to have the witnesses subscribe to their testimony and will so execute the stipulation when it is presented to me. The hearing was closed by the examining officer at 4:45 p. m. on Wednesday, September 13, 1950.

Senator NEUBERGER. This concludes our discussion and our hearing of testimony here in Oregon. As Senator Murray suggested, later testimony will be taken in the National Capital.

We are now in recess.

(Whereupon, at 8:30 p. m., the hearing was recessed, subject to call.)

UNIVERSITY OF MICHIGAN LIBRARIES

## THE AL SARENA CASE

TUESDAY, JANUARY 10, 1956

UNITED STATES SENATE,  
SUBCOMMITTEE ON LEGISLATIVE OVERSIGHT FUNCTION OF  
THE SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS;  
HOUSE OF REPRESENTATIVES,  
SUBCOMMITTEE ON PUBLIC WORKS AND RESOURCES  
OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS,  
*Washington, D. C.*

The subcommittees met at 9:30 a. m., in the caucus room, Old House Office Building, Washington, D. C., Hon. Kerr W. Scott (chairman of the Senate committee), presiding.

Present: Senators Scott (North Carolina); Richard L. Neuberger (Oregon); and George W. Malone (Nevada).

Also Present: Senators Arthur V. Watkins, (Utah); Thomas H. Kuchel (California), and Barry Goldwater (Arizona).

Present: Representatives Earl Chudoff (Pennsylvania), (Chairman of the House Subcommittee); Robert E. Jones, (Alabama); John E. Moss, Jr., (California), Dante B. Fascell (Florida); Clare E. Hoffman (Michigan); Victor A. Knox (Michigan); Charles Raper Jonas (North Carolina), and William E. Minshall (Ohio).

Senator SCOTT. The subcommittees will please come to order.

I sent after my glasses and they haven't gotten here yet, but I borrowed some from a neighbor in the Far West, so if I cannot read it all right, you will find that we have one anyway.

Congressman Chudoff, it is good to have you and your associates on the House subcommittee sitting with us again as we resume hearings on the so-called Al Sarena case.

All of us are justified in feeling disturbed about the disclosures in the Portland hearing that some of the physical evidence in this matter was dumped in the Rogue River and questionable practices for the ordinary procedures the citizen has a right to expect from the Government.

The charge has been made that these hearings have as their motive politics. Such a charge, almost without exception, is a defense of those who have something to hide and who are afraid for the people to know what the real facts are.

The purpose of this inquiry is to ascertain the real facts regardless of where the chips may fall, and I assure everyone within the sound of my voice that I shall follow that course so long as I am a member of the committee without being led down any blind alleys.

As was the case in Portland, the witnesses will be sworn.

As was the case in Portland, in the interest of saving time, and avoiding confusion, I am asking that all members of both subcommittees re-

frain from asking any witness any questions until after the staff has completed its preliminary questioning of each witness.

I am directing Mr. Redwine and Mr. Coburn to initiate the questioning, to be followed by Mr. Lanigan, after which I will call upon each member of the committees in turn to propound such inquiries as each may desire.

Our first witness is Mr. J. A. McDaniel, Mobile, Ala., of the A. W. Williams Co.

Representative HOFFMAN. Mr. Chairman, before you proceed, I wish to give to the press a statement expressing my views on what has been heard and with reference to these charges and with reference to the third paragraph on the statement you just read, especially that part which says, and I quote :

The charge has been made that these hearings have as their motive politics.

I made that charge several times. Then the statement continues:

Such a charge, almost without exception, is a defense of those who have something to hide and who are afraid for the people to know what the real facts are.

I just want to say in my judgment there is absolutely no foundation for any such statement. I want it on the record and I am also giving to the press statements made by Drew Pearson and an answer that was in the Eugene Press, which was offered in the record at either Portland or Seattle.

I am also asking that before we finish, inasmuch as there are three articles in this morning's Post attacking the administration and Secretary McKay, we called the gentlemen who wrote those articles in an effort to ascertain what they actually know and how much of their statements is merely hearsay and political propaganda.

Senator SCOTT. That will all be taken under advisement. In the course of the hearings I think all that will be brought out.

Congressman CHUDOFF, will you swear in the witness here, Mr. McDaniel?

Representative CHUDOFF. Would you hold your right hand up, please?

Do you solemnly swear that the testimony you are about to give before this committee will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. MCDANIEL. I do.

Representative CHUDOFF. Be seated, please.

Mr. REDWINE. Mr. Chairman, in the examination of this witness certain documents will be submitted to him for examination and explanation. They are from the files of the A. W. Williams Inspection Co.

Representative CHUDOFF. Mr. Chairman, could I make a suggestion?

Will you ask counsel for your subcommittee to bring the mike a little closer to him. It is very difficult to hear down at this end of the table.

Mr. REDWINE. These documents that will be submitted to the witness for identification and explanation are from the files of the A. W. William Inspection Co., for whom he works.

I think it is only fair that the record should show that they are in the possession of the committee through subpoena.

The Williams Co. has not turned anything over to the committee that has not been subpoenaed, in fairness to its client. It is a professional matter with them.

Mr. McDaniel, how long have you been with the A. W. Williams Inspection Co.?

**TESTIMONY OF J. A. McDANIEL, ASSAYER, A. W. WILLIAMS INSPECTION CO.**

Mr. McDANIEL. I have been with the A. W. Williams Inspection Co. in two periods of employment, the first from January 1, 1948 to February 15, 1952, and from the 24th of June 1953 to the present.

Mr. REDWINE. What is the business of the A. W. Williams Inspection Co.?

Mr. McDANIEL. The business of the A. W. Williams Inspection Co. is a commercial testing laboratory.

Mr. REDWINE. What does it test?

Mr. McDANIEL. We handle analyses and tests of samples of many kinds—ores, fuels, radiographic inspection, metallurgical inspections, and many other types of samples.

Mr. REDWINE. What about your forest activities?

Mr. McDANIEL. The Williams Co. as an inspector of timber products is one of the largest in the country.

Mr. REDWINE. You maintain how many offices? Are you familiar with that figure, Mr. McDaniel?

Mr. McDANIEL. At present we have our main office in Mobile, then branch sales offices at St. Louis and New York, and there is a staff of between 50 and 60 field inspectors stationed at various points throughout the United States.

Mr. REDWINE. Field inspectors in what?

Mr. McDANIEL. Timber.

Mr. REDWINE. What percentage would you say of the A. W. Williams Inspection Co.'s business is in the field of timber?

Mr. McDANIEL. I have no figures that I could give out on that.

Mr. REDWINE. What is your position with the company?

Mr. McDANIEL. My position is chief chemist and metallurgist.

Senator SCOTT. Does your organization have an office in Oregon?

Mr. McDANIEL. At one time we did have an office in Eugene, and it was later moved to Longview and then later discontinued.

Senator SCOTT. Discontinued?

Mr. McDANIEL. Yes, sir.

Mr. REDWINE. That office that you had in Eugene was part of your timber operations, was it not, Mr. McDaniel?

Mr. McDANIEL. It was.

Mr. REDWINE. It had nothing to do with minerals, or ores, or metallurgy, did it?

Mr. McDANIEL. The only thing that any of our fieldmen would have with ores and metallurgy or something like that, is that all of them solicit work when possible for our main office.

Mr. REDWINE. Were there ever any samples that came in from the Eugene office as a result of the solicitation of your men there?

Mr. McDANIEL. No.

Mr. REDWINE. What was your training and education for type of work that you are now doing, Mr. McDaniel?

Mr. McDANIEL. Mr. Chairman, I have a statement here which I would like, with your permission, to read into the record.

Senator SCOTT. Yes.

Representative HOFFMAN. Mr. Chairman, as I understand, the witness has a prepared statement. It has been customary heretofore in these hearings to let a witness make his statement and I think in fairness and following the usual procedure this witness should be permitted to follow that course.

Senator SCOTT. It has already been ruled that you may, so go ahead.

Mr. McDANIEL. I am a native United States citizen from the State of Alabama. I have continuously resided in that State, except from the periods June 1927 to February 1928, when I lived at Port Arthur, Tex., and February 1943 to February 1948, while residing at Pascagoula, Miss.

The personnel of the Mobile Chemical Laboratory Division of the A. W. Williams Inspection Co. are called upon to make tests and analyses in many fields of scientific work. They are selected on the basis of broad general knowledge rather than any specialty.

I wish to present my qualifications as follows:

I graduated from the Alabama Polytechnic Institute at Auburn, Ala., in May 1925, and received the degree of bachelor of science in chemical engineering.

I have since received supplementary instruction, not leading to other degrees, from Mississippi State College and Massachusetts Institute of Technology.

I have been employed by the Gulf Refining Co. at Port Arthur, Tex.; the United States War Department, Birmingham, Ala., Ordnance District; the Ingalls Shipbuilding Corp., and the American Rock Wool Corp., and in family owned enterprises, in addition to my present employment from January 1948 to February 1952, and from June 1953 to the present.

While at the Ingalls Shipbuilding Corp., I set up and operated the chemical laboratory section of their metals laboratory and since leaving their employment, frequently exchange technical information and advice with my former supervisor.

In my present employment during the past year and a half, this company has installed, under my supervision, an industrial radiographic department, using radioactive isotopes obtained from the United States Atomic Energy Commission, or from an authorized distributor of radio isotopes.

The purchase authorizations issued by the AEC read:

This isotope is to be only used either by, or under the direct supervision of Mr. J. A. McDaniel.

Under my direction, this department has performed the necessary tests to be approved by the Bureau of Ships, United States Navy, for radiographing naval material.

I hold certified chemist's card No. 407, issued by the American Bureau of Shipping, for the testing of explosive and toxic gas hazards on vessels to be repaired.

I work closely with inspectors employed by the United States Coast Guard, United States Navy, and American Bureau of Shipping in various phases of my work, representing clients in the Mobile area.

My report on the investigation of a television transmission tower failure was the principal basis of claim of our client that resulted in a substantial out-of-court settlement.

I was reared in the Birmingham, Ala., district. My father was an iron ore mine superintendent from the time of my birth until his death in 1930.

There is a large area in the central and eastern part of Alabama that contains numerous low-grade gold and silver deposits. I have personally seen gold nuggets as large as a medium size English pea that were reported to have been found in Alabama and north Georgia.

The geologists and chemists employed by the iron and steel companies of the Birmingham district made prospecting trips in their free time into this gold-bearing area and brought back samples of ores that were prepared with the ore laboratory's crushers and with full approval of high company officials who, if what they considered a commercial grade deposit were found, would have made an investment and rendered technical advice in its development, assayed these ores in laboratory equipment not specifically designed for precious metal ore assays.

During school vacations, I was employed at the Republic Steel Laboratory and assisted in some of these assays, using a forge in the blacksmith shop for the primary fusion and the regular Hoskins lab furnace for cupellation of the lead button.

MR. REDWINE. Is that all of your statement, Mr. McDaniel?

MR. McDANIEL. That is part of my statement that relates to qualifications.

MR. REDWINE. Would you like to complete your statement at this time? You may do so, if you desire.

MR. McDANIEL. I will complete the part of it that—

MR. REDWINE. As we go along?

MR. McDANIEL. Concerns the assaying of the Al Sarena ores at this time.

MR. REDWINE. Whatever you want to do.

MR. McDANIEL. My activities in the A. W. Williams Inspection Co.'s involvement in the Al Sarena Mines, Inc., mining claim matter is as follows:

In the summer of 1949 an inquiry was made to a representative of this company, Mr. Lee Roy Johnston, by Mr. Walter H. Johnston, who operates an automobile repair shop in Mobile, Ala., and who was then servicing this company's vehicles, if gold and silver ore assays could be made in this laboratory. Through normal company channels, the inquiry was referred to me and Mr. Johnston was informed that we could make them.

A few days later, Mr. Charles R. McDonald and Dr. Herbert P. McDonald visited the laboratory and discussed the matter with Mr. Gordon F. Bailey, then in charge of the laboratory section of the A. W. Williams Inspection Co., and myself.

In the course of this discussion, we were informed that the ore samples submitted would be low grade and that two assay-ton portions would be required for accurate assays of their content instead of the normal one-half or one-fourth assay-ton used in assays of high grade ores, as referred to in most standard references on assaying precious metal ores.

The question of proper fluxing material for use in assaying their ores was brought up. After some discussion between Mr. Charles McDonald, Dr. Herbert McDonald, Jr., Mr. G. F. Bailey, and myself, with frequent references to Scott's Standard Methods of Chemical Analyses, and Analytical Chemistry, by Treadwell Hall, the following flux formula was agreed on, to be used in the assays of the McDonalds' ore samples—that formula is soda ash, 31.8 grams; potassium carbonate, 12.3 grams; said, 12.3 grams; borax glass, 19.6 grams; litharge, 1.6; crude tartar, 2.4, making a total of 140.1 grams of flux to be used per one assay-ton, 29.17 grams, portion of ore sample as used for assay.

A few weeks after we had this discussion the Al Sarena Mines, Inc., began to submit samples, the assays of which were submitted in our reports numbered 278035—

Mr. REDWINE. Repeat that.

Mr. McDANIEL. 278035. Do you want to get those as I call them?

Mr. REDWINE. Yes, I would like to. What was that number again?

Mr. McDANIEL. 278035.

Mr. REDWINE. What was the date of that?

Mr. McDANIEL. I don't have the dates of these. Let me see. I may have.

Mr. REDWINE. What year?

Mr. McDANIEL. That is September 27, 1949, September 27.

Mr. REDWINE. Go ahead.

Mr. McDANIEL. 278802, October 4, 1949; 281820, November 4, 1949: 282563, November 15, 1949; 282851—

Mr. REDWINE. What was the date of that?

Mr. McDANIEL. November 18, 1949, November 11.

Mr. REDWINE. Let me interject at this time: Do you have a copy of that last one you just mentioned, with you? A copy of the certificate?

Mr. McDANIEL. No, I do not, but Mr. Miller, who is present in the room, does.

Mr. REDWINE. Mr. Miller, will you please pull from your file the assay report that has just been given by Mr. McDaniel, and have it available for us a little bit later?

Go ahead, Mr. McDaniel, please.

Mr. McDANIEL. 287395 under date of January 13, 1950.

As I recall that is not a report of new assay work, but it is a compilation of assays reported in these previous reports that was prepared by Mr. Bailey from the request of Mr. Charles R. and Dr. Herbert P. McDonald, Jr.

Mr. REDWINE. But the material was assayed?

Mr. REDWINE. And the report of values given reflects the result of that assay?

Mr. McDANIEL. It reflects the values obtained in the assays made in the previous 2 to 3 months, but I might add this:

In the reports of the assays made in the previous 2 or 3 months there were several of them that showed either no or very low mineral value present.

Mr. REDWINE. Mr. McDaniel, I think since you brought that up you better break the continuity of your statement.

Mr. Chairman, if I may go down there where I can handle this.

Mr. McDANIEL. I hand you one of these that you have just mentioned. Will you read the laboratory number and the last column

as to what the total values were? The last column does indicate the total values in gold and silver, does it not?

Mr. McDANIEL. I would like to also include in this the complete identification and the heading on this report.

Mr. REDWINE. Certainly, you may go right ahead and do that.

Mr. McDANIEL. This report was issued for the Al Sarena Mines, Inc., First National Bank Building, Mobile, Ala., and is our report No. 282581, November 18, 1949, under sample identification.

Supplementary report compiled from our reports Nos. 278035, 278802, 281820, 282563, dated September 27, 1949, October 4, 1949, November 4, 1949, and November 15, 1949 respectively.

That was issued on company order No. 26483. Sample No. 2, 90 cents.

Mr. REDWINE. Let me interrupt. That reflects the total values of the gold, both the gold and silver, does it not?

Mr. McDANIEL. It does.

Mr. REDWINE. Please proceed.

Mr. McDANIEL. Sample No. 4, 92 cents.

Sample No. 5, \$1.86.

Sample No. 7, \$1.84.

Sample No. 9, 99 cents.

Sample No. 10, \$2.25.

Sample No. 16, 92 cents.

Senator SCOTT. Right there may I ask a question?

You have already given it, but I did not catch it. Is that on the basis of what, 92 cents? Those figures are on the basis of—

Mr. McDANIEL. We have a note at the bottom here:

Values above are based on gold, \$35 an ounce, and silver, \$90 an ounce.

This is the total value of both gold and silver.

Mr. REDWINE. Ninety cents, you mean?

Mr. McDANIEL. Yes.

Mr. MALONE. And that means per ton?

Mr. McDANIEL. Per ton of ore.

Senator SCOTT. That is all right.

Mr. McDANIEL. I was at sample 16. Sample 17, 90 cents.

Sample 18, 94 cents.

Sample 19, \$1.84.

Sample 22, \$1.84.

Sample 23, 94 cents.

Sample 23E, 90 cents.

Sample 24, 94 cents.

Sample 26, 94 cents.

Senator MALONE. Do you have gold and silver separate in your assays?

Mr. McDANIEL. Yes, sir.

Mr. REDWINE. It is the usual assay certificate?

Senator MALONE. Why do you not make it a part of the record?

Mr. REDWINE. We are going to.

Senator SCOTT. That report will be made a part of the record.

(The report referred to is as follows:)

The question of proper fluxing material for use in assaying their ores was brought up. After some discussion between Mr. Charles McDonald, Dr. Herbert McDonald, Jr., Mr. G. F. Bailey, and myself, with frequent references to Scott's Standard Methods of Chemical Analyses, and Analytical Chemistry, by Treadwell Hall, the following flux formula was agreed on, to be used in the assays of the McDonalds' ore samples—that formula is soda ash, 31.8 grams; potassium carbonate, 12.3 grams; said, 12.3 grams; borax glass, 19.6 grams; litharge, 1.6; crude tartar, 2.4, making a total of 140.1 grams of flux to be used per one assay-ton, 29.17 grams, portion of ore sample as used for assay.

A few weeks after we had this discussion the Al Sarena Mines, Inc., began to submit samples, the assays of which were submitted in our reports numbered 278035—

Mr. REDWINE. Repeat that.

Mr. McDANIEL. 278035. Do you want to get those as I call them?

Mr. REDWINE. Yes, I would like to. What was that number again?

Mr. McDANIEL. 278035.

Mr. REDWINE. What was the date of that?

Mr. McDANIEL. I don't have the dates of these. Let me see. I may have.

Mr. REDWINE. What year?

Mr. McDANIEL. That is September 27, 1949, September 27.

Mr. REDWINE. Go ahead.

Mr. McDANIEL. 278802, October 4, 1949; 281820, November 4, 1949; 282563, November 15, 1949; 282851—

Mr. REDWINE. What was the date of that?

Mr. McDANIEL. November 18, 1949, November 11.

Mr. REDWINE. Let me interject at this time: Do you have a copy of that last one you just mentioned, with you? A copy of the certificate?

Mr. McDANIEL. No, I do not, but Mr. Miller, who is present in the room, does.

Mr. REDWINE. Mr. Miller, will you please pull from your file the assay report that has just been given by Mr. McDaniel, and have it available for us a little bit later?

(The report referred to is as follows:)

## A. W. WILLIAMS INSPECTION CO., MOBILE, ALA.

## REPORT OF ASSAYS OF GOLD AND SILVER ORE

49-563

For: Al Sarena Mines, Inc., First National Bank Building, Mobile, Ala.

Sample identification: Supplementary report compiled from our reports Nos. 278035, 278802, 281820, 282563 dated September 27, 1949, October 4, 1949, November 4, 1949, and November 15, 1949, respectively.

Report No. 282851.

Date: November 18, 1949.

Our Order No. 26483.

Sam- ple No.		Ounce per ton		Value		
		Au	Ag	Au	Ag	Total
2	Manganese II (Dupl. Hattan).....	0.025	0.025	\$0.875	\$0.023	\$0.90
4	J. D. McKinnon, east side outcrop.....	.025	.05	.875	.045	.92
5	J. D. McKinnon, center outcrop.....	.05	.125	1.75	.11	1.86
7	W. C. Leever, largest outcrop.....	.05	.10	1.75	.09	1.84
9	J. L. Grubb.....	.025	.125	.875	.113	.99
10	Arroyo Verde.....	.050	.550	1.75	.498	2.25
16	Cougar, north line outcrop, west bank Swanson Creek).....	.025	.050	.875	.045	.92
17	Cougar, outcrop about 150 feet down ridge from southeast Oro Alto corner.....	.025	.025	.875	.023	.90
18	Henry Applegate, outcrop east line about 15 feet below station 10.....	.025	.175	.875	.068	.94
19	Henry Applegate, about 40 feet west of east line and station 10.....	.050	.100	1.75	.09	1.84
22	LaJolla, at Falls.....	.050	.100	1.75	.09	1.84
23	Manganese, 20 feet downstream from previ- ous sampling.....	.025	.075	.875	.068	.94
23E	Oro Alto (Dupl. Hattan).....	.025	.025	.875	.023	.90
24	Cougar (large cut on trail to tunnel 8).....	.025	.075	.875	.068	.94
26	J. W. Merritt, 20 feet south of Discovery.....	.025	.075	.875	.068	.94

Values above are based on Au at \$35 per ounce and Ag at \$0.905 per ounce.

Compiled and calculated by G. F. Bailey.

Five reports to: Al Sarena Mines, Inc., First National Bank Building, Mobile, Ala. Mailed November 20.

A. W. WILLIAMS INSPECTION CO.,  
By G. F. BAILEY.

Senator MALONE. Do you have any record as to the width of these veins or ledges or in what manner the samples were taken?

Mr. McDANIEL. No, sir; I do not.

Senator MALONE. You do know, do you not, that the width of a ledge or the occurrence of the ore has a lot to do with the cost of mining? You do know that, do you not?

Mr. McDANIEL. Yes, sir; I do know that.

Senator MALONE. But you have no knowledge as to how these samples were taken, or what the width of the ledge was, or how the ore occurs?

Mr. McDANIEL. No, sir.

Mr. REDWINE. Senator, if I may interrupt, the record shows that. We have that in the record. This assayer, of course, would have no knowledge of that. We have that, however, in the record.

Senator MALONE. Not in this record.

Mr. REDWINE. Not this morning, but the prior record shows that.

Representative CHUDOFF. Senator, we had considerable hearings in Portland, Oreg., during November, and a lot of information is in the record concerning the physical setup of the mine, how the samples were taken, how the samples were assayed, how they got down to Alabama, and how somebody took the second set of samples which were, I guess,

kept for the purpose of looking at it, whatever necessary, and dumped them in the Rogue River, walked two blocks and dumped them in the Rogue River.

Senator MALONE. Are these assays in your records?

Representative CHUDOFF. I believe they were.

Mr. REDWINE. These particular assays are not in the record, Senator. This is the first time these particular assays have come before the committee.

Representative CHUDOFF. It was my impression these assays were in the record, but you were trying to get the witness to explain.

Mr. REDWINE. These particular records go back to 1949, prior work that was done for this company by the Williams Co.

Senator MALONE. Is this the Williams Co. from North Carolina?

Mr. REDWINE. No, sir; Mobile, Ala.

Mr. McDANIEL. Mobile.

Senator MALONE. Are the assays, the final assays, that have been questioned here, the accuracy of which has been questioned?

Mr. REDWINE. And the final assays are in the record.

Senator MALONE. Are these the assays, the accuracy of which has been questioned?

Mr. REDWINE. No, sir.

Senator MALONE. Because they were assayed so far away from the claims or something?

Mr. REDWINE. No, sir; these particular ones were from the same property and the object of this inquiry at this point is to show, will later be shown, that these assays that are now under discussion coincide in values to assays made under the direction of the Bureau of Land Management and the Forest Service prior to the time that the final assay was made on which the decision was rendered.

Senator MALONE. Were the final assays made by this same firm?

Mr. REDWINE. Yes, sir.

Senator MALONE. Are you putting those in the record today?

Mr. REDWINE. They are already in the record, sir.

Senator MALONE. Some of us were not fortunate enough to go to the Northwest to hear this argument. It would be very helpful to us if you just completed your story right here and now so we would have the picture.

Some of us will not be able to attend all these hearings.

Mr. REDWINE. Mr. Chairman, if I may say so, it would take several hours to give the complete story of what happened in the past and what we are trying to show step by step happened in this case.

Senator SCOTT. I think it would be well for him to go ahead.

Mr. REDWINE. Mr. McDaniel, in the interest of time, in identifying this document, let's give the date, your order number on it, and read that this particular one, for instance, has seven samples involved, and just read the result.

On this particular one the gold and silver is shown separately. It is not combined. Show the results, please.

Mr. McDANIEL. This report No. 2 is 278035, under date of September 27, 1949, our order No. 26483.

On the seven samples, gold, none; silver, 0.15 per ton.

No. 2, gold, 0.02 ounce per ton. Silver, 0.025.

No. 3, none, none.

No. 4, 0.025; 0.05.

No. 5, 0.05; 0.125.

No. 6, trace; and 0.05 for gold; and 0.10 for silver.

Senator SCOTT. The report will be made a part of the record.  
(The report referred to follows:)

A. W. WILLIAMS INSPECTION CO., MOBILE, ALA.

REPORT OF GOLD AND SILVER ORE

49-444.

For: Al Sarena Mines, Inc., care of Mr. H. P. McDonald, Jr., 408 First National Bank Building, Mobile, Ala.

Sample by: Mr. H. P. McDonald, Jr.

Report No. 278035.

Date: September 27, 1949.

Our Order No. 26483. Date: September 12, 1949.

*Assays of gold and silver ore*

[Ounces per ton]

Sample No.		Gold	Silver
1	Cougar—west bank Swanson Creek near north line. Outcrop.....	None	0 15
2	Manganese. Stratified area recut manganese II.....	0.025	.025
3	Manganese. Recut at Elk Creek north of manganese II.....	None	None
4	J. McKinnon—east side large outcrop.....	.025	.05
5	J. McKinnon—center large outcrop.....	.05	.125
6	J. McKinnon—west side large outcrop.....	Trace	.125
7	Leever, largest outcrop.....	.05	.10

Assays by: J. A. McDaniel.

(2) reports to: Mr. H. P. McDonald, Jr., 408 First National Bank Building,  
Mobile, Ala. Mailed September 28.

A. W. WILLIAMS INSPECTION CO.,

By G. F. B.

Senator MALONE. Mr. Chairman, could I ask the investigator just one question. This foundation is being laid to show that this is not a commercial mine and, therefore, the patent should not have been issued. Is that what it is for?

Mr. REDWINE. That was the contention of the Forest Service.

Senator MALONE. And it is your understanding of the mining law that the assays must show at the time of application for a patent to be a commercial mine in order to secure patent? Is that your understanding?

Mr. REDWINE. Senator Malone, I was directed to investigate this matter and present it on this basis. The Forest Service protested the issuance of patents on this. A hearing was held on two grounds:

One ground on all 15 claims, and that was that the ground was not sufficiently mineralized to make it a commercial property.

No. 2, on five of the claims there was the further protest ground that the necessary assessment work had not been done.

Senator MALONE. If the necessary assessment work had not been done, of course, and no location had been filed adversely, and then they proceeded to do the location work on a patent or on a new location, what weight would that have?

Mr. REDWINE. Senator, I have no theory whatsoever on this. I have been directed to bring out all the facts that the record shows as to

whether sufficient assessment work had been done and whether it was sufficiently mineralized to justify issuance of the patent and that is what we are attempting to do.

Senator MALONE. Some of us remember back when the gold mines were shut down by an order and then during that time inflation kept them shut down.

In other words, mines maybe had been shut down during the twenties. All at once they became commercial because of the raise in the price of gold. Then they were not commercial after a certain amount of inflation raised the cost of mining.

There are some people, though, who think they should raise the price of gold again.

So how would you put it on that basis?

Mr. REDWINE. Senator, I am not putting it on any basis. I am just carrying out my assigned duty of bringing out the facts.

Senator MALONE. I do want to make one statement, Mr. Chairman, because I do have to leave. I do intend to get back when we get some of the witnesses from the Department.

I carried the Commission of Mineral surveyor for maybe 30 years in two States on patented property, as many claims as, I expect, any engineer in the West. It is just a side issue of my business, the engineering business. I do not recall that you ever asked to make a showing that it was commercially feasible at the time that you applied for patent. What you had to do was to show you had done \$500 worth of work on a ledge that went to the development of all the claims for which you asked patent, or you had to have \$500 worth of claims.

Those are the showings that would be necessary for somebody to make to justify this patent, and I presume that the Department of Interior will be able to show it.

If not, it will be very easy to decide. I merely wanted to say that. I think the amount of ore, the amount of the assay, that is, the value of the assay, if they were doing it to develop this mine, as to whether or not it was commercial at the time, have very little to do with the matter of whether or not a patent should be issued, and I will try to come back, Mr. Chairman, when you have one of these people who can show that.

Representative HOFFMAN. In view of the fact that we have not followed the rule in what the Senator says, inasmuch as I attended the previous hearings, I would like to say to the Senator that the claim here as advanced by Mr. Pearson that was—

Senator MALONE. Is Pearson on trial here? I do not understand what Pearson has to do with this hearing.

Representative HOFFMAN. He seems to be the chief accuser.

Senator MALONE. I would not bother with him. He is going to have to earn his money like anybody else.

Representative HOFFMAN. Very few of us make our living on the misfortunes of other people. I will withdraw that if it will make you feel any better.

The foundation of the Al Sarena case, if you get into it, rests upon his original charges.

Senator MALONE. His charges are not being tried here. If he is, let's get Pearson here.

Representative HOFFMAN. We will get to that all right, I hope.  
Senator MALONE. I suppose there has been an official objection or charge filed by the Forest Service, has there not, Mr. Chairman?

Senator SCOTT. Yes.

Senator MALONE. Let us get the Forest Service in and let us get the departments that are responsible for it.

Representative HOFFMAN. Will you listen to what I have to say about the charges? There are two charges made upon which the case must rest, the case against the Department of Interior, upon the truth or falsity of those two charges.

The first one is that the samples taken under the direction of the Bureau of Mines were fraudulently taken, and there seems to be nothing in the record to justify that.

Senator MALONE. You are talking about the Forest Service charge?

Representative HOFFMAN. The other one is that the assay made in Alabama was fraudulent. That is all there is to the case, if you will read the record.

Representative CHUDOFF. Nobody has charged anybody with anything.

Senator SCOTT. You are correct in that, Congressman.

Representative HOFFMAN. The Bureau of Mines, not the Forest Service.

Representative CHUDOFF. Mr. Chairman, when I sat as chairman of this joint committee all we tried to do was develop the facts and Mr. Hoffman always when some newspaper man reports a story immediately puts the newspaper man on trial and wants to know where he got his facts and why he wrote the story.

We have not charged anybody with anything. I am trying to learn the facts, in this case.

Senator NEUBERGER. Before the distinguished Senator from Nevada leaves, I would like to ask him a question, if I may.

Senator SCOTT. Senator Malone.

Senator NEUBERGER. May I ask the distinguished Senator from Nevada a question just for the point of information.

That is what I was trying to do, just so I have something straight about the statement he made. You made the statement, I think, Senator, that the only thing that was necessary on gaining patent to land was to show that five hundred dollars worth of assay work had been done on a ledge or claim; is that correct?

Senator MALONE. I did not say that was the only thing, and I will tell you one thing more. I would rather save our conversation and our argument for the executive session.

You talk to the witnesses and I will talk to them.

Senator NEUBERGER. I am just trying to get some information on this.

Senator MALONE. It has to be done to develop a ledge or a discovery and if all the work is done on one claim, or two claims, or a group of claims, it has to be done in such a manner if you are going to gain patent to the other claims; to develop that ledge or showing on all claims.

That is the showing you have to make. There is nothing in the law, nothing that I have ever found, that says it has to be commercial at the time the application for patent is made, because Congress often makes a thing commercial or noncommercial. They made gold commercial

again in many mines when they raised the price to 35 dollars an ounce. They made it noncommercial when they brought on inflation again.

Now, if I may finish answering your question, you have another law on the statute books, the 1934 Trade Agreements Act, that made noncommercial almost every critical material in the United States.

There is no mine running today of any consequence in critical materials that does not have Government money in it in one way or another. Either it has a short amortization period, guaranteed unit price, or a direct loan.

It is noncommercial because they are in direct competition with the cheap labor of the world.

Congress could change that law tomorrow and make a lot of these claims commercial again.

Senator NEUBERGER. May I ask you another question, just for a point of information?

Is it under the law within the authority of either the Forest Service or the Bureau of Land Management, depending upon which agency has jurisdiction of the land in question, to rule the patent should not be granted because a sufficient showing of minerals has not been demonstrated?

Senator MALONE. I think not at all. It goes according to the law passed by Congress and signed by the President of the United States. You modified that law last year and I think you made the initial step, of which this is probably another step, to amend the mining law again and then finally end up with a leasing system for all the Government lands.

I think that is the final objective. So that a prospector is just gone from the face of the earth.

Senator NEUBERGER. The thing I am trying to get is the information on what you said. Is it within the legal authority of those departments?

Senator MALONE. I do not think so. They can object and have their hearing, but the law must be carried out by the Department, the Secretary of the Interior, that is charged with the issuance of the patents.

If the law charged anyone of these Government departments directly with the responsibility, I think they could turn it down on any pretext, and then it would be a court case for somebody to believe it.

Mr. REDWINE. Mr. Chairman, may I interrupt the two Senators for a minute? I would like to read this out of the Department's decision in this very case in awarding the patent. This is an order signed by Assistant Secretary Davis, who was Solicitor of the Department at the time:

Among the requisites to obtain a patent to a lode mining claim is the discovery of "valuable mineral deposits" "within the limits of the claim located" (30 U. S. C., 1946 edition, secs. 22 and 23). In determining whether mineral deposits discovered on public lands are "valuable" the test to be applied is whether they are "such as would justify a person of ordinary prudence in the further expenditure of his time and means in an effort to develop a paying mine" (*Cameron et al., v. United States, supra*, 252 U. S., p. 259).

That was the decision of the Department of the Interior in this very case.

Senator MALONE. That might be all right, but if all the prospectors in the United States has been run off of land on claims located by

them where a prudent man would not dig, 80 percent of your mines would never have been discovered. The prospector is not a prudent man. He is a man who goes out and digs where he thinks his luck will hold and he will get something, a man who has the nerve to go out and spend his money or his time and do that, and the law up until last year at least, was so that he could do that.

We have now started breaking into it from various angles. We were discovering mines and, of course, we would again if we let this law alone, if we get our feet on the ground sometime and protect the prospector, and the receiver, and the working men in that differential between the low-cost European and Asian labor, and United States labor.

If we want to import \$2 labor, I do not think there is anything really feasible in the United States where a prudent man would dig until you get the Government in as a partner, so some of us do hope that we will finally get our feet on the ground and go back to the mining business on the basis of fair and reasonable competition with these low-cost laborers throughout the world, and I think we will.

You know as well as I do that if we raise the price of gold, which might very well be done, it would make mines feasible of operation as it did in 1933 or 1934, when that was raised. That has not been feasible before that time.

Furthermore, the ledge itself and the surrounding condition of mining, whether it is a steam shovel job or whether it is an underground job, all have something to do with it.

I have not yet, in my experience as a mineral surveyor, found that you had to show it was a commercial job at the moment of application in order to get a patent. That has never happened to me in 35 years of engineering.

Senator SCOTT. The witness is still here. We would like to hear from him further.

Mr. REDWINE. Have you read that one yet, Mr. McDaniel?

Mr. McDANIEL. No.

Mr. REDWINE. Will you take that up, please, shortening it as I suggested?

Mr. McDANIEL. This is our Report No. 278802, under date of October 4, 1949. There are reports of seven samples on this report.

Mr. REDWINE. I believe that came from right there, did it not (indicating)?

Mr. McDANIEL. I believe in effect.

Mr. REDWINE. I could suggest, inasmuch as this is a continuation of them, just read the No. 7 and make it continuous that way.

Mr. McDANIEL. No. 7, silver, none; gold, none.

That is No. 8. Correct.

No. 9, 0.125 ounces per ton, silver; 0.025, gold.

No. 10, 0.550, silver; 0.050 gold.

No. 11, None; none.

No. 12, trace; trace.

No. 14, none; none.

No. 15, trace; trace.

**A. W. WILLIAMS INSPECTION CO.,**  
By **G. F. BAILEY.**

Mr. REDWINE. Mr. McDaniel, will you explain to the committee what trace means?

Mr. McDANIEL. Trace means that the quantity of material is too small to establish a value by weight; that there is just a very, very small amount of the mineral present there; that in the case of assay would show up as a very tiny button, but the button was too small to be weighed.

Mr. REDWINE. What is the break point for gold and silver in usual practice by assayers? Fourteen cents for gold, 21 cents for silver, or what is the practice in your plant?

Mr. McDANIEL. Well, in our plant we usually do not report anything under .025 ounces for gold and the same for silver.

Mr. REDWINE. Translate that into values, cent values.

Mr. McDANIEL. That would be about 75 cents a ton for gold and about 7 cents for silver; that is, values under that would be reported as traces.

Mr. REDWINE. Mr. McDaniel, the record shows that Abbot Hanks shows 17 cents for gold and 21 cents for silver. Would you say that is not in line with the usual practice, or are you not in line?

Mr. McDANIEL. Well, I may not report down as close as some of the laboratories in the West that do make a specialty of assaying.

Mr. REDWINE. Will you identify that one in the same manner and read it out in the same manner?

Mr. McDANIEL. This is report No. 281620, November 4, 1949. Sample No. 16—

Representative HOFFMAN. Mr. Chairman, may I ask counsel: Is this another batch of samples? Have you finished the first batch?

them where a prudent man would not dig, 80 percent of your mines would never have been discovered. The prospector is not a prudent man. **Representative HOFFMAN.** Mr. Chairman, may I ask counsel: Is this another batch of samples? Have you finished the first batch?

Mr. REDWINE. No, sir; we are still on the 1949 group. I will let you know when we go beyond this.

Representative HOFFMAN. Thank you.

Mr. McDANIEL. Sample No. 16, 0.025 gold; 0.050 silver.

No. 17, 0.025 gold; 0.025 silver.

That is in ounces per ton.

No. 18, 0.025 gold; 0.175 silver.

No. 19, 0.050 gold; and 0.100, silver.

No. 20, is traces of both gold and silver.

No. 21 is traces of both gold and silver.

No. 22 is 0.050 gold; 0.100, silver.

No. 23, 0.050, gold; 0.100 silver.

Can you read back No. 22 and 23 to me?

(The record was read by the reporter)

Mr. McDANIEL. The correct reading of sample No. 23 should read 0.025 gold; 0.975 silver.

No. 23A is traces of both gold and silver.

No. 23B is traces of both gold and silver.

No. 23C, no gold; no silver.

No. 23D is traces.

No. 23E is 0.025 ounce of gold; 0.025 ounce of silver.

(The information referred to is as follows:)

<sup>1</sup> Traces.

Assays by: J. A. McDaniel.

Two reports to: Al Serena Mines, Inc., 408 First National Bank Building, Mobile, Ala. Mailed November 8.

**A. W. WILLIAMS INSPECTION CO.,**  
By G. F. BAILEY.

Mr. REDWINE. Mr. McDaniel, referring back to our conversation and discussion a moment ago as to anything under 75 or 90 cents being traces, let's go back to this report, 282851 of yours, which you read a few minutes ago. Isn't that 9 cents value showing up there?

Mr. McDANIEL. Yes, that is 9 cents.

Mr. REDWINE. As low as 9 cents?

Mr. McDANIEL. Yes, and some of these read as low as between 2 and 3 cents.

Mr. REDWINE. Then if you can make it in those small amounts in actual practice—

Mr. McDANIEL. That's in silver. If you will notice now, the lowest value that we reported here on gold was 87½ cents.

Mr. REDWINE. For gold that is true, but you treat gold and silver different insofar as what a trace is, then?

Mr. McDANIEL. No, we do not. With gold being approximately 35 times the value of silver, a slightly larger relation, we can weigh a smaller value of silver than we can of gold.

Mr. REDWINE. In other words, in your assaying is this true: in your assaying you recover a button that has gold and silver both in it?

Mr. McDANIEL. That is right.

Mr. REDWINE. Then you treat that with nitric acid or hot sulfuric acid and dissolve the gold out? Is that the process you followed?

Mr. McDANIEL. The process followed is treating with nitric acid, dissolving the silver out.

Mr. REDWINE. Then you weigh nitric acid, you weigh your gold, and then the difference between your nitric acid when you get through and the weight of the gold is the silver; is that it?

Mr. McDANIEL. No, sir; the way that is done, the combined button is placed in a flask or a crucible and treated with nitric acid.

The silver is dissolved by the nitric acid, leaving the gold undissolved. With careful manipulation the nitric acid containing the silver is leached from the gold particles in the crucible.

The crucible is dried and reweighed. The difference between the weight of the crucible contained in the gold button and the weight of the crucible with the silver removed is reported as the silver.

Mr. REDWINE. On these assays we have been talking about, what size sample was used? Assay-ton? Two assay tons?

Mr. McDANIEL. Two assay tons were used. The total weight on our one assay ton is 29.17 grams. To translate it into ordinary terms, it is approximately an ounce.

We used two assay tons on these samples.

Mr. REDWINE. Tell the committee how big a piece of silver that you would find out of the sample, two assay ton sample, where there would be 9 cents worth of it in a ton of ore.

How big a piece of silver is that?

Mr. McDANIEL. That would be less than the size of the head of an ordinary pin.

Senator SCOTT. That would require careful manipulation, would it not?

Mr. McDANIEL. Yes, sir.

Mr. REDWINE. Identify and read that, please, Mr. McDaniel.

Mr. McDANIEL. This is report No. 282563, November 15, 1949. No. 24, Cougar, .025 ounce of gold; .075 ounce of silver.

No. 25, gold, trace; silver, 0.05.

No. 26, 0.025; and silver, 0.075.

Assay by: J. A. McDaniel.

Two reports to: Al Serena Mines, First National Bank Building, Mobile, Ala. Mailed January 16, 1950.

**A. W. WILLIAMS INSPECTION CO.,**  
**By G. F. BAILEY.**

Mr. REDWINE. Mr. Chairman, we are now taking up a new series of assay reports taken in 1953 and Congressman Hoffman wanted to be advised when that was done.

Representative HOFFMAN. Mr. Chairman, I want to make a formal objection to the admission of this evidence. As I understand it, and if I am correct, none of these samples were used as application for the patents, were they, Mr. Redwine?

Mr. REDWINE. No, sir; none of them.

Representative HOFFMAN. The case is just like this: For example assume that the Senator would honor me by going fishing with me. I go 5 places down here in the bay and catch nothing; so I go 5 other places and I get something. Where do I take him?

Undoubtedly these fellows were looking for some places where they could get samples, where they could prove up on claims, but they did not use these at all; that is to say, these samples never came into the possession of any governmental agency, so why drag them in here?

Senator SCOTT. That question is overruled at the present.

Representative HOFFMAN. It is an unexpected ruling, but then, I accept it, of course.

Mr. McDANIEL. Before going into the 1953 series of assays, I would like to read a few other facts into the record, please.

Senator SCOTT. Go right ahead.

Mr. McDANIEL. At the completion of this series of samples, we were informed that the area in which the samples were secured was snowed in, and that they had no further samples for us at that time.

I resigned my employment with the A. W. Williams Inspection Co. in February 1952, and was not connected with this company again until June 1953, except on one occasion when I was called in as a consultant to determine the cause of the failure of a marine propulsion shaft.

Senator SCOTT. What kind?

Mr. McDANIEL. That was part of the shaft between the drive engine and the propeller, I believe it was on a large tugboat.

Shortly after returning to Mobile, I met Mr. Charles McDonald at a meeting of the Mobile Engineers Club and he told me that their Al Serena claims were still in process and that further sampling and assaying would be performed.

As this series of samples were submitted to this laboratory, they were accompanied by letters of instruction addressed to me. One of these letters refers to a Mississippi project that I will explain fully at the end of this statement.

While the first of this series of samples was in process of being assayed, Mr. Phillip Gabriel phoned and requested that a copy of the assay reports be furnished him.

Representative FASCELL. Are you talking about the 1953 assays now?

Mr. McDANIEL. Yes, sir.

Mr. COBURN. Who is Mr. Phillip Gabreil? Would you identify him?

Mr. McDANIEL. I will identify him in just a minute.

As Mr. Charles and Herbert McDonald were in Oregon at the time, another member of the McDonald family in Mobile was contacted for instructions and we were told to furnish Mr. Gabriel copies of the assay reports as he was financially interested in, and was a member of the board of directors of the Al Sarena Mines, Inc.

This series of assays were submitted in our Report Nos. 426042, 426180, 426550, 427875, 428394, and 428930, dated from October 7, to November 11, 1953.

If Mr. Redwine is ready we can go into those reports.

Representative HOFFMAN. May I ask counsel, Mr. Chairman, if these reports were used in the application for a patent.

Mr. REDWINE. They were not.

Representative HOFFMAN. Then it is understood that my objection applies to all reports of which evidence is given and which were not submitted to any governmental agency, so I will not need to keep renewing it.

Senator SCOTT. That is right.

Mr. REDWINE. Mr. McDaniel, would you rather wait until the end of your testimony to make this explanation you said you wanted to make of the Mississippi matter, or would you like to do it now?

Mr. McDANIEL. I will make it at the end of this Al Sarena matter, at the end of this.

Mr. REDWINE. This is a new series now, the 1953 series. Will you treat them just like you have been doing the others, please?

Mr. McDANIEL. This is Report No. 426042 under date of October 7, 1953. I will read the values found.

Sample AX1, \$1.75, and 5 cents, making a total of \$1.80.

Mr. REDWINE. Just read the total.

Mr. McDANIEL. Sample AX2, traces.

Sample AX3, none.

Sample AX4, \$1.80.

Sample AX5, \$1.80.

Then sample AX6, had traces.

Sample AX7 had traces.

Sample AX8 had traces.

Sample AX9, 5 cents.

AX10, no value.

AX11, no value.

A. W. WILLIAMS INSPECTION CO.

Mr. REDWINE. And another one.

Mr. McDANIEL. Report No. 426550, under date of October 14, 1953. AX29, no value. AX30, no value. AX31, \$3.70. AX32, \$3.70.

Senator SCOTT. That report will be made a part of the record.  
(The material referred to is as follows:)

A. W. WILLIAMS INSPECTION CO., MOBILE, ALA.

#### REPORT OF ASSAYS OF GOLD ORE

For: Al Sarena Mines, Inc., P. O. Box 122, Trail, Ore.

Sample identification: Samples AX29-AX32.

Samples submitted by client.

Lab. No. 53-719.

Report No. 426550.

Date: October 14, 1953.

Our Order No. 38001. Date October 8, 1953.

We find the samples which were submitted by the client to contain the following.

Sample	Ounces per ton		Value per ton		
	Gold	Silver	Gold	Silver	Total
AX29.....	None	None			
AX30.....	None	None			
AX31.....	0.1	0.2	\$3.50	\$0.20	\$3.70
AX32.....	.1	.2	3.50	.20	3.70

Assays by J. A. McDaniel.

This report is submitted for the exclusive use of the client or his representative and may not be used in any connection with advertising or sale of any product or process without our written authorization.

Four reports to: Al Sarena Mines, Inc., Trail, Ore.

One report to: Mr. Phil Gabriel, 24 North Royal St., Mobile, Ala.

A. W. WILLIAMS INSPECTION CO.

Senator GOLDWATER. Mr. Chairman, at this time may I ask a question?

Senator SCOTT. Yes.

Senator GOLDWATER. Are you relating gold samples or silver samples?

Mr. McDANIEL. This is the total value of both gold and silver in the samples.

Report number 428930, under date of November 11, 1953. This is samples AX 34, 35, 36, 37, 38, 39, 40, 41, 42, and 43. No mineral value found in any of these samples.

Senator SCOTT. That report will be made a part of the record.

(The material referred to is as follows:)

A. W. WILLIAMS INSPECTION CO., MOBILE, ALA.

REPORT OF ASSAYS OF GOLD ORE

For: Al Sarena Mines, P. O. Box 122, Trail, Ore.  
 Sample identification: AX 34 to AX 43, inclusive.  
 Samples submitted by Mr. C. H. McDonald.  
 Lab. No. 53-778.  
 Report No. 428930.  
 Date: November 11, 1953.  
 Our order No. 38001. Date: 11/10/53.

We find the samples submitted by Mr. C. H. McDonald to contain the following:

AX34	} No mineral value found in any of these samples.
AX35	
AX36	
AX37	
AX38	
AX39	
AX40	
AX41	
AX42	
AX43	

Assays by J. A. McDaniel.

Four reports to: Al Sarena Mines, Inc., P. O. Box 122, Trail, Ore.

One report to: Mr. Phil Gabriel, 24 North Royal St., Mobile, Ala.

A. W. WILLIAMS INSPECTION CO.

Mr. REDWINE. Mr. Chairman, we have several more. They run along the same way. I do not mean like this last one. There are several more. In the interest of time may we have them inserted in the record without this witness going through them?

Senator SCOTT. They will be inserted in the record.

(The material referred to is as follows:)

A. W. WILLIAMS INSPECTION CO., MOBILE, ALA.

REPORT OF ASSAYS OF GOLD AND SILVER

For Al Sarena Mines, Inc., P. O. Box 122, Trail, Ore.  
 Sample identification: See below.  
 Samples submitted by C. H. McDonald.  
 Lab. No. 53-759.  
 Report No. 426394.  
 Date: November 4, 1953.  
 Our order No. 38001. Date 11-3-53.

We find the samples that were submitted by Mr. C. H. McDonald to contain :

Sample	Ounce per ton		Value per ton		
	Gold	Silver	Gold	Silver	Total
AX2.....	0.01	0.02	\$0.35	\$0.18	\$0.53
AX6.....	.02	.04	.70	.36	1.06
AX7.....	.00	.02	.00	.18	.18
AX8.....	.03	.11	1.05	.09	1.14
AX12.....	.00	.02	.00	.18	.18
AX16.....	.00	.03	.00	.27	.27

These assays made on duplicate portions of sample.

Assays by J. A. McDaniel.

This report is submitted for the exclusive use of the client or his representative and may not be used in any connection with advertising or sale of any product or process without our written authorization.

A. W. WILLIAMS INSPECTION CO., MOBILE, ALA.

REPORT OF ASSAY OF GOLD ORE

For: Al Sarena Mines, Inc., P. O. Box 122, Trall, Oreg.

Sample identification: AX33.

Sample submitted by Mr. C. H. McDonald.

Lab. No. 53-747.

Report No. 427875.

Date: October 29, 1953.

Our Order No. 38001. Date: October 26, 1953.

We find the sample submitted by Mr. C. H. McDonald to contain:

Gold: None.

Silver: None.

Value: None.

Assay by J. A. McDaniel.

This report is submitted for the exclusive use of the client or his representative and may not be used in any connection with advertising or sale of any product or process without our written authorization.

Four reports to: Al Sarena Mines, Inc., P. O. Box 122, Trall, Oreg.

One reports to: Mr. Phil Gabriel, 24 North Royal Street, Mobile, Ala.

A. W. WILLIAMS INSPECTION CO.

Representative JONAS. It would be helpful if you would give the maximum and the minimum, if you have them right there.

Mr. REDWINE. Mr. Chairman, we have not compiled that, but during the noon hour that will be done.

Mr. McDaniel, we are now ready to take up the sample, your certificate, under date of November 25, 1953, the assay report on which the Solicitor's decision was made.

Do you not think it would be well at this time to discuss the Mississippi matter ahead of that?

Mr. McDANIEL. Yes, sir; I will discuss the Mississippi matter.

Representative HOFFMAN. Before they go into that, Mr. Chairman, may I ask counsel, is the substance of the testimony that we have been listening to this morning to the effect that this gentleman, who is a professional man who was working for the Williams Co. and working on these samples for the McDonald people, found that they did not justify a mining location? Is that the substance of it?

Mr. REDWINE. Mr. Chairman, in answer to that, I would like to say that the purpose is to show exactly how much sampling has been done by the A. W. Williams Co. from this particular property and what the results have been.

Representative HOFFMAN. There is no claim that this sampling to which you have referred was not an accurate sample or that the report was not accurate or justified?

Mr. REDWINE. Mr. Chairman, I would like to say in answer to that that the record as brought out will have to speak for itself.

Representative HOFFMAN. At least it shows that he was not working for anybody in particular, that he reported what he actually found,

and that with reference to these samples there was not enough mineral on the land to justify a mining claim. Is that not it?

Mr. REDWINE. That is what the record so far has shown.

Representative HOFFMAN. That shows that he is honest.

Then you have to drop back to substantiate your charge that the samples taken by Appling and McCormick were fraudulently taken.

Senator SCOTT. No one has made that statement.

Representative CHUDOFF. Mr. Chairman, the way things have developed this morning it appears that somebody is under indictment here, that we are trying someone under indictment. I do not think that is the purpose of these hearings. I think the purpose of the hearings is to develop the facts and after the facts are developed, then the committee will in executive session discuss them and write a report, and anybody who does not agree with the majority report can write his own under the rules.

Representative HOFFMAN. That should be true, Mr. Chairman, but, as you recall, at Denver you distinctly said that your staff was out looking for complaints and that is all they were looking for.

Representative CHUDOFF. We were very anxious to hear anybody who had a complaint. We were willing to listen to facts.

Senator SCOTT. The Forest Service is the only one that has made any complaint, and we are trying to establish the background and the facts as to whether they are justified or whether they are not.

Representative JONAS. Mr. Chairman, may I ask a question?

Senator SCOTT. Yes, sir.

Representative JONAS. Did I understand the Senator to say that the Forest Service had filed a complaint? Where does that appear in the record? I was not in Oregon.

Mr. COBURN. It is in this record.

Representative JONAS. I read the testimony of the witnesses at Portland, but my recollection is that the man who spoke for the Forest Service made the statement that after the Secretary rendered his decision it was acceptable to them and they had nothing further to say about it, and I just wonder if the record does show that the Forest Service has filed a complaint. If so, I would like to ask counsel to cite me that place in the record so I can read it.

Mr. REDWINE. Mr. Chairman, may I answer that? The Forest Service filed a protest against the granting of the patents. If they have done more than that I do not know it.

Representative JONAS. They did not file a complaint with this committee?

Mr. REDWINE. No.

Representative JONAS. Or any protest or any objection to this committee?

Mr. REDWINE. They have not.

Representative JONAS. Thank you.

Mr. REDWINE. Go ahead, please, Mr. McDaniel.

Mr. McDANIEL. I have never been financially interested in, or directly employed, or received any remuneration by the Al Sarena Mines, Inc. I have been associated with the McDonalds in the following related incident that I am including in this statement in order to show that my conduct in this matter was in keeping with accepted business, professional, and ethical relations:

Some months previous to my resignation from the A. W. Williams Inspection Co. in 1952—

Mr. REDWINE. What was the date? Will you please insert at this point what the date of that resignation was, please?

Mr. McDANIEL. That was February 15.

Mr. REDWINE. 1952?

Mr. McDANIEL. 1952.

Professor Austin of Mississippi Southern Co. told me at a meeting of the Mobile-Pensacola American Chemical Society Section that he had analyzed a rock containing an unusually high percentage of nickel. Knowing of the McDonald's interest in minerals, I discussed this with them shortly after leaving Williams and Mr. Charles McDonald and I spent 2 days in the area in which the rock was reported to have been found. We secured several samples that officials of the Mobile Pulley Works in Mobile, Ala., allowed me to test in their laboratory. One of these samples contained a small percentage of nickel that we agreed did not warrant development, although we thought that on further prospecting trips, we could discover the source of the rock analyzed by Professor Austin.

We have not pursued this matter any further at the present time. That is the explanation of it.

Mr. REDWINE. Mr. McDaniel, you and Mr. McDonald hold some options jointly on some land in connection with that?

Mr. McDANIEL. No, sir.

Mr. REDWINE. You do not?

Mr. McDANIEL. We do not. All we did was go up there and spend about 2 days scouting around, and then one of those days was spent with a water well driller up in that area. He went around with us to various locations where he had recently drilled water wells where we could secure samples of subsurface material.

Senator SCOTT. Did you ever hold any options at any time up there?

Mr. McDANIEL. No, sir.

Mr. REDWINE. Mr. McDaniel, as I recall the letter that you referred to where the Mississippi matter was brought up by Mr. McDonald, he suggested he found something interesting in Mississippi that he wanted you to look at. How does that check in with the fact that this professor so-and-so called it to your attention?

Representative HOFFMAN. Mr. Chairman, may I have him read the last part of the question? I did not hear it.

(The record was read by the reporter.)

Representative HOFFMAN. Does counsel claim that has anything to do with the granting of these mining patents?

Mr. REDWINE. Mr. Chairman, counsel is not claiming anything. Counsel is merely attempting to question the witness.

Representative HOFFMAN. That should be all right, but the question should be with reference to something relevant. I understand under the letter of Senator Murray that we are here to investigate timber claims and four particular things. Now we are straying off down into Mississippi in an entirely different matter that has not a thing to do with either mines or timber.

Senator SCOTT. Go ahead.

Mr. McDANIEL. When I made those tests on that ore; that is, on the samples we picked up in Mississippi, Mr. McDonald had told me—this is merely things that Mr. Charles McDonald told me orally—

that he had discussed this percentage with an engineer experienced in the milling of various ores, and that nickel ore of the approximate percentage that I found on that was commercially feasible to work.

Mr. REDWINE. Let us take up the matter of samples, your No. 431869.

Mr. McDANIEL. I would like to read the following into the record before we go into this sample.

Senator SCOTT. Go ahead.

Mr. McDANIEL. In the latter part of November 1953, I received a letter on Al Sarena Mines, Inc., stationery reading as follows:

A. W. WILLIAMS INSPECTION Co.,

*Mobile 3, Ala.*

(Attention: Mr. J. A. McDaniel.)

GENTLEMEN: We are forwarding a further group of 28 samples, numbered Al Sarena 1 through Al Sarena 28, inclusive. The material is to be assayed for both gold and silver. Check to cover these assays will be mailed you upon receipt of bill.

Thanking you, we remain,

Yours very truly,

AL SARENA MINES, INC.

and signed by D. Ford McCormick, consulting engineer, with the following handwritten note:

NOTE.—The split was too large for 1 envelope so the whole sample in each case was put into 2 envelopes and made into 1 package and numbered with the metal tag as placed in each bag. Use all of the pulp in each bag for sample.

It is signed by the initials D. F. McC., and there were a number of penciled corrections to this letter, as you can see on this phosostat and on the original letter which Mr. Redwine has.

Mr. REDWINE. I do not think there is any need to go into the penciled corrections.

As the letter was read they were the directions that were received by the A. W. Williams Co. with the corrections in it.

Have you anything further, Mr. McDaniel, in the way of a statement?

Mr. McDANIEL. Yes. If the committee will refer to this letter now in their possession they will note no additional instructions for reporting the results of the assays on these samples. As we were not informed in any manner that samples referred to in this letter were official Bureau of Mines referee samples, the assays were made and reported according to instructions received for previous Al Sarena Mines, Inc., samples, with omission of the copy to Mr. Gabriel, which will be explained later in this statement.

I interpreted the handwritten note on the bottom of the letter as a necessary instruction for the proper assay of those samples, with the following explanation:

As the assay-ton portions of samples were being used for assay of Al Sarena samples, this note had the meaning to me of mixing the contents of the two envelopes comprising the sample and weighing out the portion used for assay from the mixed sample. In no case, when the weight of the mixed sample was over 2 assay-tons, was the entire sample used in an individual assay. In other words, an exact portion for a 2-assay-ton sample was weighed out for assay in all cases that sufficient sample was submitted for a 2-assay-ton portion to be weighed out. When the total weight of the submitted sample was under 2 assay-tons, the entire contents of both envelopes were used.

About the same time as the receipt of this letter, a parcel was received by railway express and turned over to me. The box contained 28 samples and the assays of these samples were submitted on our Report No. 431869.

I have photostat here.

Mr. REDWINE. We have that, your original. Mr. McDaniel, in how many instances was the sample, by combining the two envelopes, insufficient to make 2 assay-tons?

Mr. McDANIEL. As this happened 2 years ago, I do not remember the exact number of those samples where the entire contents of both envelopes was under 2 assay-tons.

Mr. REDWINE. I believe earlier in your testimony you stated that when you and Mr. McDonald first discussed the matter of assaying samples in the Al Sarena mines it was agreed that to get a fair sample you have to have 2 assay-tons to work with; is that correct?

Mr. McDANIEL. That is to get an accurate assay on their ores.

Mr. REDWINE. However, in this case there was some of it that you did not have 2 assay-tons to work with; is that true?

Mr. McDANIEL. There was some of it they didn't send us 2 assay-tons.

Mr. REDWINE. You could not identify from this record which ones those were, could you? Your notebook would not show that?

Mr. McDANIEL. Well, it is our practice to—unless we are specifically told at the time of receipt of samples that there would be legal proceedings or other reasons later on, our lab worksheets are usually destroyed after about a year to 18 months, and I did not have those to make any deductions.

Mr. REDWINE. Refer to your copy there, if you wish.

Could you tell the committee whether sample No. 13 or sample No. 27 were samples where you had less than 2 assay-tons to work with? Will your memory tell you whether either one of those was in the group of those you did not—

Mr. McDANIEL. No, sir; they do not. As a general rule our procedure down there is this: Whenever a sample is submitted we analyze it. After the analysis is finished we are working on entirely different matters and we promptly forget the exact details of each individual analysis, that is, today we are working on one thing and another thing tomorrow, so we make no attempt to keep in our mind, that is, the exact details that we follow on everything except—

Mr. REDWINE. We understand that. What I am getting at is, can you from memory say that this sample here that showed values of 79 cents is included in that group or whether the sample that showed \$4.85 is included in that group?

Mr. McDANIEL. No, sir, I cannot.

Senator GOLDWATER. Might I ask a question to establish a legal point in my mind? I am sorry I do not know it. Are 2 assay-tons required by law?

Mr. REDWINE. They are not, Senator. However, the textbooks tell us that that is the preferable volume to use to get an accurate report on low-grade ores. I believe that is correct, is it not, Mr. McDaniel?

Mr. McDANIEL. Yes, sir.

Senator GOLDWATER. However, it is not required by any statute. I would like to ask Mr. Broadgate, whose mining knowledge I have

great respect for, a question. In our State of Arizona is it customary to use 2 assay-tons?

Mr. BILL BROADGATE (metals and minerals consultant to Senator Murray). No, Senator; 1 assay-ton is generally used, unless there is preknowledge of the fact that the mineral content may be so low that an accurate assay cannot be made on a 1 assay-ton sample.

Senator GOLDWATER. Thank you.

Representative JONAS. Mr. Chairman, may I ask counsel a question?

Senator SCOTT. Yes.

Representative JONAS. Were the patent assays based on 2 tons?

Mr. REDWINE. I am not sure about that, Congressman. I am told, however, that the assayers who did that work do use 2 tons, 2 assay-tons, in their work.

Representative HOFFMAN. However, you were never told that they used it in connection with the Hattan samples?

Mr. REDWINE. No, sir. I made that plain.

Representative JONAS. Was Mr. Hattan not asked that question, as to the weight of these samples?

Mr. REDWINE. No, sir, he was not.

Mr. McDaniel, have you ever in your experience been instructed by a client to have no pulp left except in this instance?

Mr. McDANIEL. Well, I have never been instructed to have no pulp left, and in this instance where sufficient pulp was submitted to us for us to use, the full 2 assay-ton sample there was pulp left.

Mr. REDWINE. What did you do with it?

Mr. McDANIEL. After several months—I would say a minimum of 6 months—we disposed of it in accordance with our company procedure of disposing of all samples a reasonable time after the analysis is completed, unless specifically requested by the client to retain samples for a longer period on account of impending legal proceedings or other reasons.

Mr. REDWINE. Mr. Chairman, I would like to call the committee's attention to the fact that according to the testimony of Mr. McDaniel and according to the letter of instructions received from Mr. D. Ford McCormick, the note here says, "Use all of the pulp in each bag for sample."

What pulp was left over, in the cases where more than 2 assay-tons were available, was destroyed within 6 months or about 6 months in accordance with the assayer's practice, and that is Mr. McDaniel. According to my information he has correctly stated that, but coupled with that fact is the other samples that were retained, the only other physical evidence in this case, was thrown into the Rogue River. You have to go on documents and testimony of witnesses to bring out what happened in this.

Representative HOFFMAN. As long as you have gone into that, will you have the witness tell how he disposed of their samples? I assume he did not throw them in the Rouge River because that was not handy. What did he do with them?

Mr. McDANIEL. I will tell you what happened to the disposed samples down there. They were thrown on our laboratory trash pile and hauled to the city dump.

Here is something that I would like to introduce as evidence.

Mr. REDWINE. May I see it, please?

Mr. McDANIEL. This is a photostat of a schedule of price quotations on ordinary samples by the Arizona Testing Laboratories. In the second last paragraph from the bottom of the notes of it reads this:

2 pounds or less of each sample held 1 month without charge. Samples held longer on request at a charge depending on size and length of storage. No responsibility assumed for safekeeping of samples.

I want to introduce that as evidence, that unless specifically requested most testing laboratories dispose of the samples after a reasonable period of time, unless the plant has specifically requested that they be held longer than their normal period.

(The material referred to is as follows:)

## ASSAY SCHEDULE

Gold (Au)-----	\$1.50
Silver (Ag)-----	1.50
Gold & Silver (When run at same time)-----	2.00
Copper (Cu)-----	1.50
Lead (Pb)-----	1.50
Zinc (Zn)-----	2.50
Aluminum oxide (Al <sub>2</sub> O <sub>3</sub> )-----	5.00
Antimony (Sb)-----	5.00
Arsenic (As)-----	5.00
Barium (Ba)-----	6.00
Bismuth (Bi)-----	6.00
Beryllium oxide (BeO)-----	10.00
Boron (B)-----	5.00
Calcium oxide (CaO)-----	4.00
Cadmium (Cd)-----	5.00
Chromium (Cr)-----	5.00
Cobalt (Co)-----	6.50
Columbium (Cb)-----	15.00
Flourspar (CaF <sub>2</sub> )-----	5.00
Gypsum (CaSO <sub>4</sub> ·2H <sub>2</sub> O)-----	6.00
Iron (Fe)-----	2.00

## ORDINARY SAMPLES

Lithium oxide (Li <sub>2</sub> O)-----	7.50
Magnesium oxide (MgO)-----	6.00
Manganese (Mn)-----	2.50
Mercury (Hg)-----	3.00
Molybdenum (Mo)-----	5.00
Nickel (Ni)-----	5.00
Phosphorus (P)-----	4.00
Potassium oxide (K <sub>2</sub> O)-----	6.00
Rare earth oxides-----	15.00
Silicon oxides (SiO <sub>2</sub> )-----	4.00
Sodium oxide (Na <sub>2</sub> O)-----	6.00
Strontium (SrO)-----	7.50
Sulphur (S)-----	3.50
Tantalum (Ta)-----	15.00
Thorium (Th)-----	10.00
Tin (Sn)-----	5.00
Titanium (Ti)-----	7.50
Tungsten oxide (WO <sub>3</sub> )-----	5.00
Uranium oxides (U <sub>3</sub> O <sub>8</sub> )-----	5.00
Vanadium (V)-----	5.00
Zirconium (Zr)-----	10.00
Complete spectrographic qualitative analysis of ores-----	7.00

Prices for other analyses ore testing, physical testing, inspection of materials anywhere, sampling and other services on request.

Control and Bullion assays double rates for individual metals. Umpire assay 3½ times.

Size of samples: Ore 2 to 5 lbs. Pulp, 4 ozs. or more. Larger and wet samples handled at extra charge.

Mark samples plainly and give written instructions with sample or by letter. 2 lbs. or less of each sample held one month without charge. Samples held longer on request at a charge depending on size and length of storage. No responsibility assumed for safe keeping of samples.

Payment must accompany samples unless credit is arranged. These prices do not permit bookkeeping and collection costs on small accounts.—Arizona Testing Laboratories, Claude E. McLean, Analytical and Consulting Chemists, Phoenix, Ariz.

Mr. REDWINE. Mr. Chairman, I would like the record to show that there is no question of the fact that the A. W. Williams Co. destroyed the pulp in accordance with the usual practices of assay houses. There is no question raised on that.

Representative HOFFMAN. Will counsel tell us, Mr. Chairman, what happened with his?

Senator GOLDWATER. Mr. Chairman, I hate to keep displaying my ignorance of mining law, but I would like to ask the counsel, is retention of samples by the assayer required by law?

Mr. REDWINE. No, sir. It is a matter of practice.

Senator GOLDWATER. Is retention of samples by the mine required by law?

Mr. REDWINE. No, sir.

Senator GOLDWATER. No, it is not?

Mr. REDWINE. No, sir.

Senator GOLDWATER. I would like to ask again Mr. Broadgate, who I think has a great knowledge of mining, is it customary in our State of Arizona for the mines to hang on to samples over a prolonged period?

Mr. BROADGATE. Not for a long period, Senator. The only reason for keeping samples is if there might be some future need to check them.

Senator GOLDWATER. However, they might dispose of them in a week, or a month, or 6 months?

Mr. BROADGATE. Certainly. It is an individual matter.

Mr. REDWINE. Mr. Chairman, I have no further questions of this witness. Perhaps Mr. Coburn has.

Senator SCOTT. Mr. Coburn, will you identify yourself with the audience and with the committee here?

Mr. COBURN. I am chief counsel of the Senate Subcommittee on Legislative Oversight Function.

Mr. McDaniel, what precisely is the main job of the 50 or 60 men that you referred to who are employed by the A. W. Williams Inspection Co.?

Mr. MCDANIEL. They are timber inspectors who grade telephone and other utility poles—

Mr. COBURN. REA poles, for example?

Mr. MCDANIEL. REA.

Mr. COBURN. They are not directly concerned then with minerals as such except the solicitation of business for your company?

Mr. MCDANIEL. They are not.

Representative JONAS. Mr. Chairman, I apologize for the interruption. Mr. Redwine led this witness right up to the identification of the report number of these latest samples, but he never did have him read into the record the results. Would it not be proper to have that follow before we go into another subject?

Mr. REDWINE. Mr. Chairman, may I suggest that is already in the printed record. We are not contesting this—

Representative JONAS. I think for purposes of comparison with these 1949 and 1953 ones I would like to have them right at this particular point, if it is not objectionable.

Mr. REDWINE. I have no objection.

Senator SCOTT. There is no objection.

Mr. REDWINE. Would you read them in, Mr. McDaniel?

Mr. McDANIEL. Let me have the original copy, because that is somewhat clearer than this photostat.

This is our report No. 431869 under date of December 17, 1953, our order No. 38001. I am reading the sample number and the total value. No. 1, \$1.89. No. 2, \$1.94. No. 3, \$2.03. No. 4, \$1.84. No. 5, \$2.85. No. 6, \$2.15. No. 7, \$1.81. No. 8, \$1.80. No. 9, \$2.14. No. 10, \$1.47. No. 11, \$1.10. No. 12, \$1.76. No. 13, \$0.79. No. 14, \$1.15. No. 15, \$1.46. No. 16, \$1.84. No. 17, \$2.50. No. 18, \$1.08. No. 19, \$1.77. No. 20, \$1.10. No. 21, \$1.84. No. 22, \$2.14. No. 23, \$1.81. No. 24, \$2.14. No. 25, \$1.98. No. 26, \$2.64. No. 27, \$4.65. No. 28, \$3.95.

Senator SCOTT. Suppose we take a 5-minute recess.

(Brief recess.)

Senator SCOTT. The meeting will please come to order.

Mr. COBURN. Mr. McDaniel, you have testified that these 50 or 60 men employed in the field by A. W. Williams Co. are concerned primarily with the inspection of timber, with REA—

Mr. McDANIEL. And for the utilities and foreign governments. Mr. Miller has a partial list of our clients.

Mr. COBURN. Now, Mr. McDaniel, what is the total number of men employed by the A. W. Williams Co.?

Mr. McDANIEL. At the present time the total employees are in the neighborhood of 90.

Mr. COBURN. Of which figure 50 or 60 are out in the field?

Mr. McDANIEL. Fifty or sixty are out in the field. Another between 15 or 20 are typists and clerical help in the main office, and about 15 are various employees in the laboratory section there at Mobile.

Mr. COBURN. How many qualified assayers do you employ?

Mr. McDANIEL. Well, at present we have three on our laboratory staff that we consider capable of handling an assay if one were submitted.

Mr. COBURN. Would that include yourself?

Mr. McDANIEL. That would include myself.

Mr. COBURN. And two others?

Mr. McDANIEL. And two others.

Mr. COBURN. Is one of these Mr. Bailey?

Mr. McDANIEL. No, sir. Mr. Bailey is not employed with our company at the present time.

Mr. COBURN. He was at one time?

Mr. McDANIEL. He was at one time, but at the time of his employment Mr. Bailey was not considered capable of handling an assay. He was just the laboratory manager and handled clerical details.

Mr. COBURN. That was in 1949?

Mr. McDANIEL. Yes, sir.

Mr. COBURN. And those 1949 samples were submitted to your company at that time?

Mr. McDANIEL. Yes, sir.

Mr. COBURN. You had a conference with the McDonalds as to how you should go about assaying these ores, what formula you should use?

Mr. McDANIEL. Yes, sir. We did have a formula. We accepted that as just the exchange of technical information that would save us a number of preliminary assays in determining the proper flux to use with the ores.

Mr. COBURN. But the formula was suggested by the McDonalds to you, is that correct?

Mr. McDANIEL. In the main, yes, but we checked it against the material.

Mr. COBURN. That is all right, Mr. McDANIEL.

Mr. McDANIEL. And Scott and Treadwell Hall, which are standard reference books. There appeared to be no major variations, from what they suggested.

Mr. COBURN. Would you say that the bulk of the business of the A. W. Williams Co. is in inspection of certain nonmineral items, such as poles and timber, or would you say that the bulk of the work is in assaying?

Mr. McDANIEL. The bulk of the timber division. The bulk of the laboratory division is an analysis; assaying of precious metals is a very minor part of our business.

Mr. COBURN. Assaying of precious metals is a very minor part of your business?

Mr. McDANIEL. Yes, sir.

Mr. COBURN. Had you done any assaying of precious metals prior to the time the McDonalds approached you?

Mr. McDANIEL. Not at the company.

Mr. COBURN. I mean the A. W. Williams Co.

Mr. McDANIEL. To my personal knowledge, they haven't. I was not employed by them until 1948. They may have done that because at that time, when we started looking around through our lab stores, I found several crucibles similar to those used in assaying, which may have been used by a previous chemist.

Mr. COBURN. Let me preface this by saying that in 1949, to identify it in your mind, when you entered into these conferences with the McDonalds concerning the formula you would use, did the A. W. Williams Inspection Co. at that time have a complete gold and silver assaying setup as to equipment?

Mr. McDANIEL. Well, no. They did not have equipment similar to the large assayers in the West, but we had equipment that we felt was suitable for that purpose.

Mr. COBURN. Did you have to purchase any additional equipment?

Mr. McDANIEL. No, sir. We did not purchase any additional equipment.

Mr. COBURN. Did you have any cupels?

Mr. McDANIEL. We purchased cupels.

Mr. COBURN. You purchased cupels. Could you assay gold and silver without cupels?

Senator SCOTT. Senator Goldwater.

Senator GOLDWATER. I think it might be helpful, in view of counsel's questioning, to put in the record at this point a bulletin from the American Council of Independent Laboratories which rates the various laboratories.

By the way, it shows Williams as being one of the most complete in the country.

I am not a member of the subcommittee. I am a member of the whole committee but, if permitted to, I would like to submit this for the record.

Mr. COBURN. What is the date?

Senator GOLDWATER. August 1955.

Senator SCOTT. We are planning to put such a document into the record but not at this time, Senator.

Senator GOLDWATER. You do intend to put one in?

Senator SCOTT. Yes.

Senator GOLDWATER. I will send this to the chairman for inclusion in case the other does not get in.

Mr. COBURN. I am referring to 1949, at the time of the conference between A. W. Williams Co. and the McDonalds. At that time have you not testified that it was necessary to purchase at least some equipment; i. e., cupels?

Mr. McDANIEL. Well, in the laboratory, a matter of laboratory equipment, we have two types, like most of the equipment. There is one thing which we class as equipment which is material, like furnaces, and so forth.

Mr. COBURN. If I may interrupt, I am convinced that you have adequate equipment. I am sure of that, because it has been demonstrated by the evidence attempted to be put in by Senator Goldwater. I am talking about 1949.

Mr. McDANIEL. A matter of crucibles, and cupels, and so forth, we considered as expendable laboratory supplies. If we get a job requiring that expendable material and reagent chemicals, we purchase what we need to do the job.

Mr. COBURN. Apparently you had not purchased any up to this time in 1949?

Mr. McDANIEL. I will say that there were no cupels in our lab stock at that time.

Senator SCOTT. In other words, at that point they were not in the business in a noticeable amount, not in that type of business?

Mr. McDANIEL. I might state this in regard to the complete company policy on samples of any kind: That a prospective client brings in his sample. We discuss the type of analysis. We check into that. We determine various phases. We find out our estimated cost. We submit a price to the client. Then, if he wants to give us the sample, we will take it and analyze it.

Senator SCOTT. You have not quite answered my question there. I do not know whether I made it clear to you or not.

Mr. McDANIEL. In the case of these samples here, when our fixed equipment at the laboratory there was thought to be suitable to do that, we went ahead and purchased crucibles and cupels and various other reagents to do this work.

Senator SCOTT. That answers it.

Mr. COBURN. Mr. McDANIEL.

Senator GOLDWATER. Before the counsel proceeds, I would like to clear up a point on a question that is in my mind. I will ask the witness: Is the assaying of gold and silver such a difficult task that it would require a specialist in gold and silver to assay it?

Mr. McDANIEL. No, sir.

Senator GOLDWATER. Any competent assayer has to know how to assay gold and silver?

Mr. McDANIEL. Any competent chemist should be able to assay gold and silver after making a few tests to determine the type of flux to use in the primary fusion of those ores.

Mr. COBURN. Provided, of course, he had the necessary equipment.

Mr. McDANIEL. With equipment suitable. You can make that first fusion in a blacksmith's forge, just so you have something that will develop enough heat to melt the sample.

Mr. COBURN. Getting to this Mississippi case, Mr. McDaniel, as referred to, and correct me if I am wrong, it seems to me that you testified that you and Mr. McDonald entered into some kind of a joint venture seeking nickel; is that correct?

Mr. McDANIEL. That is correct.

Mr. COBURN. You went to some well and took some underground samples, is that correct?

Mr. McDANIEL. We took material that this well driller reported to us as—

Mr. COBURN. Containing mineral?

Mr. McDANIEL. No, as obtained at various depths at that well.

Mr. COBURN. Now, to whom did you take the samples for assaying?

Mr. McDANIEL. Well, we did not take the samples to anyone else for assaying.

Mr. COBURN. Who did the assaying?

Mr. McDANIEL. I did the testing on that. I was not working for Williams Inspection Co. at that time, the officials of the Mobile Pulley Works allowed me to use their laboratory in making my test.

Mr. COBURN. But you did not take the samples to the A. W. Williams Co.?

Mr. McDANIEL. No, this was something that was strictly between myself and Charles McDonald. I was not working for them and I was thinking that the two of us had the right for me to test them or anything else since this was just merely a prospecting trip and we wanted to see if we had anything.

Mr. COBURN. Yet the McDonalds had been in the habit of doing business with Williams Inspection Co. for a period of years, had they not?

Mr. McDANIEL. Well, at least we ran that sample, that series of samples in 1949 at Williams Inspection Co. for the McDonalds.

Mr. COBURN. Had they, the McDonalds, done any business with the A. W. Williams Co. prior to 1949?

Mr. McDANIEL. I do not think so. I have never made a complete check.

Mr. COBURN. Is your answer that you do not know?

Mr. McDANIEL. I don't know.

Mr. COBURN. All right.

Now getting to the samples, these assay reports that were read into the record, including the 1949 and 1953 reports, do you have any way of telling the committee now from which claims, that is either the 8 uncontested claims or the 15 contested claims, these samples came, beginning in 1949?

Mr. McDANIEL. No, sir; I do not.

**Mr. COBURN.** You cannot tell then, either as to the 1953 or 1949 samples. How about the 1953 samples?

**Mr. McDANIEL.** On my record on these reports in 1949, there is some identification as to the claims that they would come from. That was identification furnished by the McDonalds to us.

And on the 1953 series, I do not think there was any specific identification.

**Mr. COBURN.** So that you do not know as to the 1953 samples exactly what claims they came from?

**Mr. McDANIEL.** I do not.

**Mr. COBURN.** That is all.

**Senator SCOTT.** Senator Neuberger?

**Senator NEUBERGER.** I have nothing at the moment, **Mr. Chairman.**

**Senator SCOTT.** Is there anything further?

**Senator GOLDWATER.** I had one question that I think would be interesting to develop at this point.

In averaging up the assays on the 28 samples that you reported—and my arithmetic certainly is open to question because I have never been too good—it comes to about \$2.068 or \$2.069. Do you know enough about the economics of mining to tell us whether or not that would cause a prudent man to get into a mine that averages that per ton?

**Mr. McDANIEL.** It has been a number of years since I have studied economic geology but, to the best of my recollection, the ores mined at the famous Homestake mine at Lead, S. Dak., only averaged around \$1.90 a ton.

**Senator GOLDWATER.** I would like to take advantage of **Mr. Broadgate** being here. He has, I think, a knowledge of this.

**Mr. Broadgate,** from your knowledge of gold mining in the West, would you say that an assay of \$2 or \$2 plus a ton would cause a prudent man or investor to go into the gold mine operation?

**Mr. REDWINE.** Let me interrupt, **Senator Goldwater.**

May we have **Mr. Broadgate** identified for the record, please?

#### **STATEMENT OF BILL BROADGATE, METALS AND MINERALS CONSULTANT TO SENATOR MURRAY, OF MONTANA**

**Mr. BROADGATE.** My name is Bill Broadgate. I am metals and minerals consultant to Senator Murray, of Montana.

That question is a little bit like asking how old is Ann. Whether a given value of ore is commercial or not depends entirely on the size and the location of the mine and the economics surrounding the operation. What you could mine in Alaska, Juneau, or at Homestake on a vast tonnage scale and what you could mine at some small general vein property are two different things.

I doubt very much, and this is an opinion for what it is worth, that in that particular area any ore could be mined commercially with as low values as you have indicated.

**Senator GOLDWATER.** That is only a doubt in your mind.

I understand perfectly that you do not know the properties, and I will not ask you to go further in this, but I do think it is a question that has to be answered, **Mr. Chairman,** as to whether or not a value of \$2 a ton gold and silver would cause a man to go into a mining operation.

I do not mind telling the committee that I have been in mining operations that assay lower than \$2 a ton. Some have been profitable and some unprofitable, but in my limited knowledge of the economics of mining in my own State, \$2 a ton is a figure that will cause many men to put their time and money into a mine, and I think that it would certainly give the Secretary of the Interior and the Bureau of Land Management cause to consider the claim valid.

Mr. Chairman, in that regard, I think this is a very good time to introduce a compilation entitled "The Rule as to What Constitutes a Valid Discovery of Minerals Sufficient To Support a Mining Location."

I would like to suggest that that would be interesting at this point. It is a compilation of the law and citations used in determining the question that we are on today.

Senator SCOTT. By whom is this prepared?

Senator GOLDWATER. I believe it is prepared by the Solicitor's department of the Department of the Interior.

Senator SCOTT. I suggest, Senator, that that come along with the Solicitor's testimony.

Senator GOLDWATER. I see no reason not to admit it here.

Senator SCOTT. I do.

Senator GOLDWATER. Certainly there are points of law and counsel can check these.

Senator SCOTT. Just hold it back.

Representative HOFFMAN. I will offer it in evidence.

Senator SCOTT. You are out of order.

Representative HOFFMAN. Offering it in evidence is out of order?

Senator SCOTT. Yes, sir.

Representative HOFFMAN. That is a strange situation when you make an offer of testimony. I have never heard of a thing such as that.

Senator SCOTT. It has already been ruled on.

Representative HOFFMAN. Just a minute. I take an appeal on that ruling and call for a record vote.

Let us see how far you want to go on that.

Senator SCOTT. It will be put into the record at the time the Solicitor testifies.

Representative HOFFMAN. I am offering it now. This committee has established the rule of accepting newspaper articles and editorials. It did it in the power hearings and has done it in these hearings. I see no reason why, when the Senator offers it, it should not be admitted.

Under the rules of the Senate committee, as I understand it, he is entitled to participate in the hearings of any subcommittee.

I offer it. There it is.

Representative CHUDOFF. Mr. Chairman, I would like to know what is being offered. It is quite long. Would the Senator tell us what you are trying to get into the record?

Senator GOLDWATER. It is the compilation of citations and of law and rulings pertaining to the subject we are talking about, what constitutes the valid law for the issuance of claim.

Representative CHUDOFF. May I ask the Senator who prepared it and who determines whether this rule is a valid discovery?

Senator GOLDWATER. It was prepared by the Department of the Interior. They are the ones that have to determine these things. I imagine that they use that in the determination.

Representative CHUDOFF. Do you know when it was prepared, Senator?

Senator GOLDWATER. No, I have no idea when it was prepared.

Representative CHUDOFF. I want to say to you that I certainly think that the proper time to offer this, if this is the rule of the present administration, is when the Solicitor or the Secretary or Under Secretary testifies.

Senator GOLDWATER. That is not the rule of the present administration. That goes back to 1879. Read it.

Representative CHUDOFF. I will be happy to read it at my leisure when I can study it. I do not want to read it now.

Do you want to wait while I read it?

Senator GOLDWATER. It is obvious that the majority of this committee does not want to treat this fairly.

Representative CHUDOFF. I think the fair way to do it is to wait until the witness who is qualified to identify it is testifying. It is a carbon copy of something that somebody made.

Senator GOLDWATER. Some corporation made.

Representative CHUDOFF. That somebody made.

Senator GOLDWATER. I told you that the Department of the Interior made it.

Representative CHUDOFF. Why can we not have somebody set forth the law from the Department of Interior?

Senator GOLDWATER. It was offered by myself as a Senator who is a member of the Senate Interior Committee. It was offered by Congressman Hoffman.

Representative CHUDOFF. I have no right to rule. Senator Scott is chairman. If we have a vote on this, I want to know how to vote.

Senator GOLDWATER. This will be helpful to you.

There are cases there that go to the beginning of the mining law.

Representative CHUDOFF. It appears to be a brief. I will be happy to study it at a later time.

Senator GOLDWATER. It would be an excellent thing to study it now and put it in the record.

Representative CHUDOFF. I think that as a matter of law it can only be offered by the man who prepared it.

Senator GOLDWATER. Now, what kind of a decision is that? You know better than that.

Representative CHUDOFF. There is nothing here that certifies that this is the rule set forth by the Interior Department. It is just a carbon copy of a brief that somebody prepared.

Representative HOFFMAN. Senator, in view of promoting harmony, I have been kicked around by this committee for something like 60 days, and I do not mind.

Senator GOLDWATER. I do not mind either. I have been kicked around ever since the majority party has started these rather obvious political investigations. The Republicans have been kicked around.

I want to see the truth brought out. I am willing to wait.

Representative HOFFMAN. We will suffer in silence.

Senator GOLDWATER. Not in silence.

Senator SCOTT. Let us have order.

Representative HOFFMAN. Do I not have the floor?

Senator SCOTT. No, sir.

Representative HOFFMAN. I wanted to put in this charge that you made of all this skullduggery and the one you made to the press.

Senator SCOTT. I would like to say that one of the troubles heretofore has been that we put in some of these things piecemeal, and we are trying to bring some coherence, if we are allowed to do so, into this. The time for this to come is when you have the witness who is to testify on this thing and who prepared this.

If it is dated in 1700 B. C., if you want to do it, that is all right.

Senator NEUBERGER. It is not dated at all.

Senator SCOTT. It is not dated at all.

Senator NEUBERGER. There is no identification. It is not signed.

Senator GOLDWATER. The Senator can only take it that you doubt the Senator's honesty.

Senator SCOTT. That is not it at all.

Senator GOLDWATER. I do not know how you put the question of a man's honesty.

Senator SCOTT. How do I put it?

Senator GOLDWATER. Yes.

Senator SCOTT. I say let us bring this out in some order, not piecemeal and taking it out of context. This thing will be heard when the man who handed this to you is here. We have not read it yet.

I think that every committee member, if it goes into the record, ought to read it. We will take the time. I will take the time to get everything in, but let us put them in together and a little more in order.

Senator GOLDWATER. As I said before, the Senator is perfectly willing to wait until the proper witness comes, but I take it as a personal inference against my honesty that you doubt the honesty of that paper.

You say there is no date. I do not know for how long it has been that Senators cannot submit evidence for the record. I have never heard a Senator's evidence questioned before.

Representative HOFFMAN. You follow this committee and you will learn a lot of new things.

Senator GOLDWATER. I am sorry that I was not here earlier.

Representative CHUDOFF. Stay around. We are glad to have you.

Mr. REDWINE. May I point out for the committee that the figures that Senator Goldwater submitted as a basis for questioning Mr. Broadgate are based on the last assay made by the A. W. Williams Co., which is entirely contrary to the assay reports made to the instrumentality of the Bureau of Land Management and the Forest Service.

The question which should have been put to Mr. Broadgate should have been double-barreled, whether this composite figure of \$2.06 a ton would lead a prudent man to try to operate the property or whether the composite figure of a broad 87 cents a ton, as shown in the other assay reports, would determine it.

That is the crux of the whole thing under discussion here, if I may say so, Mr. Chairman.

Senator SCOTT. Congressman Chudoff, do you have anything further?

Representative CHUDOFF. I would like to yield to counsel for the subcommittee, Mr. Lanigan.

Mr. LANIGAN. (counsel, House Subcommittee on Public Works and Resources). I have just a couple of questions.

Did you personally do the assaying on the 1949 and 1953 reports that were read?

Mr. McDANIEL. On the 1949 reports, I personally did the assaying.

On the 1953 reports, I personally did the weighing of the original pulp sample and the weighing of the final button, and the parting of the gold and silver; I recall that much.

Some of the other time-consuming parts of it, like the cupellation and watching the furnace during the initial fusions, I may have turned over to assistants in the laboratory.

Mr. LANIGAN. And was that true of both the earlier and the late 1953 samples?

Mr. McDANIEL. That is true.

Mr. LANIGAN. You say you have three men in your company who you believe are qualified to do assay work. Are you one of the three?

Mr. McDANIEL. I am one of the three.

Mr. LANIGAN. There are two others?

Mr. McDANIEL. There are two others.

Mr. LANIGAN. Do they have in the State of Alabama any license for assayers?

Mr. McDANIEL. To my knowledge, no; that is, if I may qualify this, if it is a person who confines his entire business to the assaying of gold and silver ores, there are none, but there are several commercial testing laboratories similar to ours that will handle an occasional assay when ore is submitted.

Mr. LANIGAN. But you have no license from the State to do assaying because perhaps that is not required in Alabama. I do not know.

Do you have a license from the State?

Mr. McDANIEL. Not an assay license.

Mr. LANIGAN. Do you know whether or not the State of Alabama issues assay licenses?

Mr. McDANIEL. As far as I know, the State of Alabama does not issue assay licenses.

Mr. LANIGAN. Now, when these envelopes came in the latter part of 1953, you said you received 28 samples. As I recall, each sample was in 2 envelopes; is that correct?

Mr. McDANIEL. That is correct.

Mr. LANIGAN. How were the envelopes attached together?

Mr. McDANIEL. The two envelopes were tied together in a single package with a string.

Mr. LANIGAN. Was there any identification on each envelope?

Mr. McDANIEL. Yes, sir. There were metal tags on each envelope.

Mr. LANIGAN. What did the identification show?

Mr. McDANIEL. Only the sample number.

Mr. LANIGAN. Just the sample number. It did not show or purport to show from which mine it came, or otherwise identify the material; is that correct?

Mr. McDANIEL. No other identification except the sample number.

Mr. LANIGAN. And you assayed the material in the envelopes by the sample number?

Mr. McDANIEL. By the sample number.

Mr. LANIGAN. Now, did the package in which the envelopes came to you indicate who had sent them to you?

Mr. McDANIEL. I don't remember any details as to the marking on it, but, to my best recollection, they were shipped by D. Ford McCormick.

Mr. LANIGAN. At that time did you know that the Bureau of Mines was interested in the samples?

Mr. McDANIEL. I was later informed that they were.

Mr. LANIGAN. When were you so informed?

Mr. McDANIEL. After Charles and Herbert McDonald returned from Oregon after these samples were taken, they told me that the samples were taken by D. Ford McCormick, representing them, and the Bureau of Mines representative.

Mr. LANIGAN. Was that before or after the assay reports had been made?

Mr. McDANIEL. That was after the assay reports had been made.

Mr. LANIGAN. That is all.

Mr. REDWINE. Mr. McDaniel, an assay scale is a very delicate instrument, is it not?

Mr. McDANIEL. It is.

Mr. REDWINE. Now, a gold assay weight and a silver assay weight are different, are they not?

Mr. McDANIEL. No; the same weights would be used.

Mr. REDWINE. Does not a silver assay weight weigh one gram and a gold assay weight weigh one-half gram? Is that not practice in assay houses, sir, to work your computations out?

Mr. McDANIEL. Well, it would be a heck of a rich ore if it required weights of one gram and one-half gram to weigh the buttons.

Mr. REDWINE. How do you weigh it then? What weights do you use?

Mr. McDANIEL. Well, an ore of \$35 a ton gold value, now the button only has a weight of 1 milligram. A milligram is one-thousandth of a gram. A gram is  $\frac{1}{454}$  of a pound.

Mr. REDWINE. Mr. McDaniel, are you familiar with the Sampling and Assay of the Precious Metals by E. A. Smith?

Mr. McDANIEL. I am not.

Mr. REDWINE. I would like to say for the record at this point that the Library of Congress has informed the staff that it is the bible for assaying.

Representative HOFFMAN. I want to object, Mr. Chairman, unless we have the gentleman from the Library of Congress who will tell us about it and testify as to the accuracy of the information he is about to give us. That is in line again with the ruling when the Senator offered the statement a moment ago from the Department of the Interior.

Mr. REDWINE. Smith says, in the Sampling and Assay of the Precious Metals:

#### ASSAY WEIGHTS

In assaying silver and gold bullion, a special decimal series of weights may be employed in which the unit for silver assay weights is one gramme, which is stamped "1000", and for gold assay weight is  $\frac{1}{2}$  gramme, which also is stamped "1000". The decimal subsidiary weights are stamped as follows: \* \* \*

Then he goes on to say that you must use the utmost care in using these weights because one is twice as heavy as the other.

I wonder if in the early experience in assays of the Williams Co. they used one weight instead of the other, because they are about

double in their value. That is why I asked about the type of weights which you used.

Mr. McDANIEL. We used our regular laboratory weights, which we checked against the standard weights of which we have certificates from the United States Bureau of Standards at frequent intervals.

Senator GOLDWATER. Might I ask, Mr. Redwine, when that book was published?

Mr. REDWINE. 1946. This is the second edition, however, Senator.

Senator GOLDWATER. When was it first published?

Mr. REDWINE. 1851, I believe. That is my recollection. Yes, 1851.

Senator GOLDWATER. And did the author use the word "may"?

Mr. REDWINE. Yes, sir.

Senator GOLDWATER. He did not use the word "shall"?

Mr. REDWINE. No.

Senator SCOTT. Senator Neuberger?

Senator NEUBERGER. Mr. Chairman, just in fairness to the Chair, and I do not think that this was brought out in the confusion earlier, I think that, before we recess for lunch, it should be made part of the record that the carbon copy of the typewritten statement submitted by the distinguished Senator from Arizona, a nine-page statement under the title "The Rule As To What Constitutes a Valid Discovery of Mineral Sufficient To Support a Mining Location," does not contain on it any identification as to which Government department it is from, as to what official of the department wrote it, or as to what date it was prepared.

I think that that should be on the record because I think that is very pertinent to the chairman's ruling.

This is a paper which purports to give legal information about some very technical points with respect to supporting patents for mining claims, and there is no identification whatsoever as to its author, the date of its authorship, or the authority behind it.

I do think that that should be on the record.

Senator GOLDWATER. It is certainly all right with the Senator from Arizona that anything the Senator from Oregon wants to put on the record ought to go on. I think that that privilege has been extended to Senators. I have already said that I will abide by the ruling of the Chair and await the testimony of the Solicitor to present this document which I have been later informed was prepared by Mr. Bradshaw, who has been long associated with the Mining Division of the Department of the Interior.

Senator SCOTT. At this time I want to recognize the Congressmen who are with us. I think that most of you know them.

Congressman Jonas from North Carolina, from my State, will you stand, please, just to be recognized.

Congressman Minshall from Ohio.

Representative HOFFMAN. That is where the presidents come from.

Senator SCOTT. And gold, too. Is that what you said?

We have Congressman Moss from California and Congressman Hoffman.

Will you stand again, Mr. Hoffman?

Representative HOFFMAN. I will be around. Do not worry.

Senator SCOTT. I know that. We have Congressman Chudoff, the chairman of the House subcommittee.

It is now 5 minutes past 12 o'clock.

Without objection, suppose we meet back here, if it is agreeable, at 5 minutes past 2.

Are there any further questions of this witness?

Representative HOFFMAN. Yes; certainly.

Senator SCOTT. He will be back here this afternoon.

Representative HOFFMAN. Three counsel have interrogated him this morning and we have not gotten to the Congressmen.

Senator SCOTT. We will be in recess until 5 minutes after 2 o'clock this afternoon.

(Whereupon, at 12:05 p. m., the hearing was recessed, to reconvene at 2:05 p. m. of the same day.)

#### AFTERNOON SESSION

Senator SCOTT. The meeting will please come to order.

We are honored by having an additional Congressman here this evening.

Mr. Jones, will you sit with us.

I will ask Mr. Coburn if he will go ahead with the witness.

Mr. COBURN. Mr. Chairman, I have no further questions. I understood that some of the Congressmen had questions to ask.

Congressman Chudoff has questions to ask.

Senator SCOTT. Do any of the Congressmen have questions to ask of the witness?

Representative CHUDOFF. Congressman Jonas has some questions.

Representative JONAS. I have one or two questions.

#### TESTIMONY OF J. A. McDANIEL, ASSAYER, A. W. WILLIAMS CO.—

##### Resumed

Representative JONAS. Mr. McDaniel, I understood this morning that the samples you assayed in 1949 amounted to 26, and that the latest group contained 28 samples? How many were in the second group?

Mr. McDANIEL. To my best recollection, 46 samples.

Representative JONAS. In that report of November 18, 1949, based upon your examination of 26 samples, you found that the returns ranged from \$2.25 per ton to 90 cents per ton. Is that a wide range for this sort of sampling, do you know out of your experience?

Mr. McDANIEL. Well, I have personally seen some low-grade ore deposits in East Alabama where at one spot there were probably \$5 worth of mineral per ton in ore, and at a spot a foot away from that it would only be country rock and it would be absolutely valueless.

Representative JONAS. The fact that in that 1949 batch of samples you found the returns would range from \$2.25 down to 90 cents would indicate that the mineralization was not consistent throughout the entire area, and that certain spots were more rich in minerals than others?

Mr. McDANIEL. That is what the report would indicate.

Representative JONAS. That was apparent from your last sampling, was it not, when the range was from \$4.85 down to 79 cents?

Mr. McDANIEL. It does.

Representative JONAS. Would I be safe in assuming then that if another batch of samples were taken, the result would depend upon

where they get the samples, from some of the lower yield areas or from some of the higher yield areas? Is that not true?

Mr. McDANIEL. Yes, that would be true.

Representative JONAS. You said this morning that some of the samples in the last group were less than 2 tons. How far below 2 did those that did not come up to 2 tons run?

Mr. McDANIEL. To my best recollection, all of the samples that did not come up to a total of 2 assay-tons came up to  $1\frac{3}{4}$  assay-tons or more. It would be between  $1\frac{3}{4}$  and 2 assay-tons.

Representative JONAS. Will you please turn to that folder you had in your hand and explain to the committee something about the organization to which the Williams Co. belongs. What is that organization? Is it a trade association, or what is it?

Mr. McDANIEL. Yes, sir. It is somewhat of a trade association. My immediate supervisor, Mr. Morris Miller, is present here. He is a member of some of the committees of this organization and I feel that he can explain.

Representative JONAS. Will he know more about that than you?

Mr. McDANIEL. He would know more about that organization than I do.

Representative JONAS. You are more of a technical man engaged in engineering and chemical analysis work, and you do not run the company?

Mr. McDANIEL. I do not run the company. My job there is running the chemical laboratory and the metallurgical section. I help get work, solicit work, and my job is after the samples get in or we get various jobs. My job is getting the work out and into the reports.

Representative HOFFMAN. Mr. Chairman, will you yield?

Is the gentleman referred to here in the room? May we have him as a witness, Mr. Chairman.

Senator SCOTT. Mr. Miller is to be called.

Representative JONAS. He is to be called.

Mr. McDANIEL, will you be seated, please, sir?

As you look back over the work you did in 1953 in assaying these samples, do you have any reason now even in retrospect to think that you failed to give a good, complete and accurate analysis of the samples that were submitted to you?

Mr. McDANIEL. No, sir; I do not. I gave an accurate assay of the samples as submitted to me.

Representative JONAS. And you personally supervised all of the work that went into the assay?

Mr. McDANIEL. Yes, sir. I either personally did the work or supervised it.

Representative JONAS. Did you give a complete and full analysis or did you bypass any steps? Do you think the work was complete in every respect and that the results you submitted were accurate?

Mr. McDANIEL. Yes, I do.

Representative JONAS. And you are willing to assume the responsibility out of your experience as a chemical engineer and out of the other experience you have had in this field of saying that those analyses you made in December of 1953 were correct and the results correctly reflect what you found from the samples as submitted to you?

Mr. McDANIEL. I do.

Representative JONAS. That is all.

Representative CHUDOFF. Do you have any questions, Mr. Hoffman?  
Representative HOFFMAN. Yes.

Counsel, I think, used your name and that of one of the McDonalds in connection with the term "joint venture".

Were you ever in any joint venture with any of the McDonalds, and, if so, what was it?

Mr. McDANIEL. Yes. I went up into Mississippi on a prospecting trip with them.

Representative HOFFMAN. That was that nickel business?

Mr. McDANIEL. That was that nickel business.

Representative HOFFMAN. How were you hooked up with McDonalds in that?

Mr. McDANIEL. We went up there with this understanding.

Representative HOFFMAN. With what?

Mr. McDANIEL. We made that trip with this understanding: that if we found anything that was worth developing, I would have an interest in it.

Representative HOFFMAN. You might go into it.

Mr. McDANIEL. We might go into it.

Representative HOFFMAN. You found that, in your opinion, it was not worth anything?

Mr. McDANIEL. What we found on that trip was not worth anything.

Representative HOFFMAN. So you did not go into it.

Mr. McDANIEL. We haven't gone into it any further.

Representative HOFFMAN. You just dropped it right there. Did you make any money? Did you lose any money?

Mr. McDANIEL. We spent about \$25 or \$30 expenses.

Representative HOFFMAN. How much?

Mr. McDANIEL. About \$25 or \$30.

Representative HOFFMAN. That was your expense for going up there?

Mr. McDANIEL. That was both of us.

Representative HOFFMAN. You had a good time, did you not?

Mr. McDANIEL. We got a lot of exercise.

Representative HOFFMAN. You got experience and saw the country?

Mr. McDANIEL. We saw the country.

Representative HOFFMAN. Was that the extent of what counsel refers to as a joint venture?

Mr. McDANIEL. Yes.

Representative HOFFMAN. Now, did you ever do any work for GSA?

Mr. McDANIEL. I do.

Representative HOFFMAN. What did you do for them?

Mr. McDANIEL. Well, I handled various analyses. I have analyzed some bauxite.

Representative HOFFMAN. More than once?

Mr. McDANIEL. Well, our company held a contract for sampling and analysis of bauxite for about 18 months at 1 time.

Representative HOFFMAN. Were you connected with the Williams Co. at that time?

Mr. McDANIEL. With the Williams Inspection Co.?

Representative HOFFMAN. Yes.

Mr. McDANIEL. Yes.

Representative HOFFMAN. You were working for them and did this work under a contract that they had with GSA?

Mr. McDANIEL. That is correct.

Representative HOFFMAN. After this contract expired, GSA was satisfied enough so that they hired you again?

Mr. McDANIEL. That is, after the first contract, which ran for 6 months, expired they extended the contract. We got another contract for another year.

Representative HOFFMAN. They did not do any complaining about your work, did they?

Mr. McDANIEL. We did not receive a single complaint.

Representative HOFFMAN. What?

Mr. McDANIEL. The company did not receive any complaints regarding our work during that period.

Representative HOFFMAN. How many times has Williams Co., while you were associated with them, worked for GSA?

Mr. McDANIEL. Offhand, Congressman Hoffman, I can't say how many times.

Representative HOFFMAN. How many?

Mr. McDANIEL. Offhand, I can't say, but I know of a half dozen occasions when we have received paint samples, and then we have these bauxite contracts.

Representative HOFFMAN. Are you doing any business, making any tests, for GSA at the present time under some subcontract?

Mr. McDANIEL. We are not making any chemical analyses. We are sampling bauxite under a subcontract for GSA.

Representative HOFFMAN. That is to say, your reputation is still good enough with GSA so that they are still hiring you?

Mr. McDANIEL. Yes.

Representative HOFFMAN. Have you done anything for any of the large aluminum companies?

Mr. McDANIEL. For 4 years our laboratory sampled bauxite for Reynolds Aluminum Co., Reynolds Metals Co.

Representative HOFFMAN. What kind of a company is that as to size?

Mr. McDANIEL. Well, I would say in the aluminum industry the company is next in size to the Aluminum Company of America.

Representative HOFFMAN. I do not know anything about that, so that I still do not know how big it is. Is it one of the larger ones or medium?

Mr. McDANIEL. It is one of the larger ones.

Representative HOFFMAN. Was the service which you have rendered for the Reynolds Co. satisfactory?

Mr. McDANIEL. It was.

Representative HOFFMAN. How long did your experience cover with them? Did you say?

Mr. McDANIEL. Approximately 4 years.

Representative HOFFMAN. Have you ever at any time had any reason from GSA to believe that your services were not satisfactory to them?

Mr. McDANIEL. No, I have not.

Representative HOFFMAN. I think that is all I have from this witness.

Representative CHUDOFF. Mr. Minshall, do you have questions?

Representative CHUDOFF. Do you have any questions, Mr. Hoffman?  
Representative HOFFMAN. Yes.

Counsel, I think, used your name and that of one of the McDonalds in connection with the term "joint venture".

Were you ever in any joint venture with any of the McDonalds, and, if so, what was it?

Mr. McDANIEL. Yes. I went up into Mississippi on a prospecting trip with them.

Representative HOFFMAN. That was that nickel business?

Mr. McDANIEL. That was that nickel business.

Representative HOFFMAN. How were you hooked up with McDonalds in that?

Mr. McDANIEL. We went up there with this understanding.

Representative HOFFMAN. With what?

Mr. McDANIEL. We made that trip with this understanding: that if we found anything that was worth developing, I would have an interest in it.

Representative HOFFMAN. You might go into it.

Mr. McDANIEL. We might go into it.

Representative HOFFMAN. You found that, in your opinion, it was not worth anything?

Mr. McDANIEL. What we found on that trip was not worth anything.

Representative HOFFMAN. So you did not go into it.

Mr. McDANIEL. We haven't gone into it any further.

Representative HOFFMAN. You just dropped it right there. Did you make any money? Did you lose any money?

Mr. McDANIEL. We spent about \$25 or \$30 expenses.

Representative HOFFMAN. How much?

Mr. McDANIEL. About \$25 or \$30.

Representative HOFFMAN. That was your expense for going up there?

Mr. McDANIEL. That was both of us.

Representative HOFFMAN. You had a good time, did you not?

Mr. McDANIEL. We got a lot of exercise.

Representative HOFFMAN. You got experience and saw the country?

Mr. McDANIEL. We saw the country.

Representative HOFFMAN. Was that the extent of what counsel refers to as a joint venture?

Mr. McDANIEL. Yes.

Representative HOFFMAN. Now, did you ever do any work for GSA?

Mr. McDANIEL. I do.

Representative HOFFMAN. What did you do for them?

Mr. McDANIEL. Well, I handled various analyses. I have analyzed some bauxite.

Representative HOFFMAN. More than once?

Mr. McDANIEL. Well, our company held a contract for sampling and analysis of bauxite for about 18 months at 1 time.

Representative HOFFMAN. Were you connected with the Williams Co. at that time?

Mr. McDANIEL. With the Williams Inspection Co.?

Representative HOFFMAN. Yes.

Mr. McDANIEL. Yes.

Representative HOFFMAN. You were working for them and did this work under a contract that they had with GSA?

Mr. McDANIEL. That is correct.

Representative HOFFMAN. After this contract expired, GSA was satisfied enough so that they hired you again?

Mr. McDANIEL. That is, after the first contract, which ran for 6 months, expired they extended the contract. We got another contract for another year.

Representative HOFFMAN. They did not do any complaining about your work, did they?

Mr. McDANIEL. We did not receive a single complaint.

Representative HOFFMAN. What?

Mr. McDANIEL. The company did not receive any complaints regarding our work during that period.

Representative HOFFMAN. How many times has Williams Co., while you were associated with them, worked for GSA?

Mr. McDANIEL. Offhand, Congressman Hoffman, I can't say how many times.

Representative HOFFMAN. How many?

Mr. McDANIEL. Offhand, I can't say, but I know of a half dozen occasions when we have received paint samples, and then we have these bauxite contracts.

Representative HOFFMAN. Are you doing any business, making any tests, for GSA at the present time under some subcontract?

Mr. McDANIEL. We are not making any chemical analyses. We are sampling bauxite under a subcontract for GSA.

Representative HOFFMAN. That is to say, your reputation is still good enough with GSA so that they are still hiring you?

Mr. McDANIEL. Yes.

Representative HOFFMAN. Have you done anything for any of the large aluminum companies?

Mr. McDANIEL. For 4 years our laboratory sampled bauxite for Reynolds Aluminum Co., Reynolds Metals Co.

Representative HOFFMAN. What kind of a company is that as to size?

Mr. McDANIEL. Well, I would say in the aluminum industry the company is next in size to the Aluminum Company of America.

Representative HOFFMAN. I do not know anything about that, so that I still do not know how big it is. Is it one of the larger ones or medium?

Mr. McDANIEL. It is one of the larger ones.

Representative HOFFMAN. Was the service which you have rendered for the Reynolds Co. satisfactory?

Mr. McDANIEL. It was.

Representative HOFFMAN. How long did your experience cover with them? Did you say?

Mr. McDANIEL. Approximately 4 years.

Representative HOFFMAN. Have you ever at any time had any reason from GSA to believe that your services were not satisfactory to them?

Mr. McDANIEL. No, I have not.

Representative HOFFMAN. I think that is all I have from this witness.

Representative CHUDOFF. Mr. Minshall, do you have questions?

Representative MINSHALL. I have no questions at this time.

Representative CHUDOFF. Mr. Jones?

Representative JONES. I have no questions.

Representative CHUDOFF. I have no further questions. There are no questions from Members of the House at this time, Mr. Chairman.

Mr. REDWINE. Mr. Chairman, it had been intended by the staff that this letter be read into the record in connection with the testimony of another witness. In view of the fact that this witness has brought in the question of the General Services Administration contracts held with the A. W. Williams Co., I suggest that this letter be read at this time.

Representative HOFFMAN. What was the letter?

Senator SCOTT. General Services Administration, Emergency Procurement Service.

Representative HOFFMAN. Pardon me, Mr. Chairman, but may we not have the General Services Administration man who wrote the letter, following the ruling of this morning? I do not even know about that.

Senator SCOTT. This letter is signed.

Representative HOFFMAN. I do not know anything about his signature. Does anybody here know that that is the signature of the man from the General Services Administration?

I would not be technical about it but, in view of the ruling of this morning, I want to follow the precedent.

Senator SCOTT. The one this morning had no signature or date or identification.

Representative HOFFMAN. It was not worth a tinker's darn except that it was vouched for by a Senator.

Senator SCOTT (reading):

SEPTEMBER 28, 1955.

HON. JAMES E. MURRAY,

*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington, D. C.*

DEAR SENATOR MURRAY: We submit below a report on service contracts which we have had with A. W. Williams Inspection Co. of Mobile, Ala., as requested by your letter of September 22, 1955.

This agency awarded three sampler-analyst service contracts to this company for evaluating mineral ores purchased by the United States Government as follows:

1. Contract SCM-TS-12743 covering metallurgical bauxite at the port of Mobile was awarded February 8, 1948, and expired June 30, 1949.

2. Contract SCM-TS-16815 covering both metallurgical and abrasive grade bauxite at Mobile was awarded July 25, 1949, and expired June 30, 1950.

3. Contract GS-OOP-7197 (SCM) covering metallurgical grade chrome ore at Gulf Ports of Mobile, Ala., New Orleans, La., and Gulfport, Miss., was awarded April 17, 1953, and expired June 30, 1954.

Many of the assay reports on imported bauxite by the Williams laboratory were questioned by the contractors supplying the bauxite and, as a result, such reports had to be umpired for settlement purposes. In each instance the umpire proved the Williams laboratory results were incorrect. Portions of the same bauxite samples were sent to each of the three firms holding service contracts at that time to determine the difference in their analytical results. This study indicated the Williams laboratory results were quite divergent in both directions on the premium and penalty determinations and were erratic on the other impurities.

Due to insufficient and inexperienced samplers being furnished to handle the first of two cargoes of Turkish chrome ore sampled at Gulfport, Miss., nine cars were shipped without sampling and had to be sampled at destination. Also the screen determination for the whole first cargo was made improperly and had to be umpired at the stockpile site in Kentucky, with the Government losing

the umpire decision. In addition, the Williams assay report was determined by umpire to be over 1 percent high in chromic oxide and  $1\frac{1}{2}$  percent high on iron content. The chemical analysis also had to be umpired on the second cargo of chrome ore.

The contracts were in effect for the full term of performance as awarded on an "as required" basis and were no terminations.

Very truly yours,

A. J. WALSH, *Commissioner*.

Representative HOFFMAN. Now, Mr. Chairman, may I have the letter and then may we have the writer of the letter up here to see what he knows about it? And may we have the other man who made the analysis and found that, in his opinion, these gentlemen were in error?

Senator SCOTT. I would like to ask the witness if he still says that there were no complaints?

Mr. MILLER. Mr. Chairman, as the supervisor——

Senator SCOTT. I am talking to the witness at the table, Mr. McDaniel.

Mr. McDANIEL. Repeat your question, please.

Senator SCOTT. Do you still say that there were no complaints, so far as you know, in regard to your work down there?

Mr. McDANIEL. Well, since that letter was written in that has been read here, there was no complaint during the life of the contracts. At least I never heard of any then, although I had been advised that something may come up about this matter and it would be wise to prepare.

Senator SCOTT. Did you know that the umpire samples had to be redone?

Mr. McDANIEL. We were not advised at any time.

Senator SCOTT. Did you know that any of these shipments were diverted because they felt that it was not done properly?

Mr. McDANIEL. No, sir.

Senator SCOTT. I will read again a part of the letter:

Due to insufficient and inexperienced samplers being furnished to handle the first of 2 cargoes of Turkish chrome ore sampled at Gulfport, Miss., 9 cars were shipped without sampling and had to be sampled at destination. Also the screen determination for the whole first cargo was made improperly and had to be umpired at the stockpile site in Kentucky, with the Government losing the umpire decision. In addition, the Williams assay report was determined by umpire to be over 1 percent high in the chromic oxide and  $1\frac{1}{2}$  percent high on iron content. The chemical analysis also had to be umpired on the second cargo of chrome ore.

Mr. McDANIEL. I was not working for the Williams Inspection Co. at the time the first cargo was handled. I was working for them at the time the second cargo was handled.

Senator SCOTT. Did you say a minute ago that you did not know anything about it?

Mr. McDANIEL. Well, I said I had no knowledge of complaints; that is, we have never received a complaint directly from GSA.

Senator SCOTT. Suppose you tell us just what you do know about it.

Mr. McDANIEL. All right. I would like to read this statement into the record.

Representative CHUDOFF. Mr. Chairman, before the witness reads a statement, I want to give him an opportunity to correct what he said before.

When Congressman Hoffman asked you about the GSA hiring you and that they thought enough about you to hire you on 3 or 4 additional occasions, you did not really mean that. You just did not think when Mr. Hoffman asked you that question.

Representative HOFFMAN. Wait a minute. Let the witness say. I had the witness. You took him out of my hands.

Go ahead. When it comes my turn again, we will straighten it out for you.

Representative CHUDOFF. Did you really mean that?

Suppose we answer the question.

Mr. McDANIEL. I really meant that because we received samples from various GSA offices throughout the country now for our analysis.

Representative CHUDOFF. What you are telling us is that you believe your work so superior that the GSA came to you every time they had an opportunity?

Representative HOFFMAN. You did not say any such thing.

Mr. McDANIEL. I did not say on every opportunity, but on a number of occasions.

Representative CHUDOFF. I understand that you have a prepared statement to read. Is that on this question?

Mr. McDANIEL. On this bauxite deal.

Representative CHUDOFF. If you did not know anything about it, how come you prepared a statement?

Representative HOFFMAN. Know anything about what?

Representative CHUDOFF. He says he did not work for the Williams Co. when this assay was made on the first group of ores. Then he said that the GSA did think enough about him to give him more business.

Now he has a prepared statement to explain it.

If you did not know about complaints, how come you prepared a statement to explain the complaints?

Mr. McDANIEL. Well, for the simple reason, on this Mobile thing by Mr. Redwine, he asked me, "What do you know about the bauxite squawk?"

Representative CHUDOFF. All I am interested in getting from you, Mr. McDaniel, is the truth. You have been fencing. You are under oath and I do not think you are telling the truth.

Representative HOFFMAN. Wait a minute, Mr. Chairman.

Representative CHUDOFF. You talk when you get a chance.

Representative HOFFMAN. I object to any member of the committee charging a witness with not telling the truth. I say it is not the proper function of the member of the committee. That is unheard of.

Representative CHUDOFF. If you think he is telling the truth, you say so. I do not think he is telling the truth.

Representative HOFFMAN. That is not the way to treat a witness.

Representative CHUDOFF. You are not so naive, Mr. Hoffman, as to have a witness tell you he knows nothing about the problem and then ask to read a prepared statement about it. I was not born yesterday.

Senator SCOTT. Go ahead and read the statement.

Mr. McDANIEL. I had no idea that this matter would be brought up at this time, until Mr. Robert Redwine, on his visit to Mobile on December 18, 1955, asked me in his hotel room, "What do you know about the bauxite squawk?"

I told him that I had never heard of any "squawk" or complaint from the General Services Administration about the way the A. W. Williams Inspection Co. had sampled and analyzed the Government bauxite shipments during 1949 and the first 6 months of 1950, and he let this matter drop at that time.

Later, during the McDonald brothers' visit to Mobile, I learned that I should be prepared to testify about this matter also so I have prepared the following statement that I wish to read into the record of these proceedings:

The Shilstone Testing Laboratory of New Orleans, La. secured a contract from the GSA to sample and analyze cargoes of bauxite purchased by the United States Government and imported through the port of Mobile, Ala. To my best recollection, this contract started on July 1, 1949, and the A. W. Williams Inspection Co. subcontracted to sample the shipments dispatched to Mobile. While these shipments were being handled, I became acquainted with Mr. Lawrence Grant, who was an inspector stationed at the Fort Worth, Tex. regional office of the Federal Supply Service.

In the latter part of December 1949 or first part of January 1950, I was informed by Mr. G. F. Bailey that this company had secured the sampling and analysis contract for these shipments for the first half of 1950, and was requested to check our reagent stock shelves and apparatus supply and prepare the necessary orders to insure that fresh reagents and sufficient apparatus was on hand to expedite the analysis of bauxite in the laboratory.

Shortly after this incident, Mr. Grant visited the laboratory and I was called by Mr. Bailey to participate in a conference with him and Mr. Grant to discuss the analysis of bauxite.

Mr. Grant informed us that our contract would include the sampling and analysis of both the chemical and metallurgical grades of bauxite. The metallurgical grade was to be shipped from Bentan in the Dutch East Indies and Billiton in the Surinam District of Dutch Guiana. The supplier was the Mining Equipment Corp. whose principal offices in the United States were located in New York City. The chemical grade bauxite was to be supplied by American Cyanamid Co. and would be shipped from Edgeton to Mobile. We discussed analysis methods to be used in this work and Mr. Grant said that he would supply them.

Mr. Grant had in his possession a number of file folders that contained copies of analysis reports on previous shipments of bauxite that had been submitted by other laboratories.

As the conference was ending, Mr. Grant went into these files and prepared a sheet for us that contained a maximum and minimum content of the various constituents of the bauxite that was to be analyzed in the Williams' laboratory. He further cautioned us to be extremely careful in reporting analytical results that fell outside of these limits, and when we had results to fall outside of the supplied limits, to run a second set of tests in duplicate to check our first results before reporting the tests.

A few days later, a set of directions for the analysis of bauxite was sent by Mr. Grant. These were in the form of 6 or 7 mimeographed sheets and, according to the heading, were prepared in the United States Customs Laboratory, New Orleans, La., and was signed by one of the chemists in that laboratory whose name I do not recall.

I had a later occasion to check these methods against those contributed by Dr. H. V. Churchill of the Aluminum Co. of America for publication in Standard Methods of Analysis by Scott, fifth edition, D. Van Nostrand & Co., and found that both sets of methods were identical. These directions were followed strictly in all analyses of bauxite performed by myself and other chemists on samples of bauxite in the A. W. Williams Inspection Co. laboratory in the performance of United States Government sampler-analyst contracts.

On subsequent visits of Mr. Grant to our laboratory before supervision of the unloading of these cargoes was transferred to the Atlanta, Ga. office of the General Services Administration with Mr. Lewis C. Varnadoe being assigned as inspector, Mr. Grant was questioned about whether our analytical results were satisfactory or not and his reply to us was to the effect that portions of sample submitted to the Federal Supply Service, as required by our contract, had been analyzed in United States Government operated laboratories and their results had checked with ours.

The results of all analyses of Government bauxite were compared before submission with the list of limits furnished us by Mr. Grant, and if our results were outside these limits, a duplicate set of necessary analyses was run, and if these results were still outside the limits, the average of the four tests were reported.

All analytical work on Government analyst contracts in the A. W. Williams Inspection Co. laboratory was performed by myself and Mrs. W. A. Frantzen until her resignation in September 1949, and with assistance from Mr. E. C. Ricks after May 1, 1950; both were graduate and experienced chemists.

The alumina and silica content on most of these samples was determined independently by two chemists who did not compare notes with each other until the analysis was completed.

Representative CHUDOFF. Mr. McDaniel, will you hold up for one second?

I want to ask this gentleman here, isn't that one of the attorneys for the Interior Department?

Mr. J. D. PARRIOTT (Solicitor's Office, Department of the Interior). Yes.

Representative CHUDOFF. Did you prepare the statement this gentleman is reading?

Mr. PARRIOTT. No, I didn't.

Representative CHUDOFF. You distributed it to the press?

Mr. PARRIOTT. Yes.

Representative CHUDOFF. Why are you distributing it to the press?

Representative HOFFMAN. Is that any of your business, why he is distributing something to the press? He is not under oath. He is not your witness.

Representative CHUDOFF. I am finding out why he is the errand boy for Mr. McDaniel.

Representative HOFFMAN. Because he is exercising the same right anybody has a right to exercise.

Representative CHUDOFF. Will you let him answer for himself?

Representative HOFFMAN. If you do not want me to answer for him and if I do not feel like it, yes. If I feel like it, I will answer.

Representative CHUDOFF. You can say anything you want, Mr. Hoffman.

Senator SCOTT. Will you answer the question?

Representative HOFFMAN. You have been making charges here, and so is the chairman.

Senator SCOTT. Mr. Hoffman, you are out of order. I asked the gentleman to answer the question.

Representative HOFFMAN. I will be out of order again.

Senator SCOTT. You stay out of order a good deal of the time.

Representative HOFFMAN. I am not out of order as you were on the 25th of November when you distributed the statement against the Interior Department.

Mr. PARRIOTT. I saw the staff member distributing the letter prepared by the General Services Administration to the press, which I knew to exist. I knew that this statement was multigraphed, so I distributed it to the press.

Representative CHUDOFF. Were you asked to do it, or did you volunteer?

Mr. PARRIOTT. I volunteered.

Representative CHUDOFF. To whom did you volunteer?

Mr. PARRIOTT. I went to Mr. Morris Miller, the head of the lab.

Representative CHUDOFF. You said, "Do you have copies of the statement? I want to give it to the press."?

Mr. PARRIOTT. Yes, I did.

Representative CHUDOFF. Do you feel that that is in your duty as counsel for the Interior Department?

Mr. PARRIOTT. I feel that certainly it is not outside of anything proper, Mr. Congressman.

Representative CHUDOFF. I did not say it was improper. I asked whether it was your duty. I am not accusing you of doing anything improper. I asked why you did it.

Mr. PARRIOTT. I feel it was pertinent.

Representative CHUDOFF. Mr. Hoffman insinuated that it might be improper.

Representative HOFFMAN. I did not insinuate that. I said that your conduct was improper. When you accuse a witness of falsifying his testimony, that is improper.

Senator SCOTT. Will you identify yourself for the record?

Mr. PARRIOTT. I am J. D. Parriott, Solicitor's Office.

Senator SCOTT. What is your title?

Mr. PARRIOTT. Associate Solicitor for the Public Lands Department of the Interior.

Senator SCOTT. It sort of borders on that same thing that we had out there where they tape-recorded those hearings, and none of us knew anything about it, including Congressman Hoffman. He had to point it out for us.

Representative HOFFMAN. What did you say?

Senator SCOTT. I mentioned tape recording out there in Oregon when I had been invited out there as a guest of Secretary McKay time after time, and I got out there and the first public statement I made I find was being tape recorded. I did not think that was much of a reception that we had out there in Oregon on my first visit to the State. Still, that is the way it was.

It was taped in a back room and Mr. Hoffman and his secretary had to find it and call it to our attention. Both agreed that it was all right if they wanted to do it. This is all right if you want to do

it, but let us do it in the orderly fashion and give the whole story when we give part of it.

What interests me in this thing is that I understood him to say that he is doing it on his own volition. So did the man out there say that he was doing it on his own volition. He did not have time to confer. He saw that he was in a muddle out there so he had to say he was doing it on his own volition. Yet he was the public relations man for the Department of the Interior and we were meeting in their building as their guests.

I do not think that we have any right to tap telephones here in Washington to get information from one office to another as to what they are doing. I never did think that that was right. I do not think that it is right now, but they are doing it now. They may be recording this. I do not know.

I see a lot of buttons here. Whatever they are taking down is all right with me. I will stand on my own. You do not have to do anything like that so far as I am concerned.

Representative JONES. I wonder if it would be in order to make inquiries of the witness about the preparation of this statement which he has prepared at this time. Would it be in order, sir?

Senator SCOTT. Yes.

Senator GOLDWATER. Would you yield for a moment?

Mr. Chairman, I would like to ask that the gentleman who was seated at the end of the table who distributed the GSA letter to the press identify himself.

Mr. PERLMAN. I am staff director for the Subcommittee on Public Works and Resources, which is participating in this hearing.

Representative CHUDOFF. He is part of my staff.

Senator GOLDWATER. He is part of the prosecution?

Representative CHUDOFF. It depends on whose ox is being gored.

Senator SCOTT. Senator, that letter was already in the record.

Senator GOLDWATER. It was distributed to the press.

I feel that the Department of the Interior, being charged in this instance, has the perfect right to present evidence if they want to do so.

Representative HOFFMAN. That right has not been acknowledged or admitted, Senator, heretofore.

Senator SCOTT. What I would like to know is why the Department of the Interior is representing the A. W. Williams Co.

In fact, you mentioned some time ago that somebody, and I did not get the name, came to you and said that you had better be ready for a hearing. They did not say, "Get your ducks in a row," but you have them that way.

Who helped you prepare that?

Mr. McDANIEL. This statement was prepared by myself with the assistance of Mr. Morris Miller, the laboratory supervisor.

Senator SCOTT. Anyone else?

Mr. McDANIEL. No.

Senator SCOTT. You are sure of that?

Mr. McDANIEL. I am sure of that. It has been checked.

Senator SCOTT. When was it turned over to the Department of the Interior?

Mr. McDANIEL. It was not turned over to the Department of the Interior until maybe just a few minutes ago when Mr. Miller gave duplicate copies to Mr. Parriott.

Senator SCOTT. Where did you get the duplicates?

Mr. McDANIEL. Well, these were prepared, these duplicates were prepared in Mobile. We brought them up on the plane with us.

Representative HOFFMAN. Mr. Chairman, might I suggest that perhaps that is a proper subject for examination by the Moss committee.

Senator SCOTT. May we have copies?

Mr. McDANIEL. I will give you copies when I finish reading it.

Senator SCOTT. It is interesting that other folks get copies before we do, but that has been done.

Representative JONES. May I ask a few questions relative to the questions which you have raised?

Senator SCOTT. Yes.

Representative JONES. When was that statement prepared, Mr. McDANIEL?

Mr. McDANIEL. This statement was prepared last week.

Representative JONES. When last week?

Mr. McDANIEL. From Monday until Thursday.

Representative JONES. Who helped in the preparation of that statement?

Mr. McDANIEL. Mr. Morris Miller.

Representatives JONES. Did you transmit a copy of that to the Department of the Interior prior to 12 o'clock today?

Mr. McDANIEL. I have not personally.

Representative JONES. Do you know whether or not any of your supervisors or those officials of the Williams Co. transmitted a copy to any of the agencies of the Department of the Interior?

Mr. McDANIEL. Mr. Miller may have.

Representative JONES. Do you know of your personal knowledge as to whether or not this statement had been transmitted, mailed, or communicated either directly, or the substance of it, to the Department of the Interior or any of its agencies?

Mr. McDANIEL. I didn't see one mailed.

Representative JONES. I did not ask you that question, Mr. McDANIEL. I asked you whether or not, from your own knowledge, that information had been communicated to the Department?

Mr. McDANIEL. I think it was.

Representative JONES. And at what time was that sent to the Department of the Interior and what method of communication was used by the Williams Co. or any of its agencies to communicate to the Department of the Interior the substance of the statement that you are making to the committee at this moment?

Mr. McDANIEL. If it was sent ahead of our arrival in Washington, it was sent by mail.

Representative JONES. Well, then, as a matter of fact, the Department of the Interior did know the substance of your statement prior to the issuance of the statement to the press just a few minutes ago?

Mr. McDANIEL. They did.

Representative JONES. Yes. And with whom have you discussed this in the Department of the Interior? Have you discussed it with Mr. Parriott?

Mr. McDANIEL. I have.

Representative JONES. Prior to your testimony here today?

Mr. McDANIEL. Yes.

Representative JONES. And on what occasions, and what was the time when you had this discussion with Mr. Parriott?

Mr. McDANIEL. This morning in his office.

Representative JONES. Did he concur in the statement that you have made in your prepared statement that you are giving by way of explanation?

Mr. McDANIEL. No comment.

Representative JONES. He has no comment.

Did you communicate with any other official of the Department of the Interior prior to your being a witness here today regarding the subject matter upon which you are testifying?

Mr. McDANIEL. No.

Representative JONES. Then the only person that you talked with this morning was Mr. Parriott in his office at the Department of the Interior?

Mr. McDANIEL. I talked with Mr. Miller, who is the Associate Director, in regard to the Al Sarena mines, but not in regard to this bauxite.

Representative JONES. What was the subject of your discussion at that time?

Mr. McDANIEL. The Al Sarena mines case.

Senator SCOTT. They have been coaching you as to what to say; is that right?

Mr. McDANIEL. No, sir.

Representative CHUDOFF. Mr. Jones, would you yield at that point? I want to ask one question.

Did you go to the Department of the Interior voluntarily or did they solicit you to come to see them?

Mr. McDANIEL. Well, we were asked to come down.

Representative CHUDOFF. Who asked you to come down?

Mr. McDANIEL. Mr. Parriott.

Representative CHUDOFF. Did he call you on the telephone?

Mr. McDANIEL. Yes; we were called on the telephone.

Representative CHUDOFF. Were you called long distance?

Mr. McDANIEL. Long distance.

Representative CHUDOFF. When did he call you?

Mr. McDANIEL. He called Mr. Miller sometime last week and Mr. Miller conveyed the information to me.

Representative CHUDOFF. You did not talk to him personally?

Mr. McDANIEL. I didn't talk to him.

Representative CHUDOFF. Mr. Miller talked to him?

Mr. McDANIEL. Mr. Miller talked to him.

Representative CHUDOFF. That is all.

Thank you.

Representative JONES. You said you talked with the Associate Director. The Associate Director of what?

Mr. McDANIEL. Bureau of Mines.

Representative JONES. What was the time of that conversation and where did it take place?

Mr. McDANIEL. It took place in his office between 7:30 and 8:30 this morning.

Representative JONES. Between 7:30 and 8:30. Did he review the statement that you have just uttered?

Mr. McDANIEL. No.

Representative JONES. Did you tell him the substance of your statement?

Mr. McDANIEL. No.

Representative JONES. What was discussed between you and Mr. Miller and the Associate Director of the Bureau of Mines?

Mr. McDANIEL. Assaying procedures of gold and silver ores.

Representative JONES. You did not discuss any aspect of the case in which you are testifying today?

Mr. McDANIEL. No. All we discussed was assaying procedures of gold and silver ores.

Representative JONES. Who was present besides Mr. Miller on this meeting this morning? Was Mr. Parriott there?

Mr. McDANIEL. Part of the time.

Representative JONES. Were any of the associates of the Williams Co. there?

Mr. McDANIEL. Not while I was discussing assaying procedures. Mr. Morris Miller was in another office there.

Representative JONES. But Mr. Parriott, the assistant counsel, knew the substance of your testimony and had seen that statement that you have before you at the moment?

Mr. McDANIEL. Yes.

Representative JONES. Did anyone help edit that statement that you have?

Mr. McDANIEL. No one other than Mr. Morris Miller, my supervisor.

Representative JONES. Mr. Morris Miller is an official with the Williams Co.?

Mr. McDANIEL. That is correct.

Senator SCOTT. Did they have you change anything at all that you had up to that time?

Mr. McDANIEL. No.

Senator SCOTT. I would like to ask this question:

Did they advise you to change anything?

Mr. McDANIEL. No.

Senator SCOTT. I would like to ask this further question. I have worked with and out of Government for a long time, but do you not think it is a little unusual for a Government worker to be moving around at 7 o'clock in the morning? That is not a common disease around here.

Representative HOFFMAN. Not under the last two administrations, it has not been. They are working now.

Mr. McDANIEL. Well, I have no knowledge of the regular office hours that are kept by Government employees in Washington.

Senator SCOTT. The press has asked for copies of this letter. I am asking Mr. Perlman to distribute them to you.

Representative CHUDOFF. Mr. Chairman, is Mr. Miller here? Is he going to be called as a witness?

Senator SCOTT. Yes.

Representative JONES. When was the first moment that you thought that such an explanation would be in order?

Mr. McDANIEL. When Mr. Redwine came down on December 18, 1955, and called me to his hotel room and asked me what I knew about the "bauxite squawk."

Representative JONES. That is the first time that you felt that Mr. Redwine was apprehensive of the activities of the Williams Co. with respect to making assays for the General Services Administration?

Mr. McDANIEL. Yes.

Representative JONES. So you felt that you would be called upon for a detailed explanation as to the practices of the Williams Co. with respect to making an analysis on the ore in question?

Mr. McDANIEL. That is correct.

Representative JONES. So that, for that reason, you made the detailed analysis that you are giving to the committee today. Did you make any inquiry of Mr. Redwine in your conversation with him about what was needed in that explanation?

Mr. McDANIEL. No; because he only asked me the one question; and, if he recalls my answer, I think I am pretty sure that he asked me, "What do you know about the bauxite squawk?" and my answer to him was, "As far as I know, the Williams Co. has never received one," or something to that effect.

Is that not correct, Mr. Redwine?

Mr. REDWINE. I am not on the stand, Mr. Chairman. I will be glad to take the stand, though.

Representative JONES. Is he going to finish the statement?

Senator SCOTT. Proceed.

Mr. McDANIEL. I am going to start this statement reading at the beginning of the paragraph in which I was interrupted by the questioning.

All analytical work on Government analyst contracts in the A. W. Williams Inspection Co. laboratory was performed by myself and Mrs. W. A. Frantzen until her resignation in September 1949, and with assistance from Mr. E. C. Ricks after May 1, 1950; both were graduate and experienced chemists.

The alumina and silica content on most of these samples was determined independently by two chemists who did not compare notes with each other until the analysis was completed and the report was to be compiled. In all cases the results reported by the individual chemist checked within reasonable tolerances. In the case of alumina this tolerance was 1 percent and silica was 0.5 percent.

These tolerances were reported to us by chemists of the Aluminum Company of America and Reynolds Metal Co. as the limits of the most probable error determined by statistical methods applied to the many hundreds of bauxite analyses performed in their laboratories.

Tests on other than alumina and silica on these samples were made by only one of our chemists, in duplicate, and these duplicate results invariably checked within close limits.

All determinations were made in accordance with the analytical methods furnished us by Mr. Grant as the official methods to be used by us in the performance of this contract.

I do not recollect any instance of being called on the carpet or criticized in any way on account of my analytical work on the Government bauxite samples.

In the periods that I was employed by the A. W. Williams Inspection Co. during the 4 years that the Reynolds Co. employed us for sampling their cargoes, I know of numerous occasions that exceptions were taken by Reynolds and the umpire samples were shipped to another laboratory, having packed these samples for shipments personally in a number of instances.

On January 2, 1956, Mr. L. C. Varnadoe, chief inspector for the Atlanta regional area, was in Mobile, Ala., in connection with the sampling of a cargo of Government bauxite. The Shilstone Testing Laboratory of New Orleans holds the contract for this work at the present time, and we perform the actual sampling under a subcontract arrangement. Insofar as we know, the General Services Administration is aware of this.

While in Mobile, Mr. Varnadoe was asked if he was satisfied with our services. He stated that he had supervised the inspection of all Government bauxite handled under GSA contracts in Mobile, since about April 1949, that he was entirely familiar with our facilities, and that our services had at all times been satisfactory.

Mr. Varnadoe made these statements before Mr. Morris Miller, our laboratory manager; Mr. Frank Tusa, chief inspector for Shilstone Testing Laboratory, and me. He said that he was not authorized to issue any formal statement in matters of this kind, but that if he were subpoenaed by this subcommittee, he would testify under oath to the same effect since it was the whole truth.

Senator SCOTT. That is the statement?

Mr. McDANIEL. That is the statement.

Mr. COBURN. May I ask a question, Mr. Chairman?

Senator SCOTT. Yes.

Mr. COBURN. Mr. McDaniel, could I ask a question?

Is it your testimony that you know nothing about the Turkish chromite contract?

Mr. McDANIEL. It is my statement that while the first of those cargoes was being handled, that I was not employed by the Williams Inspection Co.

Mr. COBURN. Do you recall what the dates of the chromite contracts were?

Mr. McDANIEL. Well, on the first, I don't. The second was somewhere after the 24th of June 1953, after I was reemployed by the Williams Inspection Co.

Mr. COBURN. After June of 1953?

Mr. McDANIEL. Right.

Mr. COBURN. According to the letter from the General Services Administration which the chairman read into the record, and I think you heard the letter read, the dates are therein listed April 17, 1953.

Mr. McDANIEL. I was not employed by Williams at that time.

Mr. COBURN. To June 29, 1954. So that at some time during your employment A. W. Williams Inspection Co., you must have become aware of what was happening under that contract. Is that true?

Mr. McDANIEL. Well, yes. I performed some analyses on the second cargo that we handled on that.

Mr. COBURN. So you wish now to change your testimony from its original to what you are saying now?

As I recall your original testimony, you said you knew nothing about the Turkish diversion of cars.

Mr. McDANIEL. I said I knew nothing about the first cargo.

Mr. COBURN. Just the first cargo, in answer to Senator Scott's question.

Would you read back the question that Senator Scott asked him about this contract?

(The record was read by the reporter as follows:)

Senator SCOTT. Did you know that any of these shipments were diverted because they felt that it was not done properly?

Mr. McDANIEL. No, sir.

Senator SCOTT. I will read again a part of the letter:

"Due to insufficient and inexperienced samplers being furnished to handle the first of two cargoes of Turkish chrome ore sampled at Gulfport, Miss., nine cars were shipped without sampling and had to be sampled at destination. Also, the screen determination for the whole first cargo was made improperly and had to be umpired at the stockpile site in Kentucky, with the Government losing the umpire decision. In addition, the Williams assay report was determined by umpire to be over 1 percent high in the chrome oxide and 1½ percent high on iron content. The chemical analysis also had to be umpired on the second cargo of chrome ore."

Mr. McDANIEL. I was not working for the Williams Inspection Co. at the time the first cargo was handled. I was working for them at the time the second cargo was handled.

Senator SCOTT. Did you say a minute ago that you did not know anything about it?

Mr. McDANIEL. Well, I said I had no knowledge of complaints; that is, we have never received a complaint directly from GSA.

Senator SCOTT. Suppose you tell us just what you do know about it.

Mr. COBURN. That is still your testimony?

Mr. McDANIEL. That is still my testimony.

Mr. COBURN. That you were not familiar with the first shipment?

Mr. McDANIEL. That is, I was not familiar with it.

Mr. COBURN. Because you were not in the employ of the company?

Mr. McDANIEL. I was not in the employ of the company.

Mr. COBURN. When did you return to the employ of the company, in June of 1953.

Mr. McDANIEL. June 24, 1953.

Mr. COBURN. Is it still your statement that you have no knowledge of the nine carloads that were sent to destination rather than to your company for sampling?

Mr. McDANIEL. No direct knowledge.

Mr. COBURN. Well, do you have any knowledge?

Mr. McDANIEL. Well, I have been told that those cars were pulled by the railroad without being released by the Williams Co. employees.

Mr. COBURN. What do you mean by that? Were the cars at the Williams Co. at the time?

Mr. McDANIEL. No, sir. The cars were in Gulfport, Miss.

Mr. COBURN. In Government custody, or en route to your company?

Mr. McDANIEL. Well, this work was performed at Gulfport, Miss., which is about 80 miles from the location of our laboratory at Mobile.

Mr. COBURN. And who performed the work there?

Mr. McDANIEL. Well, I don't know just which one of the employees.

Mr. COBURN. But you did learn at that time that these cars were sent to Gulfport, or kept at Gulfport?

Mr. McDANIEL. I learned that those cars were pulled away from Gulfport before we released them to the railroad company, that the

railroad company just pulled those cars without any authorization from anyone.

Mr. COBURN. They were pulled away from your company, in effect?

Mr. McDANIEL. In effect, they were.

Mr. COBURN. They were. Did that make you curious at all as to why they were pulled away?

Mr. McDANIEL. Well, I have later learned that the railroad company—

Mr. COBURN. At the time you first knew of this, did anyone tell you why they were pulled away from your company?

Mr. McDANIEL. No, they did not.

Mr. COBURN. Did you inquire?

Mr. McDANIEL. No, I did not.

Mr. COBURN. So that at that time it was just something that nine carloads of ore that originally were destined for sampling by your company were diverted, and you did not pay any attention to it?

Mr. McDANIEL. Well, that is a matter that I had no connection with as I was not employed by the Williams Co.

Mr. COBURN. You were not? This is after June 1953.

Mr. McDANIEL. Those cars were diverted or pulled away before June of 1953.

Mr. COBURN. On what date were they pulled away?

Mr. McDANIEL. Well, I couldn't tell you.

Mr. COBURN. You do know that it was before June of 1953?

Mr. McDANIEL. I do know.

Mr. COBURN. And you are saying now, are you not, that the time they were diverted you were not even in the employ of the company and therefore you knew nothing about it?

Mr. McDANIEL. Well, we might put that another way. What I know about it is what has been told me by various employees of the Williams Co.

Mr. COBURN. At the time?

Mr. McDANIEL. And later.

Mr. COBURN. And when?

Mr. McDANIEL. At the time that I returned to work for them, and later.

Mr. COBURN. At that time then, you did have some knowledge, did you not, of certain difficulties involving the GSA and the A. W. Williams Co.?

Mr. McDANIEL. If we did, those difficulties were not, that is, the nature of the difficulties was not passed on down to me.

Mr. COBURN. But you knew that there was something wrong?

Mr. McDANIEL. I was told that they had trouble in handling the first cargo.

Mr. COBURN. Who told you that?

Mr. McDANIEL. Well, Mr. Miller who is here, and Mr. Dwyer who was in charge and kind of acted as foreman in sampling that cargo.

Mr. COBURN. You are now saying, are you not, Mr. McDaniel, that at that time you did have at least some knowledge of something being wrong in the contract under which the A. W. Williams Inspection Co. was operating with the GSA?

Mr. McDANIEL. Well, I will repeat my answer, that I have no knowledge of any direct complaints being sent by the GSA to the company on the handling of that.

Mr. COBURN. By "direct," you mean direct knowledge or direct complaint?

Mr. McDANIEL. That is of a direct complaint being sent to Williams by GSA.

Let me go ahead a little further. I have been told that the railroad company assumed full responsibility for the moving of those cars, and the sampling of those nine cars at the destination was at the expense of the I. C. RR.

Mr. COBURN. So, as I understand your previous testimony, sir, you stated that to your knowledge there have been no complaints from the GSA to the A. W. Williams Co.?

Mr. McDANIEL. That is correct.

Mr. COBURN. Do you still wish to stand on that?

Mr. McDANIEL. I wish to stand on that.

Mr. COBURN. That is all.

Representative JONAS. Before you leave that point, Mr. Chairman, might I ask a question or two on this particular point?

Senator SCOTT. Yes.

Representative JONAS. Mr. McDaniel, I noticed that the first contract from GSA was awarded in February of 1948 and expired in June of 1949, and the second contract was awarded in July of 1949 and expired in July of 1950.

The third contract was not awarded until April 17, 1953, and expired June 30, 1954.

Do you know under which of these contracts these complaints that are contained in this letter from the GSA are referred?

Mr. McDANIEL. I do not.

Representative JONAS. Well, they say,

Many of the assay reports on imported material—

and so forth—

were questioned by contractors and in each instance an umpire proved that the Williams laboratory results were incorrect.

Do you know whether they were referring to what transpired under the first contract or under the second contract or under the third contract?

Mr. McDANIEL. I do not.

Representative HOFFMAN. May I have a copy of that letter? I asked for that letter a while ago.

Thank you.

Representative JONAS. Would you assume from the fact that the GSA awarded you the final contract on April 17, 1953, that everything was satisfactory back of that date, or else the GSA was pretty negligent in giving you another contract?

Mr. McDANIEL. I would assume so.

Representative JONAS. You have been with the company since June of 1953 for the second time, and since your return to the company you have testified to the committee that the GSA has made no complaints to you or to the company, to your knowledge?

Mr. McDANIEL. That is correct.

Representative JONAS. Now, under which contract were these cars diverted?

Mr. McDANIEL. That was on the chromite contract, the last one.

Representative JONAS. Under the last contract.

Now, who was the area supervisor or engineer for GSA? Was the man's name in your statement?

Mr. McDANIEL. I do not know who handled that. I didn't go down to Gulfport on any occasion during the sampling of those cargoes, so I do not know.

Representative JONAS. I am asking you the name of the area engineer or chemist, or the person who awarded the contract or supervised it for GSA in Atlanta.

Mr. McDANIEL. I do not know who handled that contract, that is the chromite shipments, down in Gulfport.

Representative JONAS. Well, you gave a man's name in your statement, the last page of the statement, as having had conversation with you about it, and having told you that he would be glad to come here if this committee subpoenaed him.

What is his name?

Mr. McDANIEL. His name is Mr. L. V. Barnadoe. He is the chief inspector at Atlanta.

Representative JONAS. For what organization?

Mr. McDANIEL. For the GSA.

Representative JONAS. May I inquire, Mr. Chairman, if that gentleman is under subpoena?

Mr. REDWINE. Mr. Chairman, may I answer that?

Senator SCOTT. Yes.

Mr. REDWINE. We never heard the man's name until we had the statement of the witness, Congressman. We relied entirely on the policy making group of the GSA who execute the contracts as to what the record was.

The first time we ever heard the name was this afternoon by the witness.

Representative JONAS. Do you plan to subpoena that gentleman? I would suggest that we ought to have him here. He knows a whole lot more about this inspection of this material than Mr. Walsh, who has an office here in Washington and who is the commissioner, and who obviously did not have personal knowledge. I think he might make the best witness, the man from Atlanta.

Mr. REDWINE. Would you suggest also that all of the people who complained about these samples or the work under this contract be brought in, Congressman?

Representative JONAS. I think you and the other staff members have explored that.

Mr. REDWINE. No, sir. We have not gone beyond the letter of Director Walsh.

Representative JONAS. I am just suggesting that the chief inspector of GSA at Atlanta office, which inspector is in charge of Alabama and the work performed under these contracts, would make us a better witness than a letter written by Mr. Walsh.

Mr. REDWINE. I have no objection to his being called, and at the direction of the chairman we will call him.

Representative HOFFMAN. You say you will call him?

Senator NEUBERGER. I would like to say that I do think that if we call this one inspector, then the other inspectors who, though not referred to by name, have their recommendations and work and comments alluded to in the Commissioner's letter, ought to be requested at the same time.

Representative JONAS. I am not objecting. I think that the committee staff has full authority to bring here any witnesses it feels we need. I am just suggesting that we have this one man, because he obviously has some first-hand information about the contract.

Mr. REDWINE. Mr. Chairman, I suggest that probably the way to settle this is to call Mr. Walsh and let Mr. Walsh suggest who should be called to give both sides of this, if there are two sides.

Representative HOFFMAN. Mr. Chairman, I suggest and I move that this gentleman, Mr. L. C. Varnadoe, chief inspector of the Atlanta regional area, be called here as a witness. He is the chief inspector.

You have a letter from Mr. Walsh. Let us have the man in charge down there if we want the facts.

I want to make the motion that he be called if he cannot be called without a motion.

Representative JONAS. It is already indicated that he will be called.

Representative CHUDOFF. I think that you ought to wait until the chairman refuses before making a motion.

Mr. REDWINE. Mr. McDaniel, did Mr. L. C. Varnadoe, the chief inspector, ever personally inspect any of these cargoes?

Mr. MCDANIEL. Yes.

Representative HOFFMAN. The staff comes in here with a charge of bias and prejudice and fraud by this company, and they say that the chief inspector told them they had a clean bill of health.

Senator SCOTT. We have made no such charge, but we will get him up here and maybe we will find some more hidden teletype machines.

Representative HOFFMAN. You are expert at making charges.

Senator SCOTT. I would not have done it if you had not promoted it.

Representative HOFFMAN. You had better read the one you made out at Portland.

Representative JONAS. May I ask the witness another question?

Mr. McDaniel, do you have a copy of the letter from Mr. Walsh?

Mr. MCDANIEL. No.

Representative JONAS. Let me ask you to take a look at this copy while I ask you this question.

In the last paragraph of the letter it says, and I quote:

"Also the screen determination for the whole first cargo was made improperly. It had to be umpired at the stockpile site in Kentucky, with the Government losing the umpire decision."

Does that mean that the umpire found in accordance with what you did?

What does he mean when he says "with the Government losing the umpire decision"?

Mr. MCDANIEL. By that, I would say that the umpire on that one sample had results varying from ours.

Representative JONAS. Their results did what?

Mr. MCDANIEL. Varied.

Representative JONAS. What does he mean when he says "with the Government losing the umpire's decision?"

Did not the umpire decide against the Government and for you?

Mr. McDANIEL. No, the umpire decided against the Government and for the supplier.

Representative JONAS. That was part, then, of the first cargo?

Mr. McDANIEL. That was part of the first cargo.

Mr. REDWINE. I have one question, Mr. Chairman.

Representative HOFFMAN. Mr. Chairman, may I ask for one other thing while we are talking about education. That is the correspondence between Senator Sparkman and General Services, saying that the Williams Co. services were satisfactory. Could we get that letter, too?

It is marked "restricted" but I do not believe "restricted" applies.

Mr. REDWINE. Congressman, I have never heard of such a letter.

Representative HOFFMAN. You do not know anything about that one?

Mr. REDWINE. No, sir; I have never heard of it.

Representative HOFFMAN. I will also ask for the statement of Senator Kefauver, and Congressman Boykin from Alabama.

Mr. REDWINE. Congressman, where would we find the Kefauver letter?

Representative HOFFMAN. Your files show the Boykin correspondence.

Mr. REDWINE. We have that and it will be introduced later. What about the Kefauver letter?

Representative HOFFMAN. The one where the Senator suggested that they keep their suit alive until they got a favorable report or some report from the Interior Department.

Mr. REDWINE. Addressed to the Interior Department?

Representative HOFFMAN. I think it was written to the Williams people, but I think the Interior had something about it.

Mr. REDWINE. We know nothing about it and do not know how to find such a letter, sir.

Representative HOFFMAN. I will try to keep you advised.

Mr. REDWINE. Mr. McDaniel, the last contract that A. W. Williams Inspection Co. had with the General Services Administration expired on June 30, 1954, did it not?

Mr. McDANIEL. That is information that has been given me.

Mr. REDWINE. There has been no contract since then?

Mr. McDANIEL. No direct contract.

Mr. REDWINE. Are there any strategic minerals coming through the ports in the area that normally is served by the A. W. Williams Co.?

Mr. McDANIEL. There is an occasional cargo of abrasive grade bauxite, for which Shilstone has the contract.

Mr. REDWINE. But the Williams Co. has not been used since June 1954 by the General Services Administration?

Mr. McDANIEL. They have on analyses of paint.

Mr. REDWINE. But not on ores?

Mr. McDANIEL. Not on ores.

Mr. REDWINE. That is all.

Representative CHUDOFF. Mr. Chairman.

Senator SCOTT. Mr. Chudoff.

Representative CHUDOFF. Mr. McDaniel, I would like to ask a couple of questions.

I think you testified earlier, before we got into these bauxite questions, that you had a conference this morning with counsel for the Interior Department, or certain officials in the Interior Department, for the purpose of discussing assay procedures; is that right?

Mr. McDANIEL. That is right.

Representative CHUDOFF. Why was that necessary, Mr. McDaniel?

Mr. McDANIEL. That was to satisfy the Interior Department that I had used correct assaying procedures in making the assays of the Al Sareno ores.

Representative CHUDOFF. Did they call you to come in and discuss this with them before you came in to testify?

Mr. McDANIEL. Indirectly; yes.

Representative CHUDOFF. What do you mean by that? I do not know what that means.

Mr. McDANIEL. Well, the call was to Mr. Miller.

Representative CHUDOFF. And do you know who called Mr. Miller?

Mr. McDANIEL. Mr. Parriott.

Representative CHUDOFF. And he said that he would like you to come in to the Interior Department this morning before you appeared here as a witness?

Mr. McDANIEL. That is correct.

Representative CHUDOFF. At what time did you get into the Interior Department?

Mr. McDANIEL. We got there at 7:45.

Representative CHUDOFF. And you went over the assay procedures in your assays for the assay that you made on the Al Sareno mines?

Mr. McDANIEL. That is correct.

Representative CHUDOFF. And after you went over the procedures, did Mr. Parriott make any suggestions as to what you might say if you testified?

Mr. McDANIEL. No.

Representative CHUDOFF. Was he satisfied that the procedures were correct?

Mr. McDANIEL. Yes.

Representative CHUDOFF. Are you satisfied that the procedures are correct?

Mr. McDANIEL. Yes.

Representative CHUDOFF. That is all.

Representative JONAS. Mr. Chairman, I beg your pardon, but the questions asked by my colleague, Mr. Chudoff, cause me to ask the witness one question, if I may?

Senator SCOTT. Yes.

Representative JONAS. How many times were you interviewed, and where, by staff members of this joint committee?

Mr. McDANIEL. The only interview that I have ever had with staff members of this joint committee was in Mobile on December 18, and at the time Mr. Redwine came down to Mobile to subpoena the records, I had maybe said a few words to him, but nothing—

Representative JONAS. You had one interview then with one staff member?

Mr. McDANIEL. With one staff member.

Representative JONAS. Was that Mr. Redwine?

Mr. McDANIEL. It was.

Representative JONAS. Then he came back the second time to Mobile and subpoenaed the records?

Mr. McDANIEL. Well, the records were subpoenaed within a few days after his first visit to Mobile.

Representative JONAS. How long was he there on the first visit?

Mr. McDANIEL. He was at our office approximately an hour, and most of that was spent with Mr. Miller, my supervisor.

Representative JONAS. You said during the course of your testimony that you talked to him in his hotel room. Was that on the 1st or 2d visit?

Mr. McDANIEL. That was on his second visit.

Representative JONAS. Well, he was at the office about an hour on the first visit?

Mr. McDANIEL. On the first visit.

Representative JONAS. And then in a few days your records were subpoenaed, and then subsequent thereto came back to Mobile.

Mr. McDANIEL. That is correct.

Representative JONAS. And talked with you at his hotel. He did not come to the office the second time?

Mr. McDANIEL. Well, he arrived in Mobile on Sunday night and called me at my home and asked me to come down.

Representative JONAS. That interview was at the hotel?

Mr. McDANIEL. That interview was at his hotel room.

Representative JONAS. Was there any subject discussed other than that squabble, this thing asked you with reference to the controversy with GSA?

Mr. McDANIEL. We did not discuss the controversy with GSA further than his asking me what did I know about the squawk, and my answer that if there had been any, I was not aware of it, or words to that effect.

Representative JONAS. Well, he asked, did he not, in the course of these conversations, about the subject on which you would be examined here today? Did he not?

Mr. McDANIEL. No.

Representative JONAS. That is all.

Representative MOSS. Mr. Chairman, I wonder if I might direct a question brought up as a result of Mr. Chudoff's inquiry?

Mr. McDANIEL, the assay report of the Williams firm apparently was the basis for the granting of surface rights in this case to the Al Sarena Mining Co. Prior to this morning did anyone from the Department contact you or discuss with you the adequacy of your assay procedures in determining whether they were sound or not?

Mr. McDANIEL. No; they did not.

Representative MOSS. This is the first time that anyone from the Department has discussed with you or reviewed with you the procedures employed in making your assay?

Mr. McDANIEL. This morning was the first time.

Representative MOSS. This morning was the first time.

Thank you, Representative Chudoff.

But you were called before this morning and asked to come in, were you not?

Mr. McDANIEL. Yes.

Representative CHUDOFF. When were you called?

Mr. McDANIEL. By telephone.

Representative CHUDOFF. When?

Mr. McDANIEL. Yesterday afternoon.

Representative CHUDOFF. Did somebody call from Washington to Alabama, or were you here in Washington?

Mr. McDANIEL. Well, I was subpoenaed to appear here.

Representative CHUDOFF. Then you were here. You got the call in Washington at your hotel here?

Mr. McDANIEL. At the hotel here.

Representative CHUDOFF. How did they know you were at that particular hotel?

Mr. McDANIEL. We were over in Congressman Ellsworth's office yesterday.

Representative CHUDOFF. Did you discuss this with Congressman Ellsworth and tell him that if he needed you, you would be at your hotel where you are staying? Is that right?

Mr. McDANIEL. That is correct.

Representative CHUDOFF. You did not discuss the question with any Interior Department members in Congressman Ellsworth's office, did you?

Mr. McDANIEL. No.

Representative CHUDOFF. So that, if they knew where you were, they got the information from Congressman Ellsworth. That is the only way you feel that they could have gotten the information?

Mr. McDANIEL. That is right.

Representative CHUDOFF. And you received a call yesterday afternoon from Mr. Parriott?

Mr. McDANIEL. Well, Mr. Miller received the call.

Representative CHUDOFF. And they asked you and Mr. Miller to be in the office at quarter of eight this morning?

Mr. McDANIEL. That is correct.

Representative CHUDOFF. So that you could discuss assay procedures?

Mr. McDANIEL. That is correct.

Representative CHUDOFF. That is all.

Mr. REDWINE. I think that is all.

Senator SCOTT. That is all.

I want to thank you for the cooperation on the questions. I know that they have been rather trying in a way, but you made a good witness.

Mr. M. E. Volin.

Senator GOLDWATER. Mr. Chairman, might I inquire? This is a most unusual case. I have sat through many congressional hearings. I have never heard a subject start off in the forests of Oregon and wind up in Mississippi and Alabama.

I came here this morning and listened to gold and silver analysis discussed, and this afternoon we are on the subject of bauxite and chromite. Having only attended this one hearing, and having read in the papers what has been going on, I can only draw one conclusion as to the desire of counsel, and that is to discredit the Williams Inspection Co.

If that is the intent of counsel, and it seems to be perfectly obvious that that is the case, I suggest that it would be very proper to put Mr. Miller of that company on the stand at this time to allow him to

defend some of these remarks that have been directed at the employee of his who has no chance or probability of knowing about the contracts, as to when they were signed, and so forth.

Senator SCOTT. Senator Goldwater, meaning no discourtesy to you whatsoever, he will be put on at the proper time.

Senator GOLDWATER. Mr. Chairman, do you not agree that a company which has been maligned as this one has been maligned this afternoon has the right to defend itself?

Senator SCOTT. Yes, sir; they will be given that right.

Senator GOLDWATER. I think they have a right immediately after the accusations are made.

Senator SCOTT. I differ with you.

Senator GOLDWATER. Do you? You are the chairman.

Representative HOFFMAN. Mr. Chairman, there are three newspaper pieces in the morning Post reflecting on this company. It would seem that this is the opportune time, when the charges are made. The Senator himself, the chairman, is quoted in the press with having made this charge that there is something crooked, something wrong. It says here:

Finds the Al Sarena case smacks of "bottom-of-the-deck" dealing by "high levels" within McKay's department—

and I quote.

When that comes in today, why is not the company entitled to an opportunity forthwith to deny those charges?

Senator SCOTT. They will be heard at the proper time.

Congressman Chudoff, would you swear the witness, please?

Representative CHUDOFF. What is your full name?

Mr. VOLIN. Melden Earl Volin.

Representative CHUDOFF. Do you solemnly swear that the testimony you will give before this committee shall be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. VOLIN. I do.

Representative CHUDOFF. Have a seat, please.

### TESTIMONY OF MELDEN EARL VOLIN, CHIEF, RESEARCH, MICHIGAN SCHOOL OF MINES AND TECHNOLOGY

Mr. VOLIN. Could I give a statement on my background?

Mr. REDWINE. We would be happy to have you do so.

Mr. VOLIN. I was born in Idaho and received my high-school education there. I went to the Colorado School of Mines and graduated in 1933 with the degree of engineer of metallurgy and was in the upper fourth of my class.

During the years following graduation, I worked on several mining jobs of short duration. Then I went with the USGS for 2½ years. Then, when a civil-service examination for mining engineers in the United States Bureau of Mines was announced, I applied for that and took the examination. It was a written examination and I received a high grade, was second highest in the western part of the United States, and I received an appointment in the Bureau of Mines, and that began my career with the Bureau of Mines of over 16 years.

During the first part of that career, I was a field engineer on many sampling jobs under the strategic exploration program. Later I became a supervisor.

At the time of the Al Sarena mines sampling, I was Chief, Mining Division, region II, at the Spokane office. Later I became regional director of region V at Minneapolis, and on last January 1 was transferred to Washington, D. C., to take the position of Chief of the Branch of Base Metals.

In July I received an opportunity for employment outside of the Government. I resigned from the Bureau of Mines to accept the position of director of the Michigan Bureau of Mineral Research. I hold that position now.

Mr. REDWINE. Mr. Volin, on September 3, 1953, what was your position?

Mr. VOLIN. I was Chief, Mining Division, region II, with office at Spokane.

Mr. REDWINE. Did you, some time shortly subsequent to September 3, 1953, receive any instructions in respect to the Al Sarena contest?

Mr. VOLIN. No. It is my recollection that the first I heard about the Al Sarena was a letter from, or a memorandum from, Thomas H. Miller, Acting Director, Bureau of Mines, making me representative, appointing me as representative of the Government in this case, and with three attachments, letters giving general instructions to follow in the case.

I received that approximately September 18, I believe.

Mr. REDWINE. In general, what were those instruction, Mr. Volin?

Mr. VOLIN. In general, the instructions were to be present at the sampling which was to be done by an engineer retained by the McDonalds, who had had an application for patent on some claims of the Al Sarena claims, 15, I believe, disputed or denied; and they were trying to establish that and they wanted a resampling.

The Solicitor wanted a resampling job and suggested that the Bureau of Mines provide the representative of the Government to see that that sampling was done accurately and with good workmanship.

Mr. REDWINE. What did you then do to carry out those instructions, Mr. Volin?

Mr. VOLIN. I read those instructions and noted that there was a provision therein for me to delegate the representation and the responsibility for it, and, inasmuch as we had an engineer at Grants Pass in an office there and I was occupied full time with DMEA business, I took advantage of that and delegated that to Mr. Richard Appling, our engineer at Grants Pass.

I called him by telephone and later I confirmed that by a letter.

Mr. REDWINE. Then what happened?

Mr. VOLIN. The instructions to Mr. Appling were that he would contact Mr. McCormick, the engineer for Al Sarena mines, and the two of them would arrange the time at which the sampling would be done, and the plan that would be followed.

I had several telephone conversations with Mr. Appling reviewing what I thought were the proper precautions to observe in this job, and I gave him the general instructions that our performance in this must be above reproach.

Mr. REDWINE. Did you give Mr. Appling any instructions as to the choice of an assayer?

Mr. VOLIN. Not at that time. That didn't come up right at the moment. However, it was noted in the Solicitor's letter that the assay,

the samples would be sent to an assayer that would be mutually acceptable to the McDonalds and the Bureau of Mines. I didn't think much about it at the moment, and early in November, why, I learned that Mr. McCormick and Appling had made their plans for taking the samplings, and then I found that the McDonalds wanted to send the samples to the A. W. Williams Inspection Co., of Mobile.

Mr. REDWINE. Mr. Volin, at that time had you ever heard of the A. W. Williams Inspection Co.?

Mr. VOLIN. No, I had not.

Mr. REDWINE. What, if any, steps did you take to determine whether they were a suitable agency to conduct this assay?

Mr. VOLIN. I wrote an airmail letter to John Thoenen, assistant regional director, region VII, Bureau of Mines, Norris, Tenn., and asked him, gave him the background of the importance of this job.

Mr. REDWINE. Let me interrupt you there.

When you said "background," you mean that this was a matter in dispute, and that kind of thing?

Mr. VOLIN. Well, I believe I said that it was a case of claims to be patented, in which the application had been denied. I believe I did say that. But I did state that these samples would be similar to umpire samples. I believe I used that wording.

Anyway, I inferred, and stated, I am sure, that the firm should be a reputable one, and asked them to look into it. And he didn't reply immediately. Well, I guess it wasn't that, either. It was that the snow conditions were impending. We had to get this job finished.

I followed up the letter with a wire to him and he acted upon that wire apparently without having received the letter, and he came back with a wire stating that the firm had the okay of the State geologist of Alabama and was in the Department of Commerce register.

Mr. REDWINE. Mr. Volin, did you in your request of Mr. Thoenen—is that the way you pronounce that?

Mr. VOLIN. Thoenen.

Mr. REDWINE. Did you point out what the minerals involved were?

Mr. VOLIN. Yes, I did. I pointed out that there would be gold.

Mr. REDWINE. Do you happen to have a copy of the correspondence available?

Mr. VOLIN. I have now.

Mr. REDWINE. Would you read into the record, please, your telegram to him and his reply, and also the letter that you wrote that preceded your telegram?

Read the letter first, then your telegram and his telegraphic reply, please.

Mr. VOLIN. Yes, sir.

The first is my letter to John R. Thoenen, acting regional director, region VII, dated November 9, 1953, on the subject "Information on assaying firm in Mobile, Ala."

Representative CHUDOFF. Mr. Chairman, I do not have any objection to the letter going in, but I note on page 187 of the testimony which we took in Portland, Oreg., that that letter is in the record. I think it can be incorporated by reference.

You can read the letter, but I do not think it is necessary to put it in again.

(Witness reads document.)

Mr. VOLIN. Then there is my telegram to the same man, John R. Thoenen, acting regional director, Norris, Tenn.

Mr. JOHN R. THOENEN,  
*Acting Regional Director, Region VII,  
Norris, Tenn.:*

REOURLET to your November 9 information on A. W. Williams Inspection Co., P. O. Box 314, Mobile, Ala. Check reputation of firm for assaying gold, silver, lead, zinc, and possibly other metals in connection umpire on appeal of patent application mining claims. Acting as Government representative in this resampling claims. Applicant wants samples assayed by Williams Inspection Co. Wire reply because sampling must be undertaken immediately to avoid snow conditions.

It is signed by M. E. Volin.

The next telegram is the reply from Mr. Thoenen to me, dated November 10, 1953, in the afternoon. His previous telegram was 9: 55 a. m.; the reply is 4: 15 p. m.

RE your telegram today. Williams Inspection Co. of Mobile is listed in Department of Commerce directory and has O. K. of State geologist of Alabama by telephone to me today. No other information available. Letter not received.

Mr. REDWINE. Mr. Volin, relying upon that telegram, what did you do; or did you rely on it?

Mr. VOLIN. Yes, I did rely on it. I notified Mr. Appling by telegram, I believe, to send the samples to this firm.

Mr. REDWINE. Mr. Volin, would you recognize the Department of Commerce directory if you saw it?

Mr. VOLIN. I would not. I know of the directory. I have not referred to it.

Mr. REDWINE. Would you identify that booklet, please, Mr. Volin?

Mr. VOLIN. This book is entitled "Directory of Commercial and College Laboratories, U. S. Department of Commerce, National Bureau of Standards."

Senator GOLDWATER. Mr. Chairman, would he read the date?

Mr. REDWINE. Mr. Chairman, the date of this document, as I was going to state, is August 3, 1947. The Department of Commerce representative will testify tomorrow, we are informed, that this is the last copy that was issued, the 1947 copy; that it has been supplemented by the pamphlet that was offered this morning by the distinguished Senator from Arizona; that it is the latest issue of this document.

Senator GOLDWATER. Just a minute, Mr. Chairman.

I did not offer any document from the Department of Commerce this morning.

I offered, and it was refused, a document of the American Council of Independent Laboratories. I just want to keep the record straight. It was not put into the record, so that you do not have to worry about it.

Mr. REDWINE. Will you find the A. W. Williams Co. listed in that document, please? It is at page 5, I believe, Mr. Volin.

Mr. VOLIN. On page 5, under geographical listing of commercial laboratories, under Alabama, at Mobile, is listed A. W. Williams Inspection Co., 208 Virginia Street, Zone 3, and so forth.

Mr. REDWINE. Then, after the listing of the name, it shows the type of work that it does, does it not?

Mr. VOLIN. That is right. Let's see.

The commodities and nature of tests and research are listed by what I take to be symbols.

Mr. REDWINE. Yes, sir.

Will you then check on the symbols? What is the symbol for "metallurgical work" or treatment of ores?

Mr. VOLIN. The symbol for "metallurgical" and "metallographic" work is a small "m."

Mr. REDWINE. That is the only reference in the symbol table as to inspection of ores?

Mr. VOLIN. Well, there are two others here that could possible be. One is chemical. I don't know whether it would have an application to minerals or not. The other is X-ray and radiographic. I don't know whether that would have an application to minerals. I would have to go into this.

Mr. REDWINE. Will you then check the listing of A. W. Williams Co. and see if they are listed with those symbols, please? M is the one.

Mr. VOLIN. I do not find M listed. I find C listed but not M.

Mr. REDWINE. Mr. Volin, I realize that you relied upon the telegram that was sent you by Mr. Thoenen in this matter. If you personally were deciding whether A. W. Williams Co. should do this assay work, would you have approved them getting the assignment on the basis of what is in the Department of Commerce directory? Would you have done that on the basis of what is in the Department of Commerce directory solely, or would you have gone to the GSA and found out what experience they had?

Mr. VOLIN. Well, you are asking me for something in the nature of an opinion now. It is not my intention to dodge your question. I will try to answer it to the best of my ability.

I did give more weight to the fact that the other statement, that this firm was O. K.'d by the State geologist of Alabama, than I did to the Department of Commerce register.

Mr. REDWINE. We will go back to that in just a minute.

Representative HOFFMAN. I would like to hear his last answer.

(The record was then read by the reporter.)

Mr. COBURN. May I interrupt counsel for a moment?

Mr. REDWINE. Certainly.

Mr. COBURN. Mr. Volin, had you been—and I am just asking you this for an opinion—in Mr. Thoenen's position would you have questioned the date on that directory in 1953? Would you have gotten something about 1953?

Mr. VOLIN. I believe I would have ascertained whether that was the last directory.

Representative HOFFMAN. Mr. Chairman, will counsel yield there just for one question?

Would you make any different decision today than you did then, knowing what you know now?

Mr. VOLIN. No, sir; I would do the same.

Mr. COBURN. Let us elaborate on that. What do you mean by you would do today what you did then? You would what?

Mr. VOLIN. If this thing was referred to me I would ascertain whether that directory that I was quoting or whether the thing I was referring to was the latest information available.

Mr. COBURN. Would you also have checked the symbols to see if this firm was qualified as an assayer of minerals?

Mr. VOLIN. In view of my telegram I think that would be necessary.

Mr. COBURN. That is all.

Mr. REDWINE. Mr. Volin, in view of what you have heard today if you had to make the decision today would you select Williams Inspection Co.?

Mr. VOLIN. I don't think that is a fair question. I would prefer not to answer it. If I haven't answered I will try to, but it involves an opinion. I have had a chance to follow only what I have heard today. I don't think it would be fair to A. W. Williams Co. for me as an outsider, and having heard what has been said today, to express an opinion.

Mr. REDWINE. Mr. Volin, I sympathize very much with you in the position you are in and I will withdraw the question.

So after you received this telegram you told Mr. Appling to go ahead and ship them to the company at Mobile?

Mr. VOLIN. Yes, sir.

Mr. REDWINE. Will you proceed, sir, with what went on from then, please?

Mr. VOLIN. The next thing that I remember hearing about this was a telephone call from Sidney Gottley, of the Minerals Division, Washington, D. C., asking about the progress on this case and where is the report. I got in touch with Appling then. That was on December 29. I got in touch with Appling and he said that the report was coming forward. On January 4 or 5, I received the report, which was dated January 2, and I immediately transmitted it to the Director of the Bureau of Mines with the letter of transmittal.

Mr. REDWINE. Did you examine the report prior to transmitting it to your superior?

Mr. VOLIN. Yes; I did. I read the report rather hastily, but I did read it.

Mr. REDWINE. Did you read the assay report?

Mr. VOLIN. Yes, sir; I did, sir.

Mr. REDWINE. Was it in certificate form, or typed form, or what kind of form was it in?

Mr. VOLIN. As I remember it, it is a list, just a typed list of assays.

Mr. REDWINE. With no certificate attached?

Mr. VOLIN. With no certificate attached. I don't recall seeing a certificate.

Mr. REDWINE. Do you happen to have a copy of your letter of transmittal?

Mr. VOLIN. Yes; I have.

Mr. REDWINE. Would you take it out of your briefcase, please, and let me see it for a half minute?

Mr. VOLIN. Yes.

Mr. COBURN. While we are waiting for counsel, did you make any effort to determine at that time where the certificate was?

Mr. VOLIN. I did not.

Mr. REDWINE. Mr. Volin, on the bottom of the first page of your letter of transmittal, which is dated January 5, 1954, you state, and I quote:

The sample splits noted in Mr. Appling's report as stored with the Oregon Department of Geology and Mineral Industries were disposed of upon receipt of the assay results.

Did you have any conversation at any time with Mr. Appling in respect to these splits stored with the Oregon Department of Geology?

Mr. VOLIN. Yes.

Mr. REDWINE. Will you relate that conversation or conversations?

Mr. VOLIN. It would have been telephone calls, and I was aware that there was a split. In fact, I believe that I gave instructions that there would be a split taken, at least as a precaution until assays had been returned. We discussed where would be a security place for these splits. I remember Mr. Appling stated that he tried various places. He tried to get the splits lodged in a local bank vault and then he asked me if I thought it would be all right to leave them at the office of the Department of Geology and Mineral Industries of the State of Oregon. They had an office in Grants Pass, and I thought that would be all right as a temporary location. We also discussed sending them to Albany and putting them in the Bureau of Mines' core warehouse there and decided that wouldn't be a very good place because they could get lost there as they were not core samples.

Mr. REDWINE. How did you become aware that the splits had been destroyed?

Mr. VOLIN. When I called him to ask him about the report I learned then that the splits had been destroyed.

Mr. REDWINE. That was after you received the letter from Washington or message from Washington to hurry up?

Mr. VOLIN. I received a telephone call from Washington after December 29.

I don't know just exactly when that call was, but it was some time between December 29 and January 4.

Mr. REDWINE. Did you have any feeling of concern that those splits had already been destroyed or not?

Mr. VOLIN. Yes; I did. I reviewed with Dick the reasons why we destroyed the splits.

Mr. REDWINE. You say "we" now. Are you taking a part of the responsibility for them being destroyed?

Mr. VOLIN. I didn't have the—well, inasmuch as I did not give Dick full instructions on this perhaps part of the responsibility falls on me, but I did not know the samples were destroyed until after they were.

Then I said, "Why did we do this? Why did we destroy these samples?" And Dick reviewed some of the thoughts on the matter.

Mr. REDWINE. Such as what, Mr. Volin, please?

Mr. VOLIN. The most important was that we did not have a secure place to store samples indefinitely.

Mr. REDWINE. I am not arguing with you, but the place was just as secure on December 29 as it was the day that they were put in there, was it not?

Mr. VOLIN. It wouldn't be what you would call a secure, an absolutely secure place, and it was available to the public, this office was, and I didn't feel that it would come under the category of a secure place for indefinite storage.

Mr. REDWINE. Go ahead.

Mr. VOLIN. Dick felt the same about that. Let me think what else was involved there.

Mr. REDWINE. Do you recall any other details of that discussion with Mr. Appling, as to why they had been destroyed, other than lack of a safe place?

Mr. VOLIN. No, I think that is all I can recall of that discussion.

Mr. COBURN. Mr. Volin, what was your purpose in instructing Mr. Appling to retain these splits?

Mr. VOLIN. It is the normal procedure in sampling where you are shipping samples away to an assayer to retain splits, but, frankly, I believe that my purpose was that we would send those splits to Albany for assaying, and we did not do that because the McDonalds were supposed to take care of the total cost of this work.

We were not supposed to be doing the work for them and there was no way to remunerate the Bureau of Mines for running the assays at Albany, so we discarded that idea.

Mr. COBURN. Was this after you received the detailed instructions?

Mr. VOLIN. These were thoughts we had after I received the detailed instructions.

Mr. COBURN. And by "we"; do you mean Mr. Appling and yourself?

Mr. VOLIN. Yes.

Mr. COBURN. So you discussed the possibility of sending these splits to Albany with Mr. Appling?

Mr. VOLIN. Of sending them to Albany for assay, yes.

Mr. COBURN. Instead of that, after you decided not to do that Mr. Appling destroyed the splits; is that correct?

Mr. VOLIN. He destroyed the splits sometime—I don't know exactly the date.

Mr. COBURN. I am not asking the exact date. I say after you had this discussion—

Mr. VOLIN. Yes.

Mr. COBURN. Then instead of retaining them for any considerable length of time he destroyed them?

Mr. VOLIN. Yes.

Mr. COBURN. How long would you have retained them?

Mr. VOLIN. Well, it would depend upon the instructions, my instructions, and the purpose of these samples. I consider that it was all right to destroy these after the assays had been received if there seemed to be nothing abnormal about the assays.

Mr. COBURN. Have you not testified that you were somewhat, let us put the word aghast or perhaps amazed by the fact that they have been destroyed? Have you not so testified?

Mr. VOLIN. Yes; I said that I wanted to know and review in my mind as to why that was done.

Mr. COBURN. What gave rise to that concern on your part?

Mr. VOLIN. Well, I guess my only answer to that can be that I thought that they were being held a while longer and I hadn't given instructions to have it destroyed, and I just wanted to know why they had.

Mr. COBURN. At that time you had in your custody Mr. Appling's report showing these high assay values, is that correct, or at least assay values that were somewhat higher than had been received theretofore?

Mr. VOLIN. I don't understand your question now.

Mr. COBURN. Were you aware at the time you received Mr. Appling's report of any assay values placed on these claims by other assay firms?

Mr. VOLIN. No, I was not.

Mr. COBURN. Then, that is perfectly all right, but you did realize, did you not, as a mining engineer, that the values reflected in this report were amply sufficient to show mineralization?

**Mr. VOLIN.** It was not in our realm nor did we have any instructions to determine the economics of this case, and if I gave an opinion on that it would only be a personal opinion. It would not reflect the opinion of the Bureau of Mines, or not reflect the policy of the Bureau of Mines, because we were not entering into this case in determining or judging the economics or evaluating the property for a patent.

**Mr. COBURN.** Mr. Volin, when you and Mr. Appling were discussing the possibility of sending these splits to Albany, to the Bureau of Mines laboratory, were you going to do that as a check against what might come out of the Williams Inspection Co. assays?

**Mr. VOLIN.** Yes. We had that in mind. We had in mind checking the sampling too. We discussed a number of things, procedures, that might be used in checking the sampling and in checking the assay.

**Mr. COBURN.** Was that prior to or after you received the report from Mr. Appling?

**Mr. VOLIN.** That was prior.

**Mr. COBURN.** Were you aware at that time, Mr. Volin, of the fact that Mr. Hattan, the minerals examiner for the Bureau of Land Management, had checked, I think it was three times, on the validity of the assays they had taken?

**Mr. VOLIN.** I did not know anything about that.

**Mr. COBURN.** You did know, however, that there was a contest?

**Mr. VOLIN.** I knew there was a contest, yes.

**Mr. COBURN.** That is all.

Representative CHUDOFF (presiding). Mr. Lanigan.

**Mr. LANIGAN.** Yes.

You said that you got some instructions from Washington indicating that Mr. McDonald's engineer was going to do the sampling and the Bureau of Mines was to watch him; is that correct? They were to watch him while he did it?

**Mr. VOLIN.** Our function, as I understood the instructions, was that we would be present during the sampling to be done by the McDonald's representative and that we would determine that the sampling was done fairly and correctly.

**Mr. LANIGAN.** Were your instructions to Mr. Appling to that effect, that he was to watch while the McDonald's representative did the sampling?

**Mr. VOLIN.** Yes. I sent him copies of these instructions.

**Mr. LANIGAN.** Did you send him any map or sketch of the mines of the claims which were to be sampled?

**Mr. VOLIN.** No. The claims were listed by name in the instructions.

**Mr. LANIGAN.** How would Mr. Appling know which claims were the ones that he was supposed to supervise the sampling on?

**Mr. VOLIN.** Normally there will be markers for claims by which you can identify that claim.

**Mr. LANIGAN.** Did you instruct him to check those markers?

**Mr. VOLIN.** I did not instruct him specifically, but I think that was certainly inferred in my instructions.

**Mr. LANIGAN.** Did you instruct him as to the width of the cut in which the sample was to be taken?

**Mr. VOLIN.** You mean the size of channel?

**Mr. LANIGAN.** Perhaps that is a better term for it, yes.

**Mr. VOLIN.** We discussed the kinds of channels, the sizes of channels that would be taken, the weight of sample that would be cut

per foot of channel, but until you know the conditions of the rock and the mineralization, until you observe those, why, you can't make very good plans along that line because the rock might be so difficult to cut that you would have to rely on a chip sample or the distribution of the minerals might be such that a chip sample would be better than a channel sample.

Senator SCOTT. Mr. Lanigan, right now it is time for us to adjourn. We will recess until tomorrow morning and we will pick up right where we left off.

I want to make this statement at this time.

The testimony given here today has been both revealing and shocking.

As any fairminded person would be, I was alarmed to learn that the Department of the Interior is determined to throw every roadblock it can into the path of the subcommittees investigating the Al Sarena case.

I had sincerely hoped that the Department of the Interior would cooperate with Congress in getting at the bottom of this matter and bringing out all of the facts. Instead it is very obvious that the Department of Interior is not only coaching witnesses as to their testimony but has also put itself in the position of acting as a front for an assay company, whose performance has been strongly criticized by another agency of the Federal Government.

As we continue the hearings in this case I sincerely hope that the Department of the Interior will see fit to stop attempting to hide pertinent facts, and facts which must be brought out if we are to learn the truth about this whole matter.

So far testimony has clearly shown that the Al Sarena case was handled by the Interior Department in a shoddy and shabby fashion. If the Department of Interior has information to the contrary, I think it should concentrate on bringing this information to the subcommittee—and it will have full opportunity to do this—instead of coaching witnesses and engaging in obstructive tactics.

Tomorrow the subcommittee will meet at 9:30 a. m. in room 318, Senate Office Building.

We will adjourn until that time.

Representative HOFFMAN. In answer to that, Mr. Chairman, let me put my opinion on there that what you said is mostly bunk.

Senator GOLDWATER. Mr. Chairman, as a Senator, a Member of this Congress, have I a right to make a statement in answer to yours?

Senator SCOTT. We will have that in the morning.

Senator GOLDWATER. You do not want it now?

Senator SCOTT. No, sir.

(Whereupon, at 4:20 p. m., Tuesday, January 10, 1956, the hearing was recessed until 9:30 a. m., Wednesday, January 11, 1956.)

## THE AL SARENA CASE

---

WEDNESDAY, JANUARY 11, 1956

UNITED STATES SENATE,  
SUBCOMMITTEE ON LEGISLATIVE OVERSIGHT,  
FUNCTION OF THE SENATE COMMITTEE ON  
INTERIOR AND INSULAR AFFAIRS,  
HOUSE OF REPRESENTATIVES,  
SUBCOMMITTEE ON PUBLIC WORKS AND RESOURCES  
OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS,  
*Washington, D. C.*

The subcommittees met at 9:35 a. m., in the caucus room, Senate Office Building, Washington, D. C., Hon. Kerr W. Scott (chairman of the Senate committee) presiding.

Present: Senators Scott (North Carolina); Richard L. Neuberger (Oregon); and George W. Malone (Nevada).

Also present: Senator Henry C. Dworshak (Idaho).

Present: Representatives Earl Chudoff (Pennsylvania) (chairman of the House subcommittee); Robert E. Jones (Alabama); John E. Moss, Jr. (California); Clare E. Hoffman (Michigan); Charles Raper Jonas (North Carolina), and William E. Minshall (Ohio).

Senator Scott. The meeting will please come to order.

Mr. Volin will resume the stand, please.

### TESTIMONY OF MELDEN EARL VOLIN, CHIEF, RESEARCH, MICHIGAN SCHOOL OF MINES AND TECHNOLOGY—Resumed

Senator Scott. Mr. Lanigan will continue his examination.

Representative Hoffman. Mr. Chairman, last evening, as I understood the record, Senator Goldwater was told that he could make a statement this morning. Now he has sent one over and requested that I read it. Is this the proper time?

Senator Scott. This is the proper time right now.

Representative Hoffman. All right. [Reading:]

STATEMENT BY SENATOR BARRY GOLDWATER, UNITED STATES SENATOR FROM THE STATE OF ARIZONA

Yesterday I requested the chairman of this joint meeting, Senator Kerr Scott, Democrat, North Carolina, for the privilege of making a reply to a purely political attack which he made in the course of the hearings. He denied me that opportunity, brusquely saying that I could "make it tomorrow."

Ever since these two subcommittees began their hearings on the Al Sarena case, I have had strong suspicions that they were motivated entirely by partisan politics. Yesterday these suspicions were confirmed.

Never have I seen such discourtesy to fellow Members of Congress as the chairman showed in these hearings yesterday by calling Congressman Hoffman out of order on practically every point he raised, and in denying me, on two separate occasions, the right to insert material in the record.

If I may be permitted to insert something there, I do not feel badly about any rulings. My feelings have not been hurt in any way. I am not complaining on my own account. I have been around long enough to not be unduly mentally or physically disturbed by criticism or adverse rulings. Apparently the Senator is.

I continue to read:

I was shocked to see the treatment accorded a witness when, it having become perfectly obvious that the subcommittees' charge had no substance, the counsel attempted to discredit the witness, and the witness's honesty was questioned by a committee member to the extent of a direct charge to that effect.

If investigations being conducted by the Democrat Party in the Congress are to be so politically motivated, with the apparent object of seeking only to smear the Eisenhower administration, then the leadership of that party should expect to be held accountable for permitting the legislative process to be subverted.

The Democrats in these hearings are tossing around the term "giveaway" very loosely and irresponsibly. This charge is without substance, and they know it. By such behavior as I observed yesterday these Democrats are themselves giving away the freedoms of our country through arbitrary violation of established legislative processes.

That is the end of the statement.

Thank you, Mr. Chairman.

Senator SCOTT. It will appear in the record.

We will resume.

Mr. VOLIN. May I make a statement also, Mr. Chairman?

Senator SCOTT. Yes, sir.

Mr. VOLIN. I have not had a good night's sleep, for the first time in my life. I didn't enjoy my breakfast, for the first time, with the fear of what might come forth, what might be asked me here. From what I saw yesterday, I had some trepidation about the hearing here this morning.

Senator SCOTT. Is there anything further?

Mr. VOLIN. That is all.

Senator NEUBERGER. May I ask you a question? I have not asked any questions in this hearing.

Do you consider it improper or in any way out of line that a committee of the Congress of the United States should try to determine the behavior and performance of Government officials who were charged with the custody of natural resources.

Mr. VOLIN. I think that is entirely proper.

Senator NEUBERGER. Thank you very much.

Mr. LANIGAN. I believe, Mr. Volin, that yesterday you testified that your instructions were that a Mr. McCormick, the representative of Al Sarena Mining Co., was to take the samples in the presence of a representative of the Bureau of Mines.

Could you tell us why it was decided to let Mr. McCormick take the samples, rather than have the Bureau of Mines or the Government representative take the samples in Mr. McCormick's presence?

Mr. VOLIN. I don't believe I can tell you the reason why. I can give you this comment that might have some bearing on it.

The work was to be done by the applicant at his expense. There was no provision for Government funds to be expended on this, and the work that was done by the Bureau of Mines was done on regular Bureau allotments of funds, and work, I should say, regularly allotted for the normal objectives of the Bureau of Mines rather than this particular objective.

Mr. LANIGAN. Was it your understanding then that all of the expenses of this examination, other than the travel expenses and the salaries of the Bureau of Mines representative, were to be paid by Al Sarena?

Mr. VOLIN. Will you restate your question, please? I missed one point.

Mr. LANIGAN. Was it your understanding then that the Al Sarena Mining Co. was to pay all of the expense of the examination and the assay other than the salary and travel expense of the Bureau of Mines representative who went to the scene?

Mr. VOLIN. Well, it wasn't stated in terms like that. It was simply stated that the Government would have a representative present at the sampling.

Mr. LANIGAN. Perhaps I should preface the question with this question:

How long had you held the position as supervisor of that area prior to the time that this examination took place?

Mr. VOLIN. The particular position I was occupying at that time, Chief of the Mining Division of Region II, I was appointed to that position in April 1950.

Mr. LANIGAN. What position had you held with the Bureau of Mines prior to that appointment in 1950?

Mr. VOLIN. Going back to the start when I was first employed by the Bureau of Mines in April, no, March 1939, I first held the position of field engineer in charge of exploration investigations under the Strategic Minerals Program until 1952, when I became assistant district engineer of the Colorado District at Denver, Colo.

In December 1943 I became resident engineer on the Leadville Tunnel project. I went into the service, into military service in 1944, and returned to the Bureau of Mines in 1946, in April 1946, when I became assistant to the chief, I believe the title was, of the Salt Lake City District Office. I held that position until 1949 in April. No, it was in May 1949 that I was called upon to go to Afghanistan as a representative or on loan from the Bureau of Mines to the State Department to assist that country in a survey of their mineral resources and try to help them develop those mineral resources.

I returned in December of 1949 to my previous position and then in 1950, April 1950, I was transferred to Albany, Oreg., to take the job that we are talking about.

Mr. LANIGAN. In your experience with the Bureau of Mines, at any time prior to this one had you, or to your knowledge the Bureau, been called upon to conduct an examination of a mining claim or to participate in examination of a mining claim with the owner to get samples to determine the validity of a claim under the mining law?

Mr. VOLIN. In my career with the Bureau of Mines, I had never had any connection with an assignment like this before.

Mr. LANIGAN. Now, I wanted to get something clear in my mind, I think there was some testimony that some assays, the later assays may have shown something like \$4 a ton value.

As I recall, gold runs about \$35 an ounce, so would that mean that there would be four thirty-fifths of an ounce of gold per ton if the value were \$4 of all gold? Is that roughly correct?

Mr. VOLIN. You would determine the number of ounces per ton of sample of what you sampled. If you want to refer to it as ore, it would be the number of ounces of gold per ton of ore. In computing the gross value, and that is the gross value, you would simply multiply that by the market price for gold.

Mr. LANIGAN. That is about \$35 an ounce; is it not?

Mr. VOLIN. Yes. I might point out that in economics, you never figure that you are going to recover all of the mineral values.

Mr. LANIGAN. Well, if the assay were four thirty-fifths of an ounce per ton, the next question is what size samples are used in making these assays on, I think they used the phrase yesterday, the ton-ounce basis? If they said they took a 2-ton sample, what does that mean?

Mr. VOLIN. That is related to the amount of pulp or sample that was weighed up to run an assay. Actually, if you are asking me what size sample is taken, that is related to something different. The size sample that you would take would be related to the occurrence of the mineral in place.

Mr. LANIGAN. Well, to make a 2-ton assay, as the phrase was used, how much pulp would be needed?

Mr. VOLIN. It is my understanding that this assayer weighed up 2 assay tons or 2 weights, which would be twice 29 plus grams to assay or to run the assay on.

Mr. LANIGAN. So that would be roughly 58 grams of pulp which were used in making the assay of the sample?

Mr. VOLIN. That is right. It would be 54, sir.

Mr. LANIGAN. Fifty-four. Can you tell us what the weight of 54 grams is in terms of ounces? Could you tell us that offhand?

Mr. VOLIN. I rely so much on conversion tables that I don't want to trust my memory on that.

Mr. LANIGAN. Would it be about 2 ounces?

Representative HOFFMAN. The witness has said, Mr. Chairman, that he did not want to trust his memory. Why do you fuss around and guess about something that does not appear to be directly involved anyway?

Mr. VOLIN. I remember weighing up samples when I was back in school at the Colorado School of Mines. That is the only assaying I have ever done in my life. It is my recollection that an assay ton of normal weighing pulp is about a tablespoonful. That will visualize it for you about the best way I can describe it.

Mr. LANIGAN. About a tablespoonful of pulp would be an assay ton; so that there would be about 2 tablespoonfuls?

Mr. VOLIN. May I correct myself? I would say a teaspoonful.

Mr. LANIGAN. Now, in order to assay out at \$4 a ton value of gold in those 2 teaspoonfuls of pulp, about how much gold would there have to be?

Mr. VOLIN. Well, I would guess that the gold button you would get would be rather small. It would be perhaps the size of a pinhead.

Mr. LANIGAN. About the size of a pinhead in the two?

Mr. VOLIN. Yes.

Now, you are asking me about something that, although I took assaying in college, it was never necessary for me to pursue that line of business. I am remembering things I did some 20 years ago, and I think there is some excuse for me not to be familiar with this line of work.

Mr. LANIGAN. I do not want to embarrass you. I just thought that, being a more or less neutral person in this, you might give us a little picture. I am not testing your knowledge. I just wanted to get it for my own information.

Mr. VOLIN. I don't feel embarrassed about it. I am glad to comment as I have done.

Mr. LANIGAN. Well, in view of the fact that the samples would consist of about 2 teaspoonsful of pulp, and some gold possibly the size of a pinhead in those two teaspoonsful were involved, would you say it would be quite important in making a mineral examination of a mine to be absolutely sure that the samples were properly taken from the mine?

Mr. VOLIN. The accuracy of an evaluation, of course, would depend upon the accuracy of each of the steps through which you must approach that evaluation, and certainly the taking of the samples is an important step.

Mr. LANIGAN. Now, yesterday you were discussing the discussion that you had with Mr. Appling regarding the taking of samples, and I think you felt that there might be different types of conditions in the mine, and generally it had to be left to Mr. Appling's discretion with some general guidance, you might say, on the subject.

I take it that you did not issue any specific instructions on how those samples were to be taken out of the mine; is that correct?

Mr. VOLIN. We discussed all of the possibilities we could think of that might apply to this case: The type of sample that would be cut, whether it would be a channel sample or a chip sample, the possibilities against salting, how salting might be done, the exact procedures to be used in reducing the samples to pulps, the handling of the pulps, until the time that those samples left our possession. I considered that my main responsibility, and I did go into that as thoroughly as I thought was necessary.

Mr. LANIGAN. Since this was an investigation ordered by the Solicitor, and since it was obvious that there were contested mining claims, and high values, particularly of timber involved—

Mr. VOLIN. I didn't know that, sir. I have never been on the claims.

Mr. LANIGAN. Would it not seem that the Government representative should take the samples, rather than having one of the parties to the contest take the samples?

Mr. VOLIN. Now you are asking for an opinion that, if I expressed it, it wouldn't be the opinion, it may not be the opinion of the Bureau or the Department. I had specific orders and I tried very hard to follow those orders.

Mr. LANIGAN. You did the best you could then within the scope of the order that you were given and bound by; is that correct?

Mr. VOLIN. I really did.

Mr. REDWINE. Mr. Lanigan, may I interrupt at this point?

Mr. LANIGAN. Yes.

Mr. REDWINE. Mr. Appling, in his report, says that he took the samples almost without exception, rather than Mr. McCormick; that Appling himself took the samples. He further says:

Samples were taken from outcrop, pits, or trenches designated by the McDonalds. According to them, locations were selected that had been sampled

with satisfactory results. Location of the sample on the outcrop or in the pit was at the discretion of McCormick and the writer.

He further says in his report that in most instances he, Appling, took the sample.

Mr. LANIGAN. Does he specify in which instances he took them and which Mr. McCormick took them?

Representative HOFFMAN. No, Mr. Chairman; all of the examination of Mr. Lanigan here has proceeded on the theory that McCormick took the samples.

If I understand Counsel Redwine's comments here, Appling took them. It just shows how we are wasting time.

Mr. REDWINE. Appling reported that he took them.

Representative HOFFMAN. Whether he did or did not, may I ask a question? Will you yield, Mr. Lanigan?

Mr. LANIGAN. Yes, sir.

Representative HOFFMAN. Do you know of any reason why, if Appling did not take the samples but watched McCormick, there is anything wrong with that procedure. Have you any reason to doubt that Appling would see that fair samples were taken?

Mr. VOLIN. As long as Appling was watching McCormick take the samples all the time, and Mr. McCormick followed approved procedures, there was nothing wrong with that.

Representative HOFFMAN. Looking back at it now, do you know of any reason why any other policy or procedure should have been followed.

Mr. VOLIN. Well, there was only one thing which came into it. That was impending bad-weather conditions.

Representative HOFFMAN. What was that?

Mr. VOLIN. There was this fact of impending bad weather conditions.

Representative HOFFMAN. Well, were you to blame for that?

Mr. VOLIN. No.

Representative HOFFMAN. Or is anybody in the Department, so far as you know?

Mr. VOLIN. No, sir.

Representative HOFFMAN. I thank you. That is all.

Mr. LANIGAN. Now, on the question of sending the samples to the A. W. Williams laboratory, did you notify the laboratory at any time that the samples were going to be sent to them?

Mr. VOLIN. I did not.

Mr. LANIGAN. Do you know whether anyone else in the Department notified the laboratory?

Mr. VOLIN. I do not.

Mr. LANIGAN. Did you have any instructions on how the samples were to be packed and mailed to the laboratory?

Mr. VOLIN. I left that to Mr. Appling's judgment.

Mr. LANIGAN. Did you discuss with Mr. Appling or Mr. McCormick the advisability of asking the laboratory to retain part of the pulp after the assay had been made?

Mr. VOLIN. I never did have any contact with Mr. McCormick. I cannot recall discussing this with Mr. Appling. I would assume that this laboratory, as a commercial laboratory, would follow the usual procedure of retaining a part of the pulp in case a re-assay was requested, retaining it for a while anyway.

Mr. LANIGAN. Is that the usual procedure in any commercial assay laboratory?

Mr. VOLIN. Well, they have different policies. Most of the ones that I have had anything to do with, and especially if you ask them to, will retain a portion of the pulp until you tell them otherwise, or after a certain period of time, because of limited storage facilities, they have to throw it away.

Mr. LANIGAN. Did you know that Mr. McCormick had told the laboratory to use all the pulp when it was sent to them?

Mr. VOLIN. I heard the testimony on that yesterday and I interpret that as a precautionary statement for the laboratory to combine the 2 portions in the 2 envelopes that were spoken of to guard against having an unrepresentative sample.

In other words, if the assayer has selected his weighed portion from only one of those envelopes, there was the possibility that that would not be representative because, in dividing the portions into the two envelopes, you might have gotten more of your mineral constituents in the one just by natural segregation.

I interpret that statement, I must say truly, to mean that the samples in the 2 envelopes should be mixed together before a sample, a portion was weighed out for assaying.

Mr. LANIGAN. That is all that I have at this time, Mr. Chairman.

Mr. REDWINE. Mr. Volin, to clear up the record of yesterday, let us go over a matter we discussed yesterday again, please.

I believe you testified yesterday, and if you need to do so, refer to any of your documents, please, on this, that you had a talk with Mr. Appling on December 29, 1953, in response to or as a result of the telephone call which you had from Washington to please get this report in.

Mr. VOLIN. It is my recollection that I wrote a letter dated September 29, and I had talked to him by telephone at an earlier date.

Mr. REDWINE. I am talking about December 29, just prior to submission of Appling's report.

Mr. VOLIN. Correct.

Mr. REDWINE. And you instructed Appling to get the report in as soon as possible?

Mr. VOLIN. Yes.

Mr. REDWINE. Will you refer to your file there, to the letter we had yesterday transmitting the Appling report to your superior, please, and see whether it was January 4 or 5?

Mr. VOLIN. Here is the letter, sir, signed by me, addressed to the Director of the Bureau of Mines. It is dated January 5.

Mr. REDWINE. Mr. Volin, that is a true photostatic copy of your letter, is it?

Mr. VOLIN. It is.

Mr. REDWINE. Would you leave that with us today and we will mail it back to you? Will you leave it for inclusion in the record by the reporter, sir, and we will mail it back to you?

Mr. VOLIN. These copies are not my own. They were given to me by the Bureau of Mines. I presume this is proper. I would like to have Mr. Miller say whether it is.

Mr. REDWINE. I believe Mr. Miller is in the room, is he not?

Mr. Miller, would it be all right for Mr. Volin to allow the reporter to have this letter?

Mr. THOMAS H. MILLER (Deputy Director, Bureau of Mines, Department of the Interior). I have the copy. It might serve your purpose better.

Mr. REDWINE. It would, sir. May I see it, please?

(Handed.)

(The letter referred to follows:)

UNITED STATES DEPARTMENT OF THE INTERIOR,  
BUREAU OF MINES,  
Spokane, Wash., January 5, 1954.

Memorandum to: Director, Bureau of Mines.

From: Chief, Mining Division, Region II.

Subject: Government representation at sampling of Al Sarena Mines, Inc.

In accordance with your memorandum of September 10, 1953, with attached copies of correspondence from the office of the Solicitor, R. N. Appling, Jr., mining engineer, mining division, region II, acted as Government representative in the sampling of mining claims held by Al Sarena Mines, Inc., in Jackson County, Oreg.

The sampling was done according to instructions outlined in the Solicitor's letter of September 3, 1953, to Al Sarena Mines, Inc., and Mr. Appling's duties as Government representative were discharged as indicated in the attached memorandum report dated January 2, 1954.

The samples were sent for assay to A. W. Williams Inspection Co., of Mobile, Ala. This firm was selected by representatives of Al Sarena Mines, Inc., but before the samples were shipped inquiry as to reliability of the firm was made of John R. Thoenan, acting regional director, region VIII, by memorandum dated November 9 and teletype dated November 10. Mr. Thoenan's telegram of November 10 stated that the firm is listed in the Department of Commerce directory and has the approval of the State geologist of Alabama.

The sample splits noted in Mr. Appling's report as stored with the Oregon Department of Geology and Mineral Industries were disposed of upon receipt of the assay results.

To facilitate early receipt of Mr. Appling's report as requested by Mr. Sidney Gottley, Assistant Chief, Minerals Division, in a telephone call to this office on December 29, and with the approval of Mr. Stephen M. Shelton, regional director, region II, this memorandum along with attachments is being sent directly to your office.

M. E. VOLIN.

Mr. COBURN. Mr. Volin, what was the substance of the telephone call from Mr. Sidney Gottley, and will you identify Mr. Sidney Gottley?

Mr. VOLIN. As I recall, Mr. Gottley was assistant to the Chief of the Minerals Division, and probably was asking for the Chief at that time of the Bureau of Mines here in Washington.

Mr. COBURN. At the Bureau of Mines here in Washington?

Mr. VOLIN. Yes.

Mr. COBURN. Did he ask you to expedite action on this matter?

Mr. VOLIN. He asked me to look into it and see whether it was completed because a report was wanted.

Mr. COBURN. Did he say the Department was in a hurry to get the report?

Mr. VOLIN. I can't recall his words. He wanted to know what could be done to get the report on in.

Mr. COBURN. Did you get the impression of speed or haste at all in the course of your telephone conversation with him?

Mr. VOLIN. I don't recall that, sir.

Mr. COBURN. He just wanted to know about the status of the report?

Mr. VOLIN. Well, he did want the report. He wanted the report to come in, yes.

Mr. COBURN. Right away? As soon as possible?

Mr. VOLIN. I assumed that it was right away.

Mr. COBURN. Did he say "right away"?

Mr. VOLIN. I can't recall that. I honestly can't.

Mr. COBURN. How many days later did you get the report in to him?

Mr. VOLIN. The report was dated January 2 and reached me on the 4th, I presume, because my transmittal forward was on January 5. I believe it is indicated in the last paragraph of my letter that that report did not go through normal channeling through the regional office; in order to expedite transmittal of it, it went directly from my office to Washington, D. C.

Mr. COBURN. To Mr. Gottley?

Mr. REDWINE. Mr. Volin, until you received the report on the 4th, I believe you said, from Mr. Appling—

Mr. VOLIN. I judge it was the 4th.

Mr. REDWINE. Did you know what the reports of the assays were prior to the time you saw the report?

Mr. VOLIN. I am sure that we talked, I am sure I had asked about the assays. I was curious to know how they would come out. I am sure I asked about it. I don't specifically recall it, but for the record I am sure I asked Mr. Appling whether they were good or poor.

Mr. REDWINE. You did not write them down one by one?

Mr. VOLIN. No, there was no list or anything like that.

Mr. REDWINE. So you did not know the actual results until you read it in the Appling report?

Mr. VOLIN. The results as tabulated I did not know.

Mr. REDWINE. Let me ask you this, Mr. Volin: Did you at any time subsequent to the time you saw the Appling reports, at any time from January 4 to January 10 communicate in any form other than transmitting the Appling report as to what the results of the assay were?

Mr. VOLIN. I don't recall doing so. At that time I was being transferred to a new position as regional director at Minneapolis. I can't remember whether I left on January 9 or January 11, but I had a lot of other things on my mind that I was trying to take care of and I do not recall contacting the Washington office.

Mr. REDWINE. I am speaking now in respect to the Appling report only and not whether you would have talked to Washington about any other matter. I am thinking about the Appling report and its contents.

Mr. VOLIN. I don't remember any telephone conversation there. There might have been but it skips my memory.

Mr. REDWINE. If you had had such a telephone conversation would it appear in the records of the Spokane office that you did or not?

Mr. VOLIN. If I initiated the call it would appear in the records at Spokane, that is correct.

Mr. REDWINE. Mr. Chairman, I have no further questions of this witness.

Senator NEUBERGER (presiding). Are there questions from the members of the subcommittee? Do you have questions, Mr. Hoffman?

Representative HOFFMAN. Yes.

Senator NEUBERGER. Would you care to go ahead and ask them?

Representative HOFFMAN. If this is the proper time.

Mr. THOMAS H. MILLER (Deputy Director, Bureau of Mines, Department of the Interior). I have the copy. It might serve your purpose better.

Mr. REDWINE. It would, sir. May I see it, please?

(Handed.)

(The letter referred to follows:)

UNITED STATES DEPARTMENT OF THE INTERIOR,  
BUREAU OF MINES,  
*Spokane, Wash., January 5, 1954.*

Memorandum to: Director, Bureau of Mines.

From: Chief, Mining Division, Region II.

Subject: Government representation at sampling of Al Sarena Mines, Inc.

In accordance with your memorandum of September 10, 1953, with attached copies of correspondence from the office of the Solicitor, R. N. Appling, Jr., mining engineer, mining division, region II, acted as Government representative in the sampling of mining claims held by Al Sarena Mines, Inc., in Jackson County, Oreg.

The sampling was done according to instructions outlined in the Solicitor's letter of September 3, 1953, to Al Sarena Mines, Inc., and Mr. Appling's duties as Government representative were discharged as indicated in the attached memorandum report dated January 2, 1954.

The samples were sent for assay to A. W. Williams Inspection Co., of Mobile, Ala. This firm was selected by representatives of Al Sarena Mines, Inc., but before the samples were shipped inquiry as to reliability of the firm was made of John R. Thoenan, acting regional director, region VIII, by memorandum dated November 9 and teletype dated November 10. Mr. Thoenan's telegram of November 10 stated that the firm is listed in the Department of Commerce directory and has the approval of the State geologist of Alabama.

The sample splits noted in Mr. Appling's report as stored with the Oregon Department of Geology and Mineral Industries were disposed of upon receipt of the assay results.

To facilitate early receipt of Mr. Appling's report as requested by Mr. Sidney Gottley, Assistant Chief, Minerals Division, in a telephone call to this office on December 29, and with the approval of Mr. Stephen M. Shelton, regional director, region II, this memorandum along with attachments is being sent directly to your office.

M. E. VOLIN.

Mr. COBURN. Mr. Volin, what was the substance of the telephone call from Mr. Sidney Gottley, and will you identify Mr. Sidney Gottley?

Mr. VOLIN. As I recall, Mr. Gottley was assistant to the Chief of the Minerals Division, and probably was asking for the Chief at that time of the Bureau of Mines here in Washington.

Mr. COBURN. At the Bureau of Mines here in Washington?

Mr. VOLIN. Yes.

Mr. COBURN. Did he ask you to expedite action on this matter?

Mr. VOLIN. He asked me to look into it and see whether it was completed because a report was wanted.

Mr. COBURN. Did he say the Department was in a hurry to get the report?

Mr. VOLIN. I can't recall his words. He wanted to know what could be done to get the report on in.

Mr. COBURN. Did you get the impression of speed or haste at all in the course of your telephone conversation with him?

Mr. VOLIN. I don't recall that, sir.

Mr. COBURN. He just wanted to know about the status of the report?

Mr. VOLIN. Well, he did want the report. He wanted the report to come in, yes.

Mr. COBURN. Right away? As soon as possible?

Mr. VOLIN. I assumed that it was right away.

Mr. COBURN. Did he say "right away"?

Mr. VOLIN. I can't recall that. I honestly can't.

Mr. COBURN. How many days later did you get the report in to him?

Mr. VOLIN. The report was dated January 2 and reached me on the 4th, I presume, because my transmittal forward was on January 5. I believe it is indicated in the last paragraph of my letter that that report did not go through normal channeling through the regional office; in order to expedite transmittal of it, it went directly from my office to Washington, D. C.

Mr. COBURN. To Mr. Gottley?

Mr. REDWINE. Mr. Volin, until you received the report on the 4th, I believe you said, from Mr. Appling—

Mr. VOLIN. I judge it was the 4th.

Mr. REDWINE. Did you know what the reports of the assays were prior to the time you saw the report?

Mr. VOLIN. I am sure that we talked, I am sure I had asked about the assays. I was curious to know how they would come out. I am sure I asked about it. I don't specifically recall it, but for the record I am sure I asked Mr. Appling whether they were good or poor.

Mr. REDWINE. You did not write them down one by one?

Mr. VOLIN. No, there was no list or anything like that.

Mr. REDWINE. So you did not know the actual results until you read it in the Appling report?

Mr. VOLIN. The results as tabulated I did not know.

Mr. REDWINE. Let me ask you this, Mr. Volin: Did you at any time subsequent to the time you saw the Appling reports, at any time from January 4 to January 10 communicate in any form other than transmitting the Appling report as to what the results of the assay were?

Mr. VOLIN. I don't recall doing so. At that time I was being transferred to a new position as regional director at Minneapolis. I can't remember whether I left on January 9 or January 11, but I had a lot of other things on my mind that I was trying to take care of and I do not recall contacting the Washington office.

Mr. REDWINE. I am speaking now in respect to the Appling report only and not whether you would have talked to Washington about any other matter. I am thinking about the Appling report and its contents.

Mr. VOLIN. I don't remember any telephone conversation there. There might have been but it skips my memory.

Mr. REDWINE. If you had had such a telephone conversation would it appear in the records of the Spokane office that you did or not?

Mr. VOLIN. If I initiated the call it would appear in the records at Spokane, that is correct.

Mr. REDWINE. Mr. Chairman, I have no further questions of this witness.

Senator NEUBERGER (presiding). Are there questions from the members of the subcommittee? Do you have questions, Mr. Hoffman?

Representative HOFFMAN. Yes.

Senator NEUBERGER. Would you care to go ahead and ask them?

Representative HOFFMAN. If this is the proper time.

Senator NEUBERGER. I believe it is. I am just sitting in for Senator Scott but I believe it is.

Representative HOFFMAN. Thank you.

Do you know any reason to question either the ability or integrity of Mr. Appling?

Mr. VOLIN. No.

Representative HOFFMAN. How long have you known him?

Mr. VOLIN. Mr. Appling was working for us on a diamond drilling project as temporary engineer in 1950 in Idaho. I became quite impressed with his work and encouraged him to get a regular appointment with the Bureau of Mines and we were successful in getting an appointment for him as a regular engineer. He first worked on an important project, the Mouat chromite investigation in Montana and did a most credible job there and in the late summer of 1951, I believe it was, we opened up this new office in Grants Pass and decided that Mr. Appling could be in charge of that office, that field office, and I think his work was always done very carefully. I have complete confidence in his integrity and in his ability.

Representative HOFFMAN. Well, do you know of anything in his record or of anything that has happened either before he took these samples or since and on down to the present time, which would give you any reasonable ground to doubt his ability or his loyalty to his job, his integrity, other than the suspicions that might have been cast by the asking of questions?

Mr. VOLIN. I have never found anything to question about his ability, loyalty, or honesty.

Representative HOFFMAN. Now, what is an assay?

Mr. VOLIN. It is simply an analysis of the sample to determine certain constituents in that sample. Generally, they are metals.

Representative HOFFMAN. By chemical determination?

Mr. VOLIN. Well, there are two types of determination. There is the fire assay determination, in which you fuse the charge and then there is the chemical assay, in which you dissolve the sample.

Representative HOFFMAN. Yesterday you were handed the little book which I just gave you, the Bureau of Standards Directory of Commercial Laboratories put out by the Commerce Department, I think. Then counsel directed your attention to page 5 showing the listing of the A. W. Williams Co., and you were asked to testify concerning the symbol "M," and you did. That stood for what?

Mr. VOLIN. As I remember—but I would prefer to check it—"M" is noted in the symbolic references as "metallographic, metallurgical."

Representative HOFFMAN. Were you asked anything at that time, and if you were, what was it, about the chemical determination?

Mr. VOLIN. First let me say that the statement was made, I believe, that that would be the only symbol applying to assays. I noted the possibility that chemical "C" was symbol "C" and clay and radiographic were symbol "K," possibly could apply to analytic procedures.

Representative HOFFMAN. In that connection will you not read just the two top lines there on page 5. Symbol "C" stands for chemical determination, does it not?

Mr. VOLIN. It could stand for chemical determination.

Representative HOFFMAN. What else does it stand for if it does not stand for just that?

Mr. VOLIN. I would like to read this title or description under symbolic references to nature of tests or researches.

Representative HOFFMAN. Are you reading about "C" now?

Mr. VOLIN. I am reading the title of that tabulation.

Representative HOFFMAN. What I was asking you was if "C" didn't stand for this chemical determination, and if it did not, what else did it stand for. And if Williams & Co. was not listed under "C." Maybe you can answer those questions all at once.

Mr. VOLIN. The reason I am taking time on this is that I want to be sure of my answer.

Representative HOFFMAN. That is all right.

Mr. VOLIN. Well, it does say that these alphabetical symbols indicate the nature of the test and "C" as "chemical" would indicate to me that the company does perform chemical tests.

Representative HOFFMAN. So that the Williams Co. were qualified, were they not, under that classification?

Mr. VOLIN. Under that classification this directory shows that they do perform the chemical tests.

Representative HOFFMAN. Yesterday from what counsel said I got the opposite inference, that the Department of Commerce didn't classify them as competent. As a matter of fact, it did. Is that right?

Mr. VOLIN. Sir, I refused yesterday to pass on that question.

Representative HOFFMAN. That is, on their interpretation of it?

Mr. VOLIN. Yes, sir.

Representative HOFFMAN. Now look at the top of page 3 at that top line and those numbers, 600 to 699. Those numbers apply to ores and metals, do they not?

Mr. VOLIN. "600—ores, metals, and manufacturers."

Representative HOFFMAN. Well, that includes gold and silver, does it not?

Mr. VOLIN. It includes precious metals, which would include gold and silver.

Representative HOFFMAN. I do not want to press you, but as a matter of fact, does not that compilation indicate that the Williams Co. were qualified to perform assays?

Mr. VOLIN. It indicates to me that they had been doing this as a commercial firm and apparently that their work had been accepted by others.

Representative HOFFMAN. So far as you know, the folks in Michigan are perfectly satisfied with your services, are they?

Mr. VOLIN. I hope they are.

Representative HOFFMAN. You have not heard anything to the contrary?

Mr. VOLIN. No; I have not.

Representative HOFFMAN. Nobody has cast any reflections on your ability or integrity up there, have they?

Mr. VOLIN. No, sir.

Representative HOFFMAN. And I do not think they ever will. That is all.

Representative JONAS. Mr. Chairman, I have a question or two, at my turn, before you go back to the counsel.

Senator NEUBERGER. We will call on you in just a moment.

All right, Mr. Jonas.

Representative JONAS. Mr. Volin, I understood you to say that you were a career employee of the Bureau of Mines until you left.

Mr. VOLIN. I said my career with the Bureau of Mines had extended over a period of 16-plus years.

Representative JONAS. Well, I mean you were a career employee as distinguished from a political appointee?

Mr. VOLIN. Yes; I was a civil-service appointee—I mean I held a civil-service appointment.

Representative JONAS. And you were engaged in that work for more than 16 years with the Bureau?

Mr. VOLIN. Yes.

Representative JONAS. Now, was Mr. Appling a career employee?

Mr. VOLIN. Yes; I believe he has a civil-service appointment. I am sure he has.

Representative JONAS. When did he come to the Bureau, if you know?

Mr. VOLIN. In 1950.

Representative JONAS. And Mr. Forbes was Director of the Bureau?

Mr. VOLIN. Mr. Forbes was the Director. He has just retired.

Representative JONAS. But he has been Director for how long, and with the Bureau for how long?

Mr. VOLIN. Mr. Forbes was with the Bureau over 37 years. I don't know the exact number of years.

Representative JONAS. Now, your immediate superior, Mr. Miller, how long was he with the Bureau?

Mr. VOLIN. Ever since I can remember. That is no reflection on his age, however.

Representative JONAS. You say you received all of the instructions with reference to this sampling from Mr. Miller?

Mr. VOLIN. He transmitted the instructions; yes, sir.

Representative JONAS. Was it in the nature of a letter or a telegram or a memorandum or what?

Mr. VOLIN. The instructions were contained in a memorandum from the Solicitor's office, a copy of which was attached to Mr. Miller's letter to me designating me as representative, or as alternate representative, and giving me this responsibility.

Representative JONAS. Have you read those instructions into the record? Are they in the record?

Mr. VOLIN. I have not read them into the record; no.

Representative JONAS. Do you have a copy of the instructions with you?

Mr. VOLIN. I do.

Representative JONAS. I would like for you to state to the committee what those instructions include. Before you read the list of instructions, may I ask one other question, Mr. Volin. Do those documents, the list of instructions or the letter of transmittal submitting to you the instructions which you followed, include the entire group of instructions you received, or did you receive other instructions by letter, telegram, telephone, or oral conversation from anybody?

Mr. VOLIN. These instructions are the total instructions that I received and I do not recall any other instructions from Mr. Miller or anybody else in Washington on it.

Representative JONAS. Please tell us just exactly what you were instructed to do.

Mr. VOLIN. This letter is a copy of a letter to Al Sarena Mines, Inc., Trail, Oreg., dated September 3, 1953, and signed by Clarence A. Davis, Solicitor. The letter reads:

GENTLEMEN: Pursuant to my conversation with Mr. Garber, the following modus operandi is acceptable to me in acquiring further evidence of a valid discovery on your contested claims:

1. I should like N. E.—

he has the wrong initial there—

N. E. Volin, a mineral expert from the Bureau of Mines in Spokane, to accompany Mr. D. Ford McCormick when samples are obtained for assaying purposes. In the event Mr. Volin is unable to take the assignment, he will designate one or more substitutes from the Bureau of Mines who will be available.

2. The two men may arrange the time and place of meeting to suit their convenience. They should meet as promptly as possible, however.

3. Accurate record should be kept of the location from whence each sample is taken.

4. Samples should be taken from each of the following claims:

Henry Applegate, J. W. Merritt, Rainboe, Sulphide, Della McKinnon, Cougar, Oro Escondido, W. C. Leever, J. L. Grubb—

May I say that this copy is not too plain. I interpret that J. L. Grubb—

J. D. McKinnon, Manganese Claim, Staples, Arroyo Verde, Alabama, and La Jolla.

You may take as many samples of whatever weight from each claim as you desire.

5. The samples should be retained in the possession of Mr. McCormick and the Government representative until shipped or delivered to a qualified assayer who is acceptable to both men.

6. The assay reports should be labeled so that they are easily identified to the claim from which they are procured and the report sent to me promptly.

7. Mr. McCormick's salary and expense and the assaying costs will have to be borne by you. The Government will bear only the expense of its representative.

Representative JONAS. Where did you get a copy of that letter, Mr. Volin?

Mr. VOLIN. That was attached and referred to in Mr. Miller's letter.

Representative JONAS. Read Mr. Miller's letter to us.

Mr. VOLIN. This is a memorandum to me dated September 10, 1953, from Director, Bureau of Mines, and signed by Thomas H. Miller as Acting Director, on the subject, Government Representation at Sampling of Al Sarena Mines, Inc.

At the request of the Solicitor of the Department of the Interior, the Bureau of Mines has agreed to provide a qualified engineer to represent the Government in the taking of assay samples of Al Sarena Mines.

Please contact Mr. D. Ford McCormick, Route 1, Box 125, Eagle Point, Oreg., and arrange a time and place of meeting, convenient to you both, for sampling the deposits on each of the claims listed in the Solicitor's letter of September 3 to Al Sarena Mines, Inc., Trail, Oreg. Your responsibility will be limited to the procedure outlined in that memorandum, which you are hereby directed to follow. A copy of the memorandum is attached.

Representative JONAS. Did the two letters that you have just read contain the entire instructions you received from any department, agency or branch of the Government connected with this sampling?

Mr. VOLIN. That is right.

Representative JONAS. Did you receive any instructions, suggestions or requests from anybody in the Department of the Interior or elsewhere to select the A. W. Williams Inspection Co. to do the assaying?

Mr. VOLIN. I did not.

Representative JONAS. Was it not your responsibility as the independent umpire or the representative of the Government to inspect this sampling and supervise it, and to agree upon the assayer to do the work?

Mr. VOLIN. I believe it was, yes, sir.

Representative JONAS. And do you feel that you discharged that responsibility and that duty to your entire satisfaction by the procedures you followed in the selection of Williams?

Mr. VOLIN. I was satisfied at the time, sir.

Representative JONAS. If anybody made a mistake in the selection or agreeing to the use of the A. W. Williams Co. to make this assay, you would have to take the responsibility of that mistake, would you not?

Mr. VOLIN. I am afraid so, sir.

Representative JONAS. Because you did it yourself, thinking it was the proper and reasonable thing to do under the circumstances, but without any suggestion from Secretary McKay or anybody in his department?

Mr. VOLIN. That is right.

Representative JONAS. What did you mean when you responded to the question asked by Mr. Lanigan that you did the best you could within the scope of instructions which were given to you? Did you not have instructions to use your best judgment in seeing that proper samples were taken and that a correct assay was made from them?

Mr. VOLIN. I have just read you my instructions.

Representative JONAS. You did not mean to imply your independence of movement was restricted at all by your instructions, did you?

Mr. VOLIN. I did not intend to imply that.

Representative JONAS. When your report was received from Appling and you were ready to transmit it you transmitted it to your immediate superior in the Bureau of Mines, Mr. Miller, is that correct?

Mr. VOLIN. I transmitted that report to the Director of the Bureau of Mines, J. J. Forbes.

Representative HOFFMAN. What was the name?

Mr. VOLIN. J. J. Forbes.

Representative JONAS. Do you still have that pamphlet from the Department of Commerce to which reference has been made?

Mr. VOLIN. Yes.

Representative JONAS. Would you open it, please, to the proper place. The record will show that Mr. Hattan who took the samples that are alleged to have shown that this mine did not contain proper mineralization, had those samples assayed by the Annes Engineering Co. Will you tell us whether that company is listed in that book. May I ask are they located in Oregon or California, Mr. Coburn or Mr. Redwine?

Mr. COBURN. I think Annes is located in Oregon, as I recall.

Representative JONAS. Turn to Oregon and see if the Annes Engineering Co. is listed there at all.

Mr. Redwine says that they are in California. The record shows that Mr. Hattan sent his samples there and I think somebody on the staff will know where Annes Engineering Co. is located.

Mr. VOLIN. It is not in Oregon.

Representative JONAS. It is not in Oregon. Try California. Mr. Perlman said they are in San Francisco. Look under "California" and see if Annes Engineering Co. is in the book under "California."

Mr. VOLIN. I do not find the firm listed under "California."

Representative JONAS. I believe that is all I have, Mr. Chairman.

Representative JONES. Mr. Chairman, may I ask a question or two?

Senator SCOTT. If I may speak for just a moment here, the order of members of the committee to be heard is Mr. Jones, Mr. Jonas, Mr. Minshall, then Senator Neuberger and Senator Dworshak. That will be the order. I wonder if we might determine at this time just when we are going to adjourn for lunch. I would suggest 12:30. If there is no objection to that time we will try to adjourn at that time.

Representative HOFFMAN. Make it 12:25.

Senator SCOTT. We have had the request to adjourn at 12:25. With no objection we will do so.

Mr. Jones, will you proceed.

Representative JONES. Yes, Mr. Chairman.

Mr. Volin, in answering an inquiry made by Mr. Jonas of North Carolina, you stated that you were satisfied at the time that you issued the order. Does that same satisfaction continue to this time?

Mr. VOLIN. A question like that was asked yesterday. I refused. I stated that I didn't think it was a fair question.

Representative JONES. For what reason is it unfair? Does it jeopardize you in your professional standing?

Mr. VOLIN. No; you are asking me to judge this in the light of other evidence than I had at the time. I made my judgment at the time and I thought it was a reasonably good judgment at the time.

Representative JONES. Now, I did not quite understand your answer to the question of receiving a telephone call from the agency here in Washington asking you to make your report directly to the Washington office rather than going through the district office.

Mr. VOLIN. Well, that procedure is followed lots of times in order to save time. As long as it is all right with the regional office and with the approval of the regional office we followed that procedure on many occasions in order to expedite this.

Representative JONES. Did you follow that procedure in this instance?

Mr. VOLIN. I believe I just took the prerogative to transmit the report directly and send a copy of my letter to Albany to the regional office.

Representative JONES. The need of expedient handling of the case had come about due to the failure of your office to do the work in the ordinary length of time?

Mr. VOLIN. No; I am not sure I understand your question.

Representative JONES. Well, was your office delayed in making the study requested by the Washington office?

Mr. VOLIN. We, of course, could not complete the report until the assays had been returned. That must have been, I am sure, the reason that the report was waiting. As soon as the assays came back, why the report was completed and, inasmuch as Mr. Gottley had

asked for it to be transmitted as soon as possible, I sent it directly to Washington.

Representative JONES. Was there any reason given by the Washington office that this should be treated with some degree of priority?

Mr. VOLIN. I don't recall any reason.

Representative JONES. That was a telephone conversation?

Mr. VOLIN. That was a telephone conversation; yes, sir.

Representative JONES. No reason was given other than they wanted the report hurried up and sent to the Washington office and not sent to the regional office because they did not want to experience any further delay in handling the report?

Mr. VOLIN. Well, you must remember that the regional office did receive a copy of my letter of transmittal and the copy of the report.

Representative JONES. That is all, Mr. Chairman.

Representative HOFFMAN. I have a question, Mr. Chairman.

This case had been held up for 18 months, had it not, by the Chapman administration?

Mr. VOLIN. I don't know that background, sir.

Representative JONAS. Would you yield for one question there?

Representative HOFFMAN. Yes.

Representative JONAS. Mr. Volin, following up the question of Mr. Jones about your return of report directly to Washington, that is the channel through which you received your instructions. They came directly from Washington, did they not?

Mr. VOLIN. They came directly from Washington; yes, sir.

Representative JONAS. And you made your report through the same channels from which you received your instructions?

Mr. VOLIN. That is right, sir.

Representative JONES. That was not unusual?

Mr. VOLIN. We have followed that procedure on a number of occasions; yes, sir.

Senator SCOTT. Congressman Minshall.

Representative MINSHALL. Mr. Chairman, I would like to ask the witness just one question, if I may.

You at all times acted in good faith, did you not, Mr. Volin?

Mr. VOLIN. Yes, sir.

Representative MINSHALL. In your opinion was there any evidence of skulduggery or criminality in this matter?

Mr. VOLIN. I was not on the ground. I asked Appling to be sure and watch for anything that he thought was out of line. He reported to me that he found nothing along that line. I was satisfied myself, too.

Representative MINSHALL. You still share that opinion today, do you not?

Mr. VOLIN. I have no reason to alter that opinion.

Representative MINSHALL. Thank you.

Senator SCOTT. Senator Neuberger.

Senator NEUBERGER. I think you mentioned, Mr. Volin, early in your testimony today, that you never before had been connected with such an assignment. Did you say something substantially to that effect?

Mr. VOLIN. That is correct, sir.

Senator NEUBERGER. Would you tell us again how long you were with the Bureau of Mines?

Mr. VOLIN. I was with the Bureau of Mines from March 1939 until July 1955.

Senator NEUBERGER. In other words, you were with the Bureau about—

Mr. VOLIN. Sixteen-plus years.

Senator NEUBERGER. About 16-plus years. How long were you in Spokane?

Mr. VOLIN. I was in Spokane from April 1951 until January 1954.

Senator NEUBERGER. And during that period you were the director in a region which has a great deal of public land, a great deal of mining-claim activity and prospecting, is that not correct?

Mr. VOLIN. I would like to note that I was Chief of the Mining Division of Region II which comprises the four Northwest States: Oregon, Washington, Idaho, and Montana.

Senator NEUBERGER. To your knowledge is that not one of the areas in the country, if not the most intensive, certainly ranking near it, in the respect of Government ownership of public lands and prospecting and mineral and mining activity on those lands?

Mr. VOLIN. It has activities along those lines; yes.

Senator NEUBERGER. With the sole exception of this Al Sarena case which we are discussing here today, have you ever before been connected with any such assignment as spelled out to you and your subordinates in this case, or do you have any knowledge of any such assignment?

Mr. VOLIN. I do not and I was never connected before with such an assignment.

Senator NEUBERGER. With such an assignment. In other words, in your experience with the Bureau of Mines, and I want to get this very clearly, because in my opinion this is a very cogent part of this entire situation, you never before were connected with any such assignment or to your knowledge knew of any such assignment?

Mr. VOLIN. I don't want to have this confused with the work that the Bureau had been doing for a number of years, sampling investigations. That isn't what you mean, is it, sir?

Senator NEUBERGER. What I mean is this: Were you ever before connected with an assignment in which you or someone acting for you was assigned to obtain samples in a contested mining-claim case in which the rulings of other Government agencies were challenged, and you were requested to take samples of those samples used to determine the accuracy of the tests made by other Government agencies?

Mr. VOLIN. Thank you for clarifying that. I was never connected with any assignment like that before.

Senator NEUBERGER. Thank you very much.

Now, I would like to ask you several other questions if I may, please, Mr. Volin. The instructions which you received through the Solicitor's office or which came to the Al Sarena Mining Co. and which you were told to follow, said that the samples taken under your direction by you or someone acting for you were to be sent to an assaying laboratory mutually acceptable to you and to the mining company, is that correct?

Mr. VOLIN. That is correct.

Senator NEUBERGER. What is your opinion of such a procedure? Let me amplify what I mean.

That in a case where the rulings of the United States Forest Service and the Bureau of Land Management are challenged, the company making the challenge shall have a role in the selection of a so-called umpire. What is your opinion of that as a matter of Government policy?

Mr. VOLIN. I would prefer not to spread an opinion of that kind if I do not have to.

Senator NEUBERGER. I would like to remind you, though, that you have been expressing opinions in answer to a good many questions which were stated to you just very recently by Congressman Minshall and Congressman Jonas. You do not have to answer the question if you do not care to, but I would like to repeat it if I may.

What is your opinion, as a matter of Government policy, when a mining company questions the professional verdict of the United States Forest Service and the Bureau of Land Management, of giving that mining company a voice in the selection of the umpire to determine the validity of the rulings made by the United States Forest Service and the Bureau of Land Management?

Mr. VOLIN. Well, my personal opinion—and this does not reflect the policy of the Bureau of Mines of the Department of the Interior—is that an applicant should have recourse to review in case of a denial. I think that part of it is all right.

Senator NEUBERGER. You think it is all right?

Mr. VOLIN. That he have recourse to some procedure for review. As far as having something to say about the selection of an umpire, there are so many good umpires that in normal, I mean in general, it should be possible for two contestants about a question to settle on one that is acceptable.

Senator NEUBERGER. What would you have thought of the Secretary's Office remanding this to the Forest Service and the Bureau of Land Management which had the original jurisdiction in the case to make further studies? What would you have thought of that as a matter of procedure?

Mr. VOLIN. I would think that those would be the agencies to which this should be referred because they are directly authorized to deal with this sort of thing and the Bureau of Mines has not gotten into this sort of investigation.

Senator NEUBERGER. You would have seen no objection at all if, in view of the challenge by the company and the appeal by the company, the Interior Department had returned this case to the Forest Service and the Bureau of Land Management and asked them to take further samples and again to report and review the case of Al Sarena? You would have seen no objection to that?

Mr. VOLIN. You said something a minute ago about me expressing an opinion and I am going to express one now. I think it would have been most proper for the Department of the Interior to refer that back to the agency, the Bureau of Land Management, who is concerned with this particular business.

Senator NEUBERGER. I would just like to agree with you, if I may; and what this investigation or hearing is about is to find out why that was not done, because, in my opinion as one of the Senators representing the State where this occurred, that is what I think should have been done.

Now, I would like to ask you several more questions, if I may. The instructions which came from the Solicitor's office said that the company should bear the cost of testing these samples. Was that not one of the features of the instructions?

Mr. VOLIN. Yes; that is right.

Senator NEUBERGER. How much would it have cost to test these samples at the Bureau of Mines laboratory in Albany?

Mr. VOLIN. Let's see. There were 28 samples. A normal charge for gold and silver would be 75 cents to a dollar, let us say a dollar. So \$56 might have covered the actual assaying cost. Albany probably doesn't operate on the same basis as a commercial assaying establishment and possibly could have had higher costs attached to that.

Senator NEUBERGER. You mention the sum of \$56. Do you not think it is rather strange that here is a mining claim in the Rogue River National Forest, about 200 miles from the Bureau of Mines Laboratory, it is about 3,000 miles from a private laboratory in Mobile, Ala.; at stake is timber belonging to the people of the United States estimated value—and there are conflicting estimates—at anywhere from \$200,000 to \$630,000. Yet for the sake of a \$56 assaying charge, these mineral samples are shipped not 200 miles to Albany, Oreg., but 3,000 miles to Mobile, Ala. Do you think that is a strange situation or not?

Mr. VOLIN. I would like to answer that by saying that we discussed the possibility of sending these samples to Albany—I believe that is in the record some place—and we rejected it because of the instructions that the McDonalds were to bear the cost of this and also because there was no way to reimburse the Bureau of Mines for this work, also because there were no funds set up with the Bureau to do this work.

Senator NEUBERGER. I remember very well yesterday when you made that point. I am not criticizing you in any way. You acted within your instructions. But in view of the fact that the testing of the samples would cost around \$56 and there was at stake timber worth perhaps a quarter of a million dollars or a half million dollars—I will not argue about the value of that, that is in disagreement, but in the very lowest estimate the value is substantial, very substantial—what do you think of the instructions? I don't know what was in the mind of the man that wrote that, but he took care to see to it, in effect, that they were done at a private laboratory rather than at the Bureau of Mines laboratory under the jurisdiction of the region which you headed, and only a few hundred miles from the mining claim in the Rogue River National Forest. Do you think there is anything curious about those instructions?

Mr. VOLIN. Well, even at that time, because the Albany laboratory had a big volume of work, we were sending regular Bureau samples to private assaying firms. I did suggest two firms that I knew to be very reputable and located on the west coast close to the scene of this work. The McDonalds objected to these two firms. I don't know whether it was on the basis of previous experience with them, but they did express confidence in the A. W. Williams Co. and then I took the steps to check the A. W. Williams Co., which we are all familiar with now.

Senator NEUBERGER. Would you mind identifying the two firms which you suggested on the west coast just for the sake of the record?

Mr. VOLIN. Yes. One was Abbot A. Hanks, in San Francisco, and the other was Smith-Emery, in Los Angeles.

Senator NEUBERGER. I would like to ask one question, if I may, of counsel.

Was one of those firms the one which was used by the Forest Service?

Mr. COBURN. Abbot Hanks.

Senator NEUBERGER. It is my impression that Abbot Hanks was one of those used by the Forest Service when the assays were made on the basis of which the claims were disallowed.

Representative JONAS. Will the Senator yield?

Senator NEUBERGER. Certainly.

Representative JONAS. I was not at Portland but I have read the record and the record shows that Mr. Hattan sent his samples to the Annes Engineering Co. Later on he sent some supplemental samples that he had to this Hanks, but he used the Annes Engineering Co. as his first assayer.

Mr. COBURN. If the Congressman will read further in the record, he will find that when Mr. Sanborn accompanied Mr. Hattan on the second assay attempt they took the samples to the Abbot Hanks Laboratory in San Francisco.

Senator NEUBERGER. May I ask you this: In view of the experience of the Abbot Hanks Laboratory with samples taken on national forests and since it had been used by the United States Forest Service in similar situations, do you think it might have been preferable if these samples had been sent to the Abbot Hanks Laboratory?

Mr. VOLIN. My experience with Abbot Hanks was not on the basis of samples sent by the Forest Service but on previous work before I came to the Bureau of Mines. I knew that that is a reputable firm of long standing and I recommended it on that basis.

Senator NEUBERGER. And your recommendation of Abbot Hanks and the Annes Laboratories, I believe you mentioned, and Smith-Emery, your recommendation of those laboratories on the Pacific coast were rejected by the Al Sarena Co.?

Mr. VOLIN. That is right.

Senator NEUBERGER. Do you think that at all extraordinary in view of the existence of these reputable laboratories on the Pacific coast in the region involved, and of your own Bureau of Mines laboratory at Albany, Oreg., right in the State involved, that samples they had taken in the Rogue River National Forest should have been sent 3,000 miles for assaying?

Mr. VOLIN. If I had not had the instructions which made it necessary to reach an agreement, I would have sent the samples to one of the west coast firms.

Senator NEUBERGER. If you had not had those instructions from the Solicitor's office you would have sent the samples to one of the west coast firms?

Mr. VOLIN. That is right.

Senator NEUBERGER. In other words, it was those instructions which resulted in the samples being sent to Mobile, Ala., for testing?

Mr. VOLIN. I believe that is a fair statement.

Senator NEUBERGER. Thank you very much.

I would like to ask several questions, if I may, Mr. Volin, about the general practice of retaining umpire samples. In your experience

with the Bureau of Mines and elsewhere in private employment, what would you say was the average length of time that umpire samples are retained?

Mr. VOLIN. Well, I don't think you can state an average time. I will try to outline some comments on that. Let's consider Bureau of Mines procedures first. The Bureau of Mines samples, the samples we took in our field projects were sent to Albany and reduced to pulps there and then a duplicate would be kept of one pulp, would be split and kept at Albany for periods up to a year.

Senator NEUBERGER. For periods up to 1 year?

Mr. VOLIN. Yes.

Senator NEUBERGER. Now, these umpire samples of the Al Sarena tests were retained for how long after the assay was completed?

Mr. VOLIN. Well, you are assigning a definition to them that I don't believe you could call these umpire samples.

Senator NEUBERGER. Well, would you prefer that they be called splits?

Mr. VOLIN. These splits of the samples that were taken were kept only until the assays were examined or the assay results were seen.

Senator NEUBERGER. In other words, they were completely destroyed immediately upon receipt of the assay report, is that correct?

Mr. VOLIN. I don't know exactly when they were destroyed, but the records indicate that they were destroyed in the period from around December 29 or thereabouts.

Senator NEUBERGER. Well, they were destroyed, if I am not mistaken, from the testimony at Portland, within a few weeks. Counsel says within a few days after the report was received.

Mr. VOLIN. Well, that must be correct.

Senator NEUBERGER. In view of your statement that your splits, we will say, have been kept up to 1 year, do you regard the virtually instantaneous or immediate or very speedy destruction of these splits as somewhat an extraordinary situation?
